GROWERS OF

Fruit and Ornamental Trees

Shrubs, Etc.

Rt. 4, McMinnville, Tenn.,

Feb 22 1917

Gentlemen as to your request
I will try to give you a list
of our nursery as best I can I am
inclosing a catalogue of our fruit
which you shall you understand
except to some varieties which
I will decide as best I can
the Wamack choice apple is a
new apple, in 1861 Mr. Wamack
Wamack, brought the apple tree
from cornland mountain and
planted it on his farm in Warren
Co. Tenn it grew to be a large tree
and a great bearer it was a noted
tree for its great load of fruit and
size it bore most ever fruit it is
a large yellow apple gets ripe about
10 days earlier than the early harvest
the apple is colored very much like
the early harvest but not quite so
sour -

So in the year 1902 We started our
Nursery and we got twigs of this tree
and Grafted them and have been
grafting them ever year since this
apple is a leader among early apples
and deserves the leader ship to
We gave this apple this name
Warrack choice. in honor of Mr.
Warrack because there was a colony
of Warracks settled at this place
and it was there choice apple
as to the growth of the tree it beats them
all & find the roots of this tree allways
clean and straight and nice it leads
in grafting in the Nursery.
So if there is any thing else you
want in regard to this apple & will
Give it as Best I can

Western White June Peach
This tree was sent to a man
in West Tenn. from West Texas
he planted it on his farm and
a bout the year 1906 S. D. Elrod
was at his place and saw the tree
laden with fine ripe peaches in June
so he wanted the tree in our
nursery he had the man to send
me some buds by mail & budied
them and have been budying them
ever year since

this tree is a thrifty grower and
a Bannance Borer the body of
the tree is an orange colored tree
with greenish colored twigs and a
pale redd blossom the fruit
is white a bout the size of the
Lone Star gets ripe the 1 to the 10 of
June it aint like other early peaches
in its flavor its flavor is like

The old garden Peach, most early
Peaches has too much water a part
there this ain't the case with this
Peach it is full of acid and not water
this Peach when ripe can be peeled
like a Banana But the acid will drip
off one hands most early Peaches
ain't no good for eating Purposes not
so with this Peach it is a good comer
and keeps good & don't no haveling
We have kept them too years in can
and still good
Now take you may think you are going
a good deal to pay to you & ain't if you
have a place for 1 or 2 of these trees
and want them next year & will
send them to you free of charge
We have nothing But I am not kind
Name if I can't think of it I will send
you some of the Peaches in June
