SATISFACTION LIST

FOR

FAMILY GARDENERS.

Consequently if wanted these twelve must be bought from the

SEED CATALOGUE.

Consequently if wanted these ten must be bought from the

D. LANDRETH SEED CO.,

Bloomsdale Seed Farms, Bristol, Pennsylvania.

Price, **30c** for each packet

Landreths pay the postage in every instance.

The reader who wants **any of these seeds** is requested to send stamps or a **postal order** with the **order for seeds**. A postal order can be obtained for a three-cent fee up to \$2.50, and a five-cent fee up to \$5.00.

The sorts indicated are certain to give satisfaction because not excelled in quality.

WHY NOT HAVE THE BEST?

BEET—Landreths' Amazement

Producing a root two inches in diameter and unusually attractive in appearance, being uniformly round with smooth skin, small foliage, mouse or thread-like tail, and no side fibres. Flesh tender, juicy and of bright scarlet color, ripening for table in about 45 days from germination of the Seed. **NOTHING LIKE IT.** Try it and be amazed. You will find it well named.

CARROT—Landreths' Discovery

This will mature for table in 40 days from germination of the Seed. It is by all odds the **earliest of Carrots** and will surprise any planter by its rapidity of growth. It makes round root about the size of a silver dollar when other sorts have not yet got beyond the tap-root form. Invaluable for early summer use.

LETTUCE—Landreths' San Benito

Of remarkable merit. Heads large, solid and uniform, combining every feature of the best. Every Seed makes a head and produces an edible head in 55 days from the Seedlings breaking the surface of the earth. It is a daisy—a bonanza—can't be beat. Few people understand what a good Lettuce is. Any planter will find it in the Landreths' San Benito. Just try it once and you will **never give up** the sort.

OKRA—Landreths' None Such

A vegetable unapproached for soup. This sort matures for use in 50 days from the germination of the Seed and is so precocious that the first pod near the ground is out of the ground almost as soon as there is any appearance of the plant. In fact, all the pods are produced within a foot or two of the ground. Some who have tried it write that the pods are the first growth to appear above the ground. Of course, this is a little Western exaggeration, but it is not far from true.

RADISH—Landreths' South African

Turnip shaped, with flat bottom, very short leaves, fine brilliant red color, quite distinct from any other sort of Radish, maturing for table of a size $\frac{3}{4}$ inch in diameter two weeks from the germination of the Seed. In fact, it is fit for table before the grower can conceive of it. Gardeners can hardly keep up with it. It keeps them trotting.

TOMATO—Landreths' West Indian

Ripening for table intermediate between others. Most beautiful fruit, deep red, and of exceeding productiveness. Fruit absolutely smooth, free from cracks or depressions, ripening all over uniformly. In the Island of Jamaica the Tomato plant lasts for three years, just like a grape vine.

BEANS—Landreths' Up-to-date

Vine about 12 inches high. Ripening for table about 30 days after the Seed sprouts. All things considered, one of the best Beans ever introduced, as nearly rust-proof as any Bean under that name. Pods green, curved, half-round, exceedingly productive.

PEA—Landreths' Rent-Payer

Very showy pod, ripening for table 45 days from germination of the seed. Pods long, broad and fat. A heavier producer than Gradus or Thomas Laxton, and a far more healthy vine.

CORN—Sugar—Landreths' Money-Maker

Maturing in 70 days from germination of seed, grain deep and narrow, and in this respect superior to the best Evergreen. Stalks 20 per cent. shorter or less tall than Evergreen, but of stronger foliage, very close jointed, sturdy, and productive. Really to a marked degree most desirable. Cobs long, but only half the diameter of other sorts of Sugar Corn. An unquestionable average of three ears, often four, to the stalk and therefore well named as Money-Maker. Exceedingly productive, showy and quite amazing as a producer.

HERBS—

A Mixture in the same packet of SAGE, SUMMER SAVORY, SWEET MARJORAM, and THYME. All Gardens should have FRESH HERBS for seasoning purposes throughout the summer, and for such purposes they are worth ten times their cost.

PEPPER—Landreths' Panama Exposition

Fruit smooth, about four inches long by three inches broad at the top. Color a rich red and altogether very showy. Flavor sweet and mild, that is not hot. Vine bearing 6 to 7 large fruit. It is undoubtedly the best of the productive sorts, whether for home use or for shipment.

FLOWER SEEDS

The following seeds in ten cent packets containing mixed varieties of each family will be found in Landreths' Catalogue for 1915. Send us your order for some of these Flower Seeds. None of them cost over 10 cents each:

Aster—Mixed, Cosmos—Mixed, Japan Pink—Mixed, Nasturtium—Mixed, Pansy—Mixed, Verbena—Mixed, Sweet Peas—Mixed, Cockscomb—Mixed, Balsam—Mixed.

Do not fail to order some of these twelve packets of Vegetables, if not all. Not one of the lot will fail to give satisfaction because comparing in quality as superior to the best from other sources.

We ask you to notice that 30 cents per packet for each includes postage. Send us stamps or postal order for the number you want at 30 cents each; we pay the postage.

All the Seeds we sell, all that are named in Landreths' Catalogue, 1915, with the exception of Peas, Beans and Corn, Grass Seeds and Agricultural Seeds are delivered free to your postoffice.

A card will be put in with seeds ordered to the effect that upon the return of the card with the cash for any other order, large or small, a discount of 20 per cent. will be taken off the Catalogue Prices.

D. Landreth Seed Company,
Bristol, Pennsylvania.
