S. J. KELLEY CO. BING, N.Y.

GREETING Season of 1919

In All Wise Creator has favored us with bountiful harvests of seeds. We are grateful that conditions generally are favorable for supplying our customers and we extend Greetings to our Quarter of a Million Friends who purchase seed of us. We were never in better position to fill your orders promptly and satisfactorily.

Last season we returned thousands of dollars to our customers for seed we were unable to supply. In some cases we delayed orders hoping to obtain seeds: one car of beans shipped in Dec. arrived in May. We grew more this season than ever before and believe we can meet any demand for any seed. Select seeds for anything not satisfactory last season.

QUALITY has always been Our First and Greatest Consideration.

PLEASE READ BEFORE ORDERING

We guarantee seeds to reach you safely; to be the varieties we sell them for; to grow under proper conditions and with proper care. We will replace, free, any failing in these respects if customers have reason to think the fault was in the seed. We can not guarantee you a good crop, as other conditions might prevent that.

We do not guarantee plants to live. If they reach you in good condition, our responsibility ceases.

Remittances must accompany all orders. Send money order, express order, draft or registered letter when possible. Postage stamps taken for small amounts. The cost of money orders of 50 cents or over may be deducted from amount sent.

Special Prices will be quoted on large orders by express or freight. Sometimes we can shade prices a little.

Plants are not sent with seeds. They follow later from greenhouse. Grape vines are mailed by themselves from nursery.

Mistakes. Should there any occur, kindly notify us and we will gladly correct same. We aim to please.

Postpaid. We send everything in this catalogue by mail postpaid. Parcel post is cheaper and more satisfactory than express in most cases.

We use a large per cent of our profits for good purposes, such as charities, education, church work, missions, etc.

Good seeds, square, honest dealing, honor and good will to all is the foundation principles of our business. On these principles we have rapidly built up one of the largest mail order seed trades in the world, while "Calamity Howlers" and "Fault Finders" have as rapidly lost what trade they had.

Notice our Mail Order Seed House on the front cover of this catalogue, one of the best in the country for handling a mail order trade. Also notice Load of Mail (one day's mail starting for the post-office, about 3,000 seed orders). During the busy season we receive about three-fourths of the letters coming to Deposit post-office and send out over three-fourths of the bulk mail. What made it? Good Seeds, Square, Honest Dealing, Low Prices.

Sugar Boy is the Sweetest Watermelon on earth. Flesh a rose pink, sweet, crisp, brittle and melting to the tongue. Many have declared the honey bee has deposited sugar in it.

They are exceptionally thick meated, practically twice as thick as the old Ruby King, and more than double the thickness of the other bell peppers on the market. It is very mild, perfectly sweet and free from pungency. The plants are unusually prolific and the yield per acre is exceptional. The peppers are unusually firm and unexcelled for shipping. Deposit Big Dwarf Tomato

MAMMOTH TOMATOES ON DWARF ERECT VINES

This Big Fruited but erect-growing variety is one of the most important advances made in recent years in the line of Tomatoes especially adapted to home gardens. The original plant was discovered in a large field of Ponderosa. Its vine would indicate a cross with the Dwarf Champion while the fruit is surprisingly similar to Ponderosa, although smoother. Those who have attempted in the past to grow Ponderosa with its sprawling habit of vine may now have the same quality of fruit on strong, erect vines, requiring only one-fourth the space. The main stem or stalk grows about 20 to 24 inches high and is very stiffly erect. The fruits are immense, making Big Dwarf by far the largest fruited erect-growing sort in cultivation. The color is a rich crimson tinged with purple, making it surprisingly attractive when exposed for sale. Pkt. 8 cts.; ½ oz. 25 cts.; oz. 45 cts.; ¼ lb. \$1.50, prepaid.

One-fourth lbs. and lbs. of Corn are sent by parcel post. Pecks and bushels by express or freight, not prepaid. (Customers pay express or freight charges when they receive Corn.)

Bags furnished free to ship in.

RED COB ENSILAGE CORN

Beyond doubt one of the best fodder Corns, either to feed green right from the field, to put up for the silo, or to cure and stack away. It is sweet, tender and juicy; has short joints and therefore an abun- dance of leaves, and grows to a fair height, but not over-large and coarse-stalked as some varieties. The seed is white and grows on a red cob, thus giving it the name. Price, postpaid, ¼ lb. 10 cts.; lb. 30 cts.; 3 lbs. 75 cts.; by express, peck \$1.50.

IOWA GOLD MINE DENT CORN

A very popular and productive variety. On good land the stalks grow tall, producing two good ears to each stalk. The ears are long, with small red cob well filled with grains of medium size, of rich golden color. It ripens in from 100 to 110 days, and general- ly makes a good crop, even in dry season, by reason of its strong, vigorous growth. Stalks are leafy, making excellent fodder. ¼ lb. 10 cts.; lb. 30 cts., by mail; by express peck \$1.45; bushel \$4.50.

PRIDE OF THE NORTH

This is one of the most extensively planted Yellow Dent Corn. It is a standard early. The type varies, but usually has 16 rows of kernels on a cob, with tapering tip. Our seed is from selected ears. ¼ lb. 10 cts.; lb. 30 cts.; by express peck \$1.40; bushel \$4.40.

We most highly recommend it to our customers in the same latitude as Iowa. ¼ lb. 10 cts.; lb. 30 cts., by mail; by express peck \$1.45; bushel \$4.40.

PRIDE OF NISHNA YELLOW DENT

The stalks grow from 8 to 12 feet high, dependent on the land—hill or bottom ground—strong and ro- bust, very leafy, broad blades and plenty of them, making an excellent fodder or ensilage Corn. Roots almost equal that of sorghum. Ears uniform in size and shape, cylindrical from butt to tip, running from 8 to 12 inches long and 7 to 8 inches in circumference, containing from 16 to 20 rows solidly set on a medium small red cob, shelling 86 to 88 per cent grains and often more. Weighs out more than ordinary varieties, thus proving its solidity. It is a golden yellow and is the earliest maturing, large-eared yellow Corn known, always making itself safely and beyond dan- ger of frost in from 90 to 100 days. Our word for it, it will please you in every respect. ¼ lb. 10 cts.; lb. 30 cts.; 4 lbs. by mail \$1.00; 7 lbs. (enough for 1 acre) by mail \$1.65; by express peck \$1.45; bushel \$4.65.

Pencillaria—The Great Forage Plant

This wonderful forage plant, which is an im- proved Pearl or Cat-tail millet, has created quite a sensation as the most prolific forage plant grown. Each plant stool produces a large number of stalks from each seed. You should try some of this seed this season. Oz. 5 cts.; ¼ lb. 15 cts.; lb. 50 cts.; 4 lbs. by mail \$1.50.

SUDAN GRASS

It is a tall, annual grass reaching a height of 7 feet when planted in rows and allowed to mature for seeds crop; broadcasted and cut in the bloom for hay about 4 feet. The results have been so satisfactory that it is now established one of our permanent for- age crops. It is easily cured and handled as a hay crop. Stock of all kinds eat it readily and will leave any other hay for it. The food value is second only to alfalfa. Should not be planted until the soil be- comes warm in the spring. Two to four cuttings per year can be obtained when sown broadcast for hay, the number of cuttings secured depends upon the length of the season and the moisture. The first crop will mature in from 50 to 60 days, and the second crop is ready for harvesting in from 20 to 30 days. Three tons of cured hay per cutting per acre has been secured and three cuttings made. It is a great drought register and is particularly adapted to semi- arid regions. It is an annual and must be seeded each spring. When seeded in rows 18 to 20 inches apart, drill 4 to 6 lbs. Choicest Varieties of Flower Seeds.

We grow and have grown "in United States" especially for our trade nearly all the Flower Seeds we sell. A few not developed successfully in this country we secure in France, England, Denmark, etc. Our long experience growing Flower Seeds enables us to know what will succeed satisfactorily

Flowers usually do best in a rich light garden soil. Decomposed manure is beneficial to nearly all plants. Asters, Pansies and most plants and bulbs, etc., like plenty of moisture (a rich soil well watered), while Portulacacs will not start till weather is warm. Plants wanted early can be started in fine soil in a sunny window in the house, great care should be taken to keep most and warm while sprouting. Some hardy seeds will start well out-doors if sown early, but others will rot if earth is cold and wet. Nice mellow beds can be prepared outside for the hardier seeds when weather is warm and they can be transplanted from these when large enough.

Annuals are plants which bloom first season from seed and then perish. Those like Balsams, Nasturtiums and Zinnias, which are easily killed by frost, are called half-hardy annuals. Seeds of these should be sown, if wanted for early, in the house, but most sorts will do better if sown outside in a nicely prepared bed and transplanted. All plants should be kept free from weeds, not crowded, and be well cultivated.

Order Flower Seeds by the Number placed before each variety.

We can fill the order by number just as correctly as though you wrote the entire name.

Abutilon (See Cut Above)

1—New Hybrids. New and giant flowering sorts of these desirable house bloomers known as "Chinese Bell Flower" and "Flowering Maple." Seeds sown early produce flowering plants first season. A handsome perennial shrub loaded with rich, variously colored bell shaped flowers, often 2 to 3 inches across. Pkt. 7 cts.

Perennials are hardy plants which live year after year. Tender Perennials must be kept in house during winter. Hardy Perennials are such plants as Hollyhacks, Sweet William, Rocket, etc. Most of these will not bloom till second season. These and biennials are often benefited by a covering of hemlock boughs, straw or something which will protect from the sun and not smother plants.

Biennials produce plants first season which blossom, mature, seeds die the second season, such as Canterbury Bell, Digitalis, etc. They require about the same treatment as perennials.

Greenhouse Seeds require the greatest care and should be carefully sown in a box or flower pot in light fine earth in house kept at a temperature of about 70 degrees. Always remember they need to be moist (not wet) and warm. A pane of glass over a flower pot or a wet cloth or paper will retain moisture and assist them to germinate. If thick transplant soon as possible.

I am very much pleased with the seed I bought of you this spring. Everyone, I believe, grew and seemed to be of fine quality.
