CELERY

CULTURE.—Sow seeds in light rich soil, as early as ground can be worked, in drills 8 or 10 inches apart, cover seeds about a quarter of an inch deep, rolling or treading them if ground is dry. When fairly out of seed leaf transplant or thin from 6 to 8 inches apart in the row, and let grow until wanted to plant out. Keep well wet down in dry weather. Set out in July, 6 to 8 inches apart, (press soil firmly against roots), in single row in shallow trenches, having previously worked a good quantity of well rotted manure in bottom of trench. It is well to work thoroughly into the soil under and around the trench a quantity of Mapes or Quinipiac Fertilizers. To raise good celery requires rich soil. Earth up two or three times, taking care not to let the earth get into the heart of the plant.

IMPROVED WHITE PLUME,—One of the easiest to raise as it

requires no "banking up." Early and attractive, .10 .30 .85

CORN SALAD OR FETTICUS

CULTURE.—Sow in August in drills $\frac{1}{4}$ in. deep, 6 in. apart, keep down weeds. Just before winter cover thinly with straw or leaves.

LARGE GREEN CABBAGING,—A small, hardy, salad, used also as a substitute for lettuce, 5c pkt., 10c oz., 25c $\frac{1}{4}$ lb., 80c lb.

CORN—(Sweet or Sugar)

CULTURE.—Plant in hills 3 ft. apart each way, and five or six kernels in a hill. Hoe often, drawing soil up to stem after first hoeing. Break off side shoots. Make ground very rich. If stable manure is used, it is perhaps best to plow it under. Use broadcast or in the hill Mapes or Quinnipiac Fertilizer, worked well into soil. It has been found very beneficial to sow these fertilizers between the rows before cultivating and hoeing the second time.

We have been very careful in selecting the best and sweetest varieties of corn adapted to this section. The list below is arranged in order as they would mature. If two or more varieties are selected and planted at same time, they would be ready for the table at different times, one following the other.

DWARF GREEN CURLED SCOTCH,—Grown for winter greens, 5c pkt., 10c oz., 30c $\frac{1}{4}$ lb., \$1.00 lb.

KOHL RABBI—or Turnip-Rooted Cabbage

CULTURE.—Sow in Spring in rows 18 in. apart, thin to 8 or 10 in., when thickened stems are 2 or 3 in. through above ground they are ready to eat and should be used at once. Cook same as turnips.

PURPLE VIENNA,—5c pkt., 15c oz., 50c $\frac{1}{4}$ lb.

Hanson Lettuce

LETTUCE

CULTURE.—Sow in hot beds, and in open ground as soon as it can be worked, sow again in 2 weeks for succession. Transplant in rows 8 in. apart. Cos should be started very early in hot beds, and to blanch should be tied. Lettuce requires very rich ground well pulverized, in fact lettuce to be tender and crisp should have rapid growth, otherwise it will be tough and probably bitter.

BIG BOSTON,—About twice the size and one week later than The Boston Market, produces large solid heads,

BOSTON MARKET,—Edges slightly tinged with red, good forcing or out-door variety,

GRAND RAPIDS,—One of the best forcing varieties, strong grower, tender, crisp and retains its freshness a long time after being cut,

GOLDEN QUEEN,—Medium size golden yellow, solid heads, early,

HANSON IMPROVED,—Outer leaves green, inner white, sure header, excellent quality, very satisfactory,

IMMENSITY,—The largest head lettuce, not early, but reliable for late summer and fall use,

NEW YORK CABBAGE,—Not a forcing variety but one of the best summer lettuces, forms large heads,

PHILADELPHIA BUTTER,—Inner leaves yellow, heads solid,

PRIZE HEAD,—Leaves green and red, thin, crisp and tender,

SALAMANDER,—Heads compact, resists summer heat admirably, light green outside, white inside,

SILESIA EARLY CURLED,—Early and tender, leaves yellowish green,

Mushroom Bed

MUSHROOM SPAWN

CULTURE.—Mushrooms are more easily cultivated than many people imagine and may be grown in any room or cellar where the temperature can be maintained at from 50 to 65 degrees. For the beds use a mixture of three parts horse droppings and one part good fresh loam. Before being placed in the bed, let the manure be put in some dry place to sweeten, mixing it thoroughly and turning it three or four times, when the loam may

be added. Upon a dry firm bottom or shelf, make the bed by spreading a thin layer of the prepared mixture, pounding it firm, and continue this, till the bed is twelve inches thick. Leave it thus for about a week, or until the temperature has subsided to 85 degrees. Then make holes about ten inches apart, and put in each a piece of spawn about the size of an egg. Press the spawn firmly into the compost about two inches, leaving the top uncovered to allow the excess of heat and moisture to pass off without injury to the germs. After ten days, fill the holes and cover the whole bed with two inches of fresh loam, and over this place a few inches of straw. If the temperature is right, mushrooms will appear in six or eight weeks from the time of spawning. The bed will continue bearing from four to six weeks. If the surface of the bed becomes dry at any time, it should be moistened freely with water at a temperature of 90 to 100 degrees.

Our stock of spawn is replaced a number of times during the season and is giving excellent results.

PEAS

CULTURE.—For Peas, light dry soil is best. Sow as early as ground can be worked, and again every ten days for succession. Peas may be sown as late as August 15th. Medium and late Peas must be planted early. Early Peas may be planted early or late, and the extra early very late. Sow in single or double rows from 4 to 6 feet apart, according to variety, and about an inch apart in the row and 4 in. deep. Hoe often, keep ground clean and fine. Most Dwarf Peas will bear better if bushed enough to keep them from the ground. If the pea louse attacks the vines, spray every day with clear water of the same temperature as the atmosphere, using force.

POTATOES

CULTURE.—So many conflicting opinions exist as to the best method of growing potatoes, that we do not venture to give directions for culture. We do, however, make the following suggestions: Plant in such a manner that most of the heavy hard work can be done by the horse. Use "Mapes Potato Manure," or "Quinnipiac Potato or Market Garden," in sufficient quantities to insure a crop. Always bear in mind that to get the full benefit of the fertilizer and not burn the roots it should be thoroughly mixed with the soil. If stable manure is used at all, it should not come in contact with the tubers, as it is sure to make the crop rough and scabby.

These Potatoes were raised from our Maine Grown Seed, the crop was uniform and heavy and of excellent quality.

POTATOES

Use the "Quinnipiac or Mapes Fertilizers." To insure quantity and quality in your potato crop there are positively no better fertilizers made.

FLOWER SEEDS—(Con.) SWEET PEAS

Our list of Sweet Peas has been carefully revised with a view of keeping it strictly up to date. Should you miss some old favorite in the list, it has been discarded in favor of an improved sort. Sweet Peas, owing to the extremely short crop are very scarce and while the prices are not firm we shall endeavor to adhere to them as long as we can. It will be difficult to replace the seed stock when our present supply is sold.

LAWN GRASS SEED

OUR LAWN GRASS SEED is a specially reliable mixture of fine growing grasses, entirely free from weed seeds and can be depended on to produce a perfect, velvety green turf if properly sown and cared for. Quantity required per acre, 4 bushels. Price per quart, 25c., ½ peck, 85c., peck, \$1.50, bushel, \$5.50.

POINTS WORTH REMEMBERING IN MAKING A LAWN.

At least six inches of the surface soil should be alike and even, for nothing looks worse than to see a lawn grown in patches. So many noxious weeds are introduced into the ground with barnyard manure that its use is not recommended. The ground should be well prepared and rolled previous to sowing, it should then be gone over with a fine rake, the seed then evenly scattered over the surface at the rate of four bushels per acre. The whole should then be raked or bushed in and again rolled. When the grass has attained a height of three inches, it should be cut with a sharp scythe; never use a lawn mower that “pinches off” or “pulls” the grass, it should “clip” it with a good shear cut. Frequent mowings and rollings are necessary to keep a lawn in good condition. Once or twice during the season an application of Mapes or Quinnipiac should be applied as a top dressing. To “thicken up” the grass use one bushel lawn seed per acre. Don’t forget the roller. Use a good Lawn Mower, in good cutting order.

REPAIRING LAWN MOWERS

We repair and sharpen Lawn Mowers of all kinds, putting them in first-class working order. Should any be sent to us that are too nearly worn out to repair, we will so advise.

The Diamond Steel Track Hay Carrier

In the 21 years that we have sold Hay Carriers, we have never had a complaint; every one has done its work perfectly. ANY ONE CAN PUT THEM UP. We would be pleased to give you figures on the Carrier at the store or put up in your barn ready for use. The Diamond can be arranged to unload hay from the load to the mow, or from

the mow to the wagon. We would like to refer you to parties who are using them.

Should you wish a cheaper equipment than our Diamond we can furnish it.

MOWING MACHINE KNIVES, SECTIONS GUARDS AND REPAIRS

The furnishing of these goods is an important part of our business. We are in a position to supply you with PARTS of any Mowing Machine Rake, Tedder, Plow, Harrow, or most any Agricultural Implement made; and it is always best if possible to bring or send the old parts to insure a fit. It is important that you use the Best Knives and Sections.

We sell only the Best Sections. We positively refuse to handle a cheap section. The best are worth the money, the others are worth nothing.

QUINNIPIAC FERTILIZERS

THE GREAT CROP PRODUCERS

AVAILABLE PLANT FOOD.—Is what the farmer is looking for when he buys commercial fertilizers.

That is just why the **QUINNIPIAC GOODS** stand so well.

They contain this plant food in the available form and in the right proportions to secure good results.

PRINCIPAL BRANDS

QUINNIPIAC MARKET GARDEN MANURE.—Special attention is called to this brand as being as well formulated and as well balanced as any fertilizer on the market up to date. Per 100 lb. bag, \$2.20. Per ton, \$42.50.

QUINNIPIAC CORN MANURE.—For field, fodder or sweet corn, also used for grain. Per ton, \$35.00.

QUINNIPIAC PHOSPHATE.—A standard fertilizer for general use on all crops. Its record for uniformity of grade and mechanical condition is remarkable. It is always reliable. Per 50 lb. bag, \$1.00. Per 100 lb. bag, \$1.95. Per ton, \$37.00.

QUINNIPIAC POTATO MANURE.—Formulated and balanced the same as Market Garden Manure, but not quite so high grade. As a potato grower it has won and maintained a high standing and an enviable reputation. Per 100 lb. bag, \$1.95. Per ton, \$37.00.

QUINNIPIAC GRASS FERTILIZER.—For spring use, a top dressing for lawns, meadows and pastures. It acts quickly and produces a luxuriant growth of grass. It pays to use it. Per 50 lb. bag, \$1.25. Per 100 lb. bag, \$2.35. Per ton, \$44.00.

QUINNIPIAC PURE BONE MEAL.—Made from absolutely pure bones, finely ground and in the best mechanical condition. Per 100 lb. bag, \$2.25. Per ton, \$42.00.

We can supply Quinniapiac Fertilizers in grades that are lower in price—that will compare favorably in quality with other makes costing the same money.

The Mapes Manures

farm crops in connection with farm manure. Per 100 lb. bag, \$1.85. Per ton, \$35.00.

We can supply you any other brand of Mapes Fertilizers upon application, and will
be pleased to quote you prices on same, as well as analysis on all Mapes Brands, which our
space compels us to omit here.

We can recommend the above fertilizers as being derived from the best sources of
plant food, and we are confident their use will prove this, and the results will be satis-
factory and pleasing to you.

We Have the Agency for The Rogers Mfg. Co.'s Fertilizers, and Will be Pleased to Give You Brands and Prices on Application.
