Northern Grown Seed

Elevators on the N. P. and the G. N. Railways in North Dakota. Office—Seed Warehouse and Drying Plant for Curing SEED CORN

MOORHEAD, - - MINNESOTA

Moorhead, Minn., Feb. 1, 1912

PURE SEEDS. Our seeds are subject to the operation of the Pure Seed Laws of North Dakota and Minnesota. We guarantee them to comply with those laws. We exercise care in buying and selecting our seed corn and field seeds, and test same for germination and purity. But we require buyers to test seed at once for themselves, and if not satisfactory to notify us and hold same subject to our order. We give no warranty expressed or implied and will not in any way be responsible for the crop.

WE WANT TO BUY—Potatoes, Oats, Speltz, and Barley in carlots. Also Brome Grass and Millet Seed in any quantity. Send samples for our bid f. o. b. your station.

NORTHERN GROWN SEED CORN.

Grown in North Dakota and Northern Minnesota.

Our Northern Grown Seed Corn is thoroughly dried on the ear. We operate two large drying plants which are specially designed for Curing Northern Grown Seed Corn. The storage capacity is ample and so arranged that the ear corn is cured slowly by the movement of dry air through it for a considerable time. Ventilating, heat-

ing and storage systems are all designed to produce the same result—that of CURING the corn Slowly and Naturally. VITALITY is thus retained which would otherwise be lost by rapid and forced drying.

TEST YOUR SEED CORN. Our 1911 corn crop contained a large excess of moisture. Climatic conditions in October and November prevented curing or drying in the field to any extent. Much care and handling has been necessary in order to remove this excess moisture by artificial methods. This results in increased cost of seed and what is more serious, in lower germination than usual. The average germination of the best Northern Grown seed corn from the 1911 crop is probably ten percent less than that of an average year.

Test your seed corn. If requested we will furnish results of our own tests and of official tests. We will cheerfully replace or refund the purchase price of any seed corn that does not show a satisfactory test for germination. But the seed **must be tested before planting** and if not satisfactory, returned at once. Owing to difference in conditions of soil and climate and methods of planting, good seed corn will sometimes yield a poor stand. Therefore, we cannot guarantee seed corn to grow a crop nor be responsible for the crop except as above stated.
