RETAIL PRICE LIST
OF
Vegetable and Flower Seeds
1917

D I S C L A I M E R

We do not give, nor are our salesmen authorized to give any warranty, express or implied, as to description, productiveness or any other matter of any seeds we send out, and we will not be in any way responsible for the crop. Orders are accepted and filled only on these conditions.

PURE CLEAN NORTHERN-GROWN

W. F. COBB CO.,
Seedmen, Franklin, Mass.

RETAIL PRICE LIST

T wont need emphasis to convince the New England farmer, that the season of 1916, no less than 1915, was a hard one in which to produce seeds.

Spring rains reduced, if not ruined, many crops. The war and government embargoes of foreign nations have seriously curtailed shipments from abroad.

That some varieties will be exhausted before planting time is certain; but we shall aim to deliver to our old customers and good friends, a high quality of seeds at the lowest prices we can afford

The varieties herein are arranged in the same order as in the descriptive catalog and the distinctive characteristics of each variety are given in this price list. By using this price list *yourself* and letting the customer see the descriptive catalog when necessary, you will be able to satisfy the customer who wants to read everything; while with the people who leave the matter of selection to you, you can get your information in one half the time from this price list, thereby saving your valuable time.

Do not sell varieties that are not priced in this book. The prices quoted herein are for goods delivered at the customer's door without extra cost, and the order should be written on white order blanks.

Do not sell one-half ounces or half pints. If a customer wants less than ounce or less than a pint, sell him a packet.

Varieties are arranged as nearly as possible, under the several heads, in the order of ripening; thus in beets, Pine Tree Table is the earliest, the Early Egyptian is second, and the Detroit Dark Red is the latest.

We use care to have our seeds true to name, and of the best quality, but we nor our agents give no warranty, express or implied, as to description, productiveness or any other matter of any seeds we send out, and we will not be in any way responsible for the crop. Orders are accepted and filled only on these conditions.

W. F. COBB CO.

Franklin, Mass., Nov. 6, 1916.

Amount of Seed per Acre

Name of Vegetable	Seed Required for	
	100 ft. Row	One Acre

INSECTICIDES

And Inoculating Bacteria

CUTWORM FOOD

There is no more exasperating insect pest with which the gardener contends, than the cut worm. The most careful preparation of the land, liberal fertilizing, choicest seeds or plants, are thereby all wasted. And all the work, expense, and anticipation of financial returns, are wiped out in a night.

Most pests attack the fruit, and can hardly spoil it all, or even spoil enough to make a failure of the crop before detection; but the cut worm in about three bites, kills the entire plant as effectively as tho it were consumed root and branch.

A second planting is a poor remedy for the loss; at best it means a later crop and lower prices but it also means the work done all over, more fertilizer, time used that is needed for other work, and after all, no assurance that the second planting will not share the same fate as the first; in fact the very strong probability that it will.

And all this is so easily avoided. Just drop a teaspoonful of Cutworm Food around each plant the day it is set out, or on each hill as the seedlings break thru; and instead of eating the plants, the worm eats a little of the Food and his work is forever done. He is dead, and no more able to damage crops or produce posterity to cause annoyance and loss in years to come.

The remedy is so simple and so rapidly applied. Any child ten years old can, in an afternoon, protect a large area. The Food will not injure the most delicate plant.

We have never had a case reported to us in the four years we have handled the Food, where plants of any kind, flower or vegetable, have been eaten to any extent when protected by this means. Last season we sold fourteen thousand pounds which shows what the people who have used it, think of it.

Simply put the Food on the ground around the plant in the afternoon, when the ground is not wet; and one night, or possibly two, will practically rid the field of the worms there. If it rains within 40 hours after putting on the Food a second dose should be applied, so that the effective part of the Food may not be washed out until the worm can get at it.

One pound will protect 75 to 100 plants, which makes the expense either of cash or time, very small; almost nothing compared with the value certainly saved.

Cannot be sent by parcel post.

Will you please let me know where I can get your cut worm food? Do not find it on sale in Springfield, Mass. The best thing out.

MRS. HENRY W. FILCH.

Oak Lawn, R. I.

My experience with Cut Worm Food has been very successful. I recommend it very heartily.

JAMES E. GREENE.

CABBAGE SAVER

An inexpensive and effectual means of protecting Cabbage and Cauliflower heads from the green cabbage worm. It is used with success by some of the larger growers of cabbage for market and kraut.

Dissolve the contents of a 25 cent package in a ten or twelve quart pail of soft water, and sprinkle on the heads with a sprinkling can, sprayer, or whisk broom. This amount is sufficient for one application to 100 heads. One application is enough, unless it is washed out by rain.

It will not injure nor discolor the cabbage in any way, and is absolutely non-poisonous and harmless to persons or animals.

One pound will make enough solution for 1500 heads Five pounds for an acre.

EDWARDS' BACTERIA

To Successfully Grow and Increase the Yield of

ALFALFA, FIELD PEAS, SOY BEANS, VETCHES.

Scientifically Prepared and Tested

SMALL COST—LARGE RETURNS—EASY TO USE—NO LABOR EXPENSE

Inoculated and uninoculated alfalfa plants from a farm in Grey County, Ontario. A District Representative of the Department of Agriculture who saw the field, writes: "A part of the field was seeded with seed treated with culture obtained from the Bacteriological Department at the Agricultural College, Guelph; while the rest of the field was seeded with a better grade of seed, which, however, was not inoculated. There is a good catch of seed all over the field, but that which was from uninoculated seed has not made a very vigorous growth, while that from inoculated seed has made a luxuriant growth. In digging, many nodules could be found on the roots of the inoculated alfalfa, but none were on the roots of that which was not inoculated."

The cultures of Edwards' Legume Bacteria are grown from the same strain of bacteria as used in the above experiment.

The chief value of the above named crops, either as food or green manure, lies in the nitrogen they contain. With the aid of bacteria these plants can get their nitrogen from the air. The bacteria live in the soil, and as the plants start to grow, the bacteria burrow into the roots and produce nodules. During this process they take nitrogen from the air and store it in the plants. Unless the plants have these bacteria growing on their roots, they will not make the most successful growth.

On land to be seeded for the first time to alfalfa the bacteria must be supplied by inoculation.

This inoculation of the seed is done in a few minutes, and the bacteria are thus carried into the soil with the seed in ample numbers to insure increased growth of the crop.

VALUABLE RESULTS OF SEED INOCULATION

The pure culture method of seed inoculation is endorsed by the U. S. Department of Agriculture and many State Experiment Stations. At the Ontario Agricultural College, for a period of eight years during which time cultures were sent out to inoculate 21,000 bushels of seed, the average of reported favor-

able results from inoculation was 82.7% for alfalfa. Bulletin No. 271 of the Michigan Station says, "As the expense is so little and risk of loss of the crop so great, in case the bacteria are not present, artificial inoculation should by all means be used wherever alfalfa is being seeded." Bulletin 137, of the Iowa Experiment Station says: "The co-operative experiments show that in practically every instance where the soil was inoculated, a more vigorous growth resulted. In many cases the difference was the difference between a success and a total failure. Considering the ease and slight expense of inoculation, a farmer can ill afford to risk a loss by not inoculating."

While the quantity of bacteria furnished is sufficient for the weights of seed indicated, it will do no injury to use the amount of bacteria on a much less quantity of seed.

When you order, be sure to state clearly the kind of seed to be inoculated.

It is useless to attempt to grow alfalfa in New England unless inoculation is used. For prices, see Wholesale Seed Price List.

Last year I got my garden seed of one of your agents Mr. Stewart, and we had a lovely garden; every thing was fine. We want some of your seed for this year so will you please send us your catalog so we can send you our order.

Charleston, Maine.

JOHN L. PAINE.

Inclosed you will find check for grass seed bought of you. The seed bought of you last year was very nice.

New Vineyard, Me.

EUGENE W. GROVER

Seed all delivered and paid for. Will send you check for same. Every customer was satisfied for there was not a single mistake in their orders.

Keene, N. H.

W. L. JAQUITH

I received the grass seed and corn and am very much pleased with same. Inclosed please find money order as per statement.

Williamstown, Vt.

A. B. DOWNS

I would like to sell seeds for you this year again in my spare time and do all I can for you. Cobb's Improved Golden Bantam has made a hit wherever I have sold it. I picked 500 cucumbers off of 6 hills of Boston Pickling cucumber plants from seeds I got of you.

Orange, Mass.

FRED G. KILHART

As I have used your vegetable seed and had very good luck would like you to send me one of your vegetable catalogues at once and oblige.

Solon, Maine

MYRON WILLIAMS

Please send me one of your seed catalogues stating your latest price list. I got some of your seeds last spring and was very well satisfied with them.

Milan, N. H.

ERNEST GOSSELIN

I received the two bushel of Lakeside corn and I found it just as your agent represented it would be. It was as nice bright corn as ever I got. I am sending you the money order.

Milton, N. H.

WM. MONTGOMERY

Inclosed please find money order for the amount of my bill for seeds, with which I am very much pleased. They were the best seeds I have bought for years. Thanking you very much,

Northboro, Mass.

C. E. BAILEY

Have you any Hopedale Champion sweet corn and what do you charge for it? I gave some to a friend of mine and they thought it was fine and want to get some more and I want some too.

Saybrook, Conn.

ERASTUS STANNARD

Please send me your seed catalogue of garden seeds. I have had your seeds in the past. They proved all right.

Smithfield, Mass.

W. M. ELLIS

I have just received your letter and noted contents. I have been out among our customers. In all cases I asked them if they were satisfied with the seeds that they had bought in previous years and invariably the answer was that they were perfectly satisfied with them and liked them very much indeed.

Durham, N. H.

H. EARL GILSON

In regard to your seeds some of my customers have told me that they are the best they ever bought. When I first commenced to sell for you it was hard work to get people to buy but you will notice I have sold more this year than any year before.

N. Brookfield, Mass.

S. D. COLBURN

Master's Rapid Plant Setter

THE ONLY HAND MECHANICAL PLANT SETTER ON THE MARKET

Is built on scientific principles throughout. Its conical jaws are made of heavy sheet steel and the main body or water reservoir and plant tube of heavy tinned plate. The water valve is of brass with rubber packing. The valve rod and trip spring are of steel wire; thumb button and other fittings are also of brass. The machine is well put together with rivets and solder and should last for years.

NO STOOPING WHEN USING IT THEREFORE: NO LAME BACKS

All Kinds of Plants

Such as Cabbage, Tobacco, Tomatoes, Cauliflower, Strawberries, Sweet Potatoes, Sugar Beets, Etc., are

SET IN WATER AND COVERED AT ONE OPERATION

The plant roots are put down to the proper depth below the surface where the ground is cool and damp. You never have to wait for a shower; plants may be safely set out when large enough, regardless of the weather—no matter how dry and dusty the ground may be.

Every Farmer and Truck Grower Should Have One

Any man, with very little practice can easily set out 7,000 to 10,000 plants each day. Use **Liquid Fertilizer** to set with if possible. This will insure a quick start and a strong growth.

Printed instructions for making and using home-made Liquid Fertilizer at no cost but your own work to prepare it, sent free with each Plant Setter; also full directions **how to operate it**, go with every machine.

This Planter will save its cost a dozen times over in a season—is light and pleasant to work with—and its price within reach of every grower.

Weight 4 1-2 lbs. See Wholesale Price List.

Whately, Mass.

Gentlemen—I ordered one of your Planters last winter for my own use, not knowing anything of its merit. I did not have a chance to see it worked out until planting time, about June 15th, when I found I could set, water and cover my plants all at one operation. My neighbors saw how well it worked and I ordered 18 and received them 48 hours after sending in the order, and I sold every one of them the same day. This is a tobacco growing section along the Connecticut river for about 100 miles on both sides, and I will place them before every grower within a year if you give me the agency, and I shall want at least one hundred dozen. This little Hand Planter is going to do wonders for the growers next season.

Yours truly,

WM. L. DICKINSON
