Red Kidney, pint 35c, quart 65c.

Henbush Lima, pint 40c, quart 75c.

WAX PODDED

Curries' Rustproof, pint 45c, quart 80c.

Wardwell's Kidney, pint 45c, quart 80c.

Webber's, pint 45c, quart 80c.

We carry other varieties than those mentioned above. We make special prices on greater quantity.

BEANS|BUSH

Two pounds to 100 feet of drill, one bushel to acre.

Culture—Beans can be planted in the South from January to May, and again in September or latter part of August for fall crop. In gardens plant in rows about 18 inches apart, dropping beans four to six inches apart in the row. Field planting, rows 2½ to 3 feet apart, beans drilled about 3 inches apart in the row. Cultivate often enough to keep clean until blooms appear, but not when vines are wet. Extra heavy manuring is not needed; a good commercial fertilizer is better, especially if it is well mixed with the soil in the furrow before planting.

Wardwell's Kidney Wax

POLE OR RUNNING BEANS

four and train them around the pole in same direction. Pole beans can also be planted near a fence and trained on wire or twine.

PRICES—POSTPAID

Subject to Market Changes.

	Pint	Quart
White Creaseback	\$0.40	\$0.65
Kentucky Wonder	.40	.65
Small Sieva—Pole Lima.....	.40	.75

Also other varieties.

Kentucky Wonder

One pound to 150 hills; half bushel to the acre in drills.

Culture—Pole beans are more sensitive to cold than others, so we advise that they be planted only after all danger of frost is over. Set poles six to seven feet long in rows four feet apart, plant five to six beans around each pole and cover about two inches deep. As soon as plants have good start thin out to

TABLE BEETS

One ounce of seed to 100 feet, seven pounds to the acre.

Culture—Beets should be sown in well-manured soil that has been well prepared by deep plowing or spading. Rows two feet apart, sowing thinly in the row. We advise seed be soaked before planting to soften the bur and assist in germination. If too thick in row thin out to five or six inches apart. Cover seed one to two inches deep and firm soil around seed to keep them from drying out before germinating.

Crosby's Egyptian

PRICES—POSTPAID

Crosby's Egyptian, Early Blood Turnip, Improved Half Long, Early Eclipse, ounce 15c, ¼-lb. 40c, pound ask.

MANGEL WURZEL

Mammoth Long Red, Golden Tankard, ounce 10c, ¼-lb. 30c, pound ask.

CABBAGE---American Grown

Premium Flat Dutch

Cabbage plants 50c per 100, \$4.00 per 1,000, delivered.

One ounce of seed will sow 300 feet of drill; six ounces will provide plants enough for one acre.

Culture—Have soil in your bed in the best possible condition. Do not make it too rich or your plants will grow quickly and consequently be weak. Such plants will not stand the shock of transplanting. Soil that has been manured the previous year is to be preferred. Seed should be drilled six inches apart, and not too thick; cover lightly and press the soil down firmly around seed. Keep plants watered and free from grass or weeds. Plant during February and March; again in July and August. For spring and summer crop sow from August 15th to November 1st. Cabbage needs constant cultivation to succeed best, and we advise rows 2½ feet apart, with plants 18 inches apart in the row. The varieties of cabbage we list are those we know will give the greatest satisfaction to Southern growers.

CARROTS

One ounce will sow 100 feet of drill; three to four pounds will sow an acre.

Oxheart

Culture—Sow as early in the spring as the ground is fit to work, though good crops may be grown from sowings as late as June 15. For table use sow the smaller kinds early in rows sixteen to eighteen inches apart. For field culture sow in drills eighteen to twenty-four inches apart, using from three to four pounds of seed to the acre. Cover one-half to one inch deep and see that the soil is pressed firmly above the seed. As soon as the plants appear use the cultivator or wheel hoe. Thin two to six inches apart in the row, according to the size of the variety.

Fall sowing can be made in September and October.

CUCUMBERS

One ounce of seed will plant about fifty hills; two to three pounds will plant an acre.

Culture—For general use sow in open ground as soon as weather is sufficiently settled. Plant in hills four feet apart each way, putting a shovel of well-rotted manure in each hill. Drop five to seven seeds in each hill, and when vines start to run thin out to two plants. If wanted very early sow two or three seeds in a 4-inch pot and transplant to open ground when danger of frost is past. Gather the cucumbers when ripe enough for use, whether required or not; if left to ripen the vines stop bearing. Give frequent but shallow cultivation until the plants make runners so long that this is impracticable. This is one of the vegetables that can be grown to perfection by anyone who can control a few square yards of reasonably good soil that is fully exposed to the sun. Fall planting can be made in July and August. Every family should be supplied from its own garden. The striped cucumber beetles which attack the plants may be cut off by frequent dusting with one part arsenate of lead and five parts slack lime.

EGG PLANT

Improved N. Y. Purple

Culture—Egg plant seed germinates slowly and should be started in a hot bed during December, January and February. The soil should be one part leaf-mold and one part sandy loam. It is important to secure a rapid and continuous growth. Set thirty inches apart, pinch off the larger leaves when transplanting. Four ounces of seed will supply enough plants to set an acre. It is desirable to shade young plants from very hot sun. It is a good policy to pinch off the ends of the branches after they begin to bloom, so that only three or four fruits will set. Hoe frequently and hill up gradually until the plants begin to bloom.

Egg plants, dozen 25c, Delivered.

LETTUCE

One ounce of seed sows 120 feet of row, produces 3,000 plants.

Baton Rouge Market

Culture—For late fall and winter heading sow in August or September, either in boxes or in beds, where you can protect the young plants from extreme heat. Do not cover seed more than one-fourth inch deep; in fact, many growers prepare the soil in bed, sow seed and cover with wet bags until seed germinate, then remove bags, and as soon as plants are large enough transplant them. Soil in which you plant seed should not be too rich or plants will be weak. When you transplant set them fourteen inches each way, or if in rows set plants every twelve inches. The seed for summer lettuce should be sown as early as possible in the spring to avoid the heat.

MUSK MELONS

We make specially low prices to market gardeners and truck associations on watermelon and cantaloupe seed, peas, beans, etc. Our seed specially selected for this business.

The Rockyford—This melon, grown first in Rockyford, Colorado, has in a few years acquired a national reputation. It is of the Netted Gem type, oval in shape, averaging from 4½ to 5 inches in length. It has a most delicious flavor, is very fine and smooth grained, has flesh of light green color throughout when ripe. Our seed comes from Rockyford, where this melon is raised so extensively, and from where car loads upon car loads are shipped out every season.

PRICES—POSTPAID

Honey Dew, ounce 20c, ¼-lb. 60c, pound \$2.00.

Burrell's Gem, ounce 10c, ¼-lb. 25c, pound 80c.

Rockyford

MUSTARD

Five ounces of seed to 100 yards of Row. Four pounds to the acre.

In the spring, when the pear is in bloom, drill in rows one foot apart. To have a succession the sowings should be made every two or three weeks till October. Cut young, when old the flavor is strong. Once sown, certain to perpetuate itself.

PRICES—POSTPAID

	Ounce	Pound
Southern Giant, curled	\$0.10	\$0.50
Ostrich Plume	.15	.75
Fordhook, fancy	.15	.75
Chinese, plain	.15	.90

KOHL RABI

Grown for its thick, blub-shaped stalks, which, while young, are prepared in the same manner as turnips, and which furnish a most desirable vegetable. One ounce of seed will drill about 200 feet.

Early White Vienna—Equally good for forcing or cultivation in the open ground. Has very short tops; flesh is white, tender and of excellent table qualities. Ounce 25c, 1 lb. \$2.00, postpaid.

WATERMELONS

Florida Favorite

One ounce will plant about fifty hills. Four pounds will plant an acre.

Culture—Watermelons should never be planted twice upon the same land. The soil for this plant must be light and sandy. Plant in hills about eight feet apart, eight to twelve in a hill. Plant seed in March or after frost is over. When plants are well up thin out to three. The plants should be hoed often, and the ground between the hills kept clean until the vines touch.

PRICES—POSTPAID

	Ounce	Pound
Kleckley's Sweet	\$0.15	\$1.00

Bradford	.10	1.00
Excel	.15	1.25
Alabama Sweet	.10	1.00
Honey Lou	.15	1.25

Honey Lou

Honey Lou (85 Days)—This is a favorite for home use, due to the fact that it is the sweetest of all melons. Rind very thin, not good for shipping, but for home use and near by markets, where they can be hauled, they are considered the best seller of all melons. Flesh very sweet, crisp, bright red in color and free from stringiness.

OKRA OR GUMBO

Twelve ounces of seed to 100 yards of row. Twenty pounds to the acre. Sixty days from planting to maturity.

Culture—Plant the seed in spring in hills or drills; if in hills, two feet apart and two or three plants in each; or in drills, three feet apart and eight or ten inches between the plants. The seeds are liable to rot in the ground, and should be put in thickly to secure the requisite quantity of plants. Very rich ground is demanded by this vegetable.

PRICES—POSTPAID

	Ounce	Pound
White Velvet	\$0.10	\$0.75
Dwarf Green	.10	.75

ONIONS

La. Red Creole

Culture—The seed can be sown in the open ground in rows as soon as the weather will permit in August or September. The rows should be about twelve inches apart and the small plants thinned out to about two or three inches apart. This seed can also be sown broadcast in some sections. Onions require rich soil and constant cultivation. The soil should be well prepared and cultivation should be intense, keeping the weeds and grass from choking out the small plants, as this is absolutely necessary in order to raise large onions.

PARSNIPS

All prices subject to change.

Compare our prices with others and then place your order.

Culture—Sow as early in the spring as the ground can be worked in drills eighteen inches apart. Only rich soil should be used, and the ground should be thoroughly and deeply cultivated before sowing seed. Thin to six or eight inches apart in rows. Hoe and cultivate frequently to keep the weeds down.

Improved Hollow Crown—A fine strain of Hollow Crown Parsnip. The roots do not grow quite as long as the old variety, are of larger diameter and more easily gathered. Is a heavy cropper; the roots are very smooth, flesh fine grained and excellent quality. The best variety for market or home garden. Ounce 15c, $\frac{1}{4}$ -lb. 35c, pound 90c, postpaid.

GARDEN PEAS

Two pounds sow 100 feet or row; 90 pounds for an acre.

Culture — Peas succeed best on light, rich, loamy soil, which has been manured the previous season. Plant in the spring, as soon as the ground can be worked, in rows three or four feet apart, planting seed two inches deep, giving the taller varieties more room between the rows. For succession plant every two weeks. The dwarf varieties can be planted in rows $2\frac{1}{2}$ to 3 feet apart. Peas grown as a market crop are rarely staked, but when the taller varieties are grown for private use a good plan is to sow them in double rows and stake with brush. They should be kept clean and the earth worked toward them two or three times during the growth. Fall planting in September.

PRICES—POSTPAID

Champion of England

PEPPERS

One Ounce Will Grow 1,000 Plants.

Chinese Giant

Culture—About the same as for egg plants. Make rows eighteen to twenty inches apart and set plants fifteen to eighteen inches apart in the row. Select only strong, healthy ones to transplant. When plants are six inches high an application of manure or high grade commercial fertilizer should be used. Pepper should be well cultivated and soil made rich. Peppers are used largely for seasoning meats, soups and vegetables; also for making pickles and sausages.

Long Red Cayenne Hot	.45	1.60	Ask

RADISHES

One ounce of seed will sow 100 feet of drill. Nine pounds will sow an acre.

Culture—To have early sorts with crisp, tender flesh, grow them quickly in rich, loose soil and gather before they reach full size. Frequent plantings should be made for succession. Sow thickly in drills twelve to eighteen inches apart, and thin as needed. There is no vegetable more easily grown or better known than this. Any fair garden soil will produce good radishes. Radishes must grow quickly, and they require bright, warm, sunshiny weather to produce best results. Cool, wet, cloudy weather often causes a failure of the crop, the plants all going to top, and the bottoms being like a stick. One of the most important features is good seed, and our stock is from the best growers.

PUMPKINS

King of Mammoth

One pound will plant 200 to 300 hills. Four to six pounds will plant an acre.

Culture—Plant in spring with field corn, in hills of ten or more feet apart, four seeds in a hill, or for garden planting, in hills six feet apart. Do not plant near melon or squash vines, as they mix. The pumpkin more properly belongs to the farm than the garden, and they make splendid feed for sheep when the pasture begins to fail in the fall.

TOMATOES

Early Detroit

For early use, sow in February or March, in a hotbed or in boxes, which should be placed near a window. When the seedlings are about two inches high transplant into 2 or 3-inch pots, or in rows four to five inches apart, keeping the temperature at about 60 degrees. Subsequent transplanting will make the plants stocky and strong. Do not set them in the open ground until all danger from frost is past. Then plant into a warm, sunny location, three feet apart each way, and water freely until they are well established. One ounce of seed will produce about 1,000 plants.
