FARR'S HARDY PLANT SPECIALTIES

Second Emergency Edition

Issued as a Supplement to the Sixth Edition

NOVEMBER, 1919

**Bertrand H. Farr—
Wyomissing Nurseries Co.
Wyomissing, Penna.**

General Directions

LOCATION. Wyomissing adjoins the city of Reading. It is three and one-half hours from New York, and one and one-half hours from Philadelphia, by frequent express trains over the Pennsylvania or Reading railroads.

Visitors arriving over the Reading Railroad from Philadelphia should get off at the Franklin Station, one square from Penn Street. Express trains from New York without change by way of Easton, and trains from the north and west go to the outer station, where trolley may be taken to Fifth and Penn Streets, with transfer to Wyomissing.

The Pennsylvania Station is at the Penn Street Bridge, over which all cars for Wyomissing pass and are reached by a stairway leading from the station. Visitors from a distance will be met at the train by motor, if due notice is sent in advance of their arrival.

Our office in Wyomissing, at the corner of Garfield Avenue and Wyomissing Boulevard, can be reached in a few minutes by taking any trolley going west on Penn Street from the business center of Reading. These cars are marked Wyomissing, Wernersville, Womelsdorf, or Sinking Spring, and one should leave at Wyomissing Boulevard.

VISITORS. I am always glad to welcome visitors who are interested in hardy plants. The first week in June the German Irises are at their height, together with the Pyrethrums, Oriental Poppies, etc. At this time the early and midseason Peonies are also at their best. Late-blooming Peonies come a week later, Japan Iris early in July, and Hardy Phlox the last of the month.

The growing stock has all been planted on our new tract of land now comprising 265 acres, located in long spans inside of the limits of the city of Reading, most of the remaining portion, including the new Specimen Garden, being in Wyomissing, and all within five to ten minutes' walk from the office.

SHIPPING FACILITIES. The Reading and Pennsylvania Railroads, centering here, and the American and Adams Express Companies, place us in quick communication with all points.

FORWARDING. Growing plants and small packages and roots will invariably be sent by express, unless otherwise instructed. In the majority of cases the express rates are cheaper than parcel post, as will be seen by the following parcel-post and express rates on pack-

ages of from five to fifty pounds, to cities in various parts of the country, covering all zones. Plants and bulbs are sent under a special express ruling as second-class matter, which is 20 per cent lower than general merchandise. Heavy shipments of shrubs or peonies and other dormant plants may be sent safely by freight.

In some cases it may be more convenient for customers to receive small packages by parcel post. I will forward such orders by mail, if a sufficient sum is remitted amply to cover the postage. Should more than enough be sent, the balance will be returned. On request from responsible persons, we will prepay postage and charge it on the bill.

PRICES. All prices are strictly net and not subject to change. Quantity discounts on large orders are noted elsewhere in this catalogue.

TERMS. Cash, unless otherwise specially arranged. Orders from unknown correspondents without satisfactory commercial rating should be accompanied by a remittance to cover the order, or by references.

REMITTANCES. Should be made by post-office, or express money order, registered letter, or bank draft. 2-cent and 5-cent postage stamps may be sent for amounts under \$1.

GUARANTEE. I have no influence over conditions surrounding the plants and the care they receive after they pass out of my control. I cannot assume responsibility for customers' failure to make them grow, either on account of unfavorable weather or soil conditions, improper planting, or neglect. I take the utmost care that all plants shall leave here in first-class order and, under proper conditions, they will produce satisfactory results. I give no warranty as to description, quality or productiveness, and will not in any way be responsible for the results. Orders are accepted on these conditions only. I guarantee safe arrival of all packages; shortages or damages should be reported at once. I will not substitute other varieties than ordered unless expressly noted, or by permission.

CORRESPONDENCE. I shall be glad to give information regarding a proper selection of plants and the time of planting, provided the questions are of such a character that they can be answered briefly. My personal correspondence is so great during the rush season that it is an impossibility to reply, without considerable delay, to letters involving study and research.

An Explanation of a Most Unusual Situation

FOR THE second time in the fall of 1919 I am compelled to issue an "Emergency Edition" of Farr's Hardy Plant Specialties. It was my thought that the first Emergency Edition, which was issued in early autumn, would meet all demands until the new Seventh Edition could be prepared—but my customers thought otherwise.

This "Second Emergency Edition" is a condensation of my regular catalogue and lists only the plants and shrubs suitable for late fall or early spring planting. All pages in this condensed catalogue are exactly the same as in my general list, and you will be entirely safe in sending your order for any articles listed herein—both prices and descriptions are identical.

Because of the limited space in this Emergency Edition, it has been necessary to omit Japanese Irises, Delphiniums, Hardy Asters, Hardy Chrysanthemums, Hemerocallis, Anemones, Day Lilies, Oriental Poppies, Kniphofia, Ornamental Grasses and others of like character. However, all of these items will be completely described in the next (Seventh) edition of Farr's Hardy Plant Specialties.

PLEASE NOTE, that all persons who receive a copy of either the First or Second Emergency Edition, will also receive a copy of the new Seventh Edition of "Farr's Hardy Plant Specialties," which I hope to have ready for mailing by the first of March, 1920. The character of this book is such that it requires much research and careful comparison of descriptions with the field notes made during the past two seasons. Therefore the preparation takes considerable time—far more than is required in the production of an ordinary nursery catalogue.

TALL BEARDED IRISES (Pogoniris)

Iris Germanica (German Iris, or Fleur-de-lis)

These are all sun-lovers, and delight in a warm, well-drained situation, where the surface-creeping rhizomes can get a good baking in summer. They will thrive in almost any soil or situation except a wet one, which causes the rhizomes rapidly to decay. This is the group best known and most commonly cultivated. The flowers are the true fleur-de-lis, and they are well called the "orchids of the garden," for they fairly out rival the orchids in delicacy of structure and wide range of coloring, including rich yellows, soft blues, intense purples and claret-reds, beautiful bronzes and pure whites, in every conceivable combination.

This section includes the early-flowering dwarf kinds, and all the many varieties and species usually grouped under the head "Germanica." The true Germanica has but few varieties; they flower in May, and are represented by the old-fashioned "flags" so commonly seen. The other species classed under this head are Amoena, Neglecta, Pallida, Plicata, Squalens, Variegata and others, with their many hybrid forms and all their wonderful combinations of iridescent color. Many of them are delicately fragrant, and all have prominent yellow or orange beards.

For convenience, I have arranged them as far as possible in their natural groups.

CULTURE.—A dry, sunny location suits them best. In wet places they are liable to decay. They may be planted in early spring, but the most favorable time is during August and September, the earlier the better, as that is their dormant season, after which they make a root-growth, becoming established before winter; although planting may be done at any time until the ground freezes, if the precaution is taken to give them a slight covering of an inch of loose straw or litter merely to prevent their being heaved out of the ground by thawing. Nearly all Irises may be divided and replanted successfully immediately after flowering, if the roots are not allowed to become dry.

My collection of Irises exhibited at San Francisco received the highest award—the Panama-Pacific Exposition Gold Medal. The collection contained the cream of the standard varieties, the finest European novelties, and my own seedlings raised here at Wyomissing, pronounced by critics to be of distinct and rare beauty.

FARR'S NEW SEEDLING IRISES

All raised at Wyomissing

During recent years I have found the hybridizing and raising of seedling Irises a very interesting pastime. Of the many thousands raised, scarcely any two are exactly alike. From the many fine forms, I have selected the following which I consider to be the very best. All who have seen them growing here have been unanimous in pronouncing them very beautiful.

The color plates, showing these blooms in miniature, give but a faint idea of their fine colors, elegant form and large size, a better impression of which may be obtained by referring to the illustration of the variety, "Powhatan," opposite page 17, which is slightly reduced from the original.

Dwarf Bearded Irises

New Crimean Alpine Hybrids, Pumila, and various dwarf species

FLOWERING IN MARCH AND APRIL

These lovely dwarf Irises are very valuable for planting in groups, in front of the taller varieties, in the border, and for use as edging. The earliest ones begin to flower the end of March and follow in succession through April till the end of May, when the Germanica varieties begin to open.

The Hybrid Crimean Irises are crosses between the Pumila and other dwarf varieties, and the *Iris Germanica*. Their period of flowering is a trifle later than the Pumila varieties, and their flowers are almost as large and showy as the German Iris.

They are perfectly hardy, and thrive in a dry, sunny position, the same as the *Iris Germanica*.

BEARDLESS IRISES (Apogon)

Including Many Beautiful Species and Varieties

The Apogon section comprises the tall, beardless Irises, and, next to the Pogoniris, are the most important group under general cultivation. It will greatly simplify matters if one can remember that in this group are included all the moisture-loving kinds. Of these only two may be considered as semi-aquatics—our native Water-Flag (*Versicolor*) and the European Yellow Flag (*Pseudo-acorus*) which may be grown partially in the water. With these exceptions, it is safe to say that no Iris, however much it likes moisture, can be grown successfully where water habitually stands in winter.

CULTURE.—All of the species in this group will grow luxuriantly in any good garden soil kept moist by frequent stirring, to prevent baking and frequent evaporation of moisture.

For convenience in selecting, I have grouped together the varieties of similar habit.

Beardless Irises, Group A

Those which require a dry, sunny situation.

CRISTATA. (Evansia.) A dainty native creeping species, only 3 inches in height; flowers rich amethyst-blue; a gem for the rock-garden. May. 15 cts.

ÆTIDISSIMA (syn. Gladwyn Iris). Purple flowers, followed by bright scarlet seed-pods; much prized for winter decoration; evergreen foliage. 18 in. 25 cts.

Ætidiissima foliis variegata. A variegated form of the above, the deep green foliage being broadly striped with silver; bears scarlet-berried seed-vessels. 18 in. 35 cts.

FULVA (syn. Cuprea). A handsome species with rich coppery maroon-colored flowers the last of June. 18 in. 35 cts.

GRAMINEA. A charming dwarf species, with very narrow foliage, bearing blue and purple flowers in June and July; very decorative. 1 ft. 25 cts.

LONGIPETALA. True. S. violet-blue; F. white, with lilac veining, gold and bronze spot; very free blooming. 2 ft. 25 cts.

MISSOURIENSIS. Lilac, with a yellow spot; a profuse bloomer, and one of the earliest and prettiest of the beardless species. May. 35 cts.

TECTORUM. (Evansia.) Syn. Tomiolopha. A rare and beautiful species from China and Japan, with delicately crested flowers of the most beautiful blue. This is the "Roof Iris" of Japan, where it is grown on the thatched roofs of the cottages. A story is told of a woman who went to a Shinto priest to inquire how she could give a blue tint to her hair, and he told her to get the color from a flower which grew neither in heaven nor on earth. She tried the Iris flower from her cottage roof and attained the desired result. This Iris has so far proved hardy with us, but as the foliage is evergreen, it is benefited and will bloom more profusely if protected with a slight covering of straw. 1 ft. June 25 cts.

Tectorum album. A pure white variety of the above. When the two are planted in adjoining groups the result is delightful. 50 cts.

Not less than 3 of a variety at the rate per dozen, or 25 at the rate per 100. Lists of one or two of a kind will be charged at the rate of single plants

Beardless Irises, Group B

The Irises in this group, besides being handsome subjects for the flower and shrubbery border, may be planted by the waterside, but with their crowns above the water-level. The varieties of *Orientalis*, *Aurea*, *Monspur* and *Monneiri*, are grand and stately plants, growing from 4 to 5 feet in height, with beautiful, erect, dark green foliage, which retains its beauty until well into winter. Grown together in masses, the effect is most striking and beautiful.

Iris, Spuria Section

All of the following Irises, many of them heretofore classed as distinct species, are now considered to be varied forms of *Iris spuria*, or so closely related that they are classed together in this one group, which includes all the varieties of *Spuria*, *Guldenstadtiana*, *Monneri*, *Aurea*, *Ochroleuca* (syn. *Orientalis*), the *Monspur* hybrids and the dwarf varieties, *Graminea*, *Longipetala*, *Missouriensis*, etc. With the exception of the dwarf varieties, they are all free growers and easily cultivated, with handsome foliage, very decorative at all times; especially desirable for planting in moist—not wet—places. They are slow to multiply, however, and require more than ordinary care in transplanting, which can be done to the best advantage in the early spring after they have started into active growth, or after the flowers have faded, care being taken that the rhizomes or roots should, under no circumstances, be allowed to become dry while out of the ground.

AUREA (Species). A beautiful species from the Himalayas; large, deep golden yellow flowers. 4 ft. June and July. 35 cts.

MONNIERI. A bold, handsome species, with golden yellow flowers. 3 ft. 35 cts.

MONSPUR. Handsome new hybrids, raised by Professor Foster. They are all strong growers, with flowers of various shades of blue, producing, when massed, a glorious shimmering effect of violet-blue. 4 ft. Mixed seedlings. 35 cts.

OCHROLEUCA (syn. *Orientalis gigantea*). The Gold-banded Iris; grows some 5 feet in height, with handsome, strong foliage, producing large flowers of ivory whiteness, with an orange-yellow blotch at the base of the falls. June and July. 25 cts.

Ochroleuca sulphurea. An improved form, with pale sulphur flowers. 35 cts.

SPURIA. Lilac-blue. 3 ft. June and July. 25 cts.

Spuria alba. Pure white flowers, with yellow blotch; dwarf grower. 1 ft. 25 cts.

Spuria foliis variegata. Foliage a very handsome golden shade in early summer; flowers lilac. 35c.

Spuria, Mrs. A. W. Tait (syn. *Longipetala superba*). Flowers soft porcelain-blue, with very long, pale blue falls, having a golden blotch at the base; fine foliage; free bloomer and very hardy. A lovely species, fine for massing. 3 ft. 35 cts.

Spuria notha. S. rich violet; F. blue, spotted yellow; handsome; very strong grower. 3 ft. 35 cts.

Siberian Iris

The most delicate and elegant of all the small-flowered Irises. Narrow, grassy foliage, with tall stems and flowers of various shades of blue, with white markings; very free flowering and one of the best for cutting. I am sure even the gentian cannot surpass the intense deep blue of *Orientalis*. Two other handsome new varieties are *Blue King*, of a lighter shade, and *Snow Queen*, very large, pure white. *George Wallace* is a tall variety, with azure-blue flowers beautifully spotted while *Grandis* reaches a height of 4 to 5 feet—one of the most satisfactory species for all situations. See illus. facing p. 13.

Named varieties, unless noted, 15 cts. each, \$1.50 per doz., \$10 per 100

DELAVAYI. A new Chinese species, closely related to *Sibirica*, with tall, narrow foliage, growing in a moist situation to a height of 5 feet; flowers rich ultramarine-blue; very handsome. July. 35 cts.

Beardless Irises, Group C

Irises suitable for planting by the waterside, and in very damp or wet places. These will also do well in any good, loamy soil that is kept well cultivated and mellow.

It is an immense, cup-shaped flower, with extremely wide, imbricated petals. Young plants not well established, and the side buds produce water-lily-shaped blooms showing a center of yellow stamens. The terminal buds on established plants, however, produce immense, full-double flowers. The color of the outer petals is pale rose, gradually shading lighter toward the center to a rosy white. PEONIES OF AMERICAN ORIGIN

In this list are included the varieties raised by Richardson, Terry, Hollis, and other American growers.

Mr. Hollis originated about one hundred varieties in his gardens at South Weymouth, Mass. The seventeen varieties offered in this list are his best and, when better known, will be acknowledged as the equal of the best French varieties. They are still very scarce.

The Richardson varieties, fifteen in all, are distinguished by their fine form, color, strong, erect habit, large size and uniform high quality, most of them having been awarded First-class Certificates by the Massachusetts Horticultural Society. Most of them are late-flowering. They were not offered for sale until some time after his death, September 22, 1887, in his ninetieth year. With the exception of Rubra superba, and possibly Perfection, all were named later by his friends, the late John C. Hovey and Robert Tracy Jackson, of Cambridge, who writes, "Mr. Richardson had a perfect passion for horticulture, and every plant in his garden that he loved so well was a real personality to him—a walk with him about the garden meant a lingering at every step to consider the merits, the history, or some cultural point in regard to the plants that were as his children. When nearly ninety, he planted Peony seeds just the same as in his earlier years, and some of his posthumous seedlings are among his best."

Mr. H. A. Terry, of Crescent, Iowa, was one of the pioneers among Peony-growers of this country. He raised over one hundred varieties, the best of which are here listed, and Grover Cleveland and Etta are of special merit.

During recent years the introductions of O. F. Brand, of Faribault, Minnesota, have attracted much attention, and are given unstinted praise by those who have seen them. I am offering, for the first time, the varieties which Mr. Brand has recommended to me as being the very best.

NEW AND RARE FRENCH PEONIES

Included in this list are all the new varieties of recent introduction by the famous French growers, Lemoine, Dessert, Crousse, and others, with a few of the older varieties that are still scarce and difficult to obtain. Only those who have seen them at their best can have any conception of their marvelous coloring, beauty of form, and delightful fragrance.

The stock of many of these varieties is so limited that it is impossible to supply the demand. Many of the varieties, especially those of Lemoine, that were introduced a few years ago, have since almost disappeared from the trade. They cannot be purchased in the open market either in this country or in Europe. I am, therefore, obliged to depend upon the few I can grow myself, and will only part with what can be spared without danger of losing my own stock. This accounts for the high price of many of the varieties, and also for the fact that, in some instances, while the varieties are described and retained in the list, they are temporarily withdrawn from sale, and I reserve the right to withdraw other varieties at any time the available supply is exhausted.

NEW AND RARE FRENCH PEONIES, continued

Experienced Peony-growers have learned, however, that the scarce varieties are the best investment, as it will be many years before there will be any surplus stock of such varieties as *Le Cygne*, *Soulange*, *Rosa Bonheur*, *La France*, *Mons. Martin Cahuzac*, *Enchantress*, *Kelway's Queen*, *Kelway's Glorious*, *Lady Alexandra Duff*, *Pride of Langport*, etc.

ADOLPHE ROSSEAU. (D. & M. 1890.) Very large, semi-double. Purple-garnet, 5(165). Very tall, vigorous grower; dark foliage, veined red. Early. One of the darkest Peonies. Fine for landscape effects. In my opinion the best very early dark red Peony. \$2. See color plate facing p. 32.

ALBATRE. (Cr. 1885.) Very large, compact, globular, rose type. Milk-white, shaded ivory, wide center petals tinged lilac, edged with a minute line of carmine. Fragrance X. Very strong, vigorous, tall grower, very free bloomer. Midseason. Unsurpassed by any other white Peony in my list. \$1.50. See color plate facing p. 28.

ALBERT CROUSSE. (Cr. 1893.) Very large, flat, compact, bomb. Rose-white, 3(8), flecked crimson. Fragrant. Tall, erect, free bloomer. Late. Extra. \$1.50.

NOTE.—*Avalanche* is much confused with *Albatre*, and in most collections it is *Avalanche*, which is

offered under both names. The two are distinct, however, as *Albatre* is earlier, larger, more upright, more of a rose type, while *Avalanche* develops a crown. In *Albatre* the carmine is a mere line along the very edge of the center petals, hardly noticeable and sometimes absent altogether.

SINGLE PEONIES

Single Peonies are becoming more and more popular, many people considering them more artistic and beautiful than the double ones. They are very free bloomers, and as cut-flowers they are very effective. Especially valuable for landscape effects, on account of their brilliant colors and upright habit, not being beaten down by heavy storms, as is the case of the heavier-flowered double varieties. The following is a selection of only the choicest kinds. Mostly of English origin.

ALBIFLORA, THE BRIDE. Syn. *La Fiancee* (Des. 1902); and *Snowflake* (Kel.). Very large; pure white. Tall, vigorous grower, free bloomer, very early. Finest single white. Distinct from the primitive species *Albiflora*, being the taller grower, much larger, finer flower. Identical with the single white sent out by Dessert as *La Fiancee*. I prefer, however, to retain the name *The Bride*, to avoid confusion with the double white variety originated by Lemoine in 1898. \$2. See illus. facing p. 37.

JAPANESE PEONIES

Included in this group are the so-called "Imperial" Peonies of English growers, Hollis' new seedling varieties, and the cream of direct importations from Japan.

A new race of Peonies of a distinct type, forming a separate class, intermediate between the single and the double types, and distinguished by their stamens being transformed into narrow petaloids.

Japan has sent us many rare and beautiful flowers in recent years, but among all the wonderful new forms that have come from that land of flowers, there are none so distinctively "Japanese" in their artistic daintiness of coloring and formation as the Peonies from Japan.

They are as yet comparatively little known to the general public, and mostly found in the large collections of connoisseurs and Peony enthusiasts, where they awaken the admiration of all who behold them for the first time. Most of them have cup-shaped guard petals, filled with a mass of petaloids, or filamental petals, brilliantly colored. A few are irregular in form, and striped with the most fantastic coloring. It is very difficult to obtain these varieties true to name, but the following may be relied upon to be true to the descriptions given, as I have been growing them for several years, and have taken great pains to correct all mistakes. The American names, where they precede the Japanese names, were given by the Peony Society of the American Florists.

ALBATROSS. (Wallace.) Magnificent, finely formed flowers, pink-tinted guard petals, with a central filling of old-gold, narrow, crimped petals. \$2.

TREE PEONIES (*Paeonia Moutan*)

In the flower gardens of China, where they have been grown for over 1,500 years, the Mow Tans were considered the most beautiful of all flowers, and for this reason were called Hwa Wang, "King of Flowers." So highly prized were they that it is said single plants were valued at one hundred ounces in gold, and, when first introduced to Europe in 1789, they were sold in France for as much as one hundred louis d'or (\$460) each.

Tree Peonies, or shrub Peonies, as they are sometimes called, do not die to the ground each year, but form a woody growth, eventually becoming a bushy shrub, from 5 to 6 feet high, and several feet in diameter, producing their immense, strikingly beautiful blooms, sometimes a foot in diameter, in greatest profusion.

There are color schemes among them never found in the herbaceous forms, such as bright pure reds, brilliant scarlets, dark maroons, and rich wine colors, with lovely pure whites with golden stamens, and delicate blush, rose, mauve, and violet shades.

The French varieties are mostly full double, while those from Japan are usually single or semi-double; they are unusually large flowering, most of them having a beautiful cushion of thick golden stamens in the center of the flower.

Tree Peonies have always been scarce, as they are difficult and slow to propagate. The French varieties are grafted on the roots of herbaceous kinds, which do not sucker, and, if planted deep, they soon become established on their own roots. The Japanese graft them on the roots of the wild Tree Peony, which suckers so badly that almost invariably the graft is choked out and killed, as the foliage of the wild stock cannot be distinguished from that of the named variety.

TREE PEONIES ARE PERFECTLY HARDY and require the same soil and treatment as the herbaceous kinds. A top dressing of well-rotted manure may be applied in the fall and worked into the ground in spring, but it **should never be allowed to come in contact with the stems.** A slight hilling-up around the base of the plants with earth or dry straw, during the winter, will be beneficial.

While they are perfectly hardy, they begin their growth so early that severe late frosts are liable to injure the young flower-buds. For this reason they should be planted, if possible, in a situation protected from the early morning sun, or the half-developed buds may be covered, should freezing occur in the early spring. They are so beautiful that they well repay this slight care. When in full bloom, the flowers will last much longer if shaded from the hot afternoon sun and the direct rays of the sun during the hottest part of the day.

Tree Peonies are easily forced in a cool greenhouse. Simply lift the roots the beginning of September, plant them in large pots, which can be plunged in ashes or soil, where they can be given their natural rest by freezing, and bring them inside the beginning of February.

Tree Peonies on their Own Roots

SPECIAL ANNOUNCEMENT

It is my great pleasure to be able to inform my patrons that I have become the fortunate possessor of the largest and most noted collection of Tree Peonies in France—that of Brochet & Sons, successors to the famous Paillet Nurseries, Chatenay—through the purchase of their entire stock of upwards of 5,000 plants in 238 varieties.

This nursery has long been noted for their Tree Peonies winning grand prizes at all the expositions during the last fifty years.

These Peonies are **all on their own roots; this is important.** They are now planted in our nursery and will be offered for fall delivery. It is possible to list only a few of them here. A special list will be prepared during June and will be mailed on request to those interested. I offer them—own-root plants—as follows:

Medium size, \$3.50 each. Larger size, \$5 each

European Tree Peonies

Two to three-year-old plants, grafted on herbaceous roots, in an assortment of best varieties, \$2 each.

Japanese Tree Peonies

These most wonderful of all Peonies are but little known. Heretofore they have been obtainable only as grafted plants on the wild stock, the suckers from which soon smother them. After repeated efforts and considerable expense, I have persuaded one of the leading Japanese firms to grow a limited stock of these to my special order, grafted on herbaceous roots, the foliage of which is so distinctly different that, should an occasional one appear, it can be easily recognized and destroyed. With deep planting, these soon become established on their own roots. In this collection there are nearly a hundred varieties, with only a few of each; so it is impossible to list them here, but they can be supplied to color, with names attached, in white, blush, pink, lilac, scarlet, crimson, maroon, and purple, **at \$3.50 each.**

NOTE.—The Japanese Tree Peonies, as they are usually grown, can be supplied much more cheaply, but they are so unsatisfactory for the reasons given above, that I have decided to discontinue to offer them.

JAPANESE SINGLE WILD PEONY, MOUTAN. Large, single, purple-maroon flowers. A strong vigorous grower and profuse bloomer, well adapted for border and shrubbery planting. 50 cts.

PÆONIA LUTEA. This species, usually classed among the Tree Peonies on account of its wooded stems, was recently introduced into France from the mountains of Yunnan. Its beautiful, cup-shaped flowers, with thick, wax-like petals, are a pure, deep golden yellow. \$2.50. See illustration facing page 21.

The Peonies shipped on your invoice No. 12672 arrived in the best condition the 22nd instant. From the amount of stress placed on the size of roots sold, (according to a good many of the catalogues that I consulted), I was led to a conclusion that you would send small ones in some of the varieties—Monsieur Martin Cahuzac, for instance—since you do not make the matter of size a strong talking point in your catalogue; but I have been agreeably disappointed, for the roots are all of good size, and, what is more in their favor, they are especially sound and healthy; this last I knew would be the case, but the order went to you because I wanted to be sure of getting true varieties; the sad mixture I have received from some other sources has cured me for all time of patronizing the "cheap" class of plantmen.—**WALTER P. HULL, Kansas.**

The bulbs and plants ordered have been received, and if they do not all succeed well I fear the fault will be mine. I have never seen finer bulbs, and I feel sure I shall enjoy those I have in the house this winter, and hope for success with those planted out-of-doors.—**E. A. CONEY, Connecticut.**

The Iris arrived safely and in fine condition; they are strong healthy looking roots, and I am much pleased with them. If the plants are as good as the roots indicate they should be, I shall have a nice display in the spring.—**T. C. TURNER, New York.**

You wrote an apology for your plants, as being very small divisions but I must say that they looked to me to be very fine healthy plants.—**S. P. BALDWIN, Ohio.**

HARDY SHRUB SPECIALTIES

GENERAL COLLECTION

PLANTING of shrubs massed around the boundaries of a garden forms a perfect setting for the garden picture, a harmonious background against which the bright-colored peonies, poppies, phloxes, etc., appear to their greatest advantage.

Everywhere in the fields we may find beautiful landscapes formed by nature, the open glade and meadow, where the broad carpet of velvety greensward is framed in by a background of woodland. First, a fringe of low bushes, with a mass of foliage reaching the ground, against which are colonies of white daisies, black-eyed Susans, or blue and purple asters. Here and there are tall sunflowers, goldenrods, and meadow rue, or a Joe-Pye weed standing out in bold relief. The gleam of the vivid blood-scarlet comes from a lobelia or a giant bee balm (*Monarda didyma*). Another billow of green rises back of these formed by the viburnums, the white dogwood, the pink Judas and hawthorns, and the still taller scarlet maples and the small trees which rise higher and higher to meet the giant oaks, sycamores, and elms, which tower above all.

This idea of nature's landscape can be carried out in every garden, drawn to a full scale in the country where there is room to spare; and to a smaller scale in the large garden, where the giant trees give way to the small, dwarf trees and tall shrubs; and in miniature in the small town garden, where the lawn is simply framed in by the more refined and smaller shrubs, with their border of perennials in front, in every case forming a screen that gives a privacy to the home ground, shielding the world within from the world without.

Plant shrubs in masses of several of each variety where possible; remember they are to form the framework of your garden landscape, and do not spoil the picture by dotting them all over the lawn and garden. Allow them to develop so that each will show its distinct character. Above all things, beware of the man with the shears who has a mania for barbering them all to one model.

In pruning, remember that all early-flowering shrubs bloom on last year's wood, and should not be pruned until after they have bloomed (otherwise the bloom will be destroyed for that season), at which time the old, wornout wood should be cut away entirely, allowing the vigorous, younger shoots to remain, shortening or cutting away entirely all weak growths. All late-flowering shrubs, altheas, hydrangeas, etc., bloom on wood of this season's growth, and should be pruned in early spring, cutting back severely to induce a vigorous new growth. Vacant spaces among the shrubs may be filled with delphiniums, hollyhocks, phloxes, etc., or with cannas, dahlias, or gladioli.

New Hybrid Lilacs (*Syringa*)

Among the shrubs in every old garden, the Lilacs, or *Syringa*, have always been the chief feature, admired by all and universally loved for the many old associations and tender sentiment woven about them.

Highland Park, Rochester, N. Y., has the largest collection of Lilacs in America. They form one of the chief attractions there, and it is stated that last spring fully 175,000 people came to see the Lilacs in Highland Park, many excursions being run from distant points for that purpose. There is a similar collection of Lilacs at the Arnold Arboretum, in Boston, also visited each year by many thousands, showing the intense popular interest taken in them.

In my new specimen grounds, I have started a similar collection, and look forward with keen anticipation to a "Lilac Time" in Wyomissing, that will be well worth a visit.

Our gardens have been wonderfully enriched during late years as the result of the work of the late Victor Lemoine, of Nancy, France, who was probably the world's most skillful hybridizer; and among the many species and varieties of plants for which we are indebted to him are the many wonderful new hybrid Lilacs, the beauty of which can be appreciated only by the comparatively few who have seen them. The large, single flowers of some of the varieties are almost an inch in diameter; there are many double and semi-double varieties, some with elegantly twisted and curled petals, others perfectly formed, reflexed, and incurved. Some are borne on tapered panicles a foot in length, while others are much branched, forming huge bouquets. See color plate facing p. 80.

The season of bloom has been prolonged by the addition of earlier and later varieties. The colors range from pure white, cream, pale azure-blue, and lavender, to deep blue, purple, and dark blackish maroon. All are delightfully fragrant, and much more prolific bloomers than the common kind, which blooms freely only

NEW HYBRID LILACS, continued

after attaining considerable age, while young plants of the new hybrid varieties, 2 to 3 feet high, bloom profusely. All the varieties are equally as hardy in every section of the country as the older common kinds.

It has been very difficult to obtain these varieties on their own roots, the new varieties usually offered in this country being budded on privet, which renders them short-lived, or grafted on the common Lilac, the suckers from which soon smother out the graft. For these reasons, budded Lilacs are of little value, unless they are budded so low that, by deep planting, they may eventually become established on their own roots.

The new Lilacs I offer are all own-root stock, the only satisfactory kind. The demand for these is so great that it has been impossible to work up a stock of very large-sized plants, and these we offer, with a few exceptions, are medium sized, varying in height from 2 to 4 feet, according to variety. Where the purchaser is not particular about the variety, but especially wishes large plants, I can usually supply them, if the selection is left to me.

Deutzias

Deutzias are very graceful. The dwarf *Gracilis* varieties are especially valuable for planting in front of the more upright-growing shrubs, hiding the bare stems of the latter by their abundant, drooping foliage, reaching to the ground, completely covered in the end of May and in June by their large clusters of small, fragrant, white or pale rose flowers.

Discolor, *Scabra*, and *Vilmorinæ* are more upright in growth, and *Pride of Rochester* forms a large specimen, 6 to 8 feet in height, and should be planted in the background.

By crossing the various species, Mr. Lemoine has raised a great many very beautiful new varieties, and nearly all of the hybrids offered in this list were originated by him. The *Crenata* hybrids are crosses between *D. crenata* and *D. Vilmorinæ*. The *discolor* hybrids are crosses of *D. purpurescens* with *D. scabra* and other species. The *Gracilis* types are the most dwarf and are crosses of *D. Sieboldiana* and various species.

Præcox, Floreal. Immense clusters of large flowers; tender rose, reflected mauve, lively carmine throat. May. 50 cts.

VARIEGATA. Silvery variegated leaves; flowers blush-white. One of the best variegated-leaved plants, the peculiar markings of the leaves make it fine for contrasting with green-leaved shrubs in the border planting. 35 cts.

Philadelphus (Mock Orange)

The old, sweet-scented *Philadelphus coronarius*, or Mock Orange, has long been a close rival of the lilac in popularity, and in the production of new varieties through hybridization, Mr. Lemoine has accomplished almost as great results as he has done with the lilacs.

There is great variation both in the habit of growth of the different varieties and in their form of bloom. There are many dwarf varieties, with slender, arching branches and small foliage; while others have very large foliage and vigorous, upright habit of growth, forming larger shrubs; but all are refined and beautiful, and the different species and varieties can be grouped together most effectively. At Highland Park and in the Arnold Arboretum, the collection of *Philadelphus* is second in importance only to that of the lilacs.

Varieties marked with an asterisk (*) can only be supplied in young plants after October 1, 1917

Rhododendrons

Rhododendrons are perhaps the most gorgeous of all flowering shrubs, with their immense trusses of large, brilliant, many-colored flowers the end of May and early June. Their large, glossy evergreen foliage is attractive at all seasons. They will thrive in any good garden soil dug about 2 feet deep and well mixed with leaf mold or peat. They should be planted in a situation sheltered from severe winds, preferably on a northern slope, or on the north side of buildings, or in shrubby plantings where the early morning sun does not strike the frozen foliage in winter. In the midst of a planting of evergreens they form a pleasing contrast and receive the necessary protection. They may be planted in the shade of small trees or shrubs where they will not be deprived of a moderate amount of sunlight. They should be supplied with abundant moisture, conserved by a mulching of leaves, a new supply being added each fall, which should be allowed to remain, if possible, to rot down. It is important that the old flower-buds be removed immediately after blooming, in order that new buds may be formed for the next season. Among them an ideal condition is found for a planting of the finer varieties of lilies.

ORNAMENTAL TREES

In this section I have included trees that are specially suited for landscape and garden planting. Many are noted for the brilliancy of their foliage, others for their value in furnishing shade, and still others for both foliage and flowers. In selecting the varieties here presented I have preferred to include only those of value and service to my customers, rather than give a long list of miscellaneous sorts.

Deciduous Trees

Acer (Maple)

The varieties of Maples are all highly ornamental, and most useful and beautiful in foliage; are vigorous growers, free from all disease and adapted to all soils.

The Norway and Sugar Maples are among the very best trees for street planting on account of their hardiness, long life and fine form; while the Japanese Maples are absolutely without rivals as small shrubs or trees for planting on the home grounds, their beautifully colored foliage, in many different shades, producing distinguished effect that cannot be duplicated by any other class of plants.

The Maples included in this list are only a few of the varieties best suited for the ornamentation of the home grounds.

PLATANOIDES (Norway Maple). A large, handsome tree of spreading, round form, with broad, deep green, shining foliage. Its compact habit and stout, vigorous growth render it one of the most desirable species for the street, park or garden. 8 to 10 ft., \$1; 10 to 12 ft., \$1.50.

Platanoides Schwedleri (Schwedler's Norway Maple). A most beautiful variety, with young shoots and leaves of a brilliant purple-crimson, which changes to a dark purple-green in the older leaves. 5 to 6 ft., \$1; 6 to 8 ft., \$1.50.

Japanese Maples (*Acer polymorphum*)

These beautiful dwarf Maples are among the aristocrats of the garden, and there is nothing more ornamental for lawn planting, whether in groups of contrasting colors or in single specimens. The yellow and blood-leaf varieties are upright in growth, while the dainty cut-leaf varieties, with their delicate, lace-like foliage, droop gracefully to the ground. We have a very fine collection of these Maples, treated in such a manner that they may be handled with perfect safety. Plant preferably in the spring.

A wall! A wall around my garden rear,
And hedge me in from the disconsolate hills;
Give me but one of all the mountain rills,
Enough of ocean in its voice I hear.

—Santayana.

"There is a wall about my garden. Not that I want to keep people out but I love the wall for its spiritual significance.

"The wall is of stone and high. Vines cover it, fruits sprawl upon it, flowers crouch at its feet.

"It is my defence against the overwhelming mystery all around. . . . A little shelter against the infinite. It is to my soul children are to a book.

"Within my wall I play the King. None can invade except I open the door. There are daisies in the fields, but there are too many of them. It is my wall that makes my garden daisies finer, also my marigolds are more golden my heliotrope more odorous, my rose bush as much dearer to me than all possible rose bushes as my own children are dearer than the swarms of China.

"Within my wall is true anarchy, I can do as I please. I can dance, or sing, or sit down, or smoke, or make mud pies, who cares? There is the wall!"

—DR. FRANK CRANE, in the *New York Globe*.

Ornamental Evergreens

Long before I sent out my first catalogue I designed and planted gardens for my friends. As I have a peculiar weakness for the smaller and more distinct evergreen trees, quite naturally I have used a great many of them in my own planting, and while I have a large collection of many beautiful forms, still I have never included them in my catalogue. Within the past few years I have been called upon to help plan gardens in so many parts of the country that I have made up a list of the evergreens I use in this work, to go with my lists of hardy plants. It will be my aim in the future to grow and supply all the plants, shrubs, and ornamental trees, especially the small junipers which are always desirable in Rock-Gardens and Japanese Gardens, and the taller evergreens and deciduous trees that go to make up the complete planting.

Planting Season for Evergreens.—In both spring and fall planting, early planting has the advantage of allowing the plant to start root-growth before the advent of the very hot weather of summer and the drying winds of winter, which sap the moisture content of the plant from the pores of the persistent leaves.

Fall planting should not start until the fall rains have adequately moistened the soil. It can be successfully done as late as any other planting, provided the ground is moist when it freezes up, and it is better to wait for the fall rains than to plant too early and subject the plants to a hot, dry spell immediately afterward.

Our soil at Wyomissing is peculiarly adapted to the successful culture of Evergreens. Not only do we secure a healthy growth, but the soil is of just the right consistency to allow us to ball and burlap the roots of our Evergreens with the best results. The ball of earth about the roots protects them while being moved.

This list supersedes in all respects the lists I have heretofore published.

Flowering Shrubs of Distinct Worth

New Double Yellow Tree Peony, La Lorraine

In this new Tree Peony, the result of the cross between *Pæonia lutea* and the variety *P. Moutan*, we have at last the long-sought double yellow Peony. The well-expanded, full double flowers of good substance are fully 6 inches in diameter. The wide, nearly imbricated petals are of soft sulphur-yellow with a salmon tinge when opening. The plant is perfectly hardy and has strong woody stems, and foliage similar to other Tree Peonies. It comes into bloom early in June at the same time as the Chinese Peonies and three to four weeks later than other Tree Peonies.

This Peony was introduced to the trade by Victor Lemoine, of Nancy, France. The original plant flowered for the first time in 1904. It was awarded a work of art at the Paris Horticultural Exhibition in 1909, for only one plant carrying five flowers. At the Ghent Quinquennial Exhibition, April, 1913, it was awarded a first-class silver medal, and it was awarded a first-class certificate by the Royal Horticultural Society, May 14, 1913. In June, 1917, was exhibited by me at the American Peony Society show in Philadelphia, where it was unanimously voted a special award of merit by the judges of the Society.

I have acquired from the originators the entire salable stock of this Peony. It is my intention to reserve most of these plants for propagating purposes, but offer for this season not more than five plants at \$25 each.

New Double Yellow Tree Peony, Souvenir de Maxime Cornu

This Peony, which has never before been introduced to the trade, is similar in origin, habit of growth, and form of flower to La Lorraine, except that the coloring is a deeper yellow and the base of the petals is a deep coppery red, gradually shading to yellow, giving the flower an effect similar to some Pernetiana roses. We will offer for this season not more than five plants at \$35 each.

Orders for these two Peonies up to this number will be accepted and filled strictly in the order received.
