BUSINESS TERMS

We Especially Invite Charge Accounts. A charge account is more convenient than to remit for each order at the time it is sent us; you pay no more for your goods by reason of this accommodation. As to our responsibility, we refer you to Dun's or Bradstreet's Mercantile Agency.

When sending your first charge order, refer, preferably, to someone with whom you have a charge account. This saves many a delay. When sending us your first order accompanied by remittance, we prefer bank cashier's check or money order, unless cash is sent; this frequently saves delays.

Goods can be sent C. O. D., with the exception of perishable items, which includes plants and cold-storage bulbs. These cannot be sent C. O. D. unless a partial remittance accompanies the order.

SHIPPING INSTRUCTIONS

Always state clearly by what method you want goods forwarded, otherwise we will ship according to our best judgment.

2 MICHELL'S POT GROWN STRAWBERRY PLANTS

EXTRA SELECTED STOCK—Strong and Well Rooted. Will Yield a Full Crop of Berries Next Season. Ready About August 15th.

The time of shipment is from about August 15th to October 1st. The advantages in planting pot-grown strawberry plants are realized by a full crop of berries the following year. Our plants are carefully grown in clay pots and, prior to shipment, are transferred with the original ball of earth at their roots to substantial paper pots in which they are forwarded, thus insuring the buyer getting them in first-class order and reducing the transportation charges about 25 per cent.

It is Advisable to Send Strawberry Plants by Express Only, as They Cannot be Successfully Shipped by Mail, and by Freight the Risk of Delay is too Great. Plants Take a Special Low Express Rate.

Layer Plants of Strawberries may be obtained about October 1st. Layer plants will yield a moderate crop of berries the season following, and are recommended (because of their low cost) where one has a very large number to plant.

Note—Some varieties which are marked P. are pistillate (or imperfect flowering), and while they embrace often the best kinds, it will be necessary in order to get fruit to plant bisexual (or perfect) flowering sorts near them. About five imperfect to one perfect flowering is the general rule.

CULTURAL NOTE ON STRAWBERRIES

Strawberries delight in good rich soil, that has had plenty of manure added to it. The plants should be set 12 to 15 inches apart, in rows 2 feet apart. A row 100 feet long requires approximately 75 to 100 plants or about 14,500 per acre. If the weather is dry, when planting, water well at the time and for a few days thereafter, if it is possible. Press the soil well around the ball, when planting, and keep the soil well cultivated, cutting off all runners that may form. At the approach of permanent winter it pays to cover the entire bed to a depth of 2 inches with clean straw or salt hay. This protects the plants during severe weather. Do not use leaves, as they hold the moisture and cause damage to the plants in winter. At the approach of spring, rake the covering from the plants proper and leave it between the rows; this will serve as a mulch during the summer, protect against drought, and also keeps the fruit more free from sand, at the same time to a large measure controls the growth of weeds. In planting Strawberries, keep in mind that there are perfect and imperfect or pistillate flowering kinds. The first type of blossom is shown by cut No. 1 below; the pistillate type by cut No. 2. The perfect flowering produce freely alone, while the pistillate

No. 1

No. 2

sorts require hybridizing with the pollen, which is generally accomplished by bees. Pistillate sorts embrace some of the finest varieties, but in planting them, every fourth or fifth plant should be of a perfect flowering type to insure an abundance of fruit.

A husky developed specimen like this can't fail but give you satisfaction

EARLY VARIETIES

Abington (Perfect). A strong, vigorous grower, with rich, dark green leaves. Perfect blossom and is quite large, twenty-five berries often filling a quart box. In color it is bright red, with firm flesh and good flavor. The plant is a thrifty, healthy grower and very productive. The large foliage amply protects both flowers and fruit. A splendid sort for preserving and canning. We have flattering reports concerning this variety from different sections of the country, and we consider it one of the best of the early sorts. 70c. per doz.; per 100, \$4.00; \$37.50 per 1000.

Marshall (Perfect). This berry is claimed to have but one fault, and that is its inability to hold up the immense trusses of berries it produces. It is large, very firm and of the best quality. 60c. per doz.; per 100, \$3.50; \$30.00 per 1000.

Senator Dunlap (Perfect. Early). See colored illustration on first cover page. This grand Strawberry will please the most critical person. One of the first to yield and continues well into the height of the season. It cannot be recommended too highly. 75c. per doz.; per 100, \$5.00; \$40.00 per 1000.

Success (Perfect). This wonderful berry is all that its name implies; it is a success from start to finish. Very vigorous grower; large fruit of high color and firmness, regular shape and a wonder in productiveness. Begins to ripen early and continues several weeks, retaining its large size all season. 60c. per doz.; per 100, \$3.50; \$30.00 per 1000.

Wildwood (Perfect). A berry that will be in great favor on account of the large size and the aroma and flavor of the wild strawberry. Highly recommended for home use. 60c. per doz.; per 100, \$3.50; \$30.00 per 1000.

NOTE—About October 1st we can furnish Layer Plants of any of the above varieties at 25c. per doz.; per 100, \$1.25; \$7.50 per 1000.

MID-SEASON VARIETIES

See Special Cultural
Note on Page 2

"Auto"

Auto (Perfect). A bush-like plant, which makes but few runners, with many strong fruiting crowns. This makes it admirably suited for hill culture or narrow matted rows. Very productive; extra large, bright red, conical berries of high quality. 60c. per doz.; per 100, \$3.50; \$30.00 per 1000.

Barrymore (Perfect). A healthy, vigorous grower; very productive. The color is glossy rich dark crimson on the surface; the flesh is red and meaty and of excellent flavor. 60c. per doz.; per 100, \$3.50; \$30.00 per 1000.

Brandywine (Perfect). The finest of all mid-season sorts; it has not a single defect. Plants of extra strong constitution and growth, doing well everywhere. Fruit extra large, heart-shaped; color, bright, rich red. 60c. per doz.; per 100, \$3.50; \$30.00 per 1000.

Bubach (Pistillate). One of the best known berries in the Philadelphia markets, growers in this vicinity considering it the most profitable variety and no mistake will be made in planting it extensively for home use; an old favorite. 60c. per doz.; per 100, \$3.50; \$30.00 per 1000.

"First Quality"

First Quality (Perfect. Midseason). The uniformly large size and remarkably large crop of berries of excellent flavor, produced by this variety, make it a great favorite. 60c. per doz.; per 100, \$3.50; \$30.00 per 1000.

Glen Mary (Perfect. Midseason). One of the best of the older varieties, as it still keeps its place among the prominent strawberries. The fruit is very large but rather irregular, somewhat like Sharpless. It is a great drought resister, ripening a full crop of luscious berries in the driest weather. 60c. per doz.; per 100, \$3.50; \$30.00 per 1000.

Heritage (Perfect). This is truly a giant strawberry, it being almost impossible to put a whole berry at a time in one's mouth. It is rather irregularly shaped but of a beautiful crimson color. The plants and foliage are entirely distinct which makes it stand out above all other sorts. 60c. per doz.; per 100, \$3.50; \$30.00 per 1000.

Big Joe (Perfect). The merits of this splendid variety are great vigor of plant, splendid root system, exceptional productivity, large size of fruit, excellent flavor, and length of bearing season. The berries are perfect beauties, of very uniform, conical shape, rich and red in color. In size the berries are not surpassed by those of any other variety grown, while the flavor is superior to that of most large fruited sorts. The plants root very deep, the roots going 10 to 12 inches in the ground, that they are but little influenced by droughts. 60c. per doz.; per 100, \$3.50; \$30.00 per 1000.

President (Perfect). A most remarkable variety. For large size, beauty, great productiveness and high quality, united in a single variety, it is without an equal—it is simply superb. The plant is of mammoth size, and with ordinary culture the huge berries are literally heaped along the row. 70c. per doz.; per 100, \$4.00; \$35.00 per 1000.

Rewastico (Perfect). Extra large fruits of a rich red color and delicious flavor; a high-grade berry in every respect. 80c. per doz.; per 100, \$5.00; \$40.00 per 1000.

William Belt (Perfect. Midseason). A grand midseason sort. This variety was introduced some eight or ten years ago, and at the time was lauded very highly and many plants were sold. The superb quality, the equal of which has not yet been attained in any other medium late variety, makes it very popular for the home garden and local market. 60c. per doz.; per 100, \$3.50; \$30.00 per 1000.

NOTE—About October 1st we can furnish layer plants of any of the above varieties at 25c. per doz.; 100, \$1.25; \$7.50 per 1000.

Gandy

Chesapeake (Perfect). Although not an immense cropper, every blossom makes a well developed and strictly fancy berry of good color. 60c. per doz.; per 100, \$3.50; \$30.00 per 1000.

Gandy (Perfect. Late). This variety is known to most every berry grower as one of the best late sorts. It is very solid and large, and of a beautiful crimson color; especially good for family garden planting. 60c. per doz.; per 100, \$3.50; \$30.00 per 1000.

Sample (Pistillate). This comparatively new and splendid variety has won great popularity. It is one of the best late fruiting pistillate strawberries in cultivation. The plant is a large healthy grower making a great mass of roots, insuring it against both drought and frost. It is a big producer of very large roundish berries, holding up well in size to the end of the strawberry season. The berries are of a rich dark red color clear to the centre and of unsurpassed quality. They are borne on strong stalks and in great profusion. 60c. per doz.; per 100, \$3.50; \$30.00 per 1000.

Stevens' Late Champion

Stevens' Late Champion (Perfect). "Very large, fine flavored, bright color, good shipper, heavy yielder, good fruit stem." This berry has averaged 7,556 quarts per acre, netting \$666.96 per acre. It has been tested on all kinds of soils and will grow successfully where any strawberry will grow. It will stand a drought better than any other berry ever grown in this section. It has never shown any sign of rust. 80c. per doz.; per 100, \$5.00; \$40.00 per 1000.

Sharpless (Perfect). One of the old timers, but with so much merit it is impossible to discard it. While irregular in shape, is very large and a tremendous cropper. Plants are exceedingly vigorous and hardy, enduring both heat and cold without injury. A profitable and reliable variety for either market or home. 60c. per doz.; per 100, \$3.50; \$30.00 per 1000.

NOTE—About October 1st we can furnish layer plants of any of the above varieties at 25c. per doz.; per 100, \$1.25; \$7.50 per 1000.

MICHELL'S AUTUMN FRUITING OR EVERBEARING STRAWBERRY PLANTS (POT GROWN)

PROVIDE AN ABUNDANCE OF RIPE FRUIT UNTIL FROST

"Progressive" Autumn Fruiting Strawberries

This type, while producing its main crop of berries with the general sorts, continues uninterruptedly to mature its fruit, until checked by hard frosts; it has actually been known to bear strawberries until Christmas, when the weather is open and mild. In order to get the greatest crop of berries late, the blossoms should be kept cut off until August 1st, so as to conserve the energies of the plants for the fall crop. Treated in that way, ripe fruit will be borne in about four weeks after that date and continuously until frost. The plants must not be allowed to suffer for water in the fruiting season and the ground should be well enriched. A mulch of well rotted cow manure will be found of great advantage. High cultivation is essential for best results and any special attention that is given this type will be well rewarded with a good crop in September and October.

The two varieties listed below, are best adapted for the American climate and soil conditions.

Progressive. A recent introduction, considered the largest in size and of extreme producing qualities. The plant is of medium size and very resistant to heat. Both blossoms and fruit are well protected by the strong healthy foliage. The fruit is rich and sweet, a deep red inside and out, of good medium size and very firm. **Pot grown plants**, 75c. per doz.; per 100, \$4.00. **Layer plants**, ready about October 1st, 30c. per doz.; per 100, \$1.75, \$15.00 per 1000.

MICHELL'S PURE BONE MEAL

An excellent fertilizer to use when planting strawberries; about a teaspoonful to a plant. 25 lbs., 85c.; \$1.35 per 50 lbs.; 100 lbs., \$2.25; \$4.00 per 200 lbs.

Superb. Rich dark red of very even rounded form, medium size, early, fine flavor. The plants are very strong with stout fruit-stems, holding fruit well off the ground. A very productive variety. **Pot grown plants**, 75c. per doz.; 100, \$4.00. **Layer plants**, ready about October 1st, 30c. per doz.; per 100, \$1.75, \$15.00 per 1000.

EXTRA STRONG CELERY PLANTS

(READY ABOUT JULY 10)

These plants are grown from our own seed at our "Evergreen" Seed Gardens. We have immense quantities and can fill orders for any number.

A WORD ON CELERY CULTURE.—Celery delights in a good, rich, moist soil. Locations where the soil may become dry should be avoided. Nothing is more beneficial or so little work as the watering of celery during periods of drought. After it has been transplanted and made some growth, the plants should be set in permanent rows 6 to 8 inches apart in the row. Many private gardeners prefer to use the two-row system of trenches; it will be found very advantageous to work. If the idea of the market gardener is carried out, the celery is planted in single rows about 2 feet apart, 6 or 8 inches apart in the row. By the former method the celery is usually banked up to blanch until almost entirely covered with soil; the top is then covered with leaves or other litter as winter approaches. In the single-row system the celery is banked up gradually to blanch, and after this process is over, at the approach of winter it is dug up and laid in shallow trenches after being cleaned. Storing for winter is done by covering it with waterproof celery paper and topping off with soil or leaves. The celery may thus be gotten out for market during the severest weather. Good cultivation is highly necessary during the growing period.

Boston Market. An elegant dwarf sort, a good winter keeper, fine taste, crisp and nutty.

Dwarf Golden Heart. The best of the half-dwarf varieties; stalks large and full; the heart is golden yellow, turning to a light color when blanched.

Far Superior. Our own introduction. Offered by us exclusively in plants. This is the finest winter celery in existence. Rich flavor, very nutty.

French Golden Self-Blanching. An early sort. The heart is a rich golden-yellow, with light yellowish-green outer leaves. 60c. per 100; 500 for \$2.75; \$5.00 per 1000.

Giant Pascal. One of the largest stalked kinds. It is in its prime for use during February and March, and can be used well up into spring.

Pink Plume. The red sorts surpass the white in flavor, and possess in their coloring a feature which renders them valuable as a table ornament. (Supplied on order only.)

White Plume. The White Plume is unsurpassed for fall and early winter use, requiring very little earthing to blanch it.

Winter Queen. This variety grows a very thick, solid and heavy stalk, and has a large heart. It is a close, compact grower, and when blanched is a creamy-white color.

Prices: (Except where noted), 50c. per 100; 500 for \$2.25; \$4.00 per 1000.

MICHELL'S HARDY PERENNIAL PLANTS

It is not at all surprising that these grand old-fashioned garden flowers are to-day enjoying the greatest popularity, because there is not a time during the whole flower season in which some hardy perennial is not in bloom. Our stock is principally established in pots, which enables it to be shipped and transplanted at any season. As our spring trade for this stock was exceptionally heavy, we will not have a complete assortment until September and October. All varieties mentioned in this list are ready for delivery now. Summer and autumn planting frequently means a year's difference in results obtained the following spring, and they are usually more gratifying than from spring set plants. 14 MICHELL'S GORGEOUS DOUBLE PAEONIES (Roots)

Paeonies, especially the newer varieties, are probably the most valuable of all perennial plants. Planted in the sun or semi-shade, they give a grand display of large fragrant blossoms of brilliant colors during June, followed by their exquisite foliage, which is very ornamental during the summer months. They are most effective for house and table decorations, and last longer in water than many other perennials. No disease or insect rarely trouble the Paeony. The roots are perfectly hardy, and once planted remain for years. *Roots will be ready for delivery in September.*

18 MICHELL'S HARDY POT-GROWN ROSES

FOR PLANTING OUTDOORS IN SUMMER AND AUTUMN

Each season we carry over for Summer and Autumn sales a quantity of choice rose plants. Where our stock of pot-grown varieties is exhausted in Hybrid Perpetual sorts these can be furnished about November 1st in strong field plants. Field-grown plants of Hybrid Tea sorts do not transplant well in the autumn, so that in this class we have listed only the kinds that we have in **strong two-year-old pot-grown stock**, which, if planted out now, will produce flowers this Summer and Autumn until frost.

Order now while the selection is good; and have your rose garden established for next spring.

FALL, WINTER AND SPRING FLOWERING BULBS

Easter in 1917 comes on April 8th

ALLIUM Neapolitanum Ready in August

Used exclusively for indoor culture in pots and pans. It is especially adapted to forcing and makes an excellent cut flower; color pure white. Height, 12 inches. It is not hardy, so cannot be planted outdoors. Dozen and 100 lots mailed free. Each, 2c.; 15c. per doz.; per 100, 90c.; \$7.00 per 1000.

White Calla Lily

CALLA LILY BULBS

Ready in August

Callas require good, rich soil and plenty of warmth and water to make them thrive. The White Calla may also be grown in water. The black variety does not require so much moisture. When through flowering the pots may be laid on their side to allow the tops of bulb to die off. The plant may thus be used another season. Plant Callas indoors only.

GODFREY DWARF EVERBLOOMING CALLA (New)

This comparatively new calla has proven an excellent one, its character is exactly like the Æthiopica or regular variety, except it is of much dwarfer habit and freer bloomer; very desirable as a pot plant, and will, we believe, be very popular in a short while. Large blooming size bulbs, 25c. each; doz., \$2.50; \$15.00 per 100.

Other varieties of Narcissus ready in September.

French Roman Hyacinths afford a continuous supply of bloom from early winter until late in spring if planted in succession (two weeks apart). They are very fragrant. The blooms are suitable for most any kind of cut-flower work; they also look very attractive if planted in boxes or pots and used for window decoration.

They are easily grown in pots or pans. The bulbs, if potted in August or September, the pots plunged in the open ground for a month, until the bulbs are well rooted, and then brought in the house, they can be had in flower in November or December, and a continuous supply of these delightful flowers may be had, by bringing in a few pots or pans of the rooted bulbs at intervals of about 2 weeks. The bulbs should be planted quite close together, a 6-inch pot or pan will be sufficiently large enough for six bulbs. They are not hardy and are not suitable for outdoor planting.

Narcissus Grand Soleil d'Or

Lilium Formosum, grown from one bulb of Michell's Easter Lilies, showing 18 fully developed flowers, and an abundance of buds

Cultural Note—In order to obtain best results, attention to the following brief directions will assist materially: Upon receiving the bulbs, pot them immediately. Place a handful of well-rotted cow manure in the bottom of the pot and place the bulb directly on top, covering it with soil. After watering, place in an outside pit and protect from the direct rays of the sun; cover well with soil, ashes or any other suitable litter. When thoroughly rooted, bring inside, in a temperature of about 60°; let the plants grow slowly under a bench or some other suitable place until about 6 inches high; then place on top of the bench. About two months before Easter they can be brought into a warmer temperature and gradually forced into flower and height at one time. An occasional application of liquid cow manure will stimulate the plant wonderfully. Spray the foliage once a day. Never allow the soil to get very dry, and never feed, unless the soil is moist.

LILIUM CANDIDUM

(Ready in August)

This variety is sometimes called St. Joseph's, Madonna, or Annunciation Lily. One of the most popular and satisfactory of the American garden lilies. Pure waxy white flowers produced on straight stems bearing anywhere from 10 to 30 blooms of good size and substance; delightfully fragrant. Effective plantings are the result of massing them in clumps or borders. Our bulbs are grown in Northern France, where they have a reputation of growing the finest in the world. To insure absolute success, plant the bulbs as early as possible—September preferred—6 inches deep imbedded in sand and placed on their side; height, 4 feet; blooms in June.

MICHELL'S SUPERIOR MUSHROOM SPAWN 41

**IF WANTED BY MAIL, ALLOW
FOR POSTAGE**

Mushrooms are within the reach of any one who has a greenhouse or a cellar. A crop is produced with good spawn, a little care and patience in about 4 to 6 weeks, and continues in bearing about two months. New beds can be started at intervals which will give a supply the entire season. The first planting can be made in July, the last in March.

Get a quantity of absolutely fresh horse manure and remove the excessive heat by turning it once a day, for 3 days, or until the temperature has fallen to about 100 degrees. Then form a bed 8-10 inches deep and allow it to remain undisturbed, until the temperature has fallen to 80 degrees. Now is the time to plant the spawn.

Break the bricks in pieces the size of a walnut, and place at regular intervals of 1 to 2 inches below the surface of the bed in distance to plant 8 square feet with one brick, compress the manure after spawning to make the bed solid. Nothing now must be done until the bed has a whitish appearance which shows that the spawn is running, nor must it be watered previously. Now place a layer of fine sifted soil, (which should be procured in advance) to the depth of 1 to 2 inches on the bed. With an occasional sprinkling when dry, the bed should begin to produce in from 4 to 6 weeks from spawning time, conditions being favorable. **New beds must be made at each planting.**

BRANDYWINE PURE CULTURE SPAWN

This is an entirely new strain originating in the section of Pennsylvania that supplies the New York and Eastern markets with mushrooms. It appears to be especially full of life and we can recommend it as an early and prolific producer; mushrooms are uniform and almost pure white in color.

LAMBERT'S AMERICAN PURE CULTURE SPAWN

This type produces larger mushrooms than the English, coming into bearing somewhat earlier, and continuing to crop for a long time. This spawn is produced by selecting spores from individual specimen mushrooms and is propagated and transferred to the bricks of manure, which, when planted, produce mushrooms all of one type.

A FEW OF THE MANY TESTIMONIALS

Punxsutawney, Pa.

Last fall I purchased a brick of spawn from you and I want to tell you, it is wonderful the way the mushrooms grew. I planted the brick in a bed about 5x9 feet and that bed was one solid mass of mushrooms and it was the curiosity of the town, as people came from all over to see it.

E. J. BAKER.

South Manchester, Conn.

The mushroom spawn I had from you last Fall is the best I ever had.

MIXTURES FOR PLEASURE GROUNDS

Michell's Fair Greens (Golf Course) Mixture

Composed of short-growing, deep-rooted varieties, resists plenty of wear. It retains its color well during the severest droughts. Golf courses to retain their permanency should receive additional sowings during the season. Sow 6 bushels per acre.

Prices: Qt., 25c.; 2 qts., 45c.; 4 qts., 75c.; 1 peck, \$1.25; 1 bu. (20 lbs.), \$4.50; 5 bu., \$21.25; 100-lb. lots and over, 21 $\frac{1}{4}$ c. lb.

Michell's Putting Greens Mixture

This is a quick-growing mixture of short, thin-bladed grasses, over which the ball can roll without resistance. In sowing Putting Greens it is wise economy to be very liberal with the seed, as these places are subjected to hard use. We do not recommend less than 1 bushel of 25 lbs. (and more is better) to a green 75 foot square.

Prices: 1 qt., 30c.; 4 qts., \$1.00; 1 peck, \$2.00; 1 bush. (25 lbs.), \$8.00; 5 bush., \$37.50; \$72.50 per 10 bushels.

WHITE CLOVER

Choice recleaned for sowing on lawns, pastures, etc. Sow 10 to 12 lbs. per acre (60 lbs. per bu.). $\frac{1}{4}$ lb., 20c.; 65c. lb.; 5 lbs., \$3.15; \$6.00 for 10 lbs.; bu. (60 lbs.), \$34.25; \$55.00 per 100 lbs.

Note—All Grass Mixtures except Putting Greens and Golf Course contain white clover. Any of them, however, can be furnished without this.

MICHELL'S RECLEANED GRASS SEEDS

August and September are ideal months to sow Grass Seeds

Michell's Permanent Pasture Grass Seed. The prevalent method of sowing timothy and clover has been found not only costly but too short-lived to answer the purpose. The old custom has given way to the new, which is the sowing of a mixture of permanent grasses. Michell's Permanent Pasture Grass Seed is composed of about 10 of the best growing and most nutritious grasses and clovers for stock feeding or grazing. One sowing will last many years, although we advise additional sowings each autumn. Sow 3 to 4 bushels per acre on new lands or 2 bushels on established pastures (15 lbs. per bushel). Prices: Per qt., 20c.; 4 qts., 50c.; peck, 85c.; bush. (15 lbs.), \$3.00; 5 bush., \$13.75; 100-lb. lots, 18c. lb.; 200-lb. lots and over, 17c. lb.

Poultry Yard Grass Seed Formula. Germinates very quickly and makes a sod that grows luxuriantly. 20c. qt.; per 2 qts., 35c.; 60c. for 4 qts.; peck, 85c.; \$3.00 per bushel.

Michell's Permanent Hayfield Grass Seed. While timothy is still extensively sown for this purpose, this mixture is gradually being adopted by the progressive farmer. Its main advantages are that certain grasses in the mixture will grow better in varying conditions of soil, thus giving a full crop of hay on land that otherwise might produce but a half crop of timothy and clover. Our formula is the outcome of thorough trials in every kind of soil. Sow 3 to 4 bushels per acre on new lands, or 2 bushels on established fields (15 lbs. per bushel). Prices: Per qt., 20c.; 4 qts., 50c.; peck, 85c.; bush. (15 lbs.), \$3.25; 5 bush., \$14.00; 100-lb. lots, 18c. lb.; 200-lb. lots and over, 17c. lb.

White Clover. Choicest recleaned for sowing on lawns, pastures, etc. Sow 10 to 12 lbs. per acre (60 lbs. per bu.). ¼ lb., 20c.; 65c. lb.; 5 lbs., \$3.15; \$6.00 for 10 lbs.; bu. (60 lbs.), \$34.25; \$55.00 per 100 lbs.

MICHELL'S RECLEANED FARM SEEDS

In ordering Farm Seeds, always allow 22c. for each 2 bushel bag. These are returnable at the price charged.

An Alfalfa field will prove a good investment on any farm

CLOVERS

Alfalfa or Lucerne (*Medicago Sativa*). The most valuable forage crop on the American farm today, and can be truly termed a mortgage lifter. It is sown during May, August and September, these being the best months for success, although it can be sown at other times with a possible chance of doing well. Careful preparation of the soil previous to sowing is the main thing. Our special Circular on Alfalfa goes into this carefully and is free for the asking. Sow not less than $\frac{1}{2}$ bushel (30 lbs.) per acre preferably with no other crop. Our seed is always over 99% pure, and will invariably give the best of results. Price, per lb., 25c. Write for price on larger quantities, as it changes constantly.

Alsike or Swedish Clover (*Trifolium Hybridum*). One of the best for mixing with timothy; it is perfectly hardy in every climate or soil condition and seldom has to be reseeded. Under ordinary conditions it grows from 1 to 2 feet high, is sown early in the spring or late summer and early autumn. It is as nutritious as red clover and is rapidly coming to the front as a valuable farm crop. The flower resembles the white clover except that the head is larger and has a red tinge on the edge. Sow 10 to 15 lbs. per acre alone or 8 lbs. per acre with timothy. Price, 25c. lb. Price on larger quantity on application.

Bokhara or Giant Sweet Clover (*Melilotus Alba*; Syn. *M. Leucantha*). Used either as a feed crop or as a fertilizer to plow under, to improve the soil. Grows from 4 to 6 feet high. It will thrive on almost any kind of soil. If you have thin, rocky, hard or sour soil which you wish to enrich, this is just the crop for you to grow. It will make two hay crops the first year and the fodder is considered the best for cows, cattle and hogs. It will not bloat cattle under any conditions. Can be plowed under either the first or second year. We handle only the true, white-flowering biennial variety. Sow 15 lbs. per acre in early spring alone, or 10 lbs. per acre with other crops. Price, 35c. per lb. Price on larger quantity on application.

CLOVERS (Continued)

Crimson Clover (*Trifolium Incarnatum*). Delaware Grown Seed. This is used principally for soiling or green manuring, for which purposes it is highly valuable. If desired for feed, cut it just before it flowers. When desired for green manure it should be allowed to mature; its height is from 1 to 2 feet. Sow any time from April to October, the earlier the better, 20 lbs. to the acre. If sown in early spring it can be plowed down the first year, although no other crop can be raised on the field that season. Fall or late summer seeding makes it possible to use the field the following season. It is not hardy for more than one season and must be sown each year, flowers crimson. Price, 15c. per lb.; larger quantity prices on application.

Mammoth Red Clover (*Trifolium Pratense Perenne*). Sometimes called Sapling or Pea Vine Clover and English Cow Grass. This differs from the "Medium," being of a ranker growth and yielding more fodder per acre. It ripens somewhat later and is more hardy, lasting several seasons longer than the medium red clover. It also does well on poorer soils. The seed cannot be distinguished from the former. Our supply, however, is strictly reliable. Sow in early spring or in July and August, using 20 lbs. per acre alone or with other crops 10 lbs. per acre; flowers pink. It can be harvested several times in a season. 25c. per lb.; larger quantity prices on application.

Red Clover, Medium (*Trifolium Pratense*). More widely known and used than any other, used principally for hay purposes. Height from 18 inches to $2\frac{1}{2}$ feet. Sow early in the spring or in late summer—July and August; if alone, 20 lbs. per acre; if with other crops, 10 lbs. per acre. A red clover field can usually be cut twice in a season. It is not hardy for a period of years, being usually resown every third season; flowers pink. Price, 25c. lb.; larger quantity price on application.

White Dutch or Lawn Clover (*Trifolium Repens*). This is valuable for pasturage; it succeeds where other clovers and grasses fail, and it seldom dies out. It can be sown at all seasons although early spring is best; flowers greenish white. Sow 10 to 12 lbs. per acre if alone or 5 lbs. if sown on old turf or with other crops. $\frac{1}{4}$ lb., 20c.; 65c. lb.; 5 lbs., \$3.15; \$6.00 for 10 lbs.; bu. (60 lbs.), \$34.25; \$55.00 per 100 lbs.

COW PEAS

Sow 2 bushels per acre broadcast or 1 bushel per acre in drills.

Black. One of the popular varieties extensively grown. It is very prolific and matures early. It is of upright growth, consequently preferred for ploughing under or for raising stock.

Large Black Eye. An exceedingly heavy cropper, but late to mature. In the South, the seed of this variety is sold for dried peas for household use, and it is claimed they are quite delicious.

Whippoorwill. Medium early, upright growing variety, extensively used, more than any other. The seed is brown and gray speckled. It is a heavy producer of both pods and fodder. Some claim this variety gathers more nitrogen than others.

New Era. Of upright growing habit, quick to mature and remarkably prolific in both vines and pods. The seed is smaller and requires only from $\frac{3}{4}$ to 1 bushel for sowing an acre.

Early Ramshorn. This is a black-eyed variety, but much earlier than the regular type. The vines are enormous with an abundance of pods.

PRICES: These fluctuate constantly; will be quoted on request.

FARMOGERM (Nitrogen Bacteria)

Those desiring maximum crops, should inoculate their clovers before sowing with Farmogerm, particularly Alfalfa. It is easily applied, and will return its cost many times. Clovers inoculated with Farmogerm are capable of gathering as high as the equivalent of one ton of nitrates per acre from the air. Descriptive circular free. Price of Farmogerm, $\frac{1}{4}$ acre bottle, 50c.; \$2.00 one acre bottle; 5 acre bottle, \$6.00.

A field of Japanese Buckwheat

BUCKWHEAT

In the locality of Philadelphia this is sown anywhere from June 1st to August 1st; one bushel of 48 lbs. broadcast to the acre. It makes a very fine quality of flour, and is largely used for poultry food. For planting adjacent to game preserves it provides excellent food for the birds. The flower makes ideal bee food; while the straw is very abundant. Our seed is grown by a specialist in New York State, who procures his seed stock every few years from Japan. Any of the clover crops can be sown with buckwheat, these to mature the following season. Buckwheat frequently yields as much as 80 bushels to the acre.

Silver Hull. Late maturing variety; grain making whiter flour; very prolific.

Japanese. Very early variety. Dark, large grain. Price of Buckwheat, 15c. per quart; per peck, 50c. For larger quantities, price on application.

BARLEY

There is a threefold purpose in growing barley. Its straw is good for green feed or when cured, as hay. The grain in the hull is excellent poultry feed and with the latter removed is used in the household. It is a quick growing crop and very nutritious. If wanted for hay it should be cut while the grain-head is in a soft or milky condition. Sow broadcast 1½ to 2 bushels per acre from May 15th to July 15th. 48 lbs. per bushel.

Beardless. New York grown stock frequently yields 50 bushels per acre. 15c. qt. Larger quantity, price on application.

WINTER RYE

Penna. Large White. Sow 1 to 1½ bushels per acre during fall. An excellent green food in spring, and may be used for turning under or harvesting. 10c. qt. Larger quantity, price on application.

RECLEANED TIMOTHY

Our stock is of very best quality; for sowing among wheat as a second-year hay crop, or for sowing alone for a first-year hay crop this is extensively used. Sow ½ bu. per acre alone or 6 to 8 qts. with wheat. 15c. lb. Write for price on larger quantity.

WINTER VETCH (*Vicia Villosa*)

True Sand or Hairy Vetch

Extensively used as a soil renovator or for dry or green feed in the early spring. It may be sown alone or with Winter Rye or Oats; is perfectly hardy, thriving under most adverse conditions. Is very nutritious, and live stock relish it. When sown with rye, etc., it will attain a height of 4 to 5 feet; sow ½ bushel an acre broadcast alone or with other crops. Sow early in the fall or summer, and get a good growth before cold weather sets in. 60 lbs per bu. Price on application.

MILLET

This is a very important emergency crop when the season for hay has been unsatisfactory. Can be sown as late as July 15th.

Tennessee, German or Golden. Produces a fine quality of hay and makes a large seed-head. In good seasons it grows about 4 feet high. 48 lbs. per bushel. 15c. qt.

Hungarian. Not so fine in quality as the "German." It can, however, be sown 2 weeks later. 48 lbs. per bushel. 15c. qt.

Japanese Barnyard. Sow 12 lbs. per acre broadcast. 15c. lb. Price on larger quantities of Millet on application.

SOJA BEANS

Grape growers will find after once using that these bags are indispensable; they keep the fruit clean, and free from insects, at the same time allow it to ripen freely. Grapes in bags sometimes keep until very late in the autumn on the vines.

If put on during the period when grapes are forming, they will save many times their cost in the amount of fruit they will rescue from insects, rot, etc. All ready with fasteners to attach.

MICHELL'S Rustic and Ornamental BIRD HOUSES

In the past few years there has been revived a great interest everywhere in birds.

Birds come North for the special purpose of finding a proper nesting place for the rearing of their young. If we provide bird houses and shelter they will stay with us, otherwise they will pass on and their pleasurable influence is lost.

Comparatively few of us recognize the great economic value

of birds. Particularly the bluebirds, house wrens and martins are very easily domesticated. Their favorite nesting sites are bird houses made for their use which may be placed about the garden, farm or orchards. As reut, these grateful birds pay amply, by destroying millions of insects annually.

MICHELL'S WREN HOUSES

Place Wren Houses near your dwellings; the wren is hardly ever known to nest off in the woods. If not disturbed, they will become very tame. These Wren Houses are made with 1-inch holes so that sparrows cannot disturb the occupants.

A WEED KILLER FOR USE ON LAWNS

THE NEW WAY

Showing method of applying CLIMAX LAWN SAND for destroying weeds in lawns.

CLIMAX LAWN SAND

"Climax Lawn Sand" is a unique combination of finely ground chemicals, which, when sprinkled over the grass, possess the remarkable property of destroying Moss, Chickweed, Plantains, Dandelion, and all other weeds on Lawns, Tennis Courts, Golf Greens, etc., at the same time promoting the growth of the finer grasses.

"Climax Lawn Sand" may be applied any time during the growing season of the year, namely, from beginning of April to the end of October.

The lawn must be absolutely dry; by that is meant that no rain or dew must be visible on the grass.

Ten to twelve a. m. during the months of April, May and October, nine to twelve a. m. during June, July, August and September.

Only apply in fine weather when the temperature is fairly high and when no rain appears likely for a day or two. This is most important.

After applying, the weeds blacken and die; the grass usually also becomes blackened and may remain so for a few days, but it quickly recovers its color, and young growths appear on the bare spots previously occupied by the weeds.

Should the weather be very hot and dry, the lawn should be thoroughly watered at the expiration of 48 hours after the application.

It acts as one of the most powerful fertilizers for grasses if applied as a top-dressing in the early spring. For top dressing as a fertilizer apply $\frac{1}{4}$ ton per acre.
