CATALOGUE OF

Bulbs and Flowering Roots.

AUTUMN, 1893.

August 29, 1893.

MANY of the finest Flowers are produced from Bulbs and Bulbous Roots, and they would be more widely grown were it not for the fact that they must be planted some time before the bloom appears, and cannot, like flowering plants, be sold in a blooming condition, save in the cases of bulbs which have been "forced" into flower in pots, out of their natural time of blooming, and are thereby rendered useless for outdoor planting. All the hardy portion of the class (and the best portion is hardy) must be planted in the autumn, and will bloom in the following spring and summer. It is a common occurrence in the spring to have inquiries and even orders for Hyacinths, Tulips, etc., from friends who have seen the beautiful display of these flowers in parks and private grounds. It is, of course, out of the question to supply them, save in the fall.

A most brilliant and effective display can be had by massing like or contrasting colors in varieties blooming about the same time. We will be pleased to name proper varieties for this purpose when desired.

Directions for culture will be found under the various headings.

Our Bulbs are all selected, from the best growers, and very different from the cheap "case" bulbs offered at very low prices. When parties are unacquainted with the different varieties, we shall be glad to make a suitable selection for any desired purpose. All Bulbs noted as hardy may be planted as late in the fall as the ground can be worked, but October and November are the best months for planting.

Orders for Bulbous Roots can be forwarded to us from August to November, inclusive. Those received before the first of October will be sure of being filled as ordered; after that time the supply of many varieties is frequently exhausted. It is best to order at once on receipt of the catalogue; the Bulbs will be sent in proper time for planting.

Address all orders and remittances to

BERMUDA EASTER LILY.

HYACINTHS.

Directions for Culture.

FOR PLANTING HYACINTHS IN THE OPEN GROUND, the preferable season is in October and

November, but they can be set out at any later time, as long as the ground is open and the bulbs remain sound. The best compost for their culture is the following: One-third river or sea sand, one-third well-rotted cow manure, and one-third good garden mould; or, where the soil is naturally light, well-rotted cow-manure liberally intermixed is all-sufficient. The beds composed of the above compost should be well dug to a depth of fourteen inches, and raised from two to four inches above the level of the walk. The bulbs should be planted evenly about six inches deep (to the bottom of the bulbs) and from five to six inches apart; if planted at uneven depths they will not bloom at the same time, but irregularly. Care must be taken not to press the earth too firmly around and over the bulbs; some successful gardeners follow the plan of setting each bulb in a handful of clean sand, which insures proper drainage. After planting, rake the bed or border smooth, and after the ground has frozen tolerably hard in early winter, cover with a few inches of dry litter, leaves, evergreen boughs or coarse manure. If this covering be applied before freezing weather, it renders the bulbs liable to the predations of field mice, which may burrow in it.

FOR THE CULTURE OF HYACINTHS IN POTS, prepare the above compost, adding, if possible, a quantity of leaf mould. The most favorable time for planting is September, October and November. The size of the pot depends on the number of bulbs planted in a single one; three or four bulbs in a pot of say six inches in diameter has a rich and massive effect; one or two bulbs in each may be planted in proportionately smaller pots—two bulbs in each are very effective and generally preferred. In potting, each bulb should remain two-thirds above the surface of the soil; when thus planted, water them well, to imbed the bulbs firmly in the soil, allowing them to remain in this condition one or two days; then bury the pots in the open ground to the depth of six inches for six weeks, in which condition the preparatory root-growth necessary to a vigorous development of their flower-scapes is made. After this period, take up the pots and remove them to a room not heated, but not so cold as to freeze. Being exposed to the light for the first time, they are, of course, very delicate. Care should, therefore, be exercised not to place them in the direct rays of the sun for two or three days. When about ready to flower, bring them to the ordinary living-room, where the warmth will soon cause them to bloom. By so bringing them out, a few at a time, you can secure a succession of beautiful flowers all winter. They will need occasional watering until they begin to grow, when they should have an abundance of air in mild weather, and plenty of water.

FOR CULTURE IN GLASSES, the bulbs should be so placed that only the base of each touches the water; then place them, for the first ten days, in a dark but cool closet or room, to promote the starting of the roots, after which expose them to the light and air as much as possible; *avoid placing them near gas-light*. The water should be changed as it becomes impure; draw the roots entirely out of the glasses, rinse off the fibers in clean water, and wash the inside of the glass well. The water should never be allowed to freeze. When the bulbs are well advanced, give them a soft shower of rain-water every day.

Parties unacquainted with the different varieties will do well to leave the selection to us, only specifying in their orders whether the bulbs are wanted for pot, glass or garden culture; we shall take pleasure in sending such varieties as will insure satisfaction.

SELECT NAMED HYACINTHS.

The Single-flowered varieties are mostly more effective than the Double ones, and, as a general rule, the former succeed better than the latter in glasses.

The Double varieties are distinguished by an asterisk (*).

All Single Hyacinths succeed well in water, and those of the Double ones marked thus (**) are also suitable for glasses.

If ordered by mail, please add twenty cents per dozen for postage.

HYACINTH BEDS.

Some designs suitable for Hyacinth Beds will be found on inside back cover. By selecting contrasting colors and arranging them harmoniously, the most exquisitely beautiful effects can be produced. The named varieties, printed in boldface type, are most largely used for bedding. Parties desiring less expensive ones will find our separate colors of Mixed Hyacinths entirely satisfactory; our mixtures are made up of **Extra Selected Bulbs**, and are equal to the named sorts generally sold.

EARLY ROMAN HYACINTHS.

These are extensively used by florists for forcing, which may be done at a temperature of 60 degrees. The white variety flowers a fortnight to three weeks in advance of the Holland Hyacinths. The flowers are pure white and very fragrant, and each bulb will throw up from three to four spikes. For forcing, three or four bulbs are generally planted in a suitable pot, in good soil (as recommended for other varieties). The pots must be kept in a cool and dark place until filled with roots, when the flower-spikes can be rapidly developed by exposure to light and moderate heat. The blue and rose Roman Hyacinths flower from one to two weeks later than the white variety.

If ordered by mail, add 8 cents per dozen for postage.

ROMAN HYACINTHS.

TULIPS.

Tulips have been improved until now almost every shade of color is found in them, including the most delicate and brilliant effects.

SINGLE TULIPS.

Most of the varieties named below are equally well adapted either for pot-culture or the flower border. They are readily brought forward for early bloom in the house or conservatory, while, used on the lawn, they group admirably with other varieties of early bulbs, or form beautiful beds when massed in contrasting colors.

Tulips require cultural treatment very similar to Hyacinths, except that the bulbs, being smaller, must not be planted quite so deep. We have noted the average height to which the various varieties grow, to aid in selecting sorts for beds.

EARLY FLOWERING OR BEDDING TULIPS.

Admirably adapted for culture in pots, edgings or beds, flowering immediately after the Duc van Thol varieties.

If ordered by mail, add 6 cents per dozen for postage.

Please note that our extra selected EARLY SINGLE and EARLY DOUBLE MIXED TULIPS, if planted in large beds, will produce an exceedingly beautiful and lively effect.

TULIP BEDS.

It is to be regretted that the gorgeous displays presented by the Tulip beds of our public parks should be so seldom seen on our private lawns. With no other bulbs can such brilliant effects be produced. Tulips are so hardy and of such easy culture that failure to obtain satisfactory results is possible only by selecting unsuitable sorts. In order to obviate this difficulty, we give the following groups of sorts that bloom at the same time and are of equal heights. Any of these groups will form an effective combination. Tulips should be planted five or six inches apart and about four or five inches deep to the bottom of the bulb. For culture, the directions given on page 2, for culture of Hyacinths, are equally applicable. After the tulips have flowered the beds can be used for bedding plants, such as Geraniums, etc.

GROUPS OF TULIPS THAT WILL FORM EFFECTIVE COMBINATIONS.

SINGLE TULIPS.

It is advisable to order as soon as possible after receipt of this Catalogue, as later on in the season we may be sold out of some varieties owing to an unusual demand for same. In that case we shall substitute equally fine sorts of same color.

AMARYLLIS.

These bulbs, which are so remarkable for their beautiful flowers, should be, most of them, cultivated indoors, and but moderately watered, unless they show indications of flowering. The soil suitable for their culture is a good loam, with one-fourth part of leaf-mold or pulverized manure and a proportion of sand. Frequent disturbance of the roots is to be avoided.

ARUMS.

A class of odd perennial bulbous plants, with peculiar and distinct foliage and flowers. They are of easy culture, requiring rich soil and plenty of water during their growing season. *A. dracunculus* is hardy, and a very curious species; the stalks of the leaves are spotted with brown and purple, like a snake. The others are not hardy, but should be potted in autumn and kept dormant till spring.

If ordered by mail, add 3 cents each for postage.

" stellaris. The handsomest of all; flowers rich purple, with white center	05	50	2 50

CROCUS.

For pots and borders. A universal favorite, being one of the earliest flowers seen in the spring. They are neat, dwarf and compact in growth, and the blooms are of bright colors. If planted close—say two inches apart—and in close rows, they make a very pretty display immediately after the snow goes off in the spring. Do not disturb for several years.

For flowering in pots, hedge-hogs, baskets, etc., they should be plunged in the open ground for three weeks after planting, precisely in the same manner as directed for Hyacinths.

If ordered by mail, add 15 cents per 100 for postage.

CYCLAMEN.

CULTURE OF THE PERSIAN CYCLAMEN.—When well-grown it is difficult to find a more useful plant than this for greenhouse, room and window decorations. The various species produce flowers varying from deep red to pure white.

Cyclamens raised from seed, if well attended to, will flower within a year from the time of sowing. The seed should be sown in a well-drained pan, filled to within half an inch of the rim with good loam, leaf-mold, and plenty of sand; sow evenly, and cover with fine soil; water gently, and place in a temperature of 65 to 70 degrees; keep the soil moist, and as soon as the seedlings appear, raise the pan to a position as near the glass as possible, and shade from the sun during the middle of the day. When the plants have one leaf, lift them carefully, and pot singly into three-inch pots, in the same soil as was originally used for sowing. Place them in a

CYCLAMEN—CONTINUED.

warm frame near glass, to prevent the plants from being drawn. Give a moderate amount of air through the day, but close early in the afternoon, and give the plants a gentle sprinkling overhead. When the pots are full of roots they will require shifting into five-inch pots; the

CYCLAMEN NEAPOLITANUM.

same compost will do, but some well decomposed manure may be added. All plants that are throwing up blooms should be placed in an airy position and attention paid to watering them. When the flowering is over, remove the plants to a cold-frame and give water until the leaves begin to decay; then gradually withhold it, allowing the plants to rest until August. Then the established plants should be shaken out and repotted into the same sized pot; place in a cool-frame and keep moist and close for a few days until they commence to grow, when air should be admitted freely. By the middle of September they will be growing finely.

If ordered by mail, add 3 cents each for postage.

SEEDS OF CYCLAMEN GIGANTEUM.

The magnificent strain of the German Imperial Gardens, collected for us expressly. Best time to sow Cyclamen Giganteum is the autumn. The seed should be sown thinly on the surface, pressed into the ground and covered lightly. Light sandy soil suits them best. Temperature of 55° is sufficient to insure germination. When seedlings appear they should be brought near the light, and when large enough, pricked off—several in a 5-inch pot.

THE WEEPING SPRUCE OF CALIFORNIA.

(*Picea Breweriana*.)

Of this, the rarest and handsomest of Spruces, we have now the first seed ever offered. It has been collected on the summit of the Siskiyou Mountains. Per packet of about 100 seeds, 50c

CROWN IMPERIALS.

A stately-growing plant, with dark green foliage, and flowers of all intermediate shades

CROWN IMPERIAL.

between yellow and crimson; effective for centers of beds; hardy and permanent, and not so generally planted as they should be. Their flowers are produced quite early in spring, and are very ornamental and decorative in the center of a bed of other bulbous plants. The old dull red variety, while handsome, does not give anything like the effect that the newer sorts do. The double varieties are especially conspicuous and desirable in every respect. They are better for being planted in good, rich, well-drained soil.

If ordered by mail, add 3 cents each for postage.

FREESIA.

The justly popular *Freesias* are greatly prized for the delightful fragrance of their delicately colored flowers, which, when cut, will remain in good condition in water a long time. They are easily grown or forced in a light sandy soil, in a frame or greenhouse, and are excellent for window culture in winter; one plant will perfume a large room, but not in the persistent manner of a Tuberose. The plant has tooth-shaped bulbs and flat, spreading leaves. For the information of all not acquainted with these bulbs, we may say that they are quite small, and produce very large blooms in comparison to their size.

If ordered by mail, add 3 cents per dozen for postage.

Freesia refracta alba. Pure white, and sweetly scented; very largely forced; it is one of the prettiest bulbous plants known. The flowers are two inches long and about the same in width, shaped like miniature Gladioli, and in clusters of six to ten, on depressed horizontal scapes. The body of the flower is pure white, with lower segments spotted lemon yellow. There is a peculiar delicacy and beauty about this flower that is all its own; the fragrance is remarkable and very lasting. Each, 5 cts.; per doz., 30 cts.; per 100, \$1.25.

Freesia Leichtlinii major. Creamy white, shading to yellow; a pretty sort, but not so largely used as *F. refracta alba*. Each, 5 cts.; per doz., 40 cts.; per 100, \$2.

Freesia odorata. Sweet-scented. Each, 5 cts.; per doz., 40 cts.; per 100, \$2.

FREESIA REFRACTA ALBA.

GLADIOLUS.

The following varieties are the only sorts to be had at this season of the year, and they are generally planted in pots in autumn, and require to be kept in a warm room or greenhouse, except those prefixed with an asterisk (*), which are hardy, and may be planted out; it is best, however, to give them a slight protection. Some varieties are successfully forced.

GLADIOLUS, "THE BRIDE."

The French Hybrids, for spring planting, will be in by November. These form a family of bulbs of rare beauty. Every year is now adding varieties of most exquisite tint and shade; and from the time of year during which these bloom, and the long continuance of their flowers in perfection, they become one of the greatest ornaments of the garden at a season when flowers of vivid tints are scarce. They are valuable for bedding.

IXIAS.

The Named Hybrid Ixias are so beautiful and rich in tints that no lover of bulbs should be without them. They are equally adapted for pots or the open ground, exceedingly free flowering, and invaluable for cutting. If planted out, they require rather more covering during winter than Hyacinths. In pots their culture is the same as that usually recommended for other bulbs. By reason of their curious forms and strange coloring the Ixias everywhere attract much attention.

If ordered by mail, add 3 cents per dozen or 13 cents per 100 for postage.

Hispanica (Spanish). These are now being largely grown for cut-flowers. They are planted in beds in the open as soon as received in the autumn, and protected slightly. In the beginning of April cover the bed with glass, to have the flowers ready for cutting in May. Mixed colors 05 20 75

JONQUILS.

A class related to the Narcissus, and suitable alike for pot-culture or planting out. The culture required is the same as for Hyacinths.

If ordered by mail, add 6 cents per dozen for postage.

Each Per doz. Per 100
 Single Yellow Sweet-Scented . . \$0 05 \$0 30 \$1 25
 Large Single (Campanelle). Yellow 05 30 1 25
 Large Double. Yellow 08 60 4 00

LILIES. (LILIUM.)

These require very little care. The principal thing, indeed, to be attended to is to forbear disturbing them too often. *L. auratum* cannot bear manure; ordinary light soil suits them best. We call particular attention to the *L. speciosum* (Japan Lilies), which are, next to *L. auratum*, the most magnificent species. Lilies should be planted deep, not less than six inches, and, although hardy, are benefited by a light covering.

Most of these Lilies are not ready for shipment until after frost.

If ordered by mail, add 3 cents each for those marked thus (*); others from 1 to 2 cents each for postage.

Each Per doz.

**Atrosanguineum* (*Fulgens*). Dark crimson, black spots \$0 20 \$2 00

**Brownii*. Creamy white, shaded with chocolate crimson; an extra large and always rare lily; 2½ ft. . . 75 8 00

Canadense (Meadow Lily). Yellow, spotted; 1½ to 3 ft. 10 75

**Candidum* (Madonna Lily). The common, large, white, sweet-scented lily; valuable for forcing; 2 to 3 ft. high . . . 10 1 00

LILY-OF-THE-VALLEY.

(*Convallaria majalis*.)

One of the most beautiful and admired spring flowering plants, and universally sought for its neat and chaste outline and delicate odor. The growth is close, dwarf and compact, and the plant is hardy and permanent. It is now a most popular plant for forcing, which is easily done by planting the pips in pots, from six to twelve in each, watering freely, keeping in a cold cellar, and starting from week to week, to keep up a succession. They generally flower in three to four weeks after planting. They require a considerable amount of heat to start them.

Each Per doz.

Convallaria majalis. White flowers; fine large clumps \$0 30 \$3 00

Per 100 Per 1,000

Convallaria majalis. Strong pips for forcing. 50 cts. per bundle of 25 \$1 50 \$10 00

LILY-OF-THE-VALLEY.

CHINESE SACRED LILY.

(The Water-Fairy Flower.)

A variety of the *Polyanthus Narcissus*, imported from China; the bulbs do not generally arrive here until November. The Chinese have the following interesting fable connected with this flower:

"Once upon a time a father left his property to his two sons, with the understanding that it should be equally divided; but the elder son seized all the tillable land and left the younger nothing but an acre covered with rocks and water. The younger son, failing to obtain justice, sat at the water's edge bemoaning his misfortune. A benevolent fairy appeared, and giving him these *Narcissus* bulbs, told him to drop them into the water. Shortly afterward their flowers were developed, and the neighbors crowded to see the fairy's gift. In the course of a few years the badly treated brother accumulated a fortune by the rapid increase and sale of his bulbs. Then the elder brother, envious of the prosperity of the younger, bought up great numbers of the bulbs—hoping to get a monopoly by getting all of them—at so heavy a price that he was obliged to mortgage his property to procure funds for the purpose. He planted all his good land with bulbs, but they soon began to die, as they cannot live long out of water. He was ruined, while his brother, who had bought the mortgage, foreclosed it, and became possessed of the whole estate in time to plant some of the dying bulbs in the watery acre."

The bulbs should be placed from three to six in a bowl or glass dish of water, which has been partly filled with pebbles, some of which place over the bulbs so as to prevent them from floating. The water should be tepid, and changed every two days. Submerge the bulbs entirely and place in a sunny window in a cool room. 15 cents each, \$1.50 per dozen. (If ordered by mail, add 30 cents per dozen for postage.)

CHINESE SACRED LILY.

NARCISSUS.

Most useful for furnishing flowers in the early spring months from out-of-doors, or during winter, by forcing. They are all hardy, with exception of *Bulbocodium* and the *Polyanthus* section.

SINGLE NARCISSUS.

(Daffodils.)

If ordered by mail, add 13 cents per dozen for postage.

NERINE.

(Guernsey Lily.)

These bulbs should be cultivated in pots, in light, sandy soil, and to promote their flowering, a vigorous growth of leaves must be encouraged in the autumn; the requisites are, warmth

enough to excite them, and air to prevent their growing weak. They are very interesting and handsome in flower, and not as well known as they deserve, by any means. Our illustration gives an idea of their habit and elegance of form.

If ordered by mail, add 2 cents each for postage.

OXALIS

RANUNCULUS.

The main soil for these should be loam or clay, with a good dressing of rotten manure and leaf-mold; if heavy, add a little sand. To have them in perfection the soil should be well drained, cool, deep, rich and moist. Plant late in the autumn, claws downward, from four to six inches apart and three inches deep, covering with fine, pulverized soil. The TURBAN sorts are more hardy, and although the same treatment is desirable, they may be dealt with in a rougher fashion.

If ordered by mail, add 3 cents per dozen for postage

SNOWDROPS.

(*Galanthus Nivalis*.)

Perhaps no spring flower is a more general favorite than the Snowdrop. The earliest flowering of its varieties is the common single sort, which is also very graceful and beautiful, commencing to bloom before the snow is fairly off the ground in the spring. This is succeeded by the double-flowered variety, with its elegant drooping snow-white blossoms.

If ordered by mail, add 3 cents per dozen or 25 cents per hundred for postage.

HARDY FLOWERING SEEDS.

For Autumn Sowing.

Many varieties of Flower Seeds, ANNUALS as well as BIENNIALS and PERENNIALS, may be sown in the open ground in the autumn. We give here a list of such as will succeed in this latitude and southward. The plants from autumn-sown seed become larger and more robust, flowering earlier and more numerously than if sown in spring.

	Per pkt.	Per oz.
Adonis autumnalis. Very pretty scarlet annual	\$0 05	\$0 25
Ammobium alatum. White Everlasting, easily cultivated	. 05	25
Aquilegia. Double, mixed	. 05	40
Asperula setosa azurea. Sweet-scented light-blue annual	. 05	25
Brachycome iberidifolia. Purple annual; fine for edgings	. 05	1 00
Calandrinia umbellatum. Perennial for edging; purple flowering	. 10	1 00
Calendula officinalis, “Meteor” (Annual Pot Marigold). Very showy	. 05	25
“ “ “Prince of Orange.” Very fine	. 05	30
Calliopsis Drummondii. Showy yellow and brown annual	. 05	30
“ lanceolata. One of the best perennials for cutting; large yellow flowers	. 10	2 00
Campanula carpatica. Mixed	. 05	30
“ Medium Mixed (Canterbury Bells)	. 05	30
Candytuft. Mixed; sweet-scented annual; for beds and edging	. 05	25
Centranthus macrosiphon. Pretty red annual; for rockeries, etc.	. 05	30
Chrysanthemum. Mixed annual. Should be grown in masses to get the best effect	. 05	40
Clarkia. Mixed; useful for vases and hanging baskets	. 05	40
Collinsia bicolor. Purple and white, free-flowering annual	. 05	25
“ verna. Blue and purple	. 05	50
Collomia coccinea. Pretty scarlet and yellow annual	. 05	25
Convolvulus Minor. Hardy annual; fine for rockeries and hanging baskets	. 05	25
Corn-Flower. Very showy annual. Mixed	. 05	25
Delphinium formosum (Perennial Larkspur). Blue	. 10	1 00
“ cardiopetalum. Handsome blue annual	. 05	40
Erysimum Peroffskianum. Orange; showy and free-flowering annual	. 05	30
Eschscholtzia Californica. Yellow; free-blooming annual	. 05	40
Euphorbia variegata. Showy ornamental annual	. 05	30

HARDY FLOWERING SEEDS—Continued.

	Per pkt.	Per oz.
Flax. (<i>Linum rubrum</i> .) Fine free-flowering annual	\$0 05	\$0 20
Forget-Me-Not (<i>Myosotis alpestris</i>). Perennial blue trailer	10	80
Foxglove. Mixed; showy for backgrounds and among shrubs	05	30
