Waterer's Reliable Vegetable Seeds

Hosea Waterer gives no warranty, express or implied, as to description, quality, productiveness, or any other matter of any seeds, bulbs or plants he sends out, and he will not be responsible in any way for the crop. If the purchaser does not accept the goods on these terms, they are at once to be returned.

ASPARAGUS SEED

1 oz. to 50 ft. of drill; 4 to 5 lbs. per acre

Culture. Sow the seed as early in spring as the soil can be worked, in drills 12 inches apart, and when well started thin out to three inches apart. When one or two years old, transplant into permanent beds, which should be well and deeply manured and trenched to a depth of 18 inches. Set the plants in rows two feet apart, and not less than 18 inches apart in the row. Care should be taken that the roots are well spread, and set at a depth of six inches below the level of the bed. Cover only two or three inches, and fill in gradually as the plants grow. Very little, if any, should be cut the first year after transplanting, but a fair crop can be cut the second year. Every fall after the tops have been cut down apply a dressing of coarse manure, and in the spring fork it in. An occasional top dressing of salt at the rate of one-half pound per square yard is also beneficial.

ARTICHOKE

Culture. Sow seed in hotbed in February or March, in rows six inches apart. Transplant when large enough into boxes or pots. After danger of frosts is past plant in the open ground, in rows 3 feet apart, 2 to 3 feet apart in row, care being taken to press firmly in the ground, but not plant too deep.

Large Globe or Paris. The best of all Artichokes. Pkt. 25c.; $\frac{1}{4}$ oz. 60c.; oz. \$2.00.

Jerusalem Artichoke. Distinct from the Globe, and propagated by and for its tubers. Largely used for feeding stock.....1 qt. 25c.; peck \$1.25; bush. \$4.00.

CELERY

Sow the last of March or early in April, in drills 8 to 10 inches apart. The seed should be covered very lightly or merely pressed into the earth. When fairly out of the seed leaf they may be transplanted to another bed, or else thinned out to four inches apart, and let them grow until wanted for transplanting out into the beds or trenches early in July. Some gardeners trim off the tops a little, while the plants are small, to make them grow more stocky. The trenches should be shallow, and about four feet apart, and wide enough to hold one or two rows. These rows should be one foot apart and the plants set about six inches apart in the row. As the plants grow, they should be earthed up to blanch them, care being taken not to let the earth get into the heart of the plant. For keeping over the winter, bank up with earth and cover over with litter to keep out the frost, placing boards on top to keep out the rain.

Undoubtedly the coming fancy carnation to grow.

The Chrysanthemum family comprises so many varieties that I do not list all of them, but am in a position to supply any variety that you may wish to order.

NOVELTIES

Mrs. H. S. Firestone. The outstanding novelty of the year. It is wonderfully massive, stem perfectly rigid, and foliage right up to the flower. Color pinkish, chamois-buff. This variety will be found invaluable in the classes calling for "Any other color" in the exhibitions. First bud after August 15th.

Joan of Arc. Named by President Wilson at the Cleveland show. Very much like the old President Carnot in type. Stem is absolutely stiff and easily able to carry the flower erect; foliage continues right up to the flower. Blooms are enormous in size, and another year it will occupy a prominent place in the list of reflexed white "Mums." Crown bud August 15th and later.

Mrs. W. Dennis. A very distinct pink variety, petals of which twist back as the flower ages; stem, foliage, and flower are all A1. This variety is considered par excellence as an exhibition pink color, much deeper than Mrs. J. Gibson, and more evenly distributed over the petals. In size it is the largest pink to date. Buds August 20th onward give the best result.

Mrs. J. Willis Buhl. Crimson of the largest size, and a welcome addition to this color, which is very much like Pockett's Crimson, but the plant is considerably taller in growth, running five to six feet. Buds about August 25th give best results.

Mrs. Frank H. Traendly. Somewhat resembles Joan Stratton, changing to a deeper, more even shade of pink, and has a very much larger flower. Foliage is somewhat sparse, but this is amply made up by the magnificent flower. Bud August 20th to 30th.

Reflexed Louisa Pockett. Duplicate of Louisa Pockett in every way except that the petals reflex instead of in-curve, but in all other respects it is identical, having large foliage, strong stem, and enormous flower. Buds taken late August or early September give best results.
