Rhubarb

Rhubarb comes before any fruit is ripe in the early Spring. There is nothing to take its place until its season is over, which lasts two months. Every family should raise all they can use.

I grow 10 tons to the acre every year. You can do the same.

As a money maker Rhubarb comes first. Your success with Rhubarb will depend on the kind of roots you plant. In starting your bed set only strong, vigorous root cuts which have grown rapidly under high culture. My Rhubarb is the Early Mammoth Linnaeus, highly colored, crisp and tender throughout the season. Earliest on the market. Single stalks often weigh over a pound, and 20 to 22 pounds to the hill.

My bed of ten acres is set from vigorous, healthy root-cuts of my own raising.
