Business Terms

We **Especially Invite Charge Accounts.** A charge account is more convenient than to remit for each order at the time it is sent us; you pay no more for your goods by reason of this accommodation. As to our responsibility we refer you to **Dun's or Bradstreet's Mercantile Agency.**

When sending your first charge order, refer, preferably, to someone with whom you have a charge account. This saves many a delay. When sending us your first order accompanied by remittance, we prefer bank cashier's check or money order, unless cash is sent; this frequently saves delays.

Goods can be sent C. O. D., with the exception of perishable items, which include plants and cold-storage bulbs. These cannot be sent C. O. D. unless a partial remittance accompanies the order.

Shipping Instructions

Always state clearly by what method you want goods forwarded, otherwise we will ship according to our best judgment.

Invitation

All customers and others interested in horticulture or agriculture are cordially invited to visit our plant establishment at Andalusia Station (N. Y. Division of P. R. R.) about 16 miles from Philadelphia. In the

spring, summer and autumn we invariably have interesting displays of hardy flowers, etc. This invitation applies to our city establishment as well, at 518 Market Street, Philadelphia.

Delivery Service

To points where baggage-master or package service is in operation, we ship **all orders which can be packed in one parcel or piece, not exceeding 50 pounds in weight**, free of transportation charges at prices quoted in this catalogue. Fertilizers in more than 25-lb. lots, or bulky packages, are not accepted by baggage-master service. Our automobile delivery also covers many sections of Philadelphia.

Shipping Facilities of Philadelphia

Express—Wells-Fargo, Adams, American.

Freight—Baltimore & Ohio, Reading, Lehigh Valley, and Pennsylvania.

Boat—Clyde Line, Merchants' & Miners' Steamship Company.

The above transportation companies, with their connecting lines, enable us to ship quickly and economically all over the world.

ON account of unusual prevailing conditions, all prices in this catalogue are subject to change without notice.

Brief Cultural Directions on a few of the Most Important Bulbs

HYACINTHS

Directions for Planting in the Open Ground.—This should be done in October and November, but they can be set out at any time, as long as the ground is open and the bulbs remain sound. The best compost for their culture is the following: One-third sand, one-third well rotted cow manure and one-third good garden mould. Special care should be taken not to add any bone fertilizers, as they usually draw vermin. The beds composed of the above compost should be well dug to a depth of fourteen inches, and raised from two to four inches above the level of the walks. Care must be taken not to press the earth too firmly around and over the bulbs. After planting, rake the bed smooth, and after the ground has frozen tolerably hard in early winter cover with dry litter, leaves or coarse manure.

For Culture in Pots.—Prepare the above compost, adding, if possible, a quantity of leaf mould. The most favorable time for planting is September, October and November. The size of the pot depends on the number of bulbs planted in a single one; three bulbs in a pot of, say, six inches diameter make a rich, massive effect; one or two bulbs in each may be planted in proportionately smaller pots—two bulbs in each are very effective. When planted, water them well, then bury the pots in the open ground to the depth of six inches for eight weeks, in which condition the preparatory root growth necessary to a vigorous development of their flower spikes is made. After this period remove the pots to a cool room. Being exposed to the light for the first time care should be exercised not to place them in the direct rays of the sun for two or three days.

For Growing in Glasses.—Single varieties are the best for this purpose. Place the bulb in the glass, which should be filled with water so it touches the bottom of the bulb, place them in a cool place, in the dark, changing the water every ten days or two weeks; keep them in the dark for six to eight weeks, then remove them to the light. If then kept in a cool room they will produce very fine spikes. A small lump of charcoal prevents the water from getting foul.

MINIATURE HYACINTHS

Although this type of Hyacinths is largely grown in pans or pots for decorative purposes, their splendid qualities as bedding bulbs should not be overlooked.

Miniature Hyacinths (Continued)

If planted close together, say 4 to 6 inches apart, they produce a wonderful effect. Massed with other bulbs, as Crocus, Snowdrops, Tulips, etc., they are unsurpassed for their brilliancy. We are convinced that a trial of Miniature Hyacinths as bedding bulbs will give the greatest satisfaction.

TULIPS

For Bedding Out.—The bed should be formed of a compost similar to that recommended for Hyacinths; the bulbs should be planted about four inches apart and about five inches deep (close planting makes a much finer effect and prevents the flowers breaking off when swaying in the wind); they should then be covered with a litter shortly before the severe freezing weather sets in, and left in this condition until spring approaches.

For Pot or Pan Culture.—Plant about four bulbs in a six-inch pot or five bulbs in a six-inch pan, water thoroughly and then remove to the open ground or in a cold frame, covering with coal ashes; after they have rooted thoroughly they should be brought into a moderately cool room and gradually warmer; by bringing in a fresh supply from the outside every ten days, they can be had in bloom continually.

NARCISSUS

The double and single trumpet varieties should be planted in soil, and treated similar to Hyacinths. Chinese lilies and Paper White Narcissus, and the Polyanthus type, such as Grand Soleil d'Or, etc., etc., succeed very well if planted in water and pebbles. A small lump of charcoal prevents the water from getting foul, although changes of water are advisable.

CROCUS

A real show can be obtained from these tiny bulbs. They will bloom in a few weeks from time of planting inside. Place a few bulbs, or as many as the size of crock will warrant. In a short space of time the bulb will make a grand display. Planted out in the open ground, they bloom among the first of the spring flowers.

MICHELL'S SUPERB (First Size) NAMED HYACINTHS 3

A Spring flower-effect in the Italian gardens of the late Mr. P. A. B. Widener, "Lynnewood Hall," Ogontz, Pa., planted with Michell's Bulbs

Our First Size Hyacinths are of the highest quality obtainable. They are sound, plump, heavy and sure to give satisfaction. To assist customers in selecting varieties, that will bloom at the same time, we have affixed the letters *E*, *M*, and *L*; signifying *E* for early sorts, *M* for mid-season sorts, and *L* for late sorts.

DOUBLE VARIETIES

FIRST SIZE NAMED

The Double Hyacinths, while grown by many, do not produce as large a spike as the single sorts. They should not be used for glass culture, as they will not turn out as well as the single varieties. For pot or out-door culture they are very satisfactory.

CHOICE BEDDING HYACINTHS (Unnamed)

Michell's Bedding Hyacinths are larger than those put in ordinary mixtures. They will produce fine spikes and therefore can also be used for forcing purposes. Where bedding of Hyacinths is to be done in large quantity we can particularly recommend them on account of their low cost, the length of time they remain in flower, and because of their handsome effect. Parcel post weight, 2 lbs. per dozen; per 100, 12 lbs.

Michell's Monster White Roman Hyacinths

FRENCH ROMAN HYACINTHS

French Roman Hyacinths afford a continuous supply of bloom from early winter until late in spring if planted in succession (two weeks apart). They are very fragrant.

They are easily grown in pots or pans. The bulbs, if potted in August or September, the pots plunged in the open ground for a month, until the bulbs are well rooted, and then brought in the house, they can be had in flower in November or December, and a continuous supply of these delightful flowers may be had, by bringing in a few pots or pans of the rooted bulbs at intervals of about 2 weeks. The bulbs should be planted quite close together, a 6-inch pot or pan will be sufficiently large enough for six bulbs. They are not hardy and are not suitable for outdoor planting.

Christmas Flowering Dutch Roman Hyacinths L'Innocence

These specially prepared pure white Hyacinths are peculiarly adapted for pot culture and early flowering. They can be made to bloom just at holiday season, and for that reason their name. The bulbs, which are of medium size, produce large, well-formed spikes. We recommend each lover of flowers to try a few, as Hyacinths for Christmas are a most cheerful novelty. 7c. each; doz., 75c.; \$5.00 per 100; per 1000, \$45.00.

"Darwins" are a class of Tulips which flower long after the other Tulips have bloomed. The illustration on the front cover of this catalogue can give only a faint idea of the beauty of the Darwin Tulips. The gigantic flower cups are borne on straight, stout stems, which rise far above a broad foliage and which commonly attain a height of 2 to 3 feet. For massing, bedding or border planting the Darwins are hard to equal. For pot culture they are splendid and are just the ideal Tulip to grow for Easter. The varieties marked with an asterisk (*) are most adapted for the latter purpose.

8 Michell's Cottage Garden, Late, or May Tulips

Nothing in horticulture has received so much comment in late years as the late flowering tulips. A few years ago where only hundreds were sold, the demand has now grown to hundreds of thousands. They well deserve the popularity they have gained, for no other of the spring flowering bulbs can approach them for brilliancy, beauty and usefulness. For planting in beds, massing the perennial border or planting in clumps they are ideal. The very long stems make it possible to use them in most any kind of floral decoration; the flowers are shapely and many are very fragrant. The mixed types are desirable, yet we recommend the planting of named sorts if extra fine shows are wanted. (*All Single except where noted.*)

- 14 **Blue Flag (Double).** A very pretty shade of violet blue, very odd, and should be included in every collection. 6c. each; per doz., 60c.; \$4.00 per 100; per 1000, \$35.00.
- 18 **Bouton d'Or (Golden Beauty or Ida).** Color, a beautiful golden yellow; handsome perfect flower; grand for cutting. 4c. each; per doz., 30c.; \$1.75 per 1000; per 1000, \$15.00.
- 20 **Caledonia.** A lovely shade of bright orange scarlet; massive erect flowers are produced on long stems. It is a variety that should be planted very extensively, an extra fine sort for cutting. 4c. each; doz., 35c.; \$2.25 per 100; per 1000, \$17.50
- 24 **Gesneriana Lutea.** This planted in connection with Gesneriana Spathulata makes a gorgeous combination, in fact, few other late tulips bed together as well as these. The rich canary yellow flowers hold their color for a long while; for cutting it is equally valuable. 4c. each; doz., 35c.; \$2.25 for 100; per 1000, \$17.50.
- 24 **Gesneriana Spathulata.** A brilliant scarlet, with blue-black centre. This is one of the finest late tulips in existence. 3c. each; per doz., 30c.; \$2.00 per 100; per 1000, \$16.00.
- 24 **Gesneriana Rosea.** Very similar in character and growth to the above; the color, however, is a rich brilliant pink. 3c. each; per doz., 30c.; \$2.00 per 100; per 1000, \$16.00.
- 16 **Golden Crown.** Flower very large, of a pure yellow color, with a narrow border of red, excellent for bedding or cutting. 4c. each, per doz., 30c.; \$1.75 per 100; per 1000, \$15.00.
- 24 **Inglescombe Pink.** A beautiful salmon rose, surpassing for brilliancy and stateliness anything in the cottage garden tulip line. Flowers are oval shaped like an egg; for promiscuous planting in borders this is one of the finest. If placed in a moderate heat this variety will force. 4c. each; doz., 30c.; \$2.00 per 100; per 1000, \$17.50.
- 24 **Inglescombe Scarlet.** Brilliant vermilion, with black centre, excellent for cutting. 5c. each; doz., 40c.; \$2.50 per 100; per 1000, \$20.00.
- 20 **Inglescombe Yellow.** A globular shaped rich golden yellow flower, a variety that resembles the Darwins; in fact, it is the only yellow tulip that can be massed with the latter in such a manner that it will not attract attention of its being another type. 6c. each; doz., 65c.; \$4.50 per 100; per 1000, \$37.50.
- 20 **La Merveille.** Beautiful orange red. Each, 4c.; 30c. per doz.; per 100, \$1.75; \$14.00 per 1000.
- 20 **Moonlight.** An exquisite shade of light canary yellow, with a long pointed flower on tall graceful stems; it keeps remarkably long in water as a cut flower; it can be forced in moderate heat. 75c. doz.; per 100, \$5.00; \$40.00 per 1000.
- 20 **Picotee (Maiden's Blush).** Color, white with a distinct rosy border; the finest late tulip. 4c. each; doz., 30c.; \$1.75 per 100; per 1000, \$15.00.
- 12 **Royal White.** Flower is very large, of oblong form of purest white, while the centre is light yellow. This is without doubt the best of the late whites which will force indoors in slow, gradual heat. 6c. each; doz., 60c.; \$3.50 per 100; per 1000, \$30.00.

Note—If by Parcel Post, add postage at Zone Rates. Weight of Late Tulips, 1 lb. per doz.; 100, 5 lbs. Single Bulbs mailed free.

- 20 **Rosalind.** A bright cherry pink, pure white at base. 3c. each; 30c. per doz.; per 100, \$1.75; \$15 per 1000.
- 12 **Sarah Bernhardt (Hobbema or Le Reve).** Exquisite soft rose shaded apricot; a delightful combination. 6c. each; doz., 60c.; \$4.25 per 100; per 1000, \$37.50.
- 20 **Shandon Bells (Blushing Bride or Isabella).** A beautiful carmine, shaded creamy white, a very pretty contrast. 3c. each; per doz., 30c.; \$1.75 per 100; per 1000, \$14.00.
- 20 **Striped Beauty (Summer Beauty).** Rose flaked crimson and white, a large and showy flower. 6c. each; per doz., 60c.; per 100, \$3.50; \$30.00 per 1000.

- Single Superfine Late Mixed.** We can recommend these highly for planting in places where a fine show is desired. 3c. each; per doz., 25c.; \$1.75 per 100; per 1000, \$13.00.

DUTCH BREEDER TULIPS

This old-fashioned type has come into prominence very much of late years. They are the race from which practically all other late tulips originated. The colors run principally in the purple, maroon and terra cotta shades; they are gigantic in size and of vigorous growth. The shades of color are really distinct from all other classes, being exceptionally refined. They make a fine effect in hardy borders, and when used as a cut flower last a long while in water. If you want something exceptionally fine in your garden, plant some of these varieties. Breeder tulips cannot be forced.

MICHELL'S EARLY DOUBLE TULIPS

Double Tulips have massive flowers of brilliant and varied colors and the flowers last much longer in bloom than the single varieties. Double Tulips are beautifully adapted for beds on the lawn, in the garden, or for planting in clumps of a dozen or more among shrubbery. They should not be planted in beds with Single Tulips, as they do not bloom as early as the single sorts. Double Tulips are also used extensively for forcing. The number prefixed before the variety denotes the approximate height in inches.

MICHELL'S
"GIANT NAMED"
CROCUS

MICHELL'S SPRING FLOWERING CROCUS, Etc.

With the introduction of the newer improved Giant Named Crocus this flower has gained untold favor; for it is not only used as in olden days a decoration for lawns, but occupies a place as prominent as tulips; it is most effective in clumps of one color among shrubberies, in borders or garden beds. In lawns planted in the grass the Crocus is extremely effective. They are easily planted in the turf with the aid of a dibble, especially after rains have made the sod moist. The flowers are gone before the lawn requires mowing, so they do not interfere with the summer beauty of the lawn. The Giant flowering named varieties are splendid for flowering in pots, and may also be successfully grown in bowls of water, with moss, fibre or pebbles.

GIANT NAMED VARIETIES

The bulbs of these varieties are very large and each bulb is capable of producing several flowers. In size of flowers and coloring they are a great improvement on the older sorts.

AUTUMN FLOWERING—CROCUS AND COLCHICUM

Effective, hardy bulbous plants, which flower in the autumn without foliage, the latter appearing the following spring. Very desirable, especially for hillsides and terraces. They can be put to splendid use either in clumps in the hardy border, or between shrubs, or for naturalizing in fields, woods or meadows. The latter spots are their natural home.

As a house plant they are a curio. For this purpose they must be placed in shallow saucers near a sunny window. As if by magic over night the flowers peep through the top, first white, and then gradually changing to lavender. Plant early.

Note.—In describing Narcissus, Daffodils, etc., by "perianth" we mean the flower petals surrounding the cup or funnel; "Trumpets" is a word applied to the centre tube or funnel; "Cup" refers to a short cup-like formation in place of the funnel. To assist customers in making a selection we have affixed the height and time of flowering; the height in inches is denoted by figures; F indicates that a variety is suited for planting indoors for winter blooming.

- 14 **Cynosure**. Primrose yellow perianth, orange shaded cup stained scarlet; this is one of the showiest in its class; a very free bloomer and is fine for cutting; recommended for outdoor planting in herbaceous borders and shrubbery; mid-season. 3c. each; doz., 25c.; \$1.35 per 100; \$11.00 per 1000.

This should be planted largely in every hardy border or any other spot where it can give a natural effect; mid-season. 3c. each; doz., 25c.; \$1.50 per 100; per 1000, \$12.00.
- 12 **Stella**. HARDY NARCISSUS IN MIXTURE

For massing in borders, fields, woods and, in fact anywhere, they more than return their cost in the liberal manner in which they flower, producing a wide range of color and variety of bloom. We offer large size bulbs only, which can be depended upon for results the first season.

Narcissus Poeticus Ornatus (Natural Size)

THE OLD-FASHIONED POET'S NARCISSUS

This class is noted for its hardiness and freedom of bloom. It is one of the most popular types, used extensively for wild gardening and naturalizing. They are quite fragrant and are splendid for cut flowers.

Height

- 12 **Biflorus**. Two to three flowers appear on a single stalk; perianth pure white; the crown is soft yellow; it flowers very late and is delightfully sweet scented. Each, 4c.; 30c. doz.; per 100, \$1.50; \$11.50 per 1000.
- 12 **Burbidgei**. This is the earliest variety, bearing pure white flowers, the cup being beautifully fringed and margined red. Each, 3c.; 25c. doz.; per 100, \$1.35; \$11.00 per 1000.
- 15 F **King Edward VII** (*Almira*). An improved type, having magnificent large flowers with broad, round petals, a glistening white, and the yellow cup is edged deep red; a very early flowering variety. 5c. each; doz., 35c.; \$2.25 per 100; per 1000, \$20.00.
- 24 F **Poetaz Elvira**. This remarkable novelty is the result of a cross between the Pheasant Eye and the Polyanthus Narcissus, combining hardiness with the cluster flowering effect. The blooms which are pure white of remarkable substance and delicate yellow cup never come less than 3 to 4 to a long stem and from 2 to 3 stems are produced from a single bulb. The fragrance is distinct, resembling that of a Gardenia. It forces well and early. Each, 4c.; 40c. doz.; per 100, \$2.75; \$22.50 per 1000.
- 12 **Poeticus Ornatus**. A much improved form of the ordinary Poeticus, producing larger flowers and blooming two weeks earlier; especially adapted for forcing; mid-season.

MICHELL'S DOUBLE NARCISSUS OR DAFFODILS AND JONQUILS

The Narcissus or Daffodil is becoming more popular every year. It is hardy in every way and thrives most anywhere. For naturalizing in woods and fields nothing equals it. When once established they multiply rapidly and in a short time cover tremendous areas. Many varieties can also be used for forcing, for which purpose they are highly desirable. Plant in a pan or pot anywhere from 3 to 12 bulbs, according to size of bulb. We offer large bulbs only. *Parcel Post Weight of Double Narcissus, 1¼ lbs. per dozen; per 100, 10 lbs. Single bulbs mailed free.*

Alba Plena Odorata. A very sweet-scented pure white variety called Double Poets Narcissus; it flowers later than many of the other daffodils, and is not desirable for forcing. It makes a handsome show bedded among perennial plants and shrubbery; height about 15 inches. 3c. each; per doz., 25c.; \$1.35 per 100; \$11.00 per 1000.

Double Jonquils (*Sweet Scented*). Pure golden yellow; deliciously fragrant. Clumps of these planted outdoors make a beautiful effect. Indoors they can be brought into flower with ease, when they should be planted in pans containing not less than a dozen bulbs. Height, 12 inches. 4c. each; doz., 35c.; \$2.00 per 100; per 1000, \$15.00.

Incomparable Double. On account of the peculiar suffusion of the colors in the flower, this variety is also known as "Butter and Eggs." The color is yellow and orange, and makes an attractive cut bloom. Its greatest value is for outdoor planting, as it does not force so well. Height about 16 inches. 4c. each; per doz., 35c.; \$2.00 per 100; per 1000, \$15.00.

Orange Phoenix. A variety similar to the above, except for coloring, which is a light yellow, almost white, with a yellow centre. It is splendid for forcing or pot culture. It is also called "Eggs and Bacon." Height, 16 inches. 4c. each; per doz., 35c.; \$2.25 per 100; per 1000, \$17.50.

Von Sion (*Telamonius Plenus*). The true double daffodil. Our stock of these comes from one of the largest daffodil producers in Holland. The color is a pure golden yellow, entirely free from green-tipped flowers, which are often found in cheap grades. For forcing or outdoor planting it has no equal. It should be planted extensively for naturalizing. A bed or clump of these planted outdoors, and intermingled with plantings of Violas, Pansies or English Daisies, make a delightful early spring floral combination.

Sulphur (or Silver) Phoenix. Flowers very large, bluish-white; the centre is sulphur colored; excellent for forcing or outdoor planting. Height about 18 inches. 4c. each; per doz., 40c.; \$2.00 per 100; per 1000, \$17.50.

MICHELL'S SUPERB EASTER LILY BULBS FOR INDOOR CULTURE 17

Cultural Note—In order to obtain best results, attention to the following brief directions will assist materially: Upon receiving the bulbs, pot them immediately. Place a handful of well-rotted cow manure in the bottom of the pot, add about one inch of soil, and place the bulb directly on top, covering it with soil. After watering, place in an outside pit; cover well with soil, ashes or any other suitable litter. When thoroughly rooted, bring inside, in a temperature of about 60°; let the plants grow slowly under a bench or some other suitable place until about 6 inches high; then place on top of the bench. About two months before Easter they can be brought into a warmer temperature and gradually forced into flower and height at one time. An occasional application of liquid cow manure will stimulate the plant wonderfully. Spray the foliage once a day. Never allow the soil to get very dry, and never feed, unless the soil is moist.

From our experience, which we are sure compares with the experience of growers themselves, we have found that the best results from Easter Lily Bulbs of any variety are obtained when the bulbs are planted in *fresh new soil*. Every batch of Easter Lilies that are potted should be in soil that has never been employed in greenhouse work. You will be surprised to note the difference and the satisfaction that you will get from your Lily Bulbs.

BEGONIAS (Tuberous Rooted)

(Ready in January)

There hardly is a single garden in which there are semi or entirely shaded spots where the average flower will not grow; such places are ideal for this flower; yet it will make a dazzling show in the open. Enormous wax-like flowers appear uninterruptedly from June till frost. The bright flowers contrast well with the deep-colored foliage. The bulbs must be lifted in the fall. Plant bulbs outdoors about May 1st.

White Calla Lily

CALLA LILY BULBS

Callas require good, rich soil and plenty of warmth and water to make them thrive. The White Calla may also be grown in water. The black variety does not require so much moisture. When through flowering the pots may be laid on their side to allow the tops of bulb to die off. The plant may thus be used another season. Plant Callas indoors only.

GODFREY DWARF EVERBLOOMING CALLA (New)

This comparatively new calla has proven an excellent one, its character is exactly like the Æthiopica or regular variety, except it is of much dwarfer habit and freer bloomer; very desirable as a pot plant, and will, we believe, be very popular in a short while. Large blooming size bulbs, 25c. each; doz., \$2.50; \$15.00 per 100.

MICHELL'S MAMMOTH FLOWERING CHINESE LILIES

(See illustration.)

This type of *Narcissus (Orientalis)* is also known as Joss Flower, Shui Sin Far, or Flower of the Gods, is a most remarkable house flower, producing its beautiful, fragrant blossoms of white and yellow in the astonishingly short time of 4 to 6 weeks. Popularly they are grown in bowls of water and pebbles; the most satisfactory method of treating them is as follows:

Place from 3 to 6 bulbs in a bowl on top of pebbles to the depth of 2 inches; also place a piece of charcoal with the pebbles to keep the water sweet. Place more pebbles around the bulbs so they will not topple over and then fill the bowl with water to the top of pebbles. After being planted they should be stored for three weeks in a cool, dark corner and then brought forth to a light but cool place, where they will grow to the highest point of perfection. Excessive heat produces quick growth but will blight the buds and no flowers are the result; they also do best where no coal stoves or gas-lights are used in the room where they flower.

They may of course also be grown in pots with soil or sand, bulbs, fibre and moss. To have succession of blooms start a fresh bowl every 2 weeks.

For indoor culture plant about 25 pips or roots in a 7-inch pot or pan, place outside, where they should be left until they have been subjected to several nights' freezing, which brings them into flower more readily. Bermuda Buttercup Oxalis

OXALIS (Winter Flowering)

For conservatory, greenhouse and window garden culture the Oxalis is ideal. It succeeds anywhere and with any one, flowering often in 6 to 8 weeks after planting. Plant at least six bulbs of any variety in a suitable size receptacle, place them in a cool, dark place for about two to three weeks till thoroughly rooted, watering as required. The flowering period extends during the entire winter. For indoor planting only. To keep Oxalis free from insects, an occasional application of tobacco dust has proven to be best.

MICHELL'S BULB GROWING GUIDE

Bound into a heavy cover, we have issued the above booklet containing not only the most up-to-date cultural directions in general but giving a very concise detail to what use each variety is best put to and in addition describing very explicitly each and every bulb offered in this catalogue. We want every bulb grower to possess this instructive guide. Mailed or handed free to every applicant.

ORDER BULBS EARLY

Our bulbs have such a splendid reputation we are frequently sold out of some varieties early. We, therefore, recommend the placing of orders as soon as our Catalogue is received.

Giant Single Snowdrops

SNOWDROPS (Galanthus)

No spring flowering bulb plays a more important part in the garden than does this somewhat insignificant variety. 'Neath ice and snow often early in March; yes, frequently in February you can see it sticking forth its flower spike as though exclaiming, I can't wait for spring to come. What can gladden the heart more than this? A combination of Crocus, Scillas and Snowdrops make a glorious effect when planted promiscuously in a border; one follows the other in flowering and a change of color with each one suggests a floral treat hard to equal at the time of year they flower—*February till April*. They are perfectly hardy; should be planted in masses of 50 or more bulbs. They also flower well in pots indoors.

SPRING SNOWFLAKE (Leucojum Vernal)

Beautiful early flowering bulb, rivaling for earliness the Snowdrop. Plant in clumps of 25 to 100 bulbs, for a good effect. Color, pure white tipped green; may also be used for flowering indoors; height, about 7 inches. Each, 4c.; 30c. doz.; per 100, \$1.75; \$15.00 per 1000.

SPIREA (Astilbe)

This is a favorite Easter flowering plant rivaling with the lily. If wanted for indoor blooming, pot the roots on arrival, water well and place outdoors for about 6 to 8 weeks. They may be brought in and placed in a moderately warm room, the cooler, without freezing, however, the better. They can be made to flower almost any time by bringing them to a warmer place. For outdoor they are fine in hardy borders; flowering in June. Parcel Post Weight, 2 lbs. each.

Note:—We have discontinued the varieties, "Compacta," "Japonica," and "Astilboides Floribunda," as other varieties, which are better, have superseded them.

America (New). A very beautiful lilac-rose colored variety, having the same habit, large feathery panicles and forcing qualities of Gladstone. Well grown pots of this variety in bloom are certainly most attractive. Large clumps. Each, 40c.; \$3.00 doz.; per 100, \$17.50.

Gladstone. This popular, large-flowering Spiraea is a wonderful improvement over all other white-flowering varieties, and is, no doubt, the most beautiful Easter and spring-flowering pot plant grown. The immense trusses of flowers are snow white; borne on strong, erect stalks, and appear in such abundance that the plant is practically enveloped with a white feathery foam.

Extra large clumps. 25c. each; doz., \$2.25; \$12.00 per 100.

Monster clumps. 50c. each; doz., \$5.00; \$30.00 per 100.

Queen Alexandra. A beautiful shade of pink. Being an offspring of the Gladstone it requires the same culture. The plant should be shaded as it comes into bloom in order to bring the flower to full perfection.

Extra Large Clumps. 25c. each; doz., \$2.25; \$12.50 per 100.

Philadelphia. A grand pink variety, producing magnificent plummy flower spikes of a beautiful rose shade. This variety is a great improvement over Queen Alexandra and will, in all probability, supersede the latter sort.

Extra Large Clumps. 35c. each; doz., \$2.50; \$15.00 per 100.

Princess Mary (New). A splendid forcer of delicate lilac rose color. Resembles in growth the popular "Gladstone," but the color is entirely distinct. It is, without a doubt, the finest of all pink spiraeas. Extra large clumps, 50c. each; doz., \$5.00; per 100, \$30.00.

SPIREA ARENDSI TYPE

Special attention is called to these offered in the perennial plant section; they are among the finest of hardy flowers, splendid for border work, massing or cut flowers.

MIXTURES FOR PLEASURE GROUNDS

Michell's Fair Greens (Golf Course) Mixture

The formula for this mixture was reached after a lifetime experience of the late P. F. Foy, at the time Superintendent of the Philadelphia Country Club, Bala, Pa., and we have improved it from time to time.

Composed of short-growing, deep-rooted varieties, resists plenty of wear. Sow 6 bushels per acre.

Prices: Qt., 25c.; 2 qts., 45c.; 4 qts., 75c.; 1 peck, \$1.25; 1 bu. (20 lbs.), \$5.00; 5 bu., \$22.50; 100-lb. lots and over, 22½c. lb.

Michell's Putting Greens Mixture

A quick-growing mixture of short grasses, over which the ball can roll without resistance. Our formula for this has been reached after many extensive tests, and those who desire to sow it, will not be disappointed in the results they get from it. We do not recommend less than a bushel of 25 lbs. (and more is better) to a green 75 feet square.

Prices: 1 qt., 30c.; 4 qts., \$1.00; 1 peck, \$2.25; 1 bush. (25 lbs.), \$8.50; 5 bush., \$40.00; 100-lb. lots and over, 32c. lb.

Note—All Grass Mixtures except Putting Greens and Golf Course contain white clover. Any of them, however, can be furnished without this.

Michell's Permanent Pasture Grass Seed. In the past few years ideas of what was the best way to establish a permanent grazing sod have undergone many changes. The method of sowing timothy and clover has been found not only costly but too short lived. Michell's Permanent Pasture Grass Seed is composed of about 10 of the best growing and most nutritious grasses and clovers for stock feeding or grazing. One sowing will last many years, although we advise additional sowings each autumn just previous to which a light harrowing is recommended to give the grass a quick hold. Sow 3 to 4 bushels per acre on new lands or 2 bushels on established pastures (15 lbs. per bushel). Prices: Per qt., 20c.; 4 qts., 50c.; pk., 85c.; bush. (15 lbs.), \$3.00; 5 bush., \$13.75; 100-lb. lots, 18c. lb.; 200-lb. lots and over, 17c. lb.

Michell's Permanent Hayfield Grass Seed. While timothy is still extensively sown for this purpose, this mixture is gradually being adopted by the progressive farmer. Its main advantages are that certain grasses in the mixture will grow better in varying conditions of soil, thus giving a full crop of hay. Sow 3 to 4 bushels per acre on new lands, or 2 bushels on established fields (15 lbs. per bushel). Prices: Per qt., 20c.; 4 qts., 50c.; pk., 85c.; bush. (15 lbs.), \$3.25; 5 bush., \$14.00; 100 lb. lots, 18c. lb.; 200-lb. lots and over, 17c. lb.

44 Michell's Choice Recleaned Seed Wheat, Etc.

Prices of Seed Wheat fluctuate constantly and will be quoted on request

"MIRACLE" (Beardless)

This valuable Wheat was introduced by us in the vicinity of Philadelphia in 1911. We kept track of parties to whom we shipped it, and we learned, without a single exception, that it is all we represented it to be. It produces a magnificent, heavy growth of straw, which is very stiff and erect. The head is bearded and contains well-shaped wheat berries of a semi-hard red nature of excellent milling qualities. **It is a tremendous stooler, one grain producing as many as 25 stalks with often 45 grains to the head or stalk.** It is readily seen that this wheat should produce on average conditions an enormous crop, its usual rating being anywhere from 40 to 50 bushels per acre under average conditions. The introducer impresses upon us very forcibly **not to recommend the sowing of more than one-half bushel per acre**, as if seeded heavier it is liable to choke itself, on account of its free stooling habit. It is early to mature, and produces straw often 5 feet high.

"FULTZO-MEDITERRANEAN" (Beardless)

This is a cross of the "Fultz" and the old "Mediterranean" Wheats. The berry is short, plump, and red. Chaff white and smooth. The heads are of medium length, very compact, well filled and inclined to widen at the top. By careful selections and reselections for a series of years our grower succeeded in eliminating practically all the bearded heads formerly found in Fultzo-Mediterranean. For earliness or stiffness of straw it cannot be excelled. It stools well and $1\frac{1}{4}$ to $1\frac{1}{2}$ bushels per acre is sufficient to sow. Coming from two vigorous hardy varieties, it has inherited the good qualities of both its parents. It frequently produces over 40 bushels per acre.

FOUR-ROWED FULTZ (Beardless)

Four-rowed Fultz has a tendency to produce spikelets composed of four grains of wheat arranged in a row close together. Although the heads are only of medium length, in most cases they contain more wheat than heads of other varieties that are much longer.

Four-rowed Fultz is **extremely early**. The berry is of medium size, hard, red in color. Chaff is white. Straw is of medium length, strong and stiff. It is adapted for practically any variety of soils and is unsurpassed for hardness.

On average and rich soils, Four-rowed Fultz will give straw of great length, will stool out wonderfully, making a thick growth.

Four rowed Fultz has numerous records of yield of 40 bushels per acre on average land. On select land as much as 50 bushels per acre has been harvested. Sow $1\frac{1}{2}$ to 2 bushels per acre.

LANCASTER-FULCASTER (Bearded)

A reselection from the old "Fulcaster" and one of the purest wheats now offered.

There are few other varieties that will do quite as well on soils of average quality. Farmers who are not able to raise even fair crops on rather thin soils should sow "Lancaster-Fulcaster." Even under adverse conditions this variety will produce a satisfactory crop of straw and a surprising crop of grain. Even on thin soils the grain will be of full size. The grain is of finest quality, a genuine long berry, dark red and hard. The chaff is white and the straw is long and stiff.

Lancaster-Fulcaster is a great favorite with millers on account of its splendid milling qualities. It will carry through extreme winters and withstands attacks of insect pests and disease better than any other variety. Sow $1\frac{1}{2}$ to 2 bushels per acre.

LEAP'S PROLIFIC (Beardless)

Stools out strongly, roots deeply and is a good producer. The grain is hard, large, dark red; the chaff white, the straw long and stiff; ripens early. It is a splendid all round variety. Sow $1\frac{1}{2}$ bushels per acre.

MICHELL'S RECLEANED ALFALFA (Medicago Sativa)

The most valuable forage crop on the American farm today, and can be truly termed a mortgage lifter. It is sown during May, August and September, these being the best months for success, although it can be sown at other times with a possible chance of doing well. Careful preparation of the soil previous to sowing is the main thing. Our special Circular on Alfalfa goes into this carefully and is free for the asking. Sow not less than $\frac{1}{2}$ bushel (30 lbs.) per acre, preferably with no other crop. **Our seed is always over 99% pure**, and will invariably give the best of results. Price, per lb., 25c. Write for price on larger quantities, as it changes.

Crimson Clover

Alfalfa (see page 44).

CLOVERS

Alsike or Swedish Clover (*Trifolium Hybridum*). One of the best for mixing with timothy; it is perfectly hardy in every climate or soil condition and seldom has to be reseeded. Under ordinary conditions it grows from 1 to 2 feet high, is sown early in the spring or late summer and early autumn. It is as nutritious as red clover and is rapidly coming to the front as a valuable farm crop. The flower resembles the white clover except that the head is larger and has a red tinge on the edge. Sow 10 to 15 lbs. per acre alone or 8 lbs. per acre with timothy. Price on application.

Bokhara or Giant Sweet Clover (*Melilotus Alba*, Syn. *M. Leucantha*). Used either as a feed crop or as a fertilizer to plow under. Grows from 4 to 6 feet high. It will thrive on almost any kind of soil. If you have thin, rocky, hard or sour soil, which you wish to enrich, this is just the crop for you to grow. It will make two hay crops the first year and the fodder is considered the best for cows, cattle and hogs. **We handle only the true, white-flowered variety.** Sow 15 lbs per acre in early spring alone, or 10 lbs. per acre with other crops. Price on application.

Crimson Clover (*Trifolium Incarnatum*). Delaware Grown Seed. This is used principally for soiling or green manuring, for which purposes it is highly valuable. If desired for feed, cut it just before it flowers. When desired for green manure it should be allowed to mature; its height is from 1 to 2 feet. Sow any time from April to October, the earlier the better, 20 lbs. to the acre. If sown in early spring it can be plowed down the first year, although no other crop can be raised on the field that season. Fall or late summer seeding makes it possible to use the field the following season. It is not hardy; flowers crimson. Price on application.

Mammoth Red Clover (*Trifolium Pratense Perenne*). Sometimes called Sapling or Pea Vine Clover and English Cow Grass. This differs from the "Medium," being of a ranker growth and yielding more fodder per acre. It ripens somewhat later and is more hardy, lasting several seasons longer than the medium red clover. It also does well on poorer soils. The seed cannot be distinguished from the former. Our supply, however, is strictly reliable. Sow in early spring or in July and August, using 20 lbs. per acre alone or with other crops 10 lbs. per acre; flowers pink. It can be harvested several times in a season. Price on application.

Red Clover, Medium (*Trifolium Pratense*). More widely known and used than any other, used principally for hay purposes. Height from 18 inches to 2½ feet. Sow early in the spring or in late summer—July and August; if alone, 20 lbs. per acre; if with other crops, 10 lbs. per acre. It is not hardy for a period of years, being usually resown every third season; flowers pink. Price on application.

CLOVERS (Continued)

White Dutch or Lawn Clover (*Trifolium Repens*). This is valuable for pasturage; it succeeds where other clovers and grasses fail, and it seldom dies out. It can be sown at all seasons, although early spring is best; flowers greenish white. Sow 10 to 12 lbs. per acre if alone or 5 lbs. if sown on old turf or with other crops. ¼ lb., 20c.; 60c. lb.; 5 lbs., \$2.80; \$5.50 for 10 lbs.; \$50.00 per 100 lbs.

VIRGINIA GRAY WINTER OATS

Grown principally in the South, where they are hardy. They can be sown further North in the spring and produce good crops. 15c. qt. Larger quantity, price on application.

DWARF ESSEX RAPE

For pasturing sheep and hogs. Sow 6 lbs. per acre broadcast. Price on application.

WINTER RYE

Penna. Large White. Sow 1 to 1½ bushels per acre during fall. An excellent green food in spring, and may be used for turning under or harvesting. Price on application.

RECLEANED TIMOTHY

Our stock is of very best quality; for sowing among wheat as a second-year hay crop or for sowing alone for a first-year hay crop this is extensively used. Sow ½ bu. per acre alone or 6 to 8 qts. with wheat. Write for price.

WINTER VETCH (Vicia Villosa)

True Sand or Hairy Vetch

Our stock of this is the true type, being imported by us direct from Russia and which will absolutely live throughout the winter. There is also an English strain on the market which is not hardy in the Northern sections of the United States, and buyers should beware when buying that they procure the right article, which is a small round black seed; this is far superior to Crimson Clover, as it never winter-kills. Sow from August 1st to October 1st, but the earlier the better, broadcast, 1 bushel per acre, to which we suggest adding a bushel of winter rye or wheat. In the spring it can be plowed in as green manure, or when in flower cut for hay. All stock relish it keenly. Price on application.

MICHELL'S HARDY PERENNIALS FOR AUTUMN 47 PLANTING

Fall is one of the best times for setting out perennial plants; they invariably establish themselves quickly and more permanently than when put out in the spring, at which time the season is shorter, a greater rush exists, and the weather frequently gets hot before they have made any growth in their new environment. Autumn planting frequently means a year's difference in results obtained the following spring, and they are usually more gratifying than from spring-set plants.

MICHELL'S GORGEOUS DOUBLE PAEONIES (Roots) 55

Pæonies, especially the newer varieties, are probably the most valuable of all perennial plants. Planted in the sun or semi-shade, they give a grand display of large fragrant blossoms of brilliant colors during June, followed by their exquisite foliage, which is very ornamental during the summer months. They are most effective for house and table decorations, and last longer in water than many other perennials. Disease or insects rarely trouble the Pæony. The roots are perfectly hardy, and once planted remain for years.

Being absolutely hardy, it increases in its beauty with each successive year, and the possibilities are amply displayed at some of the model suburban home grounds in and around Philadelphia.

Plant from October 1st to November 15th, and from March 15th to May 15th. Ask for our special free circular on California Privet.
