SNOW (White) . Sometimes called Poor Man's Friend.

ON account of the large yields that have been reported of this potato it is rightly entitled to be called the "Poor Man's Friend." It is of handsome shape and most desirable for the best trade. It is a vigorous grower, ripens uniformly, is a good keeper and is fast becoming one of the most popular medium late varieties. The vines are always very heavy, the seed being especially vigorous and tubers always good size where soil is well tilled. Our customers will find the Snow a very reliable potato. We can furnish nice stock while the supply lasts. Prices quoted on application.

EARLY EUREKA

IS one of the best, as well as one of the heaviest yielders, among the early potatoes. It is a fine potato for forcing, as it sets a good number in a hill, and will not grow prongy under the hardest forcing. The vines are heavy, with white blossoms. The tubers are roundish with shallow eyes, the cut being taken from two potatoes which are typical of the variety. The flesh is very white and of the finest table quality. Those who want a potato which can be forced for early market can, with the Early Eureka, produce a very heavy crop of fine table potatoes, and have them all smooth. Ask for prices before it is too late.

EARLY WHITE ALBINO

THIS wonderful new early potato is a good cropper. The skin and flesh are extremely white; it is of exceptionally good cooking quality and very prolific; fully as early as the old Early Rose in maturing and particularly valuable for the early market by reason of its fine shape and early maturity. The vines grow erect and it is one of the best early varieties to withstand blight and disease. Plant this potato early in good soil and give it proper cultivation, and pleasing results are sure at harvest time. One grand thing in favor of this early potato is its good keeping quality. Prices quoted upon application.

GREEN MOUNTAIN JR. New White Seedling.

ORIGINATED by W. E. Johnson in 1905. An inbred Green Mountain; seed boll grown on Green Mountain and pollenized with Green Mountain. It is practically thorough-bred or pure-bred. It has all the good qualities and in general appearance is the same, except it is a trifle whiter in color and the skin is more smooth. It grows round to oblong, somewhat flattened; eyes shallow. The sprouts in spring are white and stubby, not grow very long. Soon after the stalks appear above the surface they branch very much, the broad dark leaves lying close to and completely covering the ground, which will kill weeds and grass and have a tendency to hold moisture. It will make a vigorous, rapid growth, set a large number in the hill and mature to the marketable size a few days earlier than its parent. Blossom is white, with yellow centre stalks. Cooking excellent. On our trial grounds it has given a yield at the rate of 640 bushels per acre.

CLYDE

Color, White

Originated in 1912 by Wm. E. Johnson. 3-4 Green Mountain, 1-8 Early Rose, 1-8 Beauty of Leon. It resembles the Green Mountain in many respects, having the same heavy set vine with profusion of blossoms, tubers oval shape, somewhat flattened and sets potatoes closer together in the hill. The Clyde certainly is a wonderful potato and a yielder of proper shape tubers and of delicious flavor. Further information and price sent upon request.

New Varieties from Seed Boll

GROWN ON VIRGIN SOIL

Absolutely Free From
 Paris Green or Arsenic

THE VINES OF NEW SEED-
 LINGS are so young and
 tender that they are especially at-
 tractive to bugs and flea beetles and
 susceptible to blight. To protect
 against these evils we use Bug
 Death dry, applying with the Dia-
 mond Slot Duster, the Dickey Bug
 Death Duster or Acre-an-Hour Sifter
 just at night or early in the morning,
 when the vines are moist with dew
 and the air is quite still, to prevent
 wasting the fine powder.
