T H E

P R E F A C E.

THIS Herbal was begun by James Newton, M. D. about 1680, and the great Assistances he received from Abroad, and at Home, from the ablest Botanists of his Time, and his own great Abilities, Care, and many Years Study and Expence, to render it the most curious and universal of its Kind then published, may be so well known to need any Enlargement.

But considering this Herbal might be the Work of his younger Days, so on a Review of it in his more mature and knowing Years, it might not please him, as he might think, and very justly too, that then he could compose another of a more useful, curious, and universal Nature; and having such good Materials before him to work on as his first Herbal, he might therefore the more readily enter upon his other universal and compleat History of Plants, with their Icons, comprehending all hitherto extant, with Additions.

As his first Herbal begins with Grass, the other begins with Apples; and had he lived a few Months longer, he might have published it compleat and entire; for at his Death he had printed his First Book of Apples, and Part of the Second Book, but dying suddenly, this valuable Work was lain by till now of late.

Liber

The P R E F A C E.

Liber I. De Arboribus Pomiferis ; or, of Apples in general, treats of above eleven Hundred different Sorts comprehending the several Kinds and Species of Apples hitherto known ; and about three Hundred of their most principal Icons, neatly engraved on Copper-Plates.

Liber II. De Arboribus, & Fruticibus Bacciferis ; or of Trees, and Shrubs bearing Berries in general, may be rather more curious and comprehensive than the First Book.

Over the Icons stand their English, and in the descriptive Part their Latin Names. Since the Icons are reduced into their proper Classes, and the Index contains the Names of each Class, it may therefore equally answer the Intention of a more general one, which might have swelled to a great Size ; as you may take in at one View, by turning to its proper Class, the several Species belonging to it.

As for the antique Spelling, it is to be hoped the Reader will excuse that, since there's no Possibility of altering it.

The capital Letters standing by the Icons denote the Authors they were taken from, as P from Perkinson's Herbal, G from Gerard's, and B from Bauhinus's, and R from Ray's, &c.
