INTRODUCTION.

In this bulletin, which is one of an annual series covering the period 1904 to 1918, inclusive, with the exception of 1914,¹ are detailed statistics of the 1918 production of lumber, lath, and shingles in the continental United States,² with comparative figures from previous annual reports.

The collection and compilation of the statistics for the Western States were done through the district offices of the Forest Service at Missoula, Denver, Albuquerque, Ogden, San Francisco, and Portland. The figures for New York State were furnished by the New York Conservation Commission.³ The work in all of the other States east

¹ A detailed summary of the 1914 lumber production is given in Bulletin 506, which contains the figures for 1915.

² The production statistics for 1918 were summarized in a preliminary statement issued in May, 1919.

³ Acknowledgement is made for assistance in the compilation and review of this bulletin to A. B. Strough, New York Conservation Commission; and to C. N. Whitney, Miss Frances R. Waters, Quincy Randles, N. J. Fetherolf, Miss Catherine Deneen, L. A. Nelson, and T. J. Starker, of the Forest Service.

of the Rocky Mountains was done in the Washington office of the Forest Service.

As in former years, the census was carried on in cooperation with the National Lumber Manufacturers' Association, which contributed financial assistance, and aided, through its affiliated organizations, in securing reports from the mills.

TOTAL LUMBER PRODUCTION.

The quantity of lumber reported cut in 1918 by 14,753 mills was 29,362,020,000 board feet. The output of 2,887 mills cutting less than 50,000 board feet each is not included in the total cut. An additional 2,795 mills were reported idle. The estimated total lumber production by 22,546 mills in 1918 was 31,890,494,000 board feet. The reported cut shows a decrease of 11.5 per cent from the 1917 figures; the number of mills reporting, a decrease of 10 per cent; and the estimated total production, a decrease of 11 per cent.

Many of the conditions which were responsible for the slowing up of production in 1917 continued for the greater portion of 1918, and in some instances were accentuated prior to the signing of the armistice in November. War demands of both a direct and indirect character resulted in the taking up of the lumber produced from the usual avenues of utilization.

Ever increasing prices for lumber and other building materials, railroad freight embargoes, car shortages, high wages, and scarcity of labor, curtailed credits, and the discouragement by the Government of all activities other than those aimed to help win the war cut down the demand for lumber for the first 10 months of 1918. Illustrative of building conditions, statistics for the year show the value of construction for which permits were issued in 148 cities of the country to have been approximately \$415,000,000, a decrease of 39 per cent from the year before. The decline in 1917 from 1916 was 29 per cent. Conditions at the mills were of a trying character because of the scarcity of skilled labor and the large turnover in both skilled and unskilled labor, increasing costs along every line, and because of the difficulty in making shipments on orders. Export trade remained at a low ebb, for not only was foreign business light but tonnage available was limited. Many small mills did not operate because of unsatisfactory market conditions; 2,795 mills reported idle. The number of big mills operating—those cutting upward of 5,000,000 feet annually—decreased 5 per cent from the year before; the 1,290 mills falling into this classification cut 70.68 per cent of the aggregate output of the country.

The reported lumber cut, the number of active mills reporting, and the estimated annual total cut are given in Table 1 for each year since 1899 for which data have been compiled. The statistics for

all of the years are not directly comparable, since the intensiveness of the individual annual canvass made must be taken into consideration. In the enumerations for 1899 and 1909, field agents of the Bureau of the Census were employed, which permitted the output of nearly all, if not all, mills being recorded. The reported cut and the estimated total cut for 1918 are the smallest for any one of the years shown.

LUMBER PRODUCTION BY CLASSES OF MILLS.

As in previous years, the mills were arbitrarily divided into classes according to the quantity reported cut. These classes are shown in Table 2, with the computed¹ number of mills operating and the computed total production for each of the last five years—1914 to 1918, inclusive.

More than two-thirds of the aggregate output of the country's sawmills was produced by 1,290 mills, or but 5.7 per cent of the 22,546, or computed total number, in operation. The concentration of production among the larger operations—mills cutting 10,000,000 feet and over annually—has increased materially during the last decade. In 1909, this class of mills produced 43.09 per cent of the total cut for the year, while in 1918 the same class of mills cut 59.49 per cent of the total. In 1918, the number of class 5 mills operating was about 100 less than for the year before; a number of class 5 mills in 1917 became class 4 mills in 1918 through their cut falling below 10,000,000 feet.

Figures on sawmill capacity with relation to actual production, arranged by classes of mills and by States, are contained in Table 3. The compilation is based upon answers to a question on the lumber cut schedule sent to the mills as to how much lumber the reporting mill could produce in a 10-hour shift if demand and price were very favorable. While not all of the returns contained an answer, the number of replies is sufficiently large to furnish an excellent basis for the table. Local conditions of a wide variety, with climatic conditions dominating, account for the considerable variation in the average number of 10-hour days operated by the mills in different States, and in the average yearly output per mill. The theory held generally by operators that the larger mills, such as those falling into class 5, operate closer to capacity than do the mills in the lower classes is supported by the figures in the tabulation. A computed average figure for the country as a whole is omitted, since there was no logical common basis for it.

¹ "Computed," as used in this bulletin, expresses results obtained by the extension of figures based on actual returns so as to show totals for approximately all sawmills whether or not reports were received from them.

¹ Shifts reduced to 10-hour basis.² Data not obtained.³ Data not given.

The relative importance of each State in the aggregate cut of lumber is indicated in Table 4, which shows the cut by classes of mills arranged by States. Of the 777 class 5 mills reporting their output for 1918, 105 were located in Louisiana, 54 in Mississippi, 47 in Texas, 38 in Arkansas, and 29 in Alabama. From this group of States 273 class 5 mills reported in 1918, or a decrease of 18 per cent in comparison with the 332 mills reported in 1917. In the Lake States group were 40 in Wisconsin, 30 in Michigan, and 20 in Minnesota, a decrease of 18 per cent in number from 1917. In the western States 132 were in Washington, 72 in Oregon, and 40 in California and Nevada; the class 5 mills in these States in 1917 numbered but 221, so that there is an increase of 10 per cent.

In the 12 States mentioned above, the 607 class 5 mills reporting form 78 per cent of the total reporting from all States. From the four general producing regions embraced within these States comes the bulk of the soft wood cut.

Of the 11,437 mills reporting a cut of from 50,000 to 1,000,000 feet each, 1,089 were in Virginia, 979 in North Carolina, 977 in New York, 677 in Pennsylvania, and 632 in Tennessee. The 4,354 class 1 and class 2 mills in the five States constitute 38 per cent of the two classes of mills reporting for the entire country.

TABLE 4.—Sawmills classified by States, according to reported quantity of lumber cut, 1918.

State.	Aggregate.		Class 5—Mills cutting over 10,000,000 feet.		Class 4—Mills cutting from 5,000,000 to 9,999,000 feet.		Class 3—Mills cutting from 1,000,000 to 4,999,000 feet.		Class 2—Mills cutting from 999,000 feet.		Class 1—Mills cutting from 50,000 to 499,000 feet.

LUMBER PRODUCTION BY STATES.

The total number of sawmills in operation and the total quantity of lumber reported cut in each State for the last 10 years—1909 to 1918, inclusive—are shown in Table 5. The figures accurately portray the fluctuations in the lumber trade for the period covered. Only three of the leading producing States show a gain in output in 1918 over the year before, and these States are in the western group. The increase in Washington, which ranks first in volume of production amounted to less than 1 per cent; in Oregon the increase was 5 per cent, and in Idaho 6 per cent. Production in all of the southern pine States markedly declined from the year before. In comparison with the 1917 output the cut was 18 per cent smaller in Louisiana, 20 per cent in Mississippi, 17 per cent in Arkansas, 22 per cent in Texas, 18 per cent in Alabama, 23 per cent in Florida, and 30 per cent in Georgia. A largely decreased output also is in evidence for the North Carolina pine group of States; in North Carolina the decline amounted to 15 per cent, in Virginia to 19 per cent, and in South Carolina to 27 per cent. The cut in the Lake States was likewise less than for the year before. In Wisconsin the production was less by 8 per cent, in Minnesota 7 per cent, and in Michigan 12 per cent. Other changes in production among the minor producing States may be attributed to more or less local conditions.

TABLE 5.—Total number of active sawmills reporting and quantity of lumber reported or computed, by States, 1909–1918.

State.	Computed totals.					Reported totals.

All other States.....										

1 Includes cut of mills in Nebraska.

2 Includes Kansas, Nebraska, and Nevada.

The relative importance of the several general producing regions of the country at 10-year periods since the middle of the last century is shown in Table 6. The history of the lumber industry is traceable in the tabulation, since it shows the inception of lumbering in each region and its growth or decline during subsequent intervals.

TABLE 6.—*Lumber cut by groups of States, in per cent of the total.*

Northeastern group.—Connecticut, Delaware, Maryland, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, Vermont.

Central group.—Illinois, Indiana, Kentucky, Missouri, Ohio, Tennessee, West Virginia.

Southern group.—Alabama, Arkansas, Florida, Georgia, Louisiana, Mississippi, Oklahoma, Texas.

North Carolina pine group.—North Carolina, South Carolina, Virginia.

Lake States group.—Michigan, Minnesota, Wisconsin.

Pacific group.—California, Nevada, Oregon, Washington.

Rocky Mountain group.—Arizona, Colorado, Idaho, Montana, New Mexico, Utah, Wyoming.

All other.—Iowa, Kansas, Nebraska, South Dakota.

LUMBER PRODUCTION BY KINDS OF WOOD.

Table 7 shows for each of the last 10 years, 1909 to 1918, the computed cut of the different woods. In a preceding table the lessened cut was shown by States, while in this table the decline in output is revealed according to species. Only three woods on the entire list show a greater computed cut in 1918 than in 1917. These are Douglas fir with an increase of 4 per cent, hickory with 5 per cent, and walnut with 61 per cent. The enlarged cut of walnut was due entirely to the demand for this wood for war purposes.

The decrease in yellow pine production from 1917 amounted to more than 2,500,000,000 feet, or 20 per cent. As between 1917 and 1916 the cut of yellow pine fell off 10 per cent. The 1918 cut was more than 4,000,000,000 feet less than in 1916. Others of the more important softwoods, the cut of which declined from the year before, are white pine 2 per cent, hemlock 15 per cent, and western yellow pine 13 per cent. Cypress production decreased 34 per cent. Among the hardwoods the computed output of oak was less by 10 per cent and that of yellow poplar by 17 per cent.

Softwood production forms approximately four-fifths of the aggregate annual cut. The 1918 cut of softwoods was 12 per cent smaller than in 1917; the hardwood cut was 7 per cent smaller than in 1917.

Figures 2 and 3 supplement Tables 5 and 7 by showing graphically the computed figures on 1918 lumber production, by States and by species, respectively.

FIG. 2.—Computed lumber production in 1918, by States.

The several woods which go to make up the bulk of the lumber cut in the United States are treated individually in the following pages. The tabulation for each species shows by States the number of active

mills reporting, the quantity reported cut, the proportion of the total reported cut, the average value per thousand feet f. o. b. mill, and the computed total cut. The average values given in the tables are the weighted averages of about 50 per cent of the 14,753 mills which reported their cut, and accurately reflect the true value of the several species of lumber at the mill. The variation in values for the same wood in different States is caused by character of timber, type of manufacture, and distance from market.

FIG. 3.—Computed total lumber production in 1918, by kinds of wood.

The question is frequently asked in connection with lumber production figures as to what part shortleaf pine forms of the total quantity of yellow pine reported, or the ratio of white oak cut to the total. It is not practicable in the lumber census work to do more than group the figures for all of the yellow pines together, and treat the oaks, gums, cedars, and other woods in the same way, since no standard classification is found among the lumbermen. Producers in one section frequently apply a local name to a given species and only confusion would follow an attempt to segregate the figures.

TABLE 7.—Quantity of each kind of lumber reported, 1909-1914, and computed total production, 1915-1918, by kinds of wood.

YELLOW PINE.

The reported cut of yellow pine for 1918 was 20 per cent under that for 1917 and is the smallest cut recorded since 1899, with the exception of 1905. Since yellow pine production formed 34 per cent of the country's aggregate lumber output, the economic importance of the decline becomes the more marked. Embraced in the classification of yellow pine is the longleaf pine cut in the Southern and Gulf States, the shortleaf pine from the same region as well as Arkansas, and the shortleaf and loblolly pine of the North Carolina pine region.

The lessened output was general among the larger producing States. In Missouri and Maryland alone the 1918 cut was in excess of that reported in 1917. The decrease ranged from 17 per cent in both Louisiana and North Carolina to as high as 36 per cent in Georgia. Through the greater loss in output in Arkansas, that State displaced North Carolina in seventh place in the rank of producing States.

Reports were received from 5,289 active mills in 1918, whereas 6,217 mills reported in 1917.

The average value of yellow pine f. o. b. mill for the year was \$24.38. The figure represents an increase of \$5.38 per 1,000 feet; or 28 per cent, over the year before. The average value rose 33 per cent in 1917 over 1916.

All other States (see Summary, p. 42).....	158	25,783,000	.2	25.13

¹ Longleaf pine (*Pinus palustris*), also known as Georgia pine and hard pine and exported as pitch pine; cut mostly in the Gulf States.

North Carolina pine (*Pinus taeda*), also called shortleaf, loblolly, old field, rosemary, and Virginia pine; cut mostly in Virginia, North and South Carolina, Arkansas, and Texas.

Shortleaf pine (*Pinus echinata*); cut mostly in Virginia, North and South Carolina, Arkansas, Louisiana, and Mississippi.

Sand pine (*Pinus clausa*); Florida and Alabama.

Slash (or Cuban) pine (*Pinus caribea*); cut mostly in Georgia and the Gulf States east of the Mississippi River.

Scrub pine (*Pinus virginiana*), also called Jersey pine; cut in the Middle Atlantic States.

Pitch pine (*Pinus rigida*); Middle Atlantic and Northern States.

Spruce pine (*Pinus glabra*); Gulf States.

Pond pine (*Pinus serotina*); South Atlantic States.

Table-mountain pine (*Pinus pungens*); Appalachian Mountains.

DOUGLAS FIR.

The reported production of Douglas fir, amounting to 5,819,141,000 feet, exceeded the 1917 output by 9 per cent. The computed total cut of 5,820,000,000 feet is the largest for any year for which figures are available. In 1917 the cut of Douglas fir formed 16 per cent of the aggregate output of all lumber in the United States; in 1918, the cut was 20 per cent, or one-fifth, of the total. The 1,101 mills reporting are an increase of 77 mills over the year before. In Washington and Oregon production was slightly larger in 1918, and in California production increased 40 per cent over 1917 with a smaller number of mills reporting. In Idaho and Montana the output decreased.

The average value per thousand feet increased from \$16.28 in 1917 to \$18.77, or 15 per cent. The 1918 figure is the topmost price recorded for this wood.

TABLE 9.—*Reported production of Douglas fir¹ lumber, 1918.*

[Computed total production in the United States, 5,820,000,000 feet.]

State.	Number of active mills reporting.	Quantity reported.	Per cent.	Average value per 1,000 feet f. o. b. mill.

¹ Douglas fir (*Pseudotsuga taxifolia*) is the principal commercial species.

WHITE PINE.

White pine production reported in 1918 was smaller by 4 per cent than in 1917, the total cut amounting to 1,968,474,000 feet. In spite of the fact that it is the smallest quantity cut in more than a decade, white pine assumes the position occupied by oak in recent years in point of production. The 1918 white pine cut was 8 per cent below the 1917 cut in Minnesota, 7 per cent in Maine, and 21 per cent in Wisconsin; the cut gained by 8 per cent in Idaho and 10 per cent in New Hampshire.

The average value of white pine rose from \$24.81 per 1,000 feet in 1917 to \$30.84 in 1918, an increase of 24 per cent.

¹ White pine (*Pinus strobus*) is the white pine cut in the Lake States, the Northeastern States, and the Appalachian region.

Norway (or red) pine (*Pinus resinosa*), though botanically a yellow pine, is cut in the Lake States and largely marketed with white pine.

Jack pine (*Pinus banksiana*) is cut in the Lake States.

Western white pine (*Pinus monticola*) is cut in Idaho, Montana, Washington, and Oregon.

OAK.

The production of oak in the United States has decreased annually during the last 10 years and more, as a result of the depletion of oak timber and the wider use of a greater variety of hardwoods. In 1918 the reported cut was 1,658,714,000 feet, in comparison with 1,967,694,000 feet in 1917, a decrease of 16 per cent. The 1917 cut was 9 per cent less than that of 1916. The shifting center of oak production is indicated by Arkansas taking the place of West Virginia as the principal producing State. Arkansas, Louisiana, and New York were the only States in which the cut was larger than for the preceding year, all of the other States showing decreases ranging from 1 per cent in Pennsylvania to 34 per cent in Kentucky. The oak cut is 32 per cent of the aggregate cut of all hardwoods.

The average value of oak for the year was \$31.11 per 1,000 feet, an advance of \$6.62 per 1,000, or 27 per cent, over the year before.

¹ Commercially the oaks are classed as white and red. The principal commercial oaks are listed below:
White oaks.—White oak (*Quercus alba*) is the white oak common throughout the eastern half of the United States.

Chestnut (or rock) oak (*Quercus prinus*) is found in the Appalachian region.

Post oak (*Quercus minor*) and bur oak (*Quercus macrocarpa*) are common throughout the eastern half of the country.

Overcup oak (*Quercus lyrata*) and cow (or basket) oak (*Quercus michauxii*) are the principal southern white oaks.

Red oaks.—Red oak (*Quercus rubra*) is the red oak common to the eastern part of the United States.

Texan red oak (*Quercus texana*) is the principal red oak sawed in the lower Mississippi Valley.

Pin oak (*Quercus palustris*) is found in the Eastern and Central States.

Scarlet oak (*Quercus coccinea*) is the northern and northeastern red oak.

Yellow (or black) oak (*Quercus velutina*) is common to most States east of the Rocky Mountains.

Willow oak (*Quercus phellos*) is cut mostly in the Southern States.

HEMLOCK.

Hemlock production in 1918 was less by approximately 272,000,000 feet, or 14 per cent, than in 1917. The loss in output in comparison with the preceding year amounted to 12 per cent in Wisconsin, 19 per cent in Michigan, 13 per cent in Washington, 17 per cent in Pennsylvania, and 36 per cent in West Virginia. Washington succeeded Michigan in second place in point of production for all States. The output in Oregon, New Hampshire, and Vermont was larger than in 1917. Wisconsin and Michigan combined furnish 45 per cent of the aggregate cut of hemlock. Washington and Oregon produced 18.6 per cent of the country's total in 1917 and 20.3 per cent in 1918.

The average value of hemlock advanced from \$20.78 per 1,000 feet in 1917 to \$23.97 in 1918, a higher value by \$3.19, or 15 per cent.

¹ Hemlock (*Tsuga canadensis*) is cut in the Lake States, Northeastern States, and the Appalachian region.Western hemlock (*Tsuga heterophylla*) is manufactured in Washington and Oregon.Black (or western mountain) hemlock (*Tsuga mertensiana*) is cut in small quantities. Carolina hemlock (*Tsuga caroliniana*) is occasionally cut in the Appalachian region.

WESTERN YELLOW PINE.

The 1,707,784,000 feet of western yellow pine reported sawed in 1918 was 157,000,000 feet, or 8 per cent, under the 1917 output. The cut in California was 25 per cent less than in 1917 and that State gave way to Oregon as the leading State in production. California furnished 26 per cent of all the western yellow pine cut in 1917 and but 21 per cent in 1918. The cut in Idaho was practically the same as for the preceding year, and a slightly increased total was shown for both Washington and Montana.

The average value of \$20.87 per 1,000 feet for western yellow pine differs from the 1917 average of \$19.59 by \$1.28, or practically 7 per cent.

TABLE 13.—*Reported production of western yellow pine¹ lumber, 1918.*

[Computed total production in the United States, 1,710,000,000 feet.]

¹ Western yellow pine (*Pinus ponderosa*) is the one species cut as such.

SPRUCE.

The particular need for spruce for specific war purposes stimulated the production of this species in the Pacific northwest, with the result that the output is slightly in excess of the cut for 1917. Maine has been the leading spruce-producing State for a number of years, the annual output being approximately one-third of the country's entire cut, but the State dropped into third position in 1918 with its production amounting to but about one-fifth of the total cut. The scarcity of labor probably had something to do with this condition, since but 252 mills reported operating in 1918 in comparison with 298 mills in 1917. Washington's cut was 78,000,000 feet and Oregon's cut 95,000,000 feet in excess of 1917, or an increase of 39 per cent and 79 per cent, respectively. The combined cut of the two States formed one-half of the aggregate cut of the country. West Virginia's output declined 34 per cent.

The high price paid for airplane stock was offset by the lower prices which were necessary to move the large volume of lower grades, so that the average value reached but \$28.65 per 1,000 feet, an advance of \$4.24 per 1,000 feet, or 17 per cent over the 1917 figure.

¹ Red spruce (*Picea rubra*) is the principal species cut in the Northeastern States and the Appalachian region.

Sitka spruce (*Picea sitchensis*) is the principal species cut in Oregon and Washington.

Black spruce (*Picea mariana*) is cut in limited quantities in the Northeastern States.

White spruce (*Picea canadensis*) is cut in the Lake States.

Engelmann spruce (*Picea engelmanni*) is cut in the Rocky Mountain region.

MAPLE.

The production of maple shared in the general slump in output. The reported cut of 696,986,000 feet was 105,000,000 feet, or 13 per cent below that of 1917. In Michigan, where more than 40 per cent of the country's total is cut, production dropped 63,000,000 feet, or 18 per cent from the previous year. Production in New York and Ohio was slightly greater than in 1917.

A higher average mill value was obtained in 1918 than in 1917, the average value of \$29.05 in 1918 being an increase of \$5.89 per 1,000 feet, or 25 per cent.

¹ Sugar (or hard) maple (*Acer saccharum*) is cut principally in the Northern States.

Silver (or soft) maple (*Acer saccharinum*) is also cut in the Northern States.

Red (or soft) maple (*Acer rubrum*) is the principal species cut in the Southern States.

Mountain maple (*Acer spicatum*) and striped maple (*Acer pennsylvanicum*) are cut in the Eastern States.

Oregon maple (*Acer macrophyllum*) is cut in the Pacific Coast States.

GUM.

The cut of red gum in recent years, when the production of other woods declined, either increased or underwent little or no change. In 1918, however, the reported total production of 651,545,000 feet was 79,000,000 feet below the total cut in 1917, or 11 per cent. In Arkansas, in which State approximately one-third of the aggregate output of all States is sawed, the decrease in cut amounted to 15 per cent. The decline was shared in by all of the States with the exception of Alabama, where a slightly increased output advances the State from sixth to fifth place in rank of production.

The average value of \$23.21 is an increase above the 1917 average of \$19.56 of \$3.65 per 1,000 feet, or 19 per cent.

TABLE 16.—*Reported production of gum¹ lumber, 1918.*

¹ Red (or sweet) gum (*Liquidambar styraciflua*) is the only species that goes into red-gum lumber. Commercial sap gum is the sapwood of the red gum.

CYPRESS.

The falling off in cypress production was more marked than for any other one wood. The decrease in reported production was 339,000,000 feet, or 37 per cent. The reported cut in 1918 was 578,026,000 feet. The cut in Louisiana, in which State 51 per cent of the country's cypress was produced, declined from 509,659,000 feet in 1917 to 296,986,000 feet in 1918, or 42 per cent. Florida's cut was 85,376,000 feet in 1918, or 49 per cent less than the 166,857,000 feet of the year before. South Carolina ranked third among the cypress-producing States in 1917, with a production of 59,107,000 feet. In 1918 the cut dwindled to 28,898,000 feet, or half as much as the year before, and the State dropped into fifth place. In 1918, the number of mills reporting totaled 587 in comparison with 654 for the preceding year.

The average value of cypress took an upward turn of 28 per cent from the average of \$23.92 in 1917 to \$30.56 in 1918, an increase of \$6.64 per 1,000 feet.

TABLE 17.—*Reported production of cypress¹ lumber, 1918.*

[Computed total production in the United States, 630,000,000 feet.]

¹ Bald cypress (*Taxodium distichum*) is the one species cut as such.

REDWOOD.

Redwood production was reduced 44,000,000 feet from the reported total of 487,458,000 feet in 1917, a decrease of 9 per cent. Forty mills reported cutting redwood in 1918 and but 36 mills the year before. The statistics given are believed to cover practically all of the redwood cut.

The average mill value of redwood was \$21 in 1917 and \$24.30 in 1918, an advance of \$3.30 per 1,000 feet, or 16 per cent.

TABLE 18.—*Reported production of redwood¹ lumber, 1918.*

California.....	40	443,231,000	100.0	24.30

¹ Redwood (*Sequoia sempervirens*) is the species chiefly cut. Bigtree (*Sequoia washingtoniana*) furnishes a minor part of the redwood production.

CHESTNUT.

The reported total cut of chestnut, amounting to 344,929,000 feet, was a decrease of 10 per cent from the 1917 cut. The decline in West Virginia was 22,000,000 feet, or 21 per cent. That State produces approximately one-fourth of all the chestnut sawed into lumber. Pennsylvania, with an increased output of 3,000,000 feet, or 7 per cent, was the one State to show an advance in 1918 over the year before.

The average value of \$27.31 per 1,000 feet reported for chestnut is \$5.77, or 27 per cent, over the 1917 value.

TABLE 19.—*Reported production of chestnut¹ lumber, 1918.*

¹ Chestnut (*Castanea dentata*) is the only species included in chestnut lumber.

BIRCH.

The quantity of birch reported sawed, totaling 316,101,000 feet, was less by 18 per cent than in 1917. The combined cut of Wisconsin and Michigan forms two-thirds of the aggregate produced in the United States. Wisconsin's cut in 1918 was less than the year before by 47,000,000 feet, or 22 per cent, and that of Michigan by 13,000,000 feet, or 21 per cent. An increased output of 3,000,000 feet in New York over the year before lifted that State from sixth to third on the list of producing States.

The advance in the average value of birch was from \$24.07 to \$29.94 per 1,000 feet, a difference of \$5.87, or 24 per cent.

TABLE 20.—*Reported production of birch¹ lumber, 1918.*

¹ Yellow birch (*Betula lutea*) is the principal species cut in the Lake States, New England, and New York.Paper birch (*Betula papyrifera*) and white (or gray) birch (*Betula populifolia*) are also cut to a limited extent in New England.Sweet (or cherry) birch (*Betula lenta*) is cut in West Virginia and Pennsylvania.River (or red) birch (*Betula nigra*) is cut in the Southern States.

LARCH.

The reported cut of larch, known as tamarack in the Lake States and the Eastern States, amounting to 333,243,000 feet, was within 1 per cent of the total for 1917. Montana, which has led in the production of larch, cut 16 per cent less than in 1917, and gave way to Idaho in first place. The output in 1918 in Idaho amounted to 119,941,000 feet, an increase of 20 per cent. Washington mills enlarged their reported output from 34,242,000 feet in 1917 to 48,248,000 feet in 1918, or 41 per cent. The cut in other States was smaller than that reported for the year before.

The average value of larch went from \$16.21 to \$19.86 per 1,000 feet in 1918, an increase of 23 per cent.

TABLE 21.—*Reported production of larch*¹ (*tamarack*) *lumber, 1918.*

[Computed total production in the United States, 355,000,000 feet.]

State.	Number of active mills reporting.	Quantity reported.	Per cent.	Average value per 1,000 feet f. o. b. mill.

All other States (see Summary, p. 42).....	32	229,000	.1	26.60

¹ Western larch (*Larix occidentalis*) is the species cut in the Inland Empire and the Pacific Northwest. Tamarack, or larch (*Larix laricina*) is cut in the Lake States and New England States.

BEECH.

The reported total output of beech of 255,440,000 feet was smaller by 23,000,000 feet, or 8 per cent, than the 1917 cut. The production of beech is well distributed among the States, no Commonwealth or region dominating the cut. West Virginia with an increased cut of 3 per cent over the year before displaced Indiana in second position in rank of producing States. The output in New York and New Hampshire was larger than for the year before.

The average mill value for beech of \$25.06 was \$5.48 per 1,000 feet, or 28 per cent, above the 1917 value.

TABLE 22.—*Reported production of beech¹ lumber, 1918.*

¹ Beech (*Fagus atropunica*) is the only species that goes into beech lumber.

YELLOW POPLAR.

Yellow poplar production, which declined 17 per cent in 1917 from 1916, fell off 26 per cent in 1918 from 1917. The cut of 241,963,000 feet reported in 1918 is but little more than one-fourth of the quantity reported cut in 1909. The cut in 1918 slumped 34 per cent from the 1917 figure in West Virginia, 15 per cent in Tennessee, 24 per cent in Kentucky, 8 per cent in Virginia, and 24 per cent in Georgia.

The average mill value for yellow poplar in 1918 was \$35.06 per 1,000 feet; in 1917 it was \$27.17; so that there was an advance of 29 per cent for the year.

TABLE 23.—*Reported production of yellow poplar¹ lumber, 1918.*

¹ Yellow poplar (*Liriodendron tulipifera*) is the only species that goes into poplar lumber.

CEDAR.

Cedar production in the country was 230,476,000 feet in 1918, or 11 per cent smaller than in 1917. The cut in Washington was smaller than the year before by 33,000,000 feet, or 25 per cent; Washington produced 52.6 per cent of all the cedar lumber in the United States in 1917 and 44 per cent in 1918. The cut increased in several States—9 per cent in Oregon, 75 per cent in Idaho, 42 per cent in Michigan, and slightly in California.

The difference in the species cut in the several regions is responsible for the wide variation in the average value shown for the individual States. In 1917 the average for all States was \$19.40; this increased \$5.46 per 1,000 feet to \$24.86 in 1918, or 28 per cent.

TABLE 24.—*Reported production of cedar¹ lumber, 1918.*

¹ Western red cedar (*Thuja plicata*) is cut in Washington, Oregon, and Idaho.

Port Orford cedar (*Chamaecyparis lawsoniana*) is cut in Oregon.

Yellow cedar (*Chamaecyparis nootkatensis*) is cut in Washington.

Incense cedar (*Libocedrus decurrens*) is cut in California.

Western white cedar (or arbovitæ) (*Thuja occidentalis*) is cut in the Lake States and the Northeastern States.

White cedar (or jumper) (*Chamaecyparis thyoides*) is cut in the Atlantic Coast States.

Red cedar (*Juniperus virginiana*) and southern red juniper (*Juniperus barbadensis*) is cut in Tennessee, Florida, and Alabama.

TUPELO.

The total reported cut of 201,103,000 feet of tupelo in 1918 was 20 per cent under that of the year before. Louisiana's portion of the total cut increased from 51 per cent in 1917 to 61 per cent in 1918, despite the fact that the State's output was 5,000,000 feet below that of the year before, or 4 per cent. Alabama's cut declined 37 per cent, North Carolina's 32 per cent, and South Carolina's 51 per cent. The cut in Arkansas jumped from 4,788,000 to 8,786,000 feet, or 84 per cent.

A higher average mill value was obtained in 1918 than in 1917, the average value of \$22.73 in 1918 being an increase of \$4.67 per 1,000 feet, or 26 per cent.

TABLE 25.—*Reported production of tupelo¹ lumber, 1918.*

¹ Tupelo (or cotton gum) (*Nyssa aquatica*) is cut in the Gulf States.Black gum (or pepperidge) (*Nyssa sylvatica*) is cut in the Atlantic and Central States and is sold both as tupelo and black gum.Water gum (*Nyssa biflora*) is cut to a small extent in the South Atlantic States.

WHITE FIR.

After several years' continued growth in the production of white fir, the cut of 210,750,000 feet in 1918 was 1 per cent under that of the year before. The manufacture declined 13 per cent in California and Nevada, and 42 per cent in Oregon; it increased 34 per cent in Idaho and 38 per cent in Washington.

The 1918 average value of white fir was \$19.61 per 1,000 feet; that of 1917, \$17.16. The advance was equivalent to 14 per cent.

TABLE 26.—*Reported production of white fir¹ lumber, 1918.*

¹ White fir (*Abies concolor*) is cut only in the west.

Marketed as white fir are:

Grand fir (*Abies grandis*), cut mostly in Idaho and Montana.Silver fir (*Abies amabilis*), cut chiefly in Washington.Red fir (*Abies magnifica*), cut chiefly in California.Alpine fir (*Abies lasiocarpa*), cut chiefly in the northern Rocky Mountain and Cascade Mountain region.

BASSWOOD.

Basswood production, reported as 174,661,000 feet in 1918, was 8 per cent below that of 1917. In Wisconsin the cut was 7 per cent greater than the year before, and the State's proportion of the entire output of the country increased from 35.5 per cent to 41.5 per cent. Michigan's production decreased 22 per cent and West Virginia's 19 per cent.

An increase of \$8.04 per 1,000 feet—from \$25.96 in 1917 to \$34 in 1918—took place in the average mill value for basswood. The increase is 31 per cent.

TABLE 27.—*Reported production of basswood¹ lumber, 1918.*

¹ Basswood (or linn) (*Tilia americana*) is cut in the Lake States.White basswood (*Tilia heterophylla*) is cut in the Appalachian Mountain region.Downy basswood (*Tilia pubescens*) is cut in limited quantity in the Southern States.

ELM.

The reported cut of elm in 1918, amounting to 166,481,000 feet, is 13 per cent smaller than that for the preceding year. The cut in Wisconsin, the leading State in production, was less than 1 per cent smaller than in 1917. A decrease is recorded of 20 per cent in Michigan, 14 per cent in Arkansas, and 25 per cent in Indiana.

The upward trend in prices carried the average mill value from \$23.89 in 1917 to \$28.19 in 1918, an increase of \$4.30, or 18 per cent, per 1,000 feet.

TABLE 28.—*Reported production of elm¹ lumber, 1918.*

¹ White (or soft) elm (*Ulmus americana*) is cut in all of the States east of the Rocky Mountains.Slippery (or red, or soft) elm (*Ulmus pubescens*) is cut in the same region as white elm.Cork (or true rock) elm (*Ulmus racemosa*) is cut in the Lake States.Wing elm (*Ulmus alata*) and cedar elm (*Ulmus crassifolia*) are occasionally cut in the lower Mississippi Valley.

COTTONWOOD.

In line with the reduction generally in the cut of other woods, the reported production in 1918 of 148,327,000 feet of cottonwood represents a falling off of 17 per cent in the output compared with the year before. The decrease amounted to 28 per cent in Mississippi, 39 per cent in Arkansas, and 37 per cent in Louisiana.

The average value of cottonwood went up \$2.84 per 1,000 feet—from \$23.19 in 1917 to \$26.13 in 1918—an advance of 13 per cent.

TABLE 29.—*Reported production of cottonwood¹ lumber, 1918.*

¹ Common cottonwood (*Populus deltoides*) is the species most commonly cut east of the Rocky Mountains and more particularly in the lower Mississippi Valley.Swamp cottonwood (*Populus heterophylla*) is cut in the Mississippi Valley States.Aspen (or popple) (*Populus tremuloides*) is cut in the Lake States and the Northeastern States, and to a limited extent in the Rocky Mountains and farther west.Large-toothed aspen (*Populus grandidentata*) is cut in the Lake States and Northeastern States.Balm of Gilead (*Populus balsamifera*) is cut in the Lake States and Eastern States.Black cottonwood (*Populus trichocarpa*) is cut in the Pacific Coast States.

ASH.

The reported output of ash in 1918, totaling 147,414,000 feet, was within 7 per cent of the cut for the previous year. In practically every State the production was smaller; the decline in Louisiana amounted to 9 per cent, in Arkansas 7 per cent, in Tennessee 5 per cent, and in Wisconsin 6 per cent, while the output in Indiana was nearly the same as in 1917.

Ash has next to the highest average value of any domestic wood. A 29 per cent increase in the average value took place during the year. The 1917 value was \$30.01; the 1918 value, \$38.70.

¹ Lumber trade practice specifies white ash and brown ash. The former is cut from the white ash tree and the latter from the black ash tree.

Green ash (*Flaxinus lanceolata*) is cut in the Southern States.

White ash (*Flaxinus americana*) is cut in the Central States.

Black ash (*Flaxinus nigra*) is cut in the Lake States and Northeastern States.

Red ash (*Flaxinus pennsylvanica*) is cut in limited quantity in the Eastern States.

Oregon ash (*Flaxinus oregona*) is cut in the Pacific Northwest.

SUGAR PINE.

Decreased manufacture of sugar pine to the extent of 16 per cent took place in 1918 from the year before. The total output reported was 111,800,000 feet. A reduction in the number of active mills is noticeable for both California and Oregon.

The average value of sugar pine was \$28.26 per 1,000 feet in 1918, an increase over the 1917 value of \$3.57, or 14 per cent.

¹ Sugar pine (*Pinus lambertiana*) is the only species cut as such and is found only in California and southern Oregon.

HICKORY.

Hickory and walnut were the only hardwoods the production of which was greater in 1918 than in 1917. The reported cut of hickory was 89,405,000 feet, an increase of 8 per cent. Contributing to this larger total was an increased cut of 18 per cent in Arkansas, 11 per cent in Tennessee, and 19 per cent in Mississippi and Indiana.

The average mill value of hickory of \$37.95 per 1,000 feet was \$8.47, or 29 per cent, more than the corresponding figure for 1917.

TABLE 32.—*Reported production of hickory¹ lumber, 1918.*

¹ Several species of hickory are cut, the principal ones being shagbark (*Hicoria ovata*), shellbark (*Hicoria laciniosa*), pignut (*Hicoria glabra*), bitternut (*Hicoria minima*), and mockernut (*Hicoria alba*).

WALNUT.

Stimulated by Government agencies, the production of walnut reached a total of 87,305,000 feet in 1918, an increase of 63 per cent over the 1917 cut. The Missouri mills more than doubled their cut, and the output was larger by 52 per cent in Indiana, 51 per cent in Ohio, and 57 per cent in Tennessee. Four mills in Kansas cut 7,507,000 feet, or nearly 9 per cent of the aggregate production of the country. Mills in 34 States reported the manufacture of walnut.

The average mill value of walnut increased \$4.61 per 1,000 feet, or 6 per cent, for the year. The value was \$72.99 in 1917 and \$77.60 in 1918.

TABLE 33.—*Reported production of walnut¹ lumber, 1918.*

¹ Black walnut (*Juglans nigra*) is the only species cut as such.

BALSAM FIR.

Balsam fir lumber production in 1918 declined 13 per cent from the year before, the total reported being 65,402,000 feet. Maine mills milled 57 per cent of the country's total output in 1917 and but 46 per cent in 1918. The cut in this State amounted to 30,161,000 feet and represented a decrease of 30 per cent. The cut was less by 4 per cent in Minnesota, 21 per cent in Michigan, and 17 per cent in Vermont. It was larger by 76 per cent in Wisconsin.

The average mill value of balsam fir jumped from \$20.02 in 1917 to \$27.27 in 1918. The difference of \$7.25 per 1,000 feet was 36 per cent.

SYCAMORE.

Sycamore production, totaling 26,283,000 feet, was 8 per cent smaller than the cut reported for the preceding year. In Arkansas, Indiana, and Tennessee, the three States leading in production, the output was smaller; in most of the other States mills reported a slightly increased cut.

The average mill value for sycamore in 1918 was \$23.59 per 1,000 feet, compared with \$18.68 in 1917, an advance of 26 per cent.

TABLE 35.—*Reported production of sycamore¹ lumber, 1918.*

¹ Sycamore (*Platanus occidentalis*) is the only species cut as such.

LODGEPOLE PINE.

The aggregate cut of 12,176,000 feet of lodgepole pine was 2 per cent less than the cut in 1917. The mills in Montana reported a smaller output, while those in Colorado, Wyoming, and Utah returned a slightly larger production.

The increase in the average mill value for lodgepole pine was \$2.61 per 1,000 feet, or 14 per cent, the average having been \$18.34 in 1917 and \$20.95 in 1918

MINOR SPECIES.

In Table 37 is shown the quantity reported sawed of a number of woods, both domestic and imported, which have more or less special uses and which are in themselves not important enough to be tabulated and discussed separately. The tabulation also indicates the average value reported and the States in which the several woods were sawed. Mahogany forms the largest single item listed; the production was 17 per cent smaller than in 1917. The reported output of locust was almost 5 times greater and that of Spanish cedar almost 10 times greater in 1918 than in 1917.

¹ Arbitrary value assigned.

PRODUCTION OF LATH.

Lath production in the United States decreased 40 per cent in 1918 in comparison with the output in 1917. The 1917 cut was 17 per cent less than that of 1916. The smaller output reflected the light demand and the character of construction work carried on during the year; lath production fluctuates each year with the number and class of buildings put up. The reduction in lath production was general. For each State listed a decrease is noticeable in a comparison of the 1918 figures with those of the year before.

The mills reporting their lath cut in 1918 numbered 909, while in 1917 the number was 1,456. Table 38 shows the number of active mills reporting and the production of each for the last few years.

PRODUCTION OF SHINGLES.

Shingle production showed a decrease in 1918 of 35 per cent from the 1917 figures. The 1917 output was less by 7 per cent than the preceding year. The number of shingles reported produced in 1918 was 5,690,182,000. The number of mills reporting was 1,052, in comparison with 1,619 in 1917 and 1,932 in 1916. The figures would indicate the inactivity of 880 mills which were active in 1916. Washington's output of 4,238,714,000 shingles is three-fourths of the whole number manufactured in the United States. All of the States, with the exception of Tennessee, show a decreased production in 1918. The decline in Washington was 33 per cent from the year before.

LUMBER VALUES.

The average values for lumber shown in Table 40 were determined for each species from the individual reports of mills representing every variation incident to the logging, transportation, manufacture, and sale of lumber. More than one-half of the mills, in reporting their cut, furnished values at which sales were made f. o. b. mill. These reports were scrutinized carefully and the figures are undoubtedly representative.

The table shows the average value of the different woods for specified years from 1907 to 1918, during which period the lumber industry has undergone rather marked vicissitudes. The average value of \$24.79 per 1,000 feet for all woods in 1918 is an increase of \$4.47, or 22 per cent, over the 1917 average figure. It is the highest value recorded for any one year for which statistics are available. Every wood listed in the table shared in the advance, some to a much greater degree than others, as is revealed in the individual species tables.

TABLE 40.—Average value per 1,000 feet board measure, by kinds of wood, for specified years, 1907-1918.
