"STERLING QUALITY" SEEDS MEAN THE BEST

*A Descriptive List of . . .***CHOICE FLOWER SEEDS***With General Directions For Cultivation*

A rich, sandy loam is the best for most flowering plants. The soil of a good garden should be deep, well pulverized, and if fertilizers are used they should be thoroughly mixed with the soil.

It is best in practically all instances except hardy annuals to start the seed in boxes, preferably a box about 18 x 24 inches and 4 inches deep, using very sandy soil with leaf-mold that will not bake, and provide for drainage by boring some holes in the bottom of the box. It is best not to put any fertilizer in the seed-box, since it is only necessary to bring the plants to the third or fourth leaf, when they should be pricked out and reset in another box, in which the soil should be loam mixed with leaf-mold. It is important that the plant be of good size, strong and sturdy, when finally transplanted in the garden.

If the seed be sown directly in the garden, it should be sown in the spring after the soil is well worked and fertilized. When up, the plants must be thinned from two to twelve inches, depending on the variety, otherwise they will be weak and spindling. It is a mistake to leave plants too thick. A common mistake in sowing flower as well as other seeds is covering too deep. As a general rule, cover only to the depth of the thickness of the seeds, or with medium-sized seeds, like Balsams, Zinnias, etc., half an inch or less is the proper depth. Such fine seeds as Portulaca, Nicotiana, etc., need only to be pressed into the soil with a piece of board or palm of the hand. Always press the earth down firmly after sowing all flower seeds, else there is danger of their drying up before the roots can get firm hold of the soil. Seeds of the hardier annuals may be sown where they are to grow; but, as a rule, it is preferable to transplant, as the plants are generally stronger and stand the drought better. During very dry weather, and when the seedlings are first set out, they should be watered frequently. Provide some support for all such annuals as require it.

The weeds should be kept down and the ground loosened often, so that the plants will receive the full benefit of the rains and dews, which they will not if the ground is allowed to become hard and baked.

A popular half-hardy annual produced in a great variety of classes and an almost endless number of colors. The tallest varieties grow about two feet high and some varieties of dwarfs are not six inches high. The best method of culture is to sow the seed in boxes in March or April. The seed can be sown in rows where the plants are to remain, thinning them from six to twelve inches apart, according to variety. One of the best annuals for cut flowers.

NASTURTIIUM

NASTURTIIUM

A popular flower which is in constant bloom throughout the season, making a better display than almost any other plant. New colors are being developed, and in our list will be found all the best varieties that have been introduced.

Nasturtiums are of the easiest culture and require very little care after the seed is sown, merely weeding and the seed-balls picked off. If these are permitted to mature, the beauty of the plant is soon lost. Plant the seed one inch deep in moderately good soil. The tall sorts are specially adapted for covering unsightly fences or trailing over rocks and rough ground. Hardy annual.

Sow as early as the ground can be prepared in a deep, rich, moist soil, in drills 6 inches deep, covering about 2 inches deep. As the vines grow, fill up the trenches with soil and thin out to about 4 or 5 inches apart. A popular plan at the present time is to sow in double rows with a trellis or a row of brush between.

THE NEW BUFFALO INCUBATORS

Designed by CHAS. A. CYPHERS

¶ In the construction of the New Buffalo Incubator little wood is used. The casing is of open-hearth iron, galvanized and can never rust. It is lined with fibre-board, which eliminates any loss of heat by radiation. The walls are double, the ample space between the inner and outer cases being well packed. This makes an incubator as substantial and one that will last as long and hold the heat as well as the original Cyphers or Model.

¶ The front is made of hardwood, finished in the natural. In addition to a glass door, it has an outer hardwood paneled door to darken the hatching chamber and to preserve the heat.

THE INTERNATIONAL SANITARY HOVER

The Sanitary Hover can be used anywhere that there is protection for the chicks from wind and rain. It is not a center heat hover. It is warmest at the outer edge, which causes the chicks to distribute themselves near the curtain and prevents crowding and smothering the chicks.

It is a perfectly ventilated brooding device. It supplies plenty of fresh air for all the chicks, with no drafts. It can be carried around with ease and is ready for use wherever it may be dropped. No carpenter work is required to set it up—no cutting of holes nor building of platforms. All one has to do to set it up is set it down. A simple, safe, convenient, and dependable brooding device.

THE LULLABY BROODER

Get away from the old idea that you should keep fifty chickens in a lot. You will make almost, if not quite, as much profit with twenty-five chickens raised in the "Lullaby" way as with fifty raised in the old-fashioned way.

They will make a great deal better use of food consumed, grow larger, hardier, and get to laying earlier, and once you plan your plant properly you can care for just as many in lots of twenty-five as you did formerly with fifty together.

It is not a question of how many chicks you put together in the spring that tells the profit later. It is, "*How many did you raise out of every 100 Hatched?*"

The Great Time, Labor, Fuel and Chick Saver Coal-Burning, Self-Regulating, Simple, Safe and Economical

Coal is recognized as the safest fuel to use to guard against the burning of property—the Newtown burns coal. Every part of the Newtown Heater is cast iron with the exception of its heavy sheet metal casing around the fire bowl, which is a *special safety feature*. Air circulates between the heavy sheet metal casing and the hot fire bowl, which prevents over-heating of this part, so that there is no danger of the litter or buildings catching fire. The fire bowl is *not* exposed.

"Pittsburgh Perfect" Chicken, Rabbit and Poultry Fences

"Here is a combination of 'Pittsburgh Perfect' Fence styles whose field of usefulness and perfect adaptability outclass by far any other fences made for similar purposes."

"They give to poultry quarters, gardens, etc., a smart, up-to-date appearance, and are the most durable and thoroughly satisfactory poultry fence possible to procure. It is unnecessary to use a top board with any of these fences, as we employ an extra heavy top and bottom wire, which also adds greatly to strength. A top board gives the chickens a chance to see how high they have to fly to get over, and if no board is used they will not fly over. For about a foot and a half from the ground the line wires are only an inch apart, while the stay wires are placed either four or six inches apart."

Made in six different heights, offering many economical advantages.

Economy Oat Sprouter

The feeding of sprouted oats is no longer an experiment. Experience has proven its value as a food for stimulating egg-production.

Oats sprouted in the right manner furnish food most nearly akin to the fresh, green growth of spring-time, the prolific laying-time of the year. By feeding sprouted oats through the winter, egg production can be kept up to a much larger degree than otherwise.

The Economy Oat Sprouter employs the natural process for sprouting. It has a natural drainage and is effective and economical to the highest degree.

Norwich Air-Lock Fountain

With a capacity of five gallons of water, which being held in vacuum is always fresh, and with the heater attachment, we unhesitatingly pronounce the **Norwich Automatic Air-Lock Fountain** as the best device that has been placed on the market for the purpose for which it is intended. With this machine contamination is a physical impossibility and you may rest assured that your birds are drinking clean, fresh water at all times. The slight heat imparted to the water during the cold weather produces a drink at just the right temperature to induce the birds to consume large quantities, and in yards where the machine has been tested it has been found that they drink almost twice as much during the winter months as they do where cold water is supplied from the ordinary fountain. Water is indispensable in the production of eggs, and it is a natural inference that the more water we can induce our birds to consume, the more eggs they will produce.

O. K. POULTRY LITTER supplies a long-felt want to the poultryman, because it is always practically in the same condition—clean, soft, sweet and pliable after being used for months. The Park & Pollard Lay or Bust Feeds

EVERY YEAR that we handle this line of feeds for poultry increases our confidence in them; in fact, it seems impossible for any one to make anything but a success of poultry keeping if these rations are used and their Year Book directions followed.

P. & P. GRITLESS-CHICK FEED

For Baby Chicks from 48 Hours Old to 3 Weeks of Age

The Gritless-Chick Feed is the **First Aid** to the young chickens. It contains finely ground, dried codfish, and puts life and ginger into the youngsters from the first.

P. & P. GROWING FEED

The Park & Pollard Growing Feed should always be fed in connection with the **Gritless**, or **First Aid**, ration, from the age of one week to full maturity. You will be surprised every day with the growth and uniform development of your flock with this ration; broilers always plump, and in less than half the time; roasters always fat and ready to market; pullets laying a month to six weeks ahead of your neighbors; and less mortality than any other method.

P. & P. SCRATCH FEED

This combination of grains is especially compounded to tickle the appetites of the growing stock and the layers. It contains a mixed variety of choice, sweet grains and seeds, so proportioned as to balance the other feeds of the line. It sometimes costs a nickle or dime more than some other feeds, but it produces the results, and the results are the only things you can sell for **cash**.

Keep in Easily Accessible, Open Hoppers Before Mature Fowl Continuously.

This is the ration that has made the most famous line of poultry feeds on the market. First of all it sounds good to the poultryman, then it makes good **wherever it is used**. It produces eggs—lots of them—without sapping the vitality of the breeding stock at any time of the year. In the coldest winter weather or the hottest summer days, all layers give full returns on this ration. Equally good for yearlings, two-year-olds or pullets; it does not wear them out, it simply fully nourishes and stimulates the egg-producing machinery of the birds, at the same time keeping it in perfect working order, as any good ration or workman should. It is rightly named "Lay or Bust" and we sell it on the money back plan.

BANNER ROOT CUTTERS

No. 7, Exclusively for Poultry

No. 7

It cuts fast and is easy running. Leaves the feed in fine brittle, ribbon-like strips that make choking impossible. Fowls large or small can safely eat the feed. The knives are adjustable and made of the very best of steel. An iron gate in bottom of hopper lets dirt and gravel escape before reaching the knives. In this cutter we offer the poultrymen a low-priced, high-grade, nicely finished and mechanically constructed machine, and feel that any one who desires to feed roots and vegetables to their flocks can well afford to own one. Two to five minutes will cut enough feed for a large flock of fowls.

Price, \$5.00

BANNER ROOT CUTTER, No. 31

Made entirely of iron and steel. A positive feed. It must cut the roots—can't get away from the knives.

It has 19 gouge-shaped steel knives, fastened from the inside with two bolts to a cast-iron, cone-shaped drum. They project through the round openings in the drum about $\frac{3}{4}$ of an inch, and every time the drum turns around once the knives hit and cut the roots 19 times. The drum is driven by gear wheels with the power in favor of the operator, so it makes an easy running Root Cutter, with good capacity. The hopper is 24 inches in diameter at the top, 11 inches at the bottom, and 16 inches deep. Capacity, 45 to 65 Bushels per hour.

NEW ENGLAND ROOT CUTTER

With Separate Crank and Balance Wheel

The great advantage of feeding cattle and sheep during the winter months partly on vegetables has become generally recognized. It is necessary, however, to properly cut the Roots so as to prevent choking, and to make them easy of digestion.

We have in this cutter one which will do the work in every way acceptably, and for which only a small price is charged.

SHARPLES TUBULAR CREAM SEPARATOR

Efficient, economical, labor-saving. Saves fifty per cent. in cost of operation, in labor of cleaning, in oil and in repairs, and IT SAVES ALL THE CREAM. The skim milk is fed to your stock at once while it is warm and wholesome—which saves the haul to and from the creamery. The saving effected on the butter fat alone will pay for your Separator in a short time. There are many good Separators in the market, and if you have three cows or more it will pay you to get one, but in Separators, as in everything else, it is the best which pays most and longest.

THE MOST IMPORTANT FACTORS IN DAIRYING TODAY

The Sharples Mechanical Milker reduces the cost of milking seventy-five per cent. One operator with a boy to assist him can milk an hundred cows in less than two hours. Its regularity and uniformity of action foster milk production and, being protected from contamination, dust and stable air, the product is purer, its bacterial count lower, and its value both to creamery and consumer is enhanced. Planet Jr. Garden Tools

Planet Jr. Tools are better made, better finished and capable of a greater variety of work than any other on the market, and we guarantee them to be satisfactory in every way. We call especial attention to the addition of the combined Seeders and Wheel Hoes, viz., Nos. 28, 29 and 30 Machines.

A 72 page catalogue will be sent FREE on application

No. 28 Planet Jr. Combined Hill and Drill Seeder, Wheel Hoe, Cultivator, Rake and Plow

The most accurate seeder in action and the nearest perfect in construction that we have ever offered. Accuracy of construction makes for accuracy in operation, and it saves seed and labor and insures an even stand of plants and a correspondingly satisfactory crop. The new method of delivering the seed from the hopper is much superior to any that has heretofore been used.

We recommend it as our very best seeder. It is light running; is supplied with a narrow opening plow which plants the seed in a narrow, straight line, leaving a minimum amount of hand weeding, for the weeds are usually enough to one side or the other of the straight, narrow row of plants as to be cut out easily with a wheel hoe.

AS A SEEDER it drops all garden seeds in hills 4, 6, 8, 12 or 24 inches apart, or sows them in drills with accuracy, opening the furrow, covering, rolling down and marking the next row all at once. The seed drops in full sight of the operator, the rear of the spout being open and white.

No. 28 Planet Jr.—Holds 3 Quarts

Price, Complete, \$15.00 As a Seeder Only, \$11.50

No. 4 Planet Jr. Combined Hill and Drill Seeder, Wheel Hoe, Cultivator and Plow

No. 4 Planet Jr.—Holds 2½ Quarts

A favorite with all gardeners, and especially those who while not having a large acreage get a lot of pleasure and profit from using a seed drill and wheel hoe to plant and cultivate their family garden. Even those who think they haven't quite enough work to warrant buying a drill will find that this combined tool will quickly pay for itself in satisfaction in labor saving and in increased crops. It combines, in a single convenient implement, a capital hill-dropping seeder, a continuous row seeder, an admirable single wheel hoe, an excellent furrower, a capital wheel cultivator and a rapid and efficient wheel garden plow. It sows in continuous rows with great uniformity, and drops with accuracy in hills 4, 6, 8, 12 or 24 inches apart. **The feed is automatically** stopped by raising the handles, and started by lowering them.

Price, Complete, \$11.00

As a Seeder Only, \$9.00

No. 3 Planet Jr. Hill and Drill Seeder

The No. 3 driving wheel is steel, with heavy forged steel spokes, not "piano wire," of proper height, with broad face, making the tool light and easy running, even with the hopper filled to the brim.

The special force feed is admirable, working equally well whether sowing with an ounce or a full hopper.

The hill dropping is simple and reliable, making hills either 4, 6, 8, 12 or 24 inches apart.

Changes of distance between hills may be made in less than a minute, by substituting one gauge wheel for another.

A favorite among onion growers, market gardeners and seedsmen.

Planet Jr. Garden Tools

No. 25

No. 25 Planet Jr. Combined Hill and Drill Seeder and Double Wheel Hoe, Cultivator and Plow

This new combined machine is intended for gardeners who have a large enough acreage in crops for a Double Wheel Hoe to be used to good advantage, and yet prefer not to buy seeders and wheel hoes separately.

As a seeder it is practically the same as the Planet Jr. No. 4; will sow in drills any thickness or drop in hills 4, 6, 8, 12 or 24 inches apart and has the same feed, hill dropping mechanism and Automatic device for stopping the feed, and has also the new seed index. It is thoroughly substantial and is accurate in planting all kinds of garden seeds in either hills or drills.

The change from Drill to Wheel Hoe and back again is quickly made, and the entire combination is one we can heartily recommend and guarantee satisfactory.

Made with steel frame, practically indestructible.

Holds 2 1-2 Quarts

Price, \$13.50

No. 12 Double Wheel Hoe, Cultivator and Plow

The Planet Jr. Double Wheel Hoes are the greatest cultivating tools in the world for the onion and small beet grower, and also for every grower of garden crops from drilled seed. They do more and do it better and easier than can possibly be done in any other way. The frame is steel.

The hoes are the most valuable of all the wheel hoe attachments; are oil tempered and polished. Use the 6-inch for rows 12 inches and upwards.

The Plows are invaluable; use them with points together for opening furrows for manure, seed, etc., then exchange sides for covering; use them also for plowing away from or toward the crop, both sides at once.

The cultivating teeth for deep or shallow work and for marking out.

Furrows for manure or seeds can be opened and covered. In cultivating, plow away, weed the row and plow back again. This tool will enable a busy man to do in his spare minutes nearly all the work of a family garden. Chicken raisers find it of great advantage in plowing up their scratching yards.

The Skinner System of Irrigation

There are times in nearly every growing season when a crop could be saved or its value doubled if the grower could call down from the skies a soft, gentle rain of sufficient duration to abundantly water the crop. With the Skinner System of Irrigation the rainfall is at the command of the grower.

Not only will the Skinner System protect against drought, but it will distribute the water with a uniformity not otherwise possible. The moisture is applied in the way which is most advantageous to the soil and to the crop, without injury to the plant. Commercial fertilizers, insecticides and fungicides can be distributed through the Skinner System. All of this is accomplished with a minimum of labor. The early maturity of the crop, securing the advantage of better prices, and the more luxuriant and uniformly developed growth mean greater returns per acre.

A Special Cleaner for Dairymen, Milk Dealers, Creamerymen, Ice Cream Manufacturers, Etc.

is an article that is entirely different from anything heretofore introduced into the dairy or creamery for cleaning purposes.

¶ It is a cleaner of unusual merit, without any greases, fats, oils or lye in its composition. It cleans, sweetens, and rinses easily, leaving no residue or flavor.

¶ For cleaning milk cans, bottles, separators, clarifiers—in fact, everything about the dairy or creamery—Wyandotte Dairyman's Cleaner and Cleanser cannot be equalled. No greasy deposits too heavy for it to remove, no places too sour for it to make fresh and sweet.

¶ Wyandotte Dairyman's Cleaner and Cleanser is used by four out of every five butter and cheesemakers and by thousands of milk producers, and it is the only cleaner recommended by Dairy College Authorities.

¶ Every claim for Wyandotte Dairyman's Cleaner and Cleanser is fully guaranteed and we will be pleased to supply you with this understanding. May we not expect your order?

An Abrasive Cleaning and Mopping Powder WYANDOTTE DETERGENT

¶ We unhesitatingly recommend Wyandotte Detergent for all cleaning, mopping and scrubbing purposes. It is, first of all, an excellent washing agent. Then again, it has sufficient abrasive properties to loosen any hardened or stubborn deposits that do not yield readily to ordinary cleaning—but it will never scratch. Added to these are slight lubricating qualities.

¶ Wyandotte Detergent is used in office buildings, hotels, etc., for cleaning tile, marble, sinks, wash bowls and other similar surfaces. If you wish to preserve the natural gloss and beauty of your floors and walls and to keep them in a sanitary condition, you will find Wyandotte Detergent by far the safest and most satisfactory abrasive cleaner you can use. It costs but little, and you can well afford to use it.

¶ We positively guarantee every claim made for Wyandotte Detergent.

For Washing Dishes, Refrigerators, Etc.

¶ Many tests have developed the fact that amongst all the washing powders, etc., on the market, the one which gives the best results for washing dishes, either by machine or by hand, and for all other cleaning where sanitary results are so desirable, is Wyandotte Sanitary Cleaner and Cleanser. It quickly removes greases, and thoroughly cleans each dish, producing a bright polish and leaving no odor or deposits.

¶ Wyandotte Sanitary Cleaner and Cleanser is not a soap or soap powder. You will note it makes no suds and has no soapy odor. Nor does it smart or bite the hands. For removing odors, for cleaning out drain pipes, sweetening the refrigerator, and for other general cleaning, Wyandotte Sanitary Cleaner and Cleanser is distinctly superior to ordinary cleaners. We know you will not be without it, once you give it a thorough trial and know what it does and how little it costs to use.

STERLINGWORTH POWDERED HELLEBORE

Grasselli Arsenate of Lead

The superior qualities of this article as an insecticide are already well known. The arsenic is the poisoning agent. The lead serves two purposes: It acts as a binder, holding the arsenic, upon the foliage and forms a strong chemical union with the arsenic, reducing to the minimum soluble arsenic, which causes foliage injury.

It contains less than 1/2 per cent. soluble arsenic, and will not injure the most delicate foliage when used according to directions.

Packed in 600 pound barrels, 300 pound barrels, 100 pound kegs, 50 pound kegs, 20 pound kegs, 10 pound kegs, 5 pound earthenware jugs, 2 pound glass jars, 1 pound glass jars.

Grasselli Lime Sulphur Solution

The value of Lime Sulphur Solution as an Insecticide and a Fungicide is due entirely to the actual combined lime and sulphur in solution.

Grasselli Lime Sulphur Solution contains 33 per cent. combined lime and sulphur in solution at 32 to 33 degrees Beaufort, the maximum that will stay in solution under the various climatic conditions to which it is liable to be exposed.

Lime Sulphur Solution has largely replaced Bordeaux Mixture and other copper sprays, because it can be used strong enough to control fungi without serious injury to fruit or foliage.

Sheep's Head Brand Pulverized Sheep Manure

A complete natural fertilizer, supplying all the necessary plant food elements—Nitrogen, Phosphoric Acid and Potash—in combination with organic matter or humus, and it is this natural combination that produces the peculiar action and effect in the soil which can only be had from animal manures. It can be used without fear of weeds and foreign grasses that always follow the application of ordinary stable manures.

Sheep manure is probably more largely used in greenhouse growing of flowers and vegetables for market than any other fertilizer, because it is safe, and can be relied upon for quick, sure results. It is unequalled for either dry or liquid top-dressing, especially for carnations, chrysanthemums, asters and other hardy floral crops. In greenhouse vegetable growing it is used for mixing into the soil when the beds are filled and for feeding during the growing season, and produces rapid growth, development and maturity of superior crops.
