IMPORTANT

We supply with this catalogue a return envelope, in which you may enclose your order and money and mail by a Registered Letter, Money Order, Express Money Order or Bank Draft need not be registered. Postage stamps taken the same as money in any amount. Since seeds have been admitted under Parcel Post it is a great advantage to farmers residing many miles from a railroad, as seeds and other articles can be delivered to their door, thus saving a trip to town. Besides, the rates are very reasonable up to 400 or 500 miles. Should you wish to order large quantities of seeds by Parcel Post, write for special prices.

READ THIS

These seeds are all grown especially for us and are fresh, genuine and reliable. We handle no commission seeds.

Seeds of the best quality often fail to germinate by reason of improper planting, weather conditions, etc., in fact, most failures are from disregard of necessary conditions and since these conditions are so varied and so far beyond our control, it is impracticable for us to in any way guarantee crop results, and while we exercise every care in reason, we give no warranty, express or implied, as to description, quality, productiveness or any other matter of any seeds, and will not be in any way responsible for the crop. If the purchaser does not accept the goods on these terms, they are at once to be returned.

Market Gardeners, or other large planters, requiring larger quantities of seeds than are here offered, are invited to write us for Special Prices, and must be sure to name **varieties** and **quantities** they will want.

Please bear in mind that the prices given in this book include cost of postage, except where noted. For Peas, Beans and Corn, add proper amount as shown by parcel post table to cover postage. If purchasers desire forwarded by express, they may omit the amount required for postage.

Seeds by Express or Freight. We deliver seeds to any express or railroad company, the purchaser to pay transportation charges upon receipt of goods.

Name, Address, Etc. When ordering please give your name and full address. Many orders reach us on which the name or post-office address is lacking. It is, of course, impossible to fill these orders until they are identified.

How to Send Money. Money can be sent at our risk, either by postoffice order, bank draft, express order or registered letter. If your order amounts to \$1 or more, it is best to send by one of the above methods. Postage stamps received the same as cash. Always be sure to **sign your name, postoffice, county and state.** Cash should always accompany the order.

A Few Words About Irrigating the Home Garden

In seed beds, where small seeds are sown thickly, it is necessary to sprinkle the beds, never flood them. During the winter months sprinkle only in the morning when the water is warmer than the dew. This allows all the heat that accumulates in the soil during the day to be retained far into the night. During the hot summer months it will be necessary to sprinkle in the evening to revive the plants after a hot day.

When making a garden, whether for drilling or planting seed, or setting plants, always wet the ground thoroughly. GIVE IT A GOOD SOAKING TO A DEPTH OF TWO OR THREE FEET OR MORE. As soon as it is tillable—that is, as soon as it can be spaded and pulverized, or when the soil will not stick to the spade—dig it ten to twelve inches deep, put stable manure into every other furrow and turn it under. This is needed for humus and fertilizer, either in sandy or loamy soil, and more especially in adobe soil. Pulverize the soil thoroughly and rake it evenly. While it is still moist, plant seed from one-fourth inch to one inch deep, in heavy soil, and a little more deeply in sandy soil. Planted this way, almost any variety of seed will germinate and show above the ground in from four to ten days without irrigation. Never sprinkle a new garden before the plant is above ground, nor after, if you can irrigate between the rows. It is far better to irrigate than to sprinkle, and much less labor. Always mulch the soil after each irrigation, as soon as it mulches readily, but no sooner. To allow the soil to bake after irrigation is far worse than no irrigation at all.

To sprinkle the garden slightly each day during the summer months is of little value unless the ground is also thoroughly irrigated once each week or two, according to the nature of the soil. Slight sprinkling refreshes the foliage, but may not penetrate the soil more than one inch deep. Thus as the under soil dries, the roots get no moisture. The plants suffer and you do not suspect the cause, because you sprinkle each day. This is a common fault and the cause of many failures.

A Word About Sowing Seeds

Many seeds are small and the germination weak; therefore, sow them very shallow, often not more than one-eighth inch deep. This is because the germ or sprout must have air and light. If this is denied by too deep sowing, it dies before it reaches the surface.

In order to assist small or weak seeds to grow, it is advisable to plant plentifully, because the many seeds will give strength to raise the soil where one could not do so.

This ad ice applies particularly to beet and melon seeds, but is applicable to all small seeds. It is easy to thin out the surplus plants. A good general rule is to plant seeds to a depth equal to from three to five times their diameter.

GARDEN SEEDS

DON'T GIVE UP YOUR WAR GARDEN

Now that the war is over there will be many that will forget about their gardens. Don't do it. These times of high prices for all vegetables makes it very profitable for both the Home Gardener and the Market Gardener to PLANT MORE.

ASPARAGUS

Sow one ounce for 60 feet of drill, in rows 1 foot apart. When two years old transplant into permanent beds, which should be well and deeply manured, and trenched to the depth of 2 feet. Set the plants (in rows) from 3 to 4 feet apart, and 2 feet in the rows, spreading out the roots and covering from 6 to 8 inches. On the approach of winter cover with manure or compost; fork the beds early in the spring and apply a dressing of salt. Cut for use the second year after planting in permanent bed.

ASPARAGUS SEED

Succeeds well in any good, rich soil, but a light, warm soil which has been heavily manured for previous crops is best.

GIANT ARGENTEUIL.—Originally a selection from imported French stock, but has been both acclimated and improved, and is much superior to the original stock. It has been grown for several years by the most successful truckers and is pronounced far superior to any other variety in earliness, productiveness and size and always sells at a higher price in northern markets. Pkt., 5c; oz., 10c; lb., 75c.

PALMETTO.—Although of southern origin, it is well adapted to the North and it is extensively grown for the markets; it brings high prices, owing to its large size, beautiful color and regularity of stalk. Pkt., 5c; oz., 10c; lb., 75c.

DWARF BEANS

CALLED STRING BEANS, BUSH BEANS AND SNAP BEANS.

One quart to 100 feet in drills, or 150 hills; 1½ bushels to the acre, in drills. Mature for table use from 30 to 50 days from germination, according to variety.

CULTURE.—Plant from end of December, and for succession, every two weeks until May. Beans planted in this latitude during June and July will not produce much. August and September are good months in which to plant again. They are ready for the table in from thirty to fifty days after planting. Beans do not require heavy manuring; in fact, if the soil is fairly good, it is better to use a good fertilizer. The fertilizer should be well mixed in the furrow with the soil before the Beans are planted. For field culture plant in rows 2½ feet apart and about 3 inches between the Beans, covering the seed to a depth of about 3 inches. If to be cultivated by hand in small gardens, the rows may be 18 inches apart. Up to the time of blooming cultivate often.

Prices on Beans, quarts or less, postpaid.

GREEN PODDED BEANS

GIANT STRINGLESS GREEN POD.—Somewhat similar to Burpee's Stringless, but pod is a little longer, straighter and more slender, more depressed between beans and slightly lighter in color; early, hardy and of highest quality. Pkt., 15c; ½ lb., 25c; 1 lb., 40c; 2 lbs., 75c; 15 lbs., \$3.75; 60 lbs., \$14.50; 100 lbs., \$22.50.

FULL MEASURE.—A fine stringless, early, dark green, high quality bean. Pods 6 inches long, round and creasebacked. Seed

Palmetto Asparagus

bean much resembles Red Valentine. Pkt., 15c; ½ lb., 25c; 1 lb., 40c; 2 lbs., 75c; 15 lbs., \$3.75; 60 lbs., \$14.00; 100 lbs., \$22.00.

IMPROVED EARLY RED VALENTINE.—This is one of the best; earlier than the old Early Red Valentine. The vine is dwarf, the pods are smooth, round, stringless and very thickly set, remaining green and tender a long time after they are fit to pull. Vine very uniform, making little or no top growth, and producing enormously—the great market-garden, green-colored snap bean. Qt., 65c; peck, \$3.50; bu., \$13.50.

LONGFELLOW.—A superior type of green-podded snap bean; early, hardy, prolific, round pods of attractive appearance. Qt., 65c; peck, \$3.50; bu., \$13.50.

EXTRA-EARLY REFUGEE.—Has all the good qualities of the well-known Refugee, but is ten days earlier. Very productive, and sure to produce a crop either in a wet or a dry season. A fine shipper, and fast becoming one of our most popular round green-podded snaps for both spring and summer planting. This Bean is always sure of bringing the very best prices in market. Qt., 65c; peck, \$3.50; bu., \$13.50.

REFUGEE, or 1,000 to 1.—One of the best snaps for main crop and late or succession plantings. It is enormously productive. The snaps are round-podded, tender and of excellent table qualities. Later than the early kinds, but continues in bearing much longer and is more productive. Qt., 70c; peck, \$4.25; bu., \$16.00.

BURPEE'S STRINGLESS GREEN POD.—Claimed to be hardier and will stand frost better than any other early kind, and that it is entirely stringless. It makes a round-podded snap, tender and of excellent quality. Qt., 60c; peck, \$3.75; bu., \$14.00.

BLACK VALENTINE.—This variety is becoming more popular each season. It is very hardy and will stand more frost and cold weather than other kinds and consequently can be planted earlier with less risk of injury by cold. It is fully as quick-growing as the Red-speckled Valentine, very productive and makes round, straight, tender pods of attractive appearance, both for market and home use. Qt., 65c; peck, \$3.75; bu., \$13.50.

Improved Red Valentine Beans

E. A. MARTIN SEED COMPANY, JACKSONVILLE, FLORIDA

WAX-PODDED BUSH OR SNAP BEANS

DAVIS WHITE KIDNEY WAX.—Pods remarkably long, straight and of a handsome waxy white color; enormously productive. Seed white. Write for price.

WARDWELL'S KIDNEY WAX.—Most popular of all wax varieties in the South for either market or home use. Matures in five to six weeks; a strong, vigorous grower, bearing heavy crops of long, showy pods, tender and of the finest flavor. In shipping, it stands up well, bringing top prices. Is remarkably free from rust. Qt., 65c; peck, \$4.00; bu., \$15.00.

DWARF GOLDEN WAX.—An old, well-known favorite variety for private gardens. Pods long, semi-round, golden yellow and very fleshy and of the best quality. Qt., 65c; peck, \$4.00; bu., \$15.00.

Fordhook Bush Lima Beans

OLD HOMESTEAD.—This we regard as far ahead of any other green-pod Pole Bean; is ten days earlier; enormously productive and entirely stringless. Qt., 65c; peck, \$4.50; bu., \$17.00.

LAZY WIFE.—So named on account of the large number of pods it affords, making it easy to obtain a supply. One of the best varieties for snaps of the late green-podded Pole Beans. The pods grow in large clusters, are 5 to 7 inches long, broad, thick, fleshy and entirely stringless. They have a rich, buttery flavor. The dry Beans, which are white, are fine for winter use. Sold out.

The quality is remembered long after the price is forgotten.

DWARF OR BUSH LIMA BEANS

Mature earlier than Pole Limas.

One pint of small-seeded sorts plants from 100 to 125 feet, and is sufficient for an ordinary garden, or one quart of the large seeded sorts. For succession, make two plantings, four weeks apart. Mature in from 75 to 80 days from planting.

SPECIAL INFORMATION ON LIMA BEANS.—Our personal experience and observation has proven to us that it will pay, in planting the large varieties of Lima Beans, to be particular and place the eye down when planting. When beans germinate they force the bean upwards and out of the ground and when the eye is up, this compels the sprout or germ to grow under the bean to force it out of the ground and often this breaks the sprout and causes failures which are sometimes attributed to bad seed and other causes. We are all familiar with the fact that when the large Lima Beans are planted, they swell to twice the normal size and weight. This especially applies to the Fordhook variety.

BURPEE'S IMPROVED BUSH LIMA.—Bush form of the well-known Large Lima, and although not so early as the preceding variety, the large size and excellent flavor of the Beans make it desirable. Qt., 75c. Write for Prices in Quantity.

Wardwell's Kidney Wax Beans

Pole or Running Beans

ALMOST THE ENTIRE YEAR.

One quart to 150 hills, 10 to 12 quarts to the acre in drills. Matures for table use from 48 to 85 days from germination.

These are more tender and require rather more care in culture than the Bush Beans and should be sown two weeks later. They succeed best in sandy loam, which should be liberally enriched with short manure in the hills, which are formed according to the variety, from 3 to 4 feet apart. From five to six seeds are planted in each hill, about 2 inches deep. As the matured Bean is used mostly, the season is too short for succession crops in the North, though it is advantageous to plant succession crops in the southern states, especially in Florida, where the season of growth is almost the entire year. Rough cedar or similar poles about 7 or 8 feet high should be used for Lima Beans to climb on. They should be set in the ground at least 18 inches, so as to prevent being blown over.

KENTUCKY WONDER.—The most popular of all Pole Beans, especially in this section. Vines are vigorous in growth, the pods are immense, often attaining a length of 9 to 10 inches and borne in large clusters. Bright green, very meaty, tender and stringless when young, assuming a saddleback shape with age, being broader in width than depth, and becoming somewhat irregular and spongy as the Beans ripen. Very early. Qt., 65c; peck, \$4.50; bu., \$17.00.

Kentucky Wonder Beans

HENDERSON'S BUSH LIMA.—This variety has enjoyed great popularity. They are two weeks earlier than the Pole Limas and wonderfully productive, averaging about sixty pods to the bush, bearing three to four small Beans. Of hardy growth, very prolific and continuous in bearing till frost. Qt., 60c; peck, \$4.50; bu., \$16.00.

FORDHOOK BUSH LIMA.—The Beans of this new variety are of the large Lima type, but are thicker and rounder, and of superior flavor. The bush itself is of stiff, erect habit, holding the Beans well off the ground, so that the pods do not become discolored or injured from being beaten to the ground by wind or rain. It is also very prolific and the pods contain from four to five large, fat Beans each, lying closely together. The pods are so closely packed that the Beans are very easily shelled. The green Beans, even when of full size, are tender, juicy and sweet of flavor when cooked. We recommend this new introduction to our customers as a thoroughly distinct and valuable improvement in Bush Limas. Qt., 75c; peck, \$4.75; bu., \$18.00.

POLE LIMA OR BUTTER BEANS.

LARGE WHITE LIMA.—Either green or dry, this is the standard table vegetable, and the best shell Bean known. Give it rich ground and plenty of room. Qt., 65c; peck, \$4.50; bu., \$17.00.

SMALL LIMA, or SIEVA.—Similar in every way to Large Lima, except that it is only half as large, seeds and pods being smaller. Largely grown in the South and immensely popular. Qt., 75c; peck, \$4.50; bu., \$17.00.

Our beans are grown for us by the most reliable growers and are true to name, and the quality is, beyond a doubt, the very best to be obtained.

SEEDS, BULBS, PLANTS, GARDEN AND POULTRY SUPPLIES

**CAREFULLY
TESTED**

MARTIN'S HY-TEST BEETS SURE TO GROW

Martin's Dark Red Beets

Two ounces will sow 50 feet of drill, 6 to 8 pounds one acre. Mature for table use 35 to 60 days from germination.

CULTURE.—The ground for Beets should be rich and well spaded or plowed. In this latitude Beets are sown in January to May, and from the first of August to December. Some market gardeners sow them every month in the year. Seeds should be soaked twelve hours before planting, as this softens the bur and allows the seed germ to prove itself much quicker. For field culture, sow in drills 2 to 2½ feet apart, and cover about 1 inch. Thin out to 4 inches apart. For a small garden, the drills need not be more than 15 inches apart.

Prices on all kinds of Beets are by mail, postpaid.

IMPROVED EARLY BLOOD TURNIP.—Dark red, smooth, uniform size and of excellent quality. One of the best for main crop, as it keeps in condition longer than the other kinds. Pkt., 10c; oz., 15c; ¼ lb., 40c; lb., \$1.25.

EXTRA-EARLY EGYPTIAN BLOOD TURNIP.—An old standard sort, both for market gardeners and family use. Produces fine, smooth, deep red roots. About ten days earlier than the Blood Turnip. Pkt., 10c; oz., 15c; ¼ lb., 40c; lb., \$1.40.

Extra Early Eclipse.—A most popular market gardener's Beet for the South, as well as a favorite for home gardens. Of remarkably fine form, smooth and free from stringy roots. Small top and a rapid grower. Color a deep blood red, which it retains fully and after being cooked. Quality extra fine, sweet and tender. A heavy cropper, and its handsome appearance makes it an easy seller when placed on the market. Our specially selected strain of Eclipse has proved to be most successful for fall planting. Pkt., 10c; oz., 15c; ¼ lb., 40c; lb., \$1.35.

MARTIN'S DARK RED.—The King of Beets. A blood-red, early, turnip-shaped variety. Has small, upright tops; fine round shape; skin and flesh dark blood-red; very tender and sweet. Remarkably uniform in growth, and a particularly desirable sort for truckers and market gardeners. Pkt., 10c; oz., 15c; ¼ lb., 40c; lb., \$1.50.

LONG SMOOTH BLOOD.—Long, smooth and very dark red; a late variety. Our strain of this variety cannot be excelled, and will produce perfect beets, which will always be in demand in market. Pkt., 10c; oz., 15c; ¼ lb., 35c; lb., \$1.25.

CROSBY'S IMPROVED EGYPTIAN.—More largely planted for early market in the South than any other kind. It takes on its turnip shape even in early stages of its growth, a decided advantage both for forcing and early cropping. Pkt., 10c; oz., 15c; ¼ lb., 40c; lb., \$1.35.

LENTZ' EXTRA EARLY BEET.—Small top, round dark red, and grows large, but is always sweet and tender; a good winter sort.

Some market gardeners claim this beet can be raised for market in a shorter growing time than any other variety. A great favorite in Florida for shipment to northern markets. Price: Pkg., 10c; oz., 15c; ¼ lb., 35c; lb., \$1.25.

Swiss Chard

Swiss Chard or Spinach Beet

The stalks when cooked and served like asparagus make a most delicious salad. The leaves should be prepared like spinach, kale or turnip salad. Sown early in the spring it yields salad all summer. Grow a row and you will not be without it hereafter. Pkt., 10c; oz., 20c; lb., \$1.50.

MANGEL-WURZELS

Six to eight pounds of seed will sow an acre.

CULTURE.—The following varieties are extensively grown for feeding stock, and are excellent food to increase the flow of milk. As they grow much larger than the varieties cultivated for table use they require more room, and should be sown in drills about 2 feet apart. The seeds should be dropped about 2 inches apart in the drills, and when strong enough, thinned out to 12 to 15 inches in the row. The long varieties are best suited to a deep soil, and the globe sorts succeed better than the long sorts on sandy soil. Study your soil before planting.

Prices on all varieties of Mangel-Wurzels as follows: Pkt., 10c; oz., 15c; lb., \$1.00.

LARGE RED GLOBE.—Globe-shaped; red; similar to Yellow Globe and a good sort for stock.

CHAMPION YELLOW GLOBE.—The best Yellow Globe; heavy yielder, splendid keeper.

LONG RED MAMMOTH PRIZE.—The most largely grown of any of the Mangels; roots attain an enormous size, producing 30 to 50 tons per acre, quality superior; the best for deep soil.

BRUSSELL'S SPROUTS

One ounce will produce about 3,000 plants.

Of the cabbage family, producing numerous heads on the stem of most delicious quality, as well as cabbage-like head at the top. Use and cultivate the same as winter cabbage.

PERFECTION.—A new and greatly superior variety of American growth which forms heads ready for picking about three weeks earlier than other varieties. It makes stronger plants and more heads. A profitable crop for market gardeners. Pkg., 10c; oz., 50c; lb., \$6.50.

BROCCOLI

Requires a longer season than either cabbage or cauliflower to develop.

CULTURE.—The same cultivation as suggested for cauliflower should be given to Broccoli.

EARLY WHITE CAPE.—The best variety. The heads are white, compact and hard, and it is a hardy, vigorous and easily grown sort. Pkt., 15c; ½ oz., 40c; oz., 75c.

Do not fail to include in your order Martin's Dark Red Beet, an exceptionally fine variety which will most certainly please you.

Field of Long Red Mangels

ALL PRICES ON THIS PAGE ARE BY MAIL, POSTPAID.

**HIGH
BRED**

Martin's Hy-Test Cabbage

**FULLY
TESTED**

For cutting matures 65 to 120 days, according to variety.

CULTURE.—Have soil in your bed in the best possible condition. Do not make it too rich or your plants will grow quickly and consequently be weak. Such plants will not stand the shock of transplanting. Soil that has been manured the previous year is to be preferred. Seed should be drilled 6 inches apart, and not too thick; cover lightly and press the soil down firmly around seed. Keep plants watered and free from grass or weeds. Plant during February and March; again in July and August. For spring and summer crop, sow from August 15 to November 1. Six ounces of seed will supply enough plants to set one acre. We advise rows 2½ feet apart with plants 18 inches apart in the row.

All prices are mail, postpaid.

MARTIN'S EARLY SUWANEE CABBAGE.—Quickest maturing flat-head cabbage in existence. We offered this wonderful variety for the first time last fall. Our supply was so short that we did not list it in our fall catalog, but later offered to the Florida planter our surplus stock through our weekly price list. We also sent out trial packages all over the South. We are now getting very complimentary reports from every section. Early Suwanee will mature about twelve to fifteen days earlier than Jersey Wakefield. Heads are very firm, almost round, but slightly flattened on top. Is not only a quick maturing variety, but the leaves are very finely webbed and have a very delicate flavor. For quick, sure results, either in home garden or for market, our suggestion is, plant Early Suwanee Cabbage. But to do this it will be necessary for you to get your order in EARLY. Pkt., 25c; oz., 50c; ¼ lb., \$1.75; lb., \$6.00.

ALL-HEAD EARLY.—Many of our local gardeners are having great success with this variety. Especially recommended on account of its uniform size and shape and reliability for heading; makes a deep, flat head, solid and uniform in color, shape and size. In tenderness it is unsurpassed. Can be grown either for summer or winter use. By reason of its compactness it can be planted closer and will yield more heads to the acre than varieties of a more spreading habit. Pkt., 10c; oz., 30c; ¼ lb., \$1.00; lb., \$3.75.

COPENHAGEN MARKET.—Very fine, nearly as early as Wakefield with large, round, solid heads. Crop failed. Pkt., 15c; oz., 40c; ¼ lb., \$1.50; lb., \$5.75.

CHINESE CABBAGE.—The kind of cabbage universally grown in China. Does not head up solid like our Cabbage, but makes a loose roll of leaves, tender and white, but different in taste from our Cabbage. Stems are thick and brittle like celery. It is better to be blanched by tying up the outside leaves around the plant. A great curiosity and really a delicious vegetable. Pkt., 10c; oz., 35c; lb., \$4.50.

SELECTED EARLY JERSEY WAKEFIELD.—A favorite sort with market gardeners and truckers to

Martin's Early Suwanee Cabbage

Succession Cabbage

grow for earliest Cabbage, both for home market and for shipping. Makes compact, solid, blunt-pointed heads; small leaves, permitting close planting. Very hardy, not only to resist cold, but other unfavorable conditions, insuring the greatest likelihood of profitable and satisfactory results. Our stock is grown and selected with the greatest care. Pkt., 10c; oz., 35c; ¼ lb., \$1.25; lb., \$4.00.

EARLY DWARF FLAT DUTCH.—One of the most reliable cabbages for early spring planting. Plant is short-stemmed, upright, and, having comparatively few and short leaves, the rows can be set close together. Heads large, solid, crisp and tender. Pkt., 10c; oz., 30c; ¼ lb., \$1.00; lb., \$3.50.

IMPROVED EARLY DRUM-HEAD.—An intermediate kind between the cone-shaped early and late varieties; can be planted closely, takes name from its shape. Pkt., 10c; oz., 30c; ¼ lb., \$1.00; lb., \$3.50.

SUCCESSION.—Largely a market gardener's variety in many parts of the South, being used almost exclusively for shipping crops. Rather large size, well flattened on top. In maturity, almost ten days later than Early Summer and Early Flat Dutch, but nearly double the size of those varieties. Firm and solid, a very

sure header and stands shipment to the North, arriving in good condition and color. Succession is a good variety and a favorite in many parts of Florida. Pkt., 10c; oz., 30c; ¼ lb., \$1.00; lb., \$3.75.

RED ROCK (Henderson's Mammoth).—The largest and surest-heading red cabbage. Heads as large and solid as Flat Dutch and fine-grained. Pkt., 10c; oz., 35c; ¼ lb., \$1.25; lb., \$4.50.

FLORIDA HEADER.—One of the finest for second-early or for late sowing. Grows quickly to a large size and heads surely. It is a true, sure, hard header. Pkt., 10c; oz., 30c; ¼ lb., \$1.00; lb., \$3.75.

PREMIUM LATE FLAT DUTCH.—As a variety for winter market this Cabbage has no superior. Heads are large, round, solid, broad and flat on top, often tinted with reddish brown after being touched by frost. They open white and crisp, are tender and well flavored. It is a fall and winter variety and one of the best keepers. With good cultivation on moist, rich ground, 95 per cent of them will head up. Decidedly one of the best varieties for late cultivation in our state. Pkt., 10c; oz., 30c; ¼ lb., \$1.00; lb., \$3.50.

HENDERSON'S EARLY SUMMER.—A favorite round-headed variety. Pkt., 10c; oz., 35c; ¼ lb., \$1.00; lb., \$3.75.

SUREHEAD.—All head and always sure to head. Heads the list for winter use. Pkt., 10c; oz., 30c; ¼ lb., \$1.00; lb., \$3.75.

CHARLESTON WAKEFIELD.—This is a few days later than the Jersey Wakefield, but makes a larger and more solid head. Pkt., 10c; oz., 35c; ¼ lb., \$1.25; lb., \$4.00.

FINE EARLY WINNINGSTADT.—One of the best for either early or late use. Pkt., 10c; oz., 30c; ¼ lb., \$1.00; lb., \$3.50.

LARGE LATE DRUMHEAD.—A favorite winter cabbage. Pkt., 10c; oz., 30c; ¼ lb., \$1.00; lb., \$3.50.

AMERICAN PERFECTION DRUMHEAD SAVOY.—Very tender and far superior in flavor to any other fall and winter cabbage. Pkt., 10c; oz., 35c; ¼ lb., \$1.25; lb., \$4.50.

ALL HEAD EARLY CABBAGE

Be Sure and Include Martin's Early Suwanee Cabbage in Your Order.

MARTIN'S CARROTS

Two ounces will sow 100 feet of drill, 3 pounds required for an acre. Matures about 60 days from germination.

CULTURE.—Carrots require a very finely pulverized soil to grow them to perfection. A good, light, well-enriched sandy loam is the best for this crop. For field culture, sow in drills 3 to 3½ feet apart, so as to cultivate by horse. For market gardeners sow in drills, about 18 inches apart, and cultivate by hand. For early crops, cover ¼ inch deep and thin to 6 inches in the rows; for late, cover ¼ inch deep and thin to 4 inches.

Chantenay Half-Long.—A new stump-rooted French variety, the best of its class. Unexcelled in productiveness and quality. Very uniform in growth. Roots about 5 inches long, large at the top and gradually tapering to the base. Medium early and fine for both market and home gardens. Pkt., 10c; oz., 15c; ¼ lb., 50c; lb., \$1.50.

DANVERS HALF-LONG.—One of the heaviest croppers; roots dark orange-color, 8 to 10 inches in length, thick and ending in a somewhat abrupt point. Pkt., 10c; oz., 15c; ¼ lb., 40c; lb., \$1.25.

EARLY SCARLET HORN.—Popular early variety. Color a deep orange, of a most delicious flavor and makes a most splendid crop in light, shallow soils. A favorite in both market and home garden. Roots 4 to 5 inches long. Pkt., 10c; oz., 20c; ¼ lb., 50c; lb., \$1.75.

OXHEART, or GUERANDE.—Deserving of general cultivation. It grows 3 or 4 inches in diameter, is early, nearly oval in shape. Pkt., 10c; oz., 15c; ¼ lb., 50c; lb., \$1.50.

RUBICON.—Half long and stump rooted; color deep orange; finest quality. Pkt., 10c; oz., 20c; ¼ lb., 50c; lb., \$2.00.

IMPROVED LONG ORANGE.—Especially fine on light soils, making long, smooth, tapering roots of a deep orange-color, and free from side roots; superior in every respect. A fine winter sort for table, market and stock. Pkt., 10c; oz., 15c; ¼ lb., 35c; lb., \$1.25.

OXHEART CARROTS

CARROTS FOR STOCK

CULTURE.—Sow 3 pounds to the acre. These roots are often 15 inches in circumference; greatly enjoyed by stock and gives fine color to butter. 500 bushels can be raised on one acre. 1 bushel is equal to 1 bushel of corn in feed value.

BELGIAN YELLOW.—Largest, heaviest cropping and most nutritious yellow variety in cultivation. Easily gathered as the roots grow largely above the ground. Pkt., 10c; oz., 15c; ¼ lb., 30c; lb., \$1.25.

COLLARDS

CULTURE.—One ounce will produce about 2,000 plants, or 150 feet of row. Sow in spring, or summer, as directed for cabbage, either in beds, to transplant when large enough, or in rows where intended to stand. They are rapid growers.

NORTH CAROLINA SHORT-STEM.—A decided improvement, and has proved very popular wherever grown. Has short stem, large, spreading leaves, very hardy, withstanding drought in summer and cold in winter. Its flavor and cooking qualities are the very best. Pkt., 10c; oz., 15c; lb., \$1.00.

SOUTHERN, or GEORGIA.—This variety is the old-time favorite. Stands all sorts of adverse conditions without injury. Is very hardy. In many places where the soil is too poor to grow cabbage, the Collard grows easily and makes a good substitute for cabbage. Pkt., 5c; oz., 10c; ¼ lb., 30c; lb., \$1.00.

Davis Perfect Cucumbers

CUCUMBERS

• One ounce of seed will plant 50 hills, 3 pounds to the acre. Matures from 36 to 50 days.

CULTURE.—For early use, plant as soon as the ground is warm in hills 4 to 6 feet apart each way, eight to ten seeds in a hill. Cover ¼ inch deep. When danger of insects is past, thin out the plants, leaving five or six of the strongest in each hill.

Prices of Cucumbers are by mail, postpaid.

IMPROVED ARLINGTON WHITE SPINE.—The advantage claimed for this variety are improvement in shape, color, earliness and shipping qualities. Pkt., 5c; oz., 15c; lb., \$1.00.

EARLY FORTUNE.—A favorite with Florida truckers. Good variety for shipping. Pkt., 5c; oz., 15c; lb., \$1.00.

NEW KLONDIKE.—Very dark green, 6 to 7 inches long and 2 inches thick; remains crisp a long time. It is a grand market sort. Pkt., 5c; oz., 15c; lb., \$1.25.

IMPROVED LONG GREEN.—Grows 10 to 12 inches long, but makes fine pickles when young; the full-sized fruits are best for sweet pickles and slicing. Dark green in color, firm and crisp; quality excellent. A great bearer. Pkt., 5c; oz., 15c; lb., \$1.25.

JAPANESE CUMBER.—A real climber. The fruit is of extra quality and dark green. Prolific and a desirable table variety. Pkt., 5c; oz., 15c; lb., \$1.50.

BOSTON PICKLING.—Short, smooth and pointed; bright green; great yielder; one of the best for pickling. Pkt., 5c; oz., 15c; lb., \$1.50.

WEST INDIA GHERKIN.—The only genuine Gherkin. Small, oval, covered with spines; light green. For pickling exclusively. Pkt., 5c; oz., 20c; lb., \$1.50.

DAVIS PERFECT.—A superb variety. Dark glossy green, slim and symmetrical, with an average length of 10 to 12 in. They hold color till nearly ripe when they turn white without a yellow streak on them. Quality fine, as seeds are very soft when fit for table use. Very tender, brittle and of exceptional flavor. Early as earliest strain of White Spine and outyields all others. Pkt., 5c; oz., 15c; lb., \$1.25.

EARLY CLUSTER.—Fruit small and borne in pairs; light green, a great bearer. Pkt., 5c; oz., 15c; lb., \$1.50.

WHITE SPINE, HENDERSON'S PERFECTED.—A fine dark green selection of Arlington White Spine. Pkg., 5c; oz., 15c; lb., \$1.25.

MARKET GARDENERS AND LARGE FARMERS will find it to their advantage to write us for special prices on large quantities of seed. We carry a big stock at all times.

CAULIFLOWER

One-fourth ounce produces about 500 plants; 2 ounces make enough to set out an acre. Matures heads in 90 days from planting.

CULTURE.—Cauliflower will grow on soil well adapted to cabbage, and the same methods of cultivation will answer. Varying with different climatic conditions. The seeds are sown at all seasons. They must be put out just as early as danger of freezing has passed. Rapid cultivation is necessary to bring the plants to head before hot weather. The heads will be improved if the leaves are tied over them when beginning to form.

HENDERSON'S EARLY SNOWBALL.—This is undoubtedly the finest variety ever introduced; it is the earliest and produces beautiful snow-white heads of the most delicious flavor. The seed we offer is pure and genuine. Pkt., 25c; $\frac{1}{4}$ oz., 75c; oz., \$2.50; $\frac{1}{4}$ lb., \$8.50; lb., \$33.00.

EARLY FAVORITE.—A new variety and we think the best early, large-growing kind; forms a large head, which is solid, crisp and tender, and will form heads under unfavorable conditions more surely than any other. Pkt., 25c; $\frac{1}{4}$ oz., 75c; oz., \$2.25; $\frac{1}{4}$ lb., \$8.00.

CELERY

One ounce sows about 100 feet and produces about 8,000 good plants; 8 ounces to set one acre. Matures from 120 to 160 days.

CULTURE.—Celery requires a moist and fertile soil. If your soil is not fertile, you must make it so by heavy applications of well-rotted manure or commercial fertilizer. In Florida, sow seed for general crop from August 15 to November 15. Seed must not be covered more than $\frac{1}{4}$ inch and bed must be well shaded. When plants are from 4 to 6 inches high, cut tops off two or three times to make stocky plants. Transplant when 6 inches high into trenches and as the plants grow, keep drawing the earth up around them, to blanch the stalks for market.

GOLDEN SELF-BLANCHING (French Grown).—Of compact growth, with large, solid heart and thick-ribbed stalks, which blanch easily. Crisp and solid. Free from stringiness and of most delicious flavor. Both stalks and leaves are of a beautiful golden yellow. Pkt., 10c; oz., \$1.25; lb., \$15.00.

BOSTON MARKET.—Dwarf branching variety, grown so extensively about Boston. Solid, crisp, and of excellent flavor; its compact, dwarf habit allows closer planting and requires less earthing up than taller sorts. Pkt., 10c; oz., 50c; lb., \$7.50.

Black Beauty Eggplant

Golden Self-Blanching Celery

EGGPLANT

One ounce for 1,000 plants, require about 4 ounces to plant an acre. Matures in about 120 days from sowing.

CULTURE.—Eggplant seed germinates slowly and should be started in a strong heat. The soil should be one part leaf-mold and one part sandy loam. It is important to secure a rapid and continuous growth. Set 30 inches apart, pinch off the larger leaves when transplanting.

FLORIDA HIGH BUSH.—Rich purple; oblong in shape; exceedingly productive; will stand more heat than any other variety. Bushes stand high up, holding the fruit well off the ground, thereby preserving the fruit better than other sorts during rainy weather, also diminishing the number of blighted fruit to a great extent. Pkt., 10c; oz., 40c; lb., \$5.00.

BLACK BEAUTY.—Fruits large, handsome shape, and of a rich glossy black. It is as early as any, very productive and thornless. Our stock is true and is as good as can be grown. Pkt., 10c; oz., 50c; lb., \$6.00.

IMPROVED LARGE PURPLE THORNTLESS.—For years this variety has been the standard for southern market gardeners and shippers. Our seed is pure and the plants thornless. In a properly cultivated crop, streaked or off-colored fruit is almost unknown. Plants are large, strong and vigorous, each plant producing from 5 to 8 large fruits of dark, rich purple color. Earliest large-fruited variety. A trial will make you appreciative of the superiority of this variety over many others. Pkt., 10c; oz., 40c; lb., \$5.50.

Batavian Endive

ENDIVE

One ounce will sow 100 feet of row: 3 pounds will plant 1 acre of land in rows 3 feet apart.

CULTURE.—Seed may be sown any time during the year. When plants are well started, thin out to 10 inches apart in the row, or they may be transplanted to fresh rows. When plants have reached a good size, gather the leaves closely together and tie loosely in an upright bunch. This bleaches the inner leaves in about ten days and adds to the crispness as a salad, as it renders the flavor mild and delicate.

BATAVIAN, or ESCAROLLE.—Forms large heads of broad, thick leaves, which can be blanched for a salad or it will make excellent cooked greens. Pkt., 5 cts.; oz., 15 c; $\frac{1}{4}$ lb., 35c; lb., \$1.25.

GREEN CURLED.—One of the hardiest and best for general use. The deep green leaves are beautifully cut and curled, easily blanched and become very crisp and tender and fine-flavored. Pkt., 5c; oz., 15c; $\frac{1}{4}$ lb., 35c; lb., \$1.50.

WHITE CURLED.—This beautiful variety does not need blanching to prepare it for use. The midribs being naturally of a pale golden yellow, and the finely curled leaves almost white. Pkt., 5c; oz., 15c; $\frac{1}{4}$ lb., 40c; lb., \$1.50.

KOHLRABI

One ounce to 100 yards of row.

A vegetable intermediate between the cabbage and turnip, which combines the flavor of both. It forms a turnip-shaped bulb above the ground, which is prepared for the table like turnips. If used when young and tender, makes a delicate and desirable vegetable. Also known as "Turnip-rooted Cabbage." Sow in rows 18 to 20 inches apart, thinning out to 8 inches.

EARLY WHITE VIENNA.—The best variety. Bulbs about the size of an apple when ready for use. Pale whitish green color. They have a delicate cabbage flavor. Pkt., 10c; oz., 25c; ¼ lb., 90c; lb., \$3.00.

KALE or BORECOLE

One ounce will produce 3,000 plants. Four pounds to plant an acre. Matures in about 50 days.

CULTURE.—Sow from the middle of March to the beginning of April in prepared beds; transplant in April and treat in the same manner as for cabbage. Of all the cabbage tribe, this is the most tender and delicate, and should be much more extensively grown than it is. The varieties are all extremely hardy, and are best when touched by frost.

DWARF GREEN CURLED SCOTCH.—Rarely exceeding 18 inches in height, but spreading out under good cultivation to 3 feet in diameter; leaves beautifully curled and bright green. Pkt., 10c; oz., 15c; ¼ lb., 50c; lb., \$1.75.

GREEN CURLED SCOTCH.—Grows about 2 feet high; leaves dark green, curled and wrinkled; very hardy, and is improved by a light frost. Pkt., 10c; oz., 15c; ¼ lb., 50c; lb., \$1.75.

SIBERIAN.—Leaves curled on edges; hardy, withstanding the most rigorous winters; blue or slate-colored leaves. Pkt., 10c; oz., 15c; ¼ lb., 50c; lb., \$1.75.

LEEK

Four pounds to plant an acre.

Culture of Leek is about the same as onions. Sow either in early fall or spring. Sow in beds or drills, and, when 6 inches high,

transplant in rows, setting as deep as possible without covering center leaves.

LARGE LONDON FLAG.—The oldest and best known and most largely grown variety. Pkt., 5c; oz., 25c; lb., \$3.75.

Early White Vienna Kohlrabi

Dwarf Green Curled Scotch Kale

MUSHROOM SPAWN

CULTURE.—Mushrooms may be grown in cellars, under benches of green-houses, or in sheds, wherever the temperature of 50 degrees can be kept up through the winter. The beds should be made from November to February, according to the time the mushrooms are wanted, and it requires about two months for them to begin bearing. Secure fresh horse manure, free from straw and litter, and mix an equal bulk of loam from an old pasture with it. Keep this under cover, taking care to turn it every day to prevent heating, until the pile is large enough to make a bed the required size. Three to 4 feet wide, 8 inches deep and any

length desired are the proper proportions for a bed, but these may be varied. Prepare the mixture of loam and manure, making the bed in layers, and pounding down each with the back of the spade. Leave this to heat through for a few days, and as soon as the heat subsides to 90 degrees, make holes in the bed about a foot apart each way, and about one inch deep, into which put pieces of the spawn 2 or 3 inches in diameter; fill up the holes with the compost, and at the expiration of a week or ten days the spawn will have thoroughly diffused itself through the bed. Spread a layer of fresh soil over the heap to the depth of 2 inches and cover with 3 or 4 inches of hay, straw or litter. Examine the bed often to see that it does not get dry. Take special care, however, when water is given, that it be at a temperature of about 100 degrees.

	Per	10	100
	brick	bricks	bricks
American pure culture spawn.....	\$0.20	\$1.80	\$16.00

WATER CRESS

CULTURE.—Sow Water Cress in the spring, along the edges of creeks or ponds. The seed can also be sown in seed bed in a damp location, and the young plants transplanted to the edges of streams or ponds. It not only makes a desirable and attractive

plant for creeks or ponds, but purifies the water. It is also developing into quite a profitable industry in some sections for shipment and sale in our larger markets.

TRUE WATER CRESS.—Grows along the banks of ponds and streams, and is easily introduced; leaves are quite large and thick; a fine salad, sold in immense quantities in the large markets in spring. Pkt., 10c; oz., 40c; ¼ lb., \$1.25.

CRESS or PEPPER GRASS.—This is much used with lettuce, to the flavor of which its warm, pungent taste makes a very agreeable addition. The seed should be sown in drills about 16 inches apart, on very rich ground, and the plants well cultivated. Repeated sowing is necessary to secure a succession. Pkt., 10c; oz., 15c; ¼ lb., 30c; lb., \$1.50.

ATTENTION!

MARKET GARDENERS,
TRUCK GROWERS,
LARGE FARMERS.

We want you to go over this Catalog carefully, make up a list of the seeds you need and the quantities of each, and send to us for special prices.

We are in close touch with you, understand your soil and climate, and our many years' experience in the State has taught us the needs of the Florida farmer, and we are in position to serve you better than any outsider.

We have one of the largest stocks of selected and tested seed to be found in the South. We know that, quality considered, we can supply your wants at as reasonable prices as any other Seedsman or Grower, and can give you quick service. We are here to serve you and hope that you will call on us often.

Hogan, South Jacksonville, Florida.
June 21st, 1919.

E. A. Martin Seed Co., Jacksonville, Fla.

Gentlemen: Last fall my son purchased a few of the Early Suwanee Cabbage Seed which you advertlse. I found this to be the best cabbage I have ever raised. I usually plant two or three varieties of cabbage but this year I am only planting the Early Suwanee as it has proven to be the best cabbage I have ever planted. I sold them at \$1.25 per dozen the whole season through. I am right here near you and will deem it a pleasure to see any one about this cabbage you have. This is the best cabbage I ever planted.

Yours very truly,
B. F. THOMPSON.

Martin's Lettuce

One ounce will sow 100 square feet, or 120 feet in drill.
Three pounds to an acre. From 40 to 50 days
from sowing to maturity.

Lettuce can be sown almost every month in the year in our section. If you have hotbeds or even coldframes, you can produce fine big heads all through the winter months. In Florida it is grown as an open-ground crop through the winter months. The best way to grow Lettuce is to sow seed thickly in rich earth and when plants are well up transplant in rows 2 feet apart, placing plants 6 inches apart in the row. Use rich ground or else fertilize heavily. If you want crisp, tender Lettuce, free from bitterness, the growth must be rapid. If Lettuce is grown in above manner and head varieties used, you will not fail to make good heads.

BIG BOSTON.—This beautiful splendid Lettuce has steadily gained in popularity until now it is more extensively grown than all other varieties throughout the large trucking sections of the South. It may be grown in the open ground for summer and fall use, or in frames under canvas, and always makes large, fine, buttery, yellow heads with thoroughly blanched hearts; crisp, tender, white and sweet. We cannot recommend too highly our splendid strain of this most excellent variety. It gives the best of satisfaction under all possible conditions. Pkt., 5c; oz., 15c; ¼ lb., 50c; lb., \$1.50; 5 lbs., \$6.25.

PRIZE HEAD EARLY.—Leaves green and red, very thin, crisp and tender; one of the very best for private use. Pkt., 5c; oz., 15c; lb., \$1.00.

CALIFORNIA CREAM BUTTER.—Good for open-ground planting at all seasons in the South. Heads large and solid, the inside blanching to a beautiful cream-yellow when properly grown. The pure strain of this variety can be distinguished by the small spots on the outer leaves. Our stock is strictly high grade and of the purest strain. Pkt., 5c; oz., 20c; ¼ lb., 60c; lb., \$1.75.

HENDERSON'S NEW YORK CABBAGE.—Fine new sort, with heads 18 inches in diameter and weighing nearly four pounds; nearly as large as summer cabbage; one of the best for summer use. Pkt., 5c; oz., 15c; ¼ lb., 60c; lb., \$1.75.

SIMPSON EARLY CURLED.—White-seeded. A leading early sort, good for forcing or open ground; a favorite with market gardeners. Pkt., 5c; oz., 15c; ¼ lb., 40c; lb., \$1.25.

MAY KING.—Handsome, light green, heading variety of medium size and excellent quality. Outdoors the heads mature exceptionally early, attaining a size suitable for use before other sorts, and often the edges of the outer leaves have a brownish tinge. The plant is very compact for so large a head. It is very satisfactory also for forcing under glass. Pkt., 5c; oz., 20c; ¼ lb., 50c; lb., \$1.75.

BLACK-SEEDED SIMPSON.—Very popular sort among market gardeners. Forms a large, loose head, is nearly white, curly leaves thin, exceedingly tender and of good quality. Splendid for growing under glass and early planting outside. Pkt., 5c; oz., 20c; ¼ lb., 50c; lb., \$1.75.

CALIFORNIA CREAM BUTTER LETTUCE

CO'S, ROMAINE or CELERY LETTUCE.—Has no equal for quality. Forms long conical heads which, if tied up, blanch pure white and make solid heads as crisp as celery stalks. Pkt., 5c; oz., 15c; ¼ lb., 50c; lb., \$1.75.

ICEBERG.—Of beautiful appearance and excellent quality; leaves green, slightly tinged with red at the edge; heads good size. Our strain of this is the very best. Pkt., 5c; oz., 20c; ¼ lb., 85c; lb., \$2.00.

Lettuce is a very important crop with the truckers and gardeners and we exercise great care to give our planters the very best seed that can be grown.

We have been supplying the largest growers and planters for years and our high quality Lettuce Seed are well known in Florida and also other states.

Big Boston Lettuce

MUSTARD

This is grown to quite a large extent in the southern states. Southern Giant Curled is best for general use.

NEW CHINESE.—Its leaves are about twice the size of White, and of a sweet, pungent flavor. Pkt., 10c; oz., 15c; ¼ lb., 30c; lb., 90c.

SOUTHERN GIANT CURLED.—This is grown extensively in the South. Pkt., 10c; oz., 15c; ¼ lb., 25c; lb., 85c.

OSTRICH PLUME.—Double curled. Exceedingly ornamental. Green. Very superior to any other curly sort. Very delicate in texture; well named. Pkt., 10c; oz., 15c; ¼ lb., 25c; lb., 90c.

PARSLEY

One ounce for 150 feet of drill. Seven pounds to plant an acre. About 65 days from sowing to cutting.

CULTURE.—Sow thickly in rows a foot apart and half an inch deep. For winter use, protect in a frame or light cellar, or in pots or boxes in the house.

FINE DOUBLE CURLED.—A standard variety; plants bear an abundance of finely curled leaves. Pkt., 10c; oz., 15c; ¼ lb., 40c; lb., \$1.50.

PARSNIPS

About 8 pounds to plant an acre.

The value of Parsnips is not well enough known in the South. They are not only very valuable as culinary vegetables but they make the very best cattle feed exceeding even the carrot in value for this purpose. They require a deeply prepared loam for their fullest development. The seed is very slow to germinate, and should be sown early in the spring in rows 18 inches apart for hand cultivation or 30 inches apart for horse cultivation. Thin out to 6 inches in the row. Cut late of season.

SUGAR, or HOLLOW CROWN.—The very best sort in existence. A large yielder of the finest quality. Pkt., 10c; oz., 15c; ¼ lb., 40c; lb., \$1.50.

Ostrich Plume Mustard

**HIGH
BRED**

MARTIN'S HY-TEST ONIONS

**FULLY
TESTED**

Prizetaker Onions

One ounce will plant 100 feet of drill, 5 or 6 pounds in drills for an acre. For sets from 50 to 60 pounds should be sown to the acre, according to the richness of the soil. Matures about 180 days from sowing.

CULTURE.—The Onion, unlike most vegetables, succeeds well when cultivated on the same ground for successive years. Sow thinly in drills about ¼ inch deep and 1 foot apart, cover with fine soil and press down with the back of a spade or a light roller. When the young plants are strong enough, thin gradually so that they stand 3 or 4 inches apart. Keep the surface of the ground open and free from weeds by frequent hoeing, taking care not to stir the soil too deeply, or to collect it about the growing bulbs.

Probably the most popular Onion for Florida is the White Bermuda. The Red Bermuda is also grown to considerable extent.

Creole is also planted to some extent; this is sometimes spoken of as the Spanish Onion, at other times the Bermuda Onion is spoken of as the Spanish Onion.

Bermuda Onions

(GENUINE TENERIFFE-GROWN)

These are the Onions which southern growers are shipping every spring in enormous quantities to northern markets. They are tender and of the finest Onion flavor. Our genuine Teneriffe-grown seeds are grown especially for us and imported direct, and we know there is no better stock to be had. May be sown either in the fall or early spring. Both White and Red varieties.

**WHITE
BERMUDA ONIONS**

WHITE BERMUDA.—The standard variety for market crops for shipping. While it is known as "White Bermuda," it is really a light straw color or pale yellow. We make this explanation as many who grow it for the first time expect to find a pure white Onion. Less than six months required from the time of sowing the seed to the full maturity and shipment of the crop. Pkt., 10c; oz., 35c; ¼ lb., \$1.25; lb., \$4.00.

RED BERMUDA.—Identical with White Bermuda, except that it is a pale red and is the right variety where a red Onion is preferred. Pkt., 10c; oz., 35c; ¼ lb., \$1.25; lb., \$4.00.

CRYSTAL WAX.—Highly prized because of its earliness. Our seed is genuine, imported from Teneriffe. There is none better in the world. Pkt., 10c; oz., 35c; ¼ lb., \$1.75; lb., \$5.00.

PRIZETAKER.—Large, and of particularly fine flavor, like nearly all Spanish Onions. Straw color; the flesh pure white, sweet, mild and tender. Ripens up fine and hard, and makes a very attractive Onion. Pkt., 10c; oz., 35c; ¼ lb., \$1.00; lb., \$3.75.

Red Creole Onion

Greatest of all red Onions. Best keeper, best producer, both in yield and money. The skin is brownish red, flesh very solid and fine grained and rather strong flavored. Extremely productive and the best shipper and keeper of all sorts. Without doubt, the greatest Onion for the Southern Grower. Matures a little later than the Bermuda Sorts, but does not rot as easily.

Largest and best Onion under cultivation. For home garden use it is unexcelled. They can be retained after harvesting a full year without rotting. Pkt., 10c; oz., 35c; ¼ lb., \$1.25; lb., \$4.00.

Onion Sets (Measured Bushel)

Ten to twelve bushels to the acre, according to size. Prices subject to market change.

Add 10 cents per quart if wanted by mail.

CULTURE.—Plant the sets 4 inches apart, in rows about ½ inch deep and 1 foot between the rows, but do not cover the sets entirely. Fall planting of Onions is succeeding very well in the South, and should be more generally practiced.

WHITE SILVERSKIN.—Plant from August to and through March. This is a uniformly early, round, tender and very handsome variety, with an opaque, white skin. Qt., 35c; pk., \$1.50; bu., \$5.00.

YELLOW DANVERS.—Hardest of all the ordinary varieties of Onion Sets. While not the earliest, they are a good all-around, very productive variety. Write for closest market prices on larger quantities. Qt., 35c; pk., \$1.50; bu., \$5.00.

WHITE MULTIPLIER.—Differs from the Yellow Potato Onion in color, being pure white, and does not make so large Onions, but is a better keeper than the yellow.

WHITE BERMUDA ONION SETS.—Qt., 35c; pk., \$1.50; bu., \$5.00.

NOTE.—We ship Onion Sets, measured bushel, while most seed houses ship and quote 32 pounds for a bushel. 32 pounds will not measure a bushel and is only about three pecks. These facts should be thought of when ordering.

MARTIN'S HY-TEST SEEDS are tested in our seed testers and by trial on our farm. You can't go wrong on our seeds, they are **DOUBLE-TESTED**.

MARTIN'S OKRA

One ounce will plant 100 hills. Twenty pounds to plant an acre. About 60 days from planting to maturity.

Cultivated for its green seed-pods, which are used in soups or stewed and served like asparagus. Highly esteemed in the South for making gumbo soup. Can be cured like dried apples and then used for soup at any time.

CULTURE.—Sow seed thinly in dry, warm soil, in shallow drills, 2 feet apart. After plants are up, thin to 9 inches apart; hoe frequently, and draw a little earth to the stems as they grow. Gather when quite green and about 1 1/2 inches long.

WHITE VELVET.—Bears round, white, smooth pods, of extra large size, in great abundance. Pkt., 5c; oz., 10c; lb., 60c.

PERKINS' MAMMOTH PODDED.—Wonderfully productive. Intense green pods. 8 or 9 inches long; do not get hard. Very superior for canning. Pkt., 5c; oz., 10c; lb., 60c.

EARLY DWARF WHITE.—White pods. Pods extra long, measuring a foot in length; thick and fleshy; early and prolific. Pkt., 5c; oz., 10c; lb., 60c.

LONG GREEN.—Pods long, green, ribbed; heavy bearer. Pkt., 5c; oz., 10c; lb., 60c.

Martin's Favorite Okra

Sold out on Martin's Favorite Okra last season, long before the demand was supplied. It has given excellent results—far beyond our expectations—we have received numbers of testimonials. All the truckers and home gardeners also who have tried this variety are well pleased.

A new and distinct Dwarf Green Variety. This combines the good points of all the Green varieties, and grown for the home, table or market is superior to any other. The originator predicts that this will, within a few years, supersede all other Green Okra, just as the White Velvet eliminated the old-time Dwarf and Tall White. Attains a height of three to three and a half feet, produces long slender green pods (10 to 12 inches), comparatively free from ridges, and the most prolific the originator has ever seen, easily produces 20 per cent more caskets of uniform size pods than any other.

We assure you that you will make no mistake in planting Martin's Favorite Okra, either for home or market.

We anticipate a big demand for this variety and the supply is limited, and our supply may be exhausted before all of our customers' orders are filled. However, we trust that every grower will be able to try this new variety. Price per lb., 85c; oz., 15c; in 5-lb. lots., 85c lb.; in 10-lb. lots, 75c per lb.

Martin's Favorite Okra.

PEPPERS

One ounce to plant 100 yards of row. Is edible in 90 to 120 days.

Peppers are very popular in all sections of the South. They are largely used in salads, etc. The thick-fleshed sorts are very fine sliced. Peppers should be sown early in boxes or hotbeds and transplanted into a loamy well-fertilized situation in rows about 2 feet apart, and 18 inches to 2 feet in the row. Cultivate often and thoroughly, continuing until frost, and you will be rewarded with a continuous crop as long as cultivation is kept up. The seed we offer is of the very best strains, carefully tested.

RUBY KING.—Enormous variety, 4 1/2 to 6 inches long and about 3 inches thick. The flesh is very thick, tender, mild and pleasant to the taste. Fine sort for stuffing or for pepper-hash, and also makes an excellent dish of salad. Foliage is very distinct, being large-leaved and vigorous. Pkt., 10c; oz., 50c; 1/4 lb., \$1.75; lb., \$6.00.

MAMMOTH BELL, or BULL NOSE.—Most popular sweet variety. Very mild in flavor and flesh very thick. It is a very fine variety for pickling. Pkt., 10c; oz., 50c; 1/4 lb., \$1.75; lb., \$6.00.

Chinese Giant Pepper

PIMENTO PEPPER

This Pepper is of the "Pimento" type and has been brought up to a degree of perfection which we have not found in any other strain or variety that we have ever seen or grown. Fine for the home garden, both green and ripe. So smooth and uniform in shape that the skins can be easily slipped off after burning over a hot fire a few seconds or by boiling a few minutes in hot water. It can also be pared like an apple by using a sharp knife. The hull or meat is from two to three times as thick as that of the old "Bell" types, and yields about a half more edible product to the same measurement.

Very sweet and delicious and entirely free from pungency. When ripe it is a beautiful scarlet red. Very productive, yielding heavy crops until cut off by frosts. In consequence of the many superior and valuable qualities of this Pepper it is much sought and grown by canners for pimento pickles and pulp. Pkg., 10c; 1/2 oz., 25c; oz., 45c; 1/4 lb., 90c; lb., \$3.50.

Pimento Pepper.

SWEET SPANISH MONSTROUS.—Largest sweet Pepper. Plants are of extra strong, vigorous growth, branching freely and very prolific. Fruits much larger than Ruby King and Large Bell, almost square in shape. Flesh very thick. Its flavor is very mild and free from fiery taste. Pkt., 10c; oz., 40c; 1/4 lb., \$1.50; lb., \$5.75.

RUBY GIANT.—(New) — Largest of all. Red. Pkt., 10c; oz., 50c; 1/4 lb., \$1.75; lb., \$6.50.

CHINESE GIANT.—An enormous sort, sometimes measuring six inches in diameter. Very handsome, mild and superior quality for stuffing. Plants are vigorous and very prolific, late maturing. We strongly recommend this, either for home use or market. Pkt., 10c; oz., 50c; 1/4 lb., \$1.75; lb., \$6.50.

CAYENNE.—A long, slim pod, rather pointed, and when ripe, a bright red color. Extremely strong and pungent. Pkt., 10c; oz., 40c; 1/4 lb., \$1.50; lb., \$5.50.

RED CHERRY.—Fruit small and cherry-shaped; largely used for pickles, as they are very hot. Pkt., 10c; oz., 40c; 1/4 lb., \$1.50; lb., \$5.50.

NEAPOLETAN.—Valuable for our southern shippers and market gardeners from the fact that it is 10 days to two weeks earlier than any other large mild red Pepper. Plants are very strong, very stocky, and the peppers are borne erect, the plants completely laden with large, handsome fruits, bearing continuously until frost. The skin and flesh are bright red, thick meat, sweet and mild as an apple. Carries well and keeps in prime condition a long time. Pkt., 10c; oz., 60c; 1/4 lb., \$2.25; lb., \$8.00.

Salerno, Fla.

E. A. Martin Seed Co., Jacksonville, Fla.: Gentlemen—Please send me at once by express C. O. D. (12,000) twelve thousand Early Jersey Wakefield Cabbage Plants, 200 Improved Large Purple Eggplants and 200 Henderson's Early Snowball Cauliflower.

The 10,000 cabbage plants I got from you a month ago arrived in good condition. They were fine plants and have done extra well in the field. Hope this order will do as well.

Yours truly,

SEEDS, BULBS, PLANTS, GARDEN AND POULTRY SUPPLIES

MARTIN'S ENGLISH or GARDEN PEAS

CULTURE.—Two or three bushels are required to the acre. The smooth varieties are the hardiest and should be planted first. The seed is usually sown thickly in double rows, and these double rows, constituting one row, should be about $3\frac{1}{2}$ to 4 feet apart. Cover seed 2 or 3 inches, and, if too thick, thin to about $1\frac{1}{2}$ to 2 inches. Cultivate often, especially in dry weather. A thick stand is desirable. It is not necessary to provide supports for the dwarf sorts. Peas grow fairly well on poor soils, but a little fertilizer will greatly increase the yield. Well-rotted stable manure in the drill is splendid, but fresh manure should be avoided unless it is broadcasted.

FIRST AND BEST.—Splendid strain of first-early Peas. May not be, in certain respects, the equal of some of the newer specialties yet, for general purpose planting, where a tested variety is wanted, this will give full satisfaction. Pt., 35c; qt., 60c; pk., \$4.00; bu., \$15.00.

BLISS' EVERBEARING.—New second-early variety, about ten days later than the American Wonder, bearing large, well-filled pods, containing about seven or eight Peas each. The vine is of dwarf habit, growing from 15 to 20 inches in height. Pt., 30c; qt., 50c; pk., \$3.25; bu., \$14.50.

CLAUDIT.—Resembles the Alaska, except that the pod is broader and a trifle longer. Pt., 40c; qt., 75c; pk., \$4.50; bu., \$17.00.

ALDERMAN.—Very large-podded Pea, robust and vigorous, producing pods of the largest size. The pods are even larger and longer than the average large-podded sorts, and are well filled with large Peas of most excellent flavor. Vines are strong and branching, bearing rich, deep green, straight, handsome pods, pointed at the end. Belongs to the tall-growing main-crop class of Peas. Vines are from $3\frac{1}{2}$ to 4 feet in height. A point of superiority which must not be overlooked is the unusual flavor and quality of the Peas. As is true of most wrinkled varieties they are delicious, but the Alderman is of a quality surpassing many of the others. Be sure to include Alderman Peas in your order. Pt., 40c; qt., 75c; pk., \$4.25; bu., \$16.00.

TALL TELEPHONE.—Pods are very large, filled with immense Peas of a first-class quality; one of the finest yet introduced. Height, $4\frac{1}{2}$ feet. Pt., 40c; qt., 75c; pk., \$4.25; bu., \$16.00.

DWARF TELEPHONE.—(Carter's Daisy).—Excellent new variety; large, well-filled pods; Peas of fine flavor. Height, $1\frac{1}{2}$ feet. Pt., 40c; qt., 75c; pk., \$4.25; bu., \$16.00.

CHAMPION OF ENGLAND.—One of the best late Peas grown. Of delicious flavor, and a very profuse bearer. Desirable for home use, and especially recommended for market gardeners, and for extensive planting for the home market. Height, 5 feet. Pt., 30c; qt., 50c; pk., \$3.75; bu., \$14.50.

GRADUS, or PROSPERITY.—The most popular, large-podded, wrinkled sort. Matures just after the extra-early varieties and produces a good crop of pods 4 inches long, providing it is planted on light, warm rich soil, but very disappointing under adverse conditions. The quality is excellent. Height, 3 feet. Pt., 45c; qt., 80c; pk., \$4.50; bu., \$17.00.

DWARF CHAMPION, RICE'S IMPROVED.—Very productive; Peas large; fine flavor. Height, 2 feet. Pt., 35c; qt., 60c; pk., \$4.00; bu., \$15.00.

PHILADELPHIA, EXTRA-EARLY.—One of the best first-early sorts. Very productive, and free from runners. Grows from 2 to 3 feet high, and will mature for table about forty-five days from germination, frequently in less time. A good Pea for market gardeners. Pt., 35c; qt., 60c; pk., \$4.00; bu., \$15.00.

THOMAS LAXTON.—A heavy cropper, bearing uniform, long, straight, square-ended, dark green pods, containing seven to eight large, rich-flavored Peas; a deep green color adding to their attractiveness when served. Almost as early as the extra-early smooth Peas. 3 feet high. Pt., 45c; qt., 80c; pk., \$4.50; bu., \$17.00.

ALASKA.—Our strain of this variety is the very best. This Pea is increasing in popularity every year. Especially valuable for its earliness and productiveness and the beautiful green of its pods and Peas, which it retains longer than any other varieties, making it particularly valuable for shipping purposes. Specially desirable for canners. Pt., 45c; qt., 80c; pk., \$4.50; bu., \$17.00.

Alderman Peas

Garden Peas

MARTIN'S POTATOES

In drills 3 feet apart, 12 to 14 bushels to the acre; one peck will plant about 125 hills.

VARIETIES

The best varieties for planting in the South, and especially in Florida, are the early and extra-early varieties, such as the Bliss Red Triumph, Irish Cobbler, Improved Rose Number 4. These are the extra-early and the best for growing in Florida for the first crop. Second earliest can in some sections be grown with profit, but not generally throughout the state for commercial purposes.

The time of planting potatoes in Florida depends upon the section of the state. In the far southern portions they can be planted as early as December, growing later up to March as we go farther north, indicating the change necessary to conform to the seasons and location, the difference being about ten to twelve days for each 100 miles.

ROSE NO. 4.—A favorite with Florida truckers; has given universal satisfaction for several seasons.

PRICES ON POTATOES

	$\frac{1}{4}$ bu.	Bu.	Bag.
Rose No. 4.....	.90	\$3.50	\$6.50

SEED POTATOES FOR FALL PLANTING

Spaulding's No. 4 Rose. Write for prices.

For fall planting the small native grown potatoes are planted whole and not cut as the northern potatoes are for spring.

We sell a great quantity of seed potatoes each season and our seeds are noted for the high quality and being the best selected stock. If wanted in quantities of 5 bags or more, it will pay you to write us for special prices.

Potatoes weigh 60 pounds per bushel. Add postage if small quantity is wanted by mail.

Bliss Triumph Potato

NEW CROP MARTIN'S HY-TEST RADISHES FRESH TESTED

Two ounces will sow 100 feet of drill; 8 to 10 pounds to plant an acre. Matures for table in 20 to 30 days.

CULTURE.—Sow in the spring as soon as the ground can be worked. Radishes require rich, mellow soil. The early, small varieties can be sown broadcast among other crops, such as beets, peas, etc. Sow every ten days for a succession. In Florida along the Gulf Coast, they can be sown all through the winter.

Prices are by mail, postpaid.

White Icicle Radish

EARLY LONG SCARLET SHORT-TOP.—One of the best Radishes on the list; very early, attaining a large size; of very best flavor, and will remain in eating condition longer without getting pithy than any other sort. Our strain of this sort is very fine. Pkt., 10c; oz., 15c; ¼ lb., 35c; lb., \$1.25.

EARLY SCARLET TURNIP, WHITE-TIPPED.—One of the handsomest turnip sorts on the market. An early planting sort; very hardy; quick growing. Turnip-shaped, bright scarlet with white tip; one of the most salable sorts. Flesh firm and crisp; small tops. Pkt., 10c; oz., 15c; ¼ lb., 35c; lb., \$1.25.

FRENCH BREAKFAST.—A fine forcing Radish, maturing in twenty days from germination; makes very little top, and may be cultivated close together. It is oval-shaped, skin bright scarlet, but tipped at the end with pure white. Pkt., 10c; oz., 15c; ¼ lb., 30c; lb., \$1.15.

WHITE ICICLE.—Produces beautiful, long, white roots, extremely early, hence decidedly popular for forcing and a splendid sort for light, deep soil for out-of-doors. In twenty-five days after sowing this radish is ready for pulling. Pkt., 10c; oz., 15c; ¼ lb., 40c; lb., \$1.50.

LONG BLACK SPANISH.—One of the largest, latest, as well as the hardiest of Radishes. Roots of medium size, oblong, black, and flesh is of firm texture. Pkt., 10c; oz., 15c; ¼ lb., 35c; lb., \$1.25.

ROSE CHINA WINTER.—Bright rose-colored skin; flesh white and the quality excellent; one of the best for fall and winter use. Pkt., 10c; oz., 15c; ¼ lb., 40c; lb., \$1.50.

ROUND BLACK SPANISH.—Roots round, sometimes top-shaped, three or four inches in diameter; skin black; flesh white. Fine for winter use, as the roots keep a long time. Pkt., 10c; oz., 15c; ¼ lb., 40c; lb., \$1.50.

EARLY RED, or SCARLET TURNIP.—Dark crimson color, with white flesh. Splendid for general early use, does not get pithy as soon as most of the early sorts. Pkt., 10c; oz., 15c; ¼ lb., 30c; lb., \$1.00.

CINCINNATI MARKET.—Very early, splendid for forcing or open ground. Tops are very small, and they may stand close in the row. They grow straight and smooth from 6 to 7 inches long. The flesh is very tender, crisp and delicious. A handsome variety, bright red in color, and remains in good condition for several days. Pkt., 10c; oz., 15c; ¼ lb., 30c; lb., \$1.00.

WHITE CHINESE or NEW CELESTIAL.—Ready for use when three inches long and continues until nearly six inches long, making it almost an all-season Radish. Flesh firm, solid and pure white. Pkt., 10c; oz., 15c; ¼ lb., 35c; lb., \$1.25.

Round Black Spanish Radish

MARTIN'S SPINACH

Two ounces will sow 100 feet of drill; 25 pounds one acre. Matures for table use in about 40 days.

One of the most desirable winter and spring greens, and is better liked and usually sells at much higher prices than kale or turnip salad. Is largely grown for shipping.

CULTURE.—For early summer use, sow early in spring in a good, well-fertilized soil, in drills 1 inch deep, 1½ to 2 feet between the rows. For winter and spring use, sow in October. Requires but little cultivation. Best developed and most tender and succulent when grown in rich soil.

BLOOMSDALE SAVOY-LEAVED.—Heavy cropper, of fine quality and very hardy; succulent leaves curled and crinkled like a Savoy cabbage; hardiest and most productive sort. Pkt., 10c; oz., 15c; ¼ lb., 25c; lb., 75c.

NEW ZEALAND.—Entirely different from the true Spanish in type in that it thrives during the hot weather in any soil, rich or poor. The tender shoots are of good quality and may be cut throughout the summer. Plant three or four seeds in a hill 2 feet apart each way. Pkt., 10c; oz., 15c; ¼ lb., 35c; lb., \$1.25.

MARTIN'S SQUASH

One ounce of early varieties will plant 50 hills; one ounce of marrow sorts, 25 hills. Early varieties mature for table use in about 40 days.

CULTURE.—The plants are very tender and sensitive to cold, and planting must be delayed until settled warm weather. The general principles of culture are the same as those given for cucumbers and melons, but the plants are less particular as to soil. The summer varieties should be planted 4 feet apart each way, and the winter sorts, 8 feet. Three plants are sufficient to a hill. Care should be taken not to break the stems from the Squashes intended for winter use, as the slightest injury will increase the liability to decay.

GIANT SUMMER CROOKNECK.—Largest and one of the earliest summer varieties; fruits often two feet long, very warty and deep orange in color. Pkt., 10c; oz., 25c; lb., \$2.00.

EARLY WHITE BUSH.—The well-known White Scalloped or Patty Pan Squash. Earliest, very productive; light cream-color. Popular for northern shipments for both fall and spring crops. Pkt., 10c; oz., 20c; ¼ lb., 40c; lb., \$1.25.

MAMMOTH WHITE BUSH.—Improved form of the Early White Bush or Patty Pan. Is early, uniform in growth, and very prolific. Has beautiful, clear white skin and is from 8 to 12 inches in diameter. Tender and of good flavor. Fine quality and size for home gardens and nearby markets. Pkt., 10c; oz., 25c; ¼ lb., 40c; lb., \$1.25.

YELLOW SUMMER CROOKNECK.—Favorite in both

home and market gardens. Fruits rather small, of bright orange color. Rich and buttery. Pkt., 10c; oz., 20c; ¼ lb., 50c; lb., \$1.75.

HUBBARD.—Excellent winter variety. Noted for the uniform good quality of its fine-grained and nutty-flavored flesh, and its good keeping qualities. Pkt., 10c; oz., 25c; ¼ lb., 50c; lb., \$1.50.

BOSTON MARROW.—Fall and winter variety; large oval; skin thin; when ripe, bright orange, with a netting of light cream color; flesh rich salmon-yellow. Pkt., 10c; oz., 25c; ¼ lb., 50c; lb., \$1.50.

WOOD'S PROLIFIC.—A fine Squash of the Marrow type; round and thick; deep orange, with a small seed cavity. Quality excellent; productive and keeps well. Pkt., 10c; oz., 20c; ¼ lb., 50c; lb., \$1.75.

ITALIAN VEGETABLE MARROW.—A summer variety in bush habit; fruits oblong, about 12 inches in length and 5 inches in diameter; color dark green, marbled with yellow and dark green stripes. Pkt., 10c; oz., 25c; lb., \$2.00.

REMEMBER your garden in Florida works all the year. Every month you can plant some seed that will keep fresh vegetables for your table every day in the year. Are you preparing to do your part to help keep down the High Cost of Living? Prepare now to beat these high prices, and the only way to do this is to plant a garden and increase your forage crops.

DO IT NOW. Putting off ordering seed early ruins thousands of gardens every year. Order now and you will have them sure. Prices in quantity on application.

MARTIN'S TOMATOES

One ounce will produce 1,500 plants. For table use, 90 to 120 days, according to variety.

CULTURE.—Tomatoes do best on light, warm, not over-rich soil, and success depends upon securing a rapid, vigorous and unchecked growth during the early part of the season. Sow in hotbeds from six to eight weeks before they can be set out of doors, which is when danger from frost is past. Transplant carefully and cultivate well as long as the vines will permit.

JOHN BAER TOMATO.—The earliest Tomato on earth. Our seed came from a source that we know to be reliable and was grown especially for us. This tomato has a bright red color and produces large, beautiful solid shipping Tomatoes, earlier than any other Tomato that can be planted. It will produce the most perfect Tomato ever grown, will produce an enormous crop, ripens evenly, has a mild, delicious sweet flavor, and is almost seedless, solid and meaty; fruit weighs 6½ ounces. Being such a tremendous yielder, a bushel of "John Baer" Tomatoes can be gathered in one-third the time of any other tomato. Pkt., 10c; ½ oz., 30c; 1 oz., 50c; ¼ lb., \$1.50; lb., \$5.00.

LIVINGSTON'S BEAUTY.—The best all-round Tomato; exceedingly early, large, smooth and remarkably prolific. It is grown more largely by truckers and market gardeners than any other sort. The variety is of glossy crimson, with a slight tinge of purple; skin tough, good keeper and shipper. Pkt., 10c; oz., 35c; ¼ lb., \$1.00; lb., \$3.25.

NEW STONE.—Resembles the well-known Stone in color, shape, and time of ripening; the habit of growth like the Dwarf Champion. Ripens evenly, very solid, and of excellent quality. The fruit is large, of dark brick-color, solid, fleshy and is not subject to rot like some varieties, nor does it ever have a green core. We can especially recommend it for a late crop. Pkt., 10c; oz., 25c; ¼ lb., 90c; lb., \$3.00.

EARLIANA.—Has easily gained the reputation of being the best first-early Tomato. The plants are quite hardy, with rather slender branches and moderate growth, well set with fruits nearly all of which ripen extremely early in the season. The Tomatoes are bright red and grow close together in clusters; all of medium size, averaging 2¼ inches in diameter. They are smooth and solid, quite thick through and free from rough ribs or cracks. The flesh is a deep red, with solid center and small cells; slightly acid flavor. Pkt., 5c; oz., 35c; ¼ lb., \$1.00; lb., \$3.50.

DWARF CHAMPION (Purplish Pink).—Sometimes called the Tree Tomato. Especially desirable for small gardens, as they may be grown as close as three feet. The vines are stiff and upright, holding the fruits well off the ground. Smooth and attractive, firm solid, with thick flesh and meaty center. Bears in clusters of 3 to 5 good-sized fruits and continues in bearing till frost. Pkt., 10c; oz., 35c; ¼ lb., \$1.00; lb., \$3.50.

LIVINGSTON'S GLOBE TOMATO.—Of large size, maintained throughout the season, always smooth, firm-fleshed, and has very few seeds especially in the early fruits. Ripens evenly through and through. Fine glossy rose in color, tinged with purple. Very attractive. Bears fruit in clusters of from three to seven fruits. Especially adapted for slicing, as the flavor is very delicate and agreeable. Pkt., 10c; oz., 35c; ¼ lb., \$1.25; lb., \$4.50.

PEAR-SHAPED YELLOW.—Fruit pear-shaped, deep yellow color. Used mostly for preserves. Pkt., 10c; oz., 50c; ¼ lb., \$1.50; lb., \$5.00.

MARTIN'S REDFIELD BEAUTY.—Cannot be beaten as an all-round variety. Second early, vigorous grower, fruits crimson color with slight tinge of purple. It cannot be excelled as a good shipper, the skin does not break easily. If you plant Martin's Redfield Beauty for either market or home use you are planting the best. Pkt., 10c; oz., 35c; ¼ lb., \$1.00; lb., \$3.50.

PONDEROSA.—Unquestionably the largest Tomato grown. The vines are vigorous, producing a very large stalk and an unusually thick stem, which is accounted for in the great size and weight of the fruit. One of the best-flavored sorts grown, almost solid, and contains scarcely any seed. The fruit, when ripe, is cardinal-red,

John Baer Tomatoes

and, on account of its compact structure, will keep longer than any other sort. Pkt., 10c; ½ oz., 20c; oz., 40c; ¼ lb., \$1.50; lb., \$5.00.

DUKE OF YORK.—Round, rich scarlet, large size; flesh firm and of fine flavor; blight proof. The Duke of York is the only reliable blight-proof variety. Splendid shipper and makes a fine market appearance. Fruits form in clusters of 5 to 10 and are above the average size; a strong healthy grower; big cropper, and stays in bearing a long time. Pkt., 10c; oz., 35c; ¼ lb., \$1.25; lb., \$4.50.

JUNE PINK.—New. Very early; of medium size round, smooth, and very solid. Bright pink. Pkt., 10c; oz., 35c; ¼ lb., \$1.25; lb., \$4.00.

All prices of Tomatoes are by mail, postpaid.

Dwarf Champion Tomatoes

You Cannot Afford

under present conditions to buy seeds from sources where you are not sure what sort of seeds you are getting. You must plant the best seeds.

PLANT MARTIN'S HY-TEST SEEDS

St. Augustine, Fla., Aug. 20, 1918.

Dear Sirs:

Having seen such wonderful flowers in town grown from your seed, I am wondering if you issue a catalog? If so, I would be grateful if you would send me one.

Mrs.

MARTIN'S TURNIPS

Turnips can be planted in Florida almost the year round. Quantity prices on Turnips.

From 3 to 4 pounds to an acre. Matures for table use in from 55 to 85 days, according to variety.

CULTURE.—Plant for succession from September to April in drills 14 inches apart and thin out plants to 6 inches. Turnips thrive best in a highly enriched, sandy, gravelly or light loamy soil. Spring sowings should be put in early so that they will attain a good size before hot weather; otherwise they will become tough and bitter.

All the prices are by mail, postpaid.

EARLY WHITE FLAT DUTCH (Strap-leaved).—An old standby, and one of the most popular early varieties in the South for either spring or fall plantings. Of medium size and a quick grower. Is flat with very small fine tap-root. Flesh and skin pure white; fine grained and sweet. Pkt., 10c; oz., 15c; ¼ lb., 25c; lb., 75c.

RED, or PURPLE-TOP STRAP-LEAVED.—The most widely cultivated and best-known variety. Used largely for sowing broadcast among corn and potatoes. It is round and flat, white on the bottom and a reddish purple above ground, and a very quick grower. It is esteemed as a fine table variety. Pkt., 10c; oz., 15c; ¼ lb., 25c; lb., 75c.

SEVEN-TOP.—The most popular variety for winter and early spring "greens" in the South. Very hardy, growing all through the winter. Can be cut at all times, giving a supply of fresh vegetable matter at times when nothing else is available. Can be sown from August till December and in early spring. Pkt., 10c; oz., 15c; ¼ lb., 25c; lb., 85c.

EXTRA EARLY WHITE EGG.—A Turnip of the sweetest flavor ready for use in six weeks from the time of sowing with good seasons. In quality it is the finest of all. While the size is small, compared with some others, its earliness and quality more than make up for any lack of size. Skin and flesh are pure white; bulbs almost egg-shaped, solid, fine-grained and a good keeper. Very attractive when bunched for market. Pkt., 10c; oz., 15c; ¼ lb., 25c; lb., 85c.

RED-TOP WHITE GLOBE.—One of the largest and finest of all the Turnips; beautiful globe shape, with pure white flesh and a red or purple top. Of very rapid growth for a globe variety, and will produce more to the acre than any known variety. May be sown either broadcast or in drills. Pkt., 10c; oz., 15c; ¼ lb., 25c; lb., 85c.

SOUTHERN PRIZE or DIXIE.—

Makes large, round, white Turnips in addition to solid; hardy and needs no protection, the most popular winter and spring salad Turnip grown. Pkt., 10c; oz., 15c; ¼ lb., 25c; lb., 65c.

LONG WHITE COWHORN.—

Roots are long and carrot-shaped. One-third to one-half of the root is formed above ground. A deep rooter, resisting drouth. Flesh pure white, fine-grained, sweet and of good table quality. Hardy. By many it is sown in combination with Dwarf Essex Rape for winter pasture. Pkt., 10c; oz., 15c; ¼ lb., 35c; lb., \$1.00.

YELLOW GLOBE.—A splendid

sort for general crop; grows large; a good keeper, with bright, yellow flesh. Pkt., 10c; oz., 15c; ¼ lb., 25c; lb., 75c.

IMPROVED GOLDEN BALL.—

One of the sweetest and most desirable yellow-fleshed varieties; of medium size; a perfect globe shape, with firm, hard, yet rich and sweet flesh; it has no equal as a table variety; keeps well. Pkt., 10c; oz., 15c; ¼ lb., 25c; lb., 75c.

Red or Purple Top Strap-Leaved Turnip

EXTRA-EARLY PURPLE TOP.—

Earliest Turnip in cultivation and a splendid variety; bulb white, flat, of medium size, with a bright purple top; one of the sweetest and finest flavored of summer sorts. Pkt., 10c; oz., 15c; ¼ lb., 25c; lb., 75c.

AMBER GLOBE.—Flesh is beautifully yellow, very fine-grained and very sweet. Will grow to very large size in the South; is one of the very best keepers for winter use. Pkt., 10c; oz., 15c; ¼ lb., 25c; lb., 75c.

WHITE GLOBE.—Color pure white; shape round; size large; solid, quick in growth for a large Turnip, producing a great weight to the acre. Rapidly growing in popular favor, more especially as a late winter and spring variety. Productive, hardy and closely resembles in size and shape the popular Purple-Top Globe. Pkt., 10c; oz., 15c; ¼ lb., 25c; lb., 75c.

Early White Flat Dutch Turnip

RUTABAGA

The flesh of the Rutabaga is firmer and richer, generally speaking, than that of the turnip, of which family of plants it is an important member. They are usually more highly prized for winter markets, whereas the turnip comes into value for the spring and early fall markets. Perhaps the most general use of the Rutabaga, however, is for the feeding of stock. In many sections it forms a valuable adjunct to the ordinary stock food, and its nutritive value has been frequently demonstrated. Because of the fact that the yield is usually very heavy, a stock food is provided that is at once cheap, rich, succulent and nutritious.

CULTURE.—They like a rich, well-prepared soil, and should be sown in drills 30 inches apart, and thoroughly cultivated. When bulbs begin to form, throw dirt to the bulbs, keeping them well covered. This prevents the objectionable neck, so often seen on Rutabagas. They should be given room to allow development and to this end should be thinned out to about 8 inches in the row.

IMPROVED AMERICAN PURPLE-TOP RUTABAGA.—This strain is of American origin, bred to a smaller top and short neck. The bulbs are of great size, yellow-fleshed and purple crown, one of the most desirable varieties now cultivated. Pkt., 10c; oz., 15c; ¼ lb., 25c; lb., 85c.

The War Garden should have taught everyone that had one the economy of raising your own vegetables. Profit by your experience.
DON'T QUIT THE WAR GARDEN.

Improved American Purple-Top Rutabaga

Martin's Hy-Test Flower Seeds

Regardless of what your occupation may be, or how meager your experience, there are flowers that any one may grow successfully from seed. You should devote some time and space to their culture.

All Flower Seeds put up in 5c and 10c packets and sent postpaid. Special prices in bulk.

ALYSSUM, SWEET

This is a very hardy annual, blooming early in the spring, covering itself with innumerable clusters of small, pure white flowers. Their fragrance is peculiar and very delicate. Grows about 1 foot high.

ASTERS

Beautiful and popular annuals, desirable for beds, being in bloom when most other plants are nearly over. Very useful for cut flowers.

Mixed.—Dwarf and Tall.

CALLIOPSIS, or COREOPSIS

Beautiful showy summer bedding annuals, with large, bright flowers of golden yellow, varied with rich brown. Excellent for cutting and decoration.

CANDYTUFT

Popular favorite, flowering profusely the whole summer. Very valuable for edgings and borders, fairly covered with masses of white and various colors. Height, 1 foot.

Mixed Colors.—A splendid mixture.

CYPRESS VINE

A tender climbing annual, with soft, fern-like foliage and small star-like flowers. Choice mixed colors.

FOUR O'CLOCK

A hardy annual of easy culture, growing about 2 feet high. The plant is free-flowering, bearing blossoms in a great variety of colors and stripes.

HYACINTH, or JACK BEAN

A tall, twining plant, often 10 to 20 feet high. Bears purple flowers in long, erect racemes.

MIGNONETTE

Superb Mixture.—Made up of the newest and best sorts. It includes all shades of color and varieties which produce the largest flower-spikes.

MOONFLOWER (EVENING GLORY)

Grows 30 to 40 feet; covered every evening and cloudy day with large white flowers, 4 to 6 inches across.

MORNING GLORY

Imperial Japanese.—One of the grandest climbers, the flowers measuring 4 to 6 inches across, in a limitless variety of colors and markings.

Phlox.

NASTURTIUMS

In the past few years wonderful improvements have been made in these favorites. Types and colors have been added until in our mixtures we have a magnificent array of gorgeous colors. Nasturtiums do best in a loamy, well-watered situation.

Tall and Dwarf Varieties.— $\frac{1}{4}$ lb., 35c; 1 lb., \$1.00.

PANSY

Pansies thrive best in a moist, shady location and in rich loamy soil. Seed should be sown in the autumn for early spring blossoms, or can be sown early in the year for good flowers later in the spring. The plants must be transplanted twice in order to get the largest flowers; once from the seed box to a chosen bed, and again to the open garden. This is important for large size pansies; use manure liberally. The blossoms are usually larger in the spring and again in the fall, and while they bloom freely all summer, the blossoms are small during the hot months.

Our Mixed Flowers of all shades and markings. A splendid mixture.

PETUNIA

The richness of color, duration of bloom and ease of culture will always make Petunias popular, especially for massing in beds.

Double.—A splendid strain, producing a large percentage of double fringed flowers in bright colors, beautifully marked. Mixed colors.

Single.—A choice mixture; all colors.

PHLOX

Fine Mixed.—These favorites are dazzling in the effect they give in massing. A wide range of colors

PINKS

Finest Mixed.—These charming, old-fashioned flowers are great favorites. Our mixture is the finest procurable.

POPPY

Poppy Mixture.—A grand mixture of all the newest and best double and single annual Poppies, covering every color, from deep scarlet to pure white. The wonderful variety and brilliant colorings make a most effective display.

PORTULACA

Succeeds in a sunny situation, and produces flowers of almost every color in the greatest profusion. The double is especially beautiful. Sow when weather becomes settled and warm. Height, 6 inches.

Single.—Large-flowering, mixed colors.

Double.—Extra-double, all colors mixed.

SUNFLOWER

Double.—Double yellow varieties 3 to 5 feet high. Exceedingly beautiful.

SALVIA

Brilliant flowers are borne in profusion from early summer till frost. Excellent for cutting. Seed sown early in the house produce better plants than from cuttings. Height, 3 feet.

SWEET PEAS

Culture.—Some time before planting dig out a trench a foot deep, put in several inches of well-rotted manure and cover with six inches of earth. Early in February open the row three to four inches deep, drop the seeds (about four seeds) every three inches, cover about two inches, and two or three times during the season bank the soil against the roots. The white-seeded kinds are tenderer than the black-seeded, and should not be planted too early. They may also be planted in October November and December, planting four to six inches deep; give slight protection and they will become well rooted and grow off at the first opening of spring and produce an abundance of bloom earlier and for a longer season than spring plantings.

Don't gather the blooms grudgingly—the more you cut them the better and longer they bloom.

Eckford's Mixed.—An unsurpassed mixture, combining every shade and type. It is made up of named sorts only, all choice large-flowering sorts, the colors being

Sweet Peas—The Garden Beauties

distributed as evenly as possible throughout. For diversity of color, size of flowers and beautiful forms, this mixture is unexcelled. $\frac{1}{4}$ lb., 35c; 1 lb., \$1.00.

THUNBERGIA

A rapid climber, growing 4 to 6 feet high. Splendid for trellises, fences, etc., bearing beautiful flowers—white, yellow and buff, with black eye.

VERBENA

Annual for beds, borders, massing, window-gardens, covering mounds, etc. Flowers of most brilliant colors, blooming from early summer till late fall. Soak a few hours and sow in boxes indoors, transplanting when an inch high.

Zinnia (Youth and Old Age).—Few flowers are so easily grown from seed, or bloom so abundantly and continuously. Fine for beds and borders: in fact in any location.

FLOWER SEEDS

We carry the following Flower Seeds in bulk which are selected for being the highest quality and we know will give just the results desired:

	oz.	$\frac{1}{4}$ lb.	1 lb.	5 lbs
Sweet Peas—Eckford's Mixed. Mixed Colors.	10c	35c	\$1.25	\$5.50

Giant Freya—Rich Wine Color, edge white.	50c		\$2.00	
Giant Psyche—Purple Violet, edge white.	50c		2.00	

BULBS

The first step is to secure good Bulbs of good size, clean, sound and solid. Don't buy bulbs at "Bargain Prices." Such usually have been carried over in cold storage from the previous season or have been planted out in spring, then dug in the fall and sold at a low price. You cannot get fine flowers from such bulbs.

We have our bulbs especially grown for us by the most competent growers, and our stock is strictly true to name and color and we know you will be well satisfied with results.

SUGGESTIONS FOR GROWING HYACINTHS

Bulbs should be planted in Florida from October to January. However, later planting meets with success, but the above-mentioned months give better results.

OUTDOOR CULTURE

The soil should be moderately rich, or made so with well-rotted manure or bone-meal; fresh manure should not be used, as it will injure the bulbs. Good results cannot be obtained without free drainage. The common plan is to dig up the soil to a depth of about 6 inches and then fill in with a couple of inches of sand or gravel. The bulbs can be planted on this and surface soil filled in over them.

INDOOR CULTURE

Bulbs intended for blooming indoors can be planted from September until January; the earlier they are potted the better. After potting the bulbs should be set in the open air, covered with a few inches of ashes or soil, and permitted to remain outside until freezing weather, then be brought into a cool greenhouse, cellar or room where the temperature will not go above fifty degrees. An occasional watering will be required after they are brought in. If not possible to put the bulbs outdoors, the pots may be placed in a cool cellar and well watered and covered as above. If the roots are well developed, the bulbs can be brought into a cool room, and the foliage and flower spikes will develop quickly. By following these directions one can have a supply of flowers until after Easter, if the pots are brought to light at intervals of two or three weeks.

GROWING HYACINTHS IN WATER

A novel way to grow Hyacinths is by setting them in glasses, just allowing the bottoms of the bulbs to touch the water, then placing the glass in the dark until the bulbs are thoroughly rooted. The water should be changed every ten days, and a small piece of charcoal placed in the bottom of the glass will prevent the water from becoming foul.

NARCISSUS

FEW REALIZE THE BEAUTY OF THE FLOWERS GROWN FROM BULBS. THERE SHOULD BE MORE PLANTED.

ROMAN HYACINTHS

The flowers, while smaller than those of the Dutch Hyacinths, are borne in much greater abundance, each producing about six graceful spikes of bloom, which makes it a most valuable sort for cutting. White Roman Hyacinths are the kind most largely used for cut flowers. They are the earliest to bloom and are deliciously fragrant. We quote as follows by mail postpaid:

Roman Hyacinths, White.....Each, 10c; per doz., \$1.00
Roman Hyacinths, Pink.....Each, 10c; per doz., \$1.00

EXTRA SELECTED NAMED DUTCH HYACINTHS

The varieties offered in this list have been selected as the varieties which have proved the most satisfactory. We quote as follows by mail, postpaid:

Single Dutch Hyacinths, White.....Each, 10c; per doz., 75c
Single Dutch Hyacinths, Blue.....Each, 10c; per doz., 75c
Single Dutch Hyacinths, Rose or Pink.....Each, 10c; per doz., 75c
Double Dutch Hyacinths, Blue, all shades.....Each, 10c; per doz., 75c
Double Dutch Hyacinths, Rose or Pink.....Each, 10c; per doz., 75c
Double Dutch Hyacinths, Red, all shades.....Each, 10c; per doz., 75c
Double Dutch Hyacinths, White, all shades.....Each, 10c; per doz., 75c

PAPER WHITE NARCISSUS

For planting among shrubbery, in unused corners or for naturalizing in grass, where they remain undisturbed for years, these are without doubt one of the best hardy bulbs, coming into bloom early and supplying an unfailing source of cut flowers. The Paper White Narcissus is very satisfactory for outdoor blooming.

We quote as follows by mail, postpaid.
8c each; 60c per doz.

FREESIAS

The justly popular Freesias are greatly prized for the delightful fragrance of their delicately colored flowers, which, when cut, will remain in good condition for a long time in water. They are easily grown or forced in good loamy soil, with an admixture of leaf-mold and sand. For the information of all not acquainted with these bulbs, we may say that they are quite small but produce large blooms in comparison to their size. 6c each, 50c per doz.

FREESIA REFRACTA ALBA

The body of the flower is pure white, with lower segments spotted lemon-yellow. Their fragrance is remarkable and very lasting.

DAFFODILS

DAFFODILS, Emperor.—A magnificent flower of great substance, having an immense trumpet of clear, golden yellow, and broad primrose yellow perianth; very early splendid for forcing or planting out of doors. Price by mail, postpaid: Each, 10c; \$1.00 per doz.

DAFFODILS, Poeticus Ornatus.—Pure white, yellow cup, margin deep scarlet; nearly a month earlier than Poeticus; splendid forcer. It is not so sweetly perfumed as Poeticus, but is large, showier and earlier. Price, by mail, postpaid. Each, 10c; per doz., \$1.00.

Hyacinth

If your order is for 100 Bulbs or over, write for special price.

FORAGE AND GRASS PLANTS

Florida Can Lead the World in the Production of Hay

While all know that Florida, of all states in the Union, has shown the most remarkable growth of fruits, vegetables and tobacco culture it is not so well known that she is far ahead of other states in her great wealth of forage and grass plants.

Time was when it was not thought possible to grow grass in the state. That seems a great while ago. Certain it is that Florida is the richest grass and forage state in the Union. So many of these grasses and forage plants are, too, perennials—once planted, always planted, and so many are legumes and soil-enriching.

Here is a partial list: The velvet bean (legume) has its best habitat in Florida; Speckle Velvets, Whites, Lyons, Early Yokohama and New Chinese. And since the Yokohama ripen in September and mature as for North as North Carolina, Florida should build up a good industry in growing these beans for the latitudes farther north where other velvet beans will not do well. The Speckle Velvet, as is well known, produces more vine and stores more nitrogen in the soil than any other known plant. For winter grazing and for humus making and land upbuilding it has no equal. The White Chinese, a month earlier, and more prolific in beans and equally prolific in vines, may supplant in time the Speckle.

Equally important and valuable in Florida is beggar weed, a legume. Coming up in June in all cultivated fields, reseeding itself each year and practically a perennial, good for hay, or pasture, or green manuring, growing eight feet high and making more than 40,000 pounds of green stuff per acre, and rich in feeding nutrients, Florida could not and does not want any better crop than beggar weed.

In cowpeas the wilt-resisting varieties, the Iron and the early two-crop Brabhams do well and serve best. In Florida the peanut (legume) which is as much of a forage as a nut plant, is just as much at home as in North Carolina or Virginia. Johnson grass does well in Florida. So does the legume, kudzu.

A wonderful product whose best habitat is Florida, too, is Japanese sugar cane, a perennial with ten or fifteen stools or suckers from each joint of the stalk as planted, making ten or twelve tons of cane per acre good for forage or making fifteen gallons of finest syrup per ton.

The African hog noober is also adapted to the state, as also are chufas. Teosinte, fifteen feet high, stooling thirty to fifty stools per seed, twenty tons or more green stuff per acre, making 225 pounds of green stuff from one seed. Florida is the home of this wonderful plant.

Bermuda, the perennial, does well, too, in the state, as do also the remarkable perennial and green-all-the-year grasses, St. Augustine, St. Lucie and Carpet grass.

The live stock industry has grown so rapidly during the last few years that Florida is now regarded as one of the most important live stock states in the South. Florida live stock men are importing some of the finest blooded cattle and hogs the country affords.

The largest sale of registered cattle ever made in the great southwest was made to a Florida live stock man.

To keep this live stock up to standard they must be properly cared for. This can best be done by planting fall grasses, etc., for your winter grazing.

MARTIN'S HY-TEST OATS

Field of Fulghum Oats

From 2 to 3 bushels to plant an acre

FULGHUM OATS.

This new Oat has won a great reputation in the last two years and we cannot recommend it too highly to our customers. The grains and stalks are as large as the Appler and are double the size of the Texas grains. It is about three weeks earlier than the Appler and is as early as the light, thin, unsatisfactory spring "Burt" Oat. It is sturdy in habit and not apt to blow down. Has long drouth-resisting taproot. Matures evenly. The earliness of the Fulghum Oat affords a valuable opportunity for the earlier planting of other crops and for early spring feeding. It is rust-proof, cold-resistant and quite beardless and drills in the machine better than Appler.

You should include Fulghum Oats in your order. Our seed is carefully cleaned and of the strongest vitality. Peck, 65c; bu., \$2.00; 5 bu. lots, \$1.75.

Note—For Winter Grazing.—In Florida and the Southern states there is an increasing demand for quick grazing crops. Oats take an important place in supplying this demand and our demonstration and information has proven the Fulghum to be one of the

most satisfactory varieties that can be planted. While we emphasize this Oat for grazing we must not take from it any of its good qualities as a grain producer and we don't hesitate to say it is the best general purpose oat that can be planted. Our seed of this variety has been carefully selected and especially grown for us for years and are the highest quality selected seed oats that can be produced. The pedigree of the seed must be considered. Martin's Hy-Test Fulghum Oats are pedigreed.

BURT—The Burt Oat is an extremely early variety, producing an abundance of straw of good length. It is the best poor-land oat known, also the safest and earliest to plant in the spring. The grain is small, light, slim and, under favorable weather conditions, is of a very light straw-color. A good percentage of the grains have beard, and are frequently borne in clusters of two. The genuine Burt Oat is a sure header, coming to maturity ten days to two weeks before Rust-proof. Two bushels of Burt Oats should be used in seeding an acre, and, where they are to be made into hay, three bushels will be found profitable. We sell great quantities of these Oats for fall planting, and when properly put in, they go through the winter all right and come in extremely early in the following spring. The standard weight of Oats is 32 pounds to a bushel. Price on application. Peck, 65c; bu., \$2.00; 5 bu., \$1.75.

(Oats continued on next page.)

OATS—Continued.

TEXAS RED RUST-PROOF.—There is no better Oat than the Texas Red Rust-proof, providing one gets the genuine Oat, grown in the State of Texas. It is safe to say that 75 per cent of the Oats sold as Texas Rust-proof never grew in that state. Farmers should be more careful in purchasing their seed Oats. The Texas Oats are heavy grains, nearly all of them having a distinctive beard. Color varies, according to the season. They are largely planted in the spring and early fall. Two bushels should be sown to an acre. Peck, 65c; bu., \$1.75; 5 bu., \$1.50.

APPLER.—Equally well adapted for sowing in the spring and the fall, but when put in the spring, should be sown before the middle of March. It makes a strong, quick-growing Oat, with bunchy heads and heavy grain. While originating in the State of Georgia, this Oat has been grown to a considerable extent both in this section and in other Southern States, and has proven to be one of the best and most reliable of rust-proof Oats for the South. Peck, 65c; bu., \$1.75; 5 bu., \$1.50.

THE FAMOUS 100-BUSHEL.—The claim for this Oat is that it is an improved type of southern Oat, rust-proof, has heavy grains, large straw, and is extremely productive. While the claim for it is extra productivity, we certainly cannot, nor can anyone else, guarantee 100 bushels to the acre, but it should come as near or nearer to it than many other Oats on the market. Peck, 65c; bu., \$1.75; 5 bu., \$1.50.

BANCROFT OATS.

Our experiments with this improved strain of rust-proof oats last year proved to be one of the best and largest yielding and surest cropping of spring oats. It matures in about ninety-five days, and is a very superior variety, both in yield and in appearance of grain. Wherever they have been grown they have made a decided impression as a most superior cropping oat. We recommend them to our customers, believing that they will become one of the leading and standard varieties in a very short time. Peck, 65c; bu., \$2.00; 5 bu., \$1.75.

RYE

Sow at the rate of from 1½ to 2 bushels to an acre.

Florida Rye (Hy-Test) is grown in Florida by responsible growers and there is no variety that will excel the **Florida Black Rye**. It is native to our state, grows off quick, stands upright, makes the most satisfactory early fall pasture that can be planted. For planting in this state next to the Florida we recommend the **Abruzzi Rye**. Quart, 35c; peck, \$1.25; bu., \$4.50.

Southern Rye.—This Rye has not proven very satisfactory in Florida and South Georgia. We recommend it to our customers further north of this section. It will not grow so tall or head up for cutting like the Florida Rye or Abruzzi Rye. Quart, 35c; peck, \$1.00; bu., \$3.75.

ABRUZZI RYE.

Abruzzi Rye was discovered by agents of the United States Department of Agriculture while on an exploration trip through Italy in search of valuable plants for use in this country, and was introduced for the first time about January, 1900. It came from

Naples, and brought with it this record: "Abruzzes, a superior rye grown in the Abruzzi Province, a mountainous district east of Rome. This strain is one of the best grown in Italy, having made an average yield of 28.2 bushels per acre for a period of ten years."

This rye was tested by the United States Department of Agriculture, found to be valuable.

Abruzzi Rye is far superior to the ordinary rye varieties. In carefully conducted tests, we find that it will give from two to three times the amount of pasture or forage that our ordinary varieties will.

In addition to its heavy yields, it possesses the distinct advantage of growing upright, making it easy for the animals to graze. It does not lie flat on the ground. It grows off upright from the very start.

WE DO NOT KNOW OF ANY CROP THAT WILL GIVE AS MUCH GRAZING DURING THE WINTER AS ABRUZZI RYE. Qt., 25c; pk., \$1.25; bu., \$4.00.

WINTER BARLEY

Excellent pasture for winter and early spring, as it can be grazed without injury. Sow at rate of 1½ to 2 bushels per acre during fall or early winter. Pk., \$1.00; bu., \$3.75.

Dwarf Essex Rape for Winter Forage

In drill, 4 to 5 pounds to an acre; broadcast, 7 to 8 pounds. Lb., 30c; 5 to 10 lbs., 25c per lb.; 15 lbs., 17½c per lb.

Dwarf Essex Rape is a crop well suited to Florida conditions. It is excellent for feeding hogs, dairy cows, and sheep, as it will produce many tons of good nutritious feed per acre at a time of the year when green feeds are scarce. Throughout a large portion of the State, farmers and stockmen could, with advantage, grow more of the succulent forage crops for feeding stock during the autumn and winter months, when the supply of grass and other green forage is often limited. Such crops may usually be grown on land that has already produced an early maturing crop. One of the best of these succulent crops is perhaps Dwarf Essex Rape—a plant closely related to the cabbage, turnip and mustard.

The seed may be sown at any time from the fifteenth of September to the fifteenth of December. The farmers of West Florida will find it best to plant during the latter part of September, while those of Central and South Florida can plant later in the season.

Sand or Winter Vetch

If wanted by mail, add for postage.

The Sand Vetch is one of our most valuable forage plants—in fact, the most valuable of all to furnish green forage in winter. It is in general use in this section by dairymen. It is a nutritious feed, fattening and, at the same time, largely increases the flow of milk. Vetch should be sown from August to December at the rate of thirty to forty pounds per acre, with three-quarters of one bushel of rye or winter oats. Vetch is a trailing plant and needs something like rye, oats or wheat to support it, holding it well off the ground and making it easier to harvest and cure. Lb., 40c; 5 lbs., 35c; 10 lbs. and over, 32c.

One Plant Dwarf Essex Rape

Martin's Hy-Test Grasses ITALIAN RYE GRASS

Sow from 6 to 8 bushels per acre for lawns.

One of the most valuable grasses for fall planting, a quick grower, an annual, dying out the first summer. It is used mostly in Florida as a lawn grass, and makes one of the quickest growths that can be planted. It is generally sown over Bermuda or other lawn grass and will make a green lawn till spring. We are selling a great quantity of this each season, and the sale is steadily increasing. **Bus., \$4.00.**

RHODES GRASS

Rhodes Grass, scientifically known as *Chloris gayana*, is a good hay and pasture grass and does very well on good farm lands. It stands drouths very well. It is better adapted to truck than to cotton lands.

The earliest record that we find of the grass in this country is in 1902, when Dr. David G. Fairchild, Agricultural Explorer, secured a bag of the seed in South Africa. It was then attracting a great deal of attention in that country.

TIME OF SEEDING

Experience with it in Florida indicates that April and May in the spring, or October and November in the fall, would be the most favorable times for seeding in Northern Florida. This same time would probably suit Central and Southern Florida as well as any other time of the year. The seed should be sown in a seed bed thoroughly prepared, and covered very lightly. It must, however, be in contact with moist soil to germinate readily. Under favorable conditions germination will take place in about three days, and the seedlings may be expected to show themselves above ground in a week.

With good seed, 10 lbs. to the acre will be sufficient for a good stand. **Price, 75c per lb.**

SUDAN GRASS

Sudan Grass is without doubt one of the best grasses. It has proven a remarkable success wherever it has been sown, and is destined to become one of the standard summer grass and forage crops, and that it will largely supersede millet and other summer forage crops, is confidently predicted. Millet only produces one crop a year; Sudan Grass will produce two or three good cuttings each season, and cures up splendidly, making a most nutritious and desirable forage or hay crop. From our own and our customers experience, we strongly recommend liberal seedings of this grass everywhere that a summer forage or grass crop is desired. It is unquestionably a great hay-producing crop, both in quality and yield.

SOWING THE SEED.—The seed should not be sown until the ground and weather become warm, in this section not earlier than the middle of March. Can be sown either in drills from 18 inches to two feet apart at the rate of about 10 lbs. per acre, and cultivated, or can be broadcasted or drilled thickly at the rate of 25 to 30 lbs. per acre.

The hay should be cut as soon as the grass is fully headed, and early cuttings are especially advisable where more cuttings per season are expected. The grass can be cut with a mower, the same as other grasses. Sudan Grass stools out thickly after the first cutting, and makes a thicker growth for the second and third cuttings than for the first cutting.

Sudan Grass is an annual, and requires to be sown each season.

Pound, 49c.

Write for prices on large quantities.

BERMUDA GRASS

One of the most valuable pasture grasses.

Sow at the rate of 7 or 8 pounds per acre.

This is a most valuable perennial pasture grass all through the South, and also produces good yields of hay. It is very well adapted to light soils, and in some sections of the South is the only pasture grass that will make a good sod on this class of soil. It also does very well on clay and loamy soils. It is rather late in starting in the spring, but stands hot, dry weather remarkably well, making a most valuable summer pasture grass. It will furnish more summer pasture during hot, dry spells than any other grass we have ever had experience with. It is rather difficult to eradicate when once established, but this is also a strong recommendation wherever permanent grass is desired. Provided proper methods are used, however, Bermuda Grass can easily, if desired, be planted in other crops, the only requirement being that the Bermuda Grass sod be deeply plowed and thoroughly inverted, so as to give the crops that are planted on same a good start, when the shade from these will prevent the Bermuda Grass from growing. **Lb., 75c.** postpaid. Special prices on larger quantities.

Sudan Grass Fast growing and heavy yielding Grass

KENTUCKY BLUE GRASS

Kentucky Blue Grass should be included in all Lawn or Pasture Mixtures

KENTUCKY BLUE GRASS

It is rather sensitive to heat, but not so to cold weather, and on this account does its best in the fall, winter and spring. It grows slowly at first, forms a very compact turf, making a fine pasture where once established. It is much the best, however, to combine other grasses with it for either lawn or pasture. Sow in the spring or fall. **Lb., 85c.**

CANADA FIELD PEAS

Price on application.

This is in no sense a cowpea, but resembles an ordinary garden or English Pea in looks of seed and growth. It is extremely hardy, a great soil-enricher and makes the most delicious hay. Should be sown two bushels to the acre; it is better, though, to sow with oats or other winter grain to hold the vines up, using one bushel of Peas and one-half the regular quantity of grain. Both are cut at the same time. Will not give satisfactory results in Florida.

E. A. MARTIN SEED COMPANY, JACKSONVILLE, FLORIDA

MARTIN'S HY-TEST CLOVER SEED

CLOVER SEED

White.—Well known. It forms a thick, close turf, is excellent to sow for pastures, especially on sandy soils, and should enter into the composition of all lawn mixtures. Alone, it requires four to six pounds per acre; in mixture, from one to two pounds. Lb., 90c, postpaid.

Crimson.—Recommended for fall seeding and should be more largely used in the southern states. Produces an excellent hay and fine winter pasture. This is one of the finest of all soil-improving crops. Sow at the rate of 12 to 15 pounds per acre. Per lb., 30c; 5 lbs., 25c. For larger quantities write.

White Clover, One of the Best for Lawns and Pasturage

Burr Clover.—Sold in burrs unhulled. A perennial legume. Plant two bushels per acre. Sow July to last of November. Smoothly harrow land and cover only one-third inch in depth. It is better to plant on thoroughly plowed ground and level and sow the burrs directly on top of the land. Our Burr Clover is all fresh. Will not come up if plowed under; and if on account of a dry season there is not sufficient moisture to wet the seed in the burr, they will not come up. Sprouts with fall rains and matures about May 20th. Furnishes immense grazing for cattle, sheep and hogs in winter. Makes fine hay. This is fine for a winter pasture and cover crop. It seeds and dies in May or June, and will come again in the fall. In the burr, price per lb., 25c; bu., \$2.00.

Recleaned 40c. lb., postpaid.

ALFALFA OR LUCERNE

Sow broadcast from 25 to 30 pounds per acre.

The acreage devoted to Alfalfa is increasing very rapidly all through the southern and middle states, as wherever it succeeds, it proves very convincingly its value as one of the most profitable and satisfactory crops that can be grown on the farm. Alfalfa will do well on any good loamy soil, but the land must be well and thoroughly prepared and contain plenty of vegetable matter or be well enriched by the liberal application of well-rotted stable manure. A heavy application of lime is also of decided benefit. It is also decidedly preferable to sow it on land that has a porous or gravelly subsoil that the roots can penetrate. Alfalfa is a deeprooting plant and will give best results on soils of this character. Has not proven a success in Florida but is recommended for states further north. Lb., 40c, postpaid. Write for prices in large quantities.

Write for descriptive matter and prices on Farmogerm, for better crops of clovers, alfalfa, peas, beans, vetch, peanuts, etc.

MAMMOTH RUSSIAN SUNFLOWER

The best variety for the farmer. Makes heads nearly double the size of the common kind, and makes a much larger yield of seed. Will yield, under favorable conditions, 40 to 60 bushels to the acre, and yields of as high as 125 bushels have been reported under exceptionally favorable conditions. It is highly recommended for poultry and is the best egg-producing food known, and the leaves make excellent fodder, relished by all kinds of stock. The seed is a good food for horses. It is claimed in some sections that the

growth of the Sunflower near the house acts as a preventive of malaria. Qt., 30c, postpaid; 1 lb., 35c; 5 lbs., 30c; 10 lbs., 25c, not postpaid.

JAPANESE BUCKWHEAT

Entirely distinct from all other varieties. It has the advantage of remaining for some time in bloom, and produces seed earlier. It resists drouth and blight very well. The seed is rich dark brown in color and larger than Silver Hull. As much as forty bushels to the acre has been harvested of this variety, making it very profitable to raise. Lb., 25c, postpaid; bu., \$4.50.

JAPAN CLOVER

Lespedeza striata

One of the Most Valuable of Grazing and Soil-Improving Crops; Also Makes a Splendid Nutritious Hay Crop

Japan Clover is one of the most valuable crops for the entire South, and is rapidly increasing in popularity wherever it is grown. Its greatest value is as a soil-improving and grazing crop. It is also very largely grown as a hay crop, producing large yields of the best hay, superior in nutritive value to timothy hay.

Once started, it soon spreads and takes possession of the land, making a steady growth of the finest and most nutritious pasturage, greatly relished by horses and all farm stock. It succeeds everywhere throughout the Southern and Middle States, taking possession even of stony hillside and barren or waste lands. It also does well on low or wet lands, and a combination of Red Top (Herd's Grass) with Japan Clover on this class of soil furnishes excellent grazing. In places where it was sown several years ago it was found spreading all over the neighborhood, along the roadsides, ditch banks, and over neglected fields; at the same time it is easily subdued by cultivation, and does not in any way prove a pest to cultivated crops.

It will succeed if sown broadcast on old pastures, broom-sedges, etc., without any special preparation, and will soon spread and grow thickly all over the fields where put in, even taking the place of and driving out broom-sedges and wire grass. For sowing in woods that are used for grazing, or anywhere under the shades of trees, where other grasses do not succeed well, Japan Clover is to be strongly recommended, as it succeeds and does better under denser shade than any other grass or clover. All throughout the summer it makes a dense green carpet, which is very attractive and desirable.

It is best not to graze Japan Clover too early the first season, so as to give the seed time to mature and fall, which it is constantly doing all summer from the axil of the leaves. After the first season it can be grazed at any time. We do not recommend this clover for land that can be successfully grown in other grasses or clover in this section, but on waste land or poor, worn-out soils it will furnish excellent, nutritious pasturage, and at the same time improve the condition and productiveness of these poor lands to a considerable extent.

Sow at the rate of 10 to 15 lbs. per acre in March or April. It does not make much showing the first year the seed is sown. Price, 60c per lb. Write for prices in larger quantities.

Field of Lespedeza or Japan Clover

A beautiful lawn will add much to the attractiveness and value of your home

MARTIN'S FLORIDA WINTER LAWN MIXTURE

This is a superb special mixture for winter lawns and is adapted only to Florida. If you will use this mixture and give your lawn good care you will have one of the finest lawns possible to obtain. Now is the time to start. Per lb., 75c, postpaid

We have Special Lawn Grass Mixtures for Golf Courses, Country Clubs, Public Parks and Play Grounds. Write us for prices.

Our special lawn fertilizer should be used to obtain best results. Write us for prices.

LAWNS

It is possible for the lawns in Florida to become famous as the most beautiful in the world. In few places can a new home become so quickly surrounded with luxuriant vines, trees, shrubbery and flowers. More can be accomplished in this climate in one season than can be done in five seasons in the North. But, it of course, requires work and skill to keep up the beauty of a lawn. It is necessary to feed the grass well, as you can't expect it to remain beautiful after the elements of plant food have been exhausted.

Lawns can be made in Florida all the year. The first thing to do in making a lawn is to put the soil in proper condition. Unevenness in soil texture and fertility produce unevenness in the growth and color of the lawn grass.

Lawns should not be clipped too short during the hottest and driest months of the year. The knives of the machine should be set high and the short, fine clippings may be allowed to remain on the lawn, where they can work down around the grass plants and produce a mulch that will conserve moisture and protect the crown of the plants from extreme heat. If the grass is allowed to grow too long before cutting and a large amount of clippings are produced, they are better raked off and taken away.

In new lawns weeds usually give trouble and very often in old ones. For this we recommend only hand weeding, as it seems to be the only reliable remedy. Weeds should be pulled roots and all as soon as they make their appearance and are large enough to handle. They are more easily pulled from soft moist soil than from a hard dry surface.

ITALIAN RYE GRASS

Sow from 6 to 8 bushels per acre for lawns.

One of the most valuable grasses for fall planting, a quick grower, an annual, dying out the first summer. It is used mostly in Florida as a lawn grass, and makes one of the quickest growths that can be planted. It is generally sown over Bermuda or other lawn grass and will make a green lawn till spring. We are selling a great quantity of this each season and the sale is steadily increasing. Bu., \$4.00.

BERMUDA GRASS

Sow for lawns 15 pounds per acre.

This is the most valuable lawn grass for Florida, as it is well adapted to light soils and in some sections is the only grass that will make a good sod on this class of soil. It also does well on clay and loamy soils. It is rather late to start in the spring, but stands hot, dry weather remarkably well, making a valuable summer lawn. Some gardeners prefer to mix a percentage of Kentucky Blue Grass and white clover with Bermuda and especially when a quick lawn is desired, as the clover and the Kentucky Blue Grass will make a good green showing before the Bermuda grass is

ready, but the Bermuda grass is to be depended on for a permanent summer lawn. Lb., 75c, postpaid.

For winter lawns, Italian rye is used. We sell carloads of Italian rye each season for Florida winter lawns. See description on this page.

CLOVER SEED

White.—Well known. It forms a thick, close turf, is excellent to sow for pastures, especially on sandy soils, and should enter into the composition of all lawn mixtures. Alone, it requires four to six pounds per acre; in mixture, from one to two pounds. Lb., 90c, postpaid.

KENTUCKY BLUE GRASS

It is rather sensitive to heat, but not so to cold weather, and on this account does its best in the fall, winter and spring. It grows slowly at first, forms a very compact turf, making a fine pasture when once established. It is much the best, however, to combine other grasses with it for either lawn or pasture. Sow in the spring or fall. Lb., 85c, postpaid.

FERTILIZERS

Our "Special brand of vegetable and trucker's fertilizer" will furnish you with the best combination of plant food for the various crops for which we recommend them. The following are a few for special crops, but we can supply your wants for any crop desired. Prices f. o. b. Jacksonville.

Vegetable Special, Cucumber Special, Irish Potato Special, Strawberry Special, Bean Special, Cabbage Special, Cantaloupe Special, Watermelon Special, Tomato Special, Sweet Potato Special, Special Corn-Grower.

On account of unsettled prices of fertilizer material, we are unable to name prices on above. Will be pleased to quote lowest market prices on application.

E. A. MARTIN SEED COMPANY, JACKSONVILLE, FLORIDA

It Sticks; It Stays; It Stimulates; It Saves

BUG DEATH

REG. U. S. PAT. OFF.

The INSECTICIDE which kills most bugs and worms that eat the leaves of plants, trees and vines; protects from injury by the flea beetle, is especially valuable for potato, tomato, squash and cucumber vines, currant and gooseberry bushes, strawberry plants, etc.; helps to ward off Blight, commonly known as Rust, on these vegetables and berries.

It saves beets from wormy leaves, celery from rust, asparagus from injury, cabbages and cauliflowers from destruction.

BUG DEATH is a fine powder which may safely be used on all plants, trees and vines, as it CONTAINS NO PARIS GREEN OR ARSENIC IN ANY FORM

In careful tests with Irish potatoes those on which **BUG DEATH** was applied yielded 67 5/9 bushels more per acre than those treated with Paris Green. At an average price of 5/c per bushel this means \$33.78 more for one acre, 67.56 more for two acres, 168.90 more for five acres, 337.80 more for ten acres, etc.

Considering a proportionate average increase of profit on other vegetables, can you afford not to use **BUG DEATH**?

BUG DEATH is packed and sold as follows:

	By Parcel Post—Prepaid			
	1st and 2d zones.	3rd zone.	4th zone.	
1-lb round carton (with sifter top).	\$0.30	\$0.32	\$0.35	\$0.39

HAMMOND'S SLUG SHOT

Used from Ocean to Ocean for 39 Years

SLUG SHOT is an Insecticide to destroy Potato Slugs and Cabbage Worms on Cabbage and similar plants, and certain Worms on Cabbages, Tomatoes and Egg Plants; Flea Beetles, Striped Cucumber Beetles and similar leaf-eating Insects; certain Slugs and Caterpillars on trees and bushes.

SLUG SHOT kills many Injurious Insects without injury to the Foliage.

IF YOU WANT CABBAGE FREE FROM WORMS, USE HAMMOND'S SLUG SHOT.

How to Destroy Cabbage Worms.—Slug Shot can be used lightly or heavily and the cabbage suffers no harm. The cabbage forms its head by interior growth; it throws off its earlier and outside leaves, and no dust can enfold within its head. Apply **Slug Shot** with a duster (see illustration), sieve it over the plants or full grown cabbages. The powder is very fine and goes a long way in field or garden. 1 lb. can, 35c; 5 lb. pkg., \$1.50; 10 lb. pkg., \$2.75.

The measure of success achieved by **SPRATT'S DOG FOODS** is the outcome of their intrinsic worth, every ingredient entering into their manufacture being chosen either as a health producer, a body builder or vitalizer.

SPRATT'S DOG CAKES

Pkg., 2 1/2 lbs., Price, 35c.

AND PUPPY BISCUITS

Pkg., 2 1/2 lbs., Price, 35c.

Comprise just the right proportion of best quality wheat meals and our pure "Meat Fibrine" to ensure an alert and healthy dog.

FLOWER POTS AND RED EARTHENWARE SPECIALTIES

Made for us by the best pottery in this country, and far better than the common pots usually offered. Special prices to florists using large quantities.

Charge will be made for packing pots, pans and saucers at 25 cents for order amounting to \$2.50 or less. On large orders proportionate charge will be made. This barely covers cost of packing.

POULTRY SUPPLIES

In the past ten years farm products have not increased in proportion to the population, with the consequence that their value has greatly increased. The high price of feeds has reduced the number of cattle fattened in the feeding districts, so that there is less of it being done now than at any time within the past ten years, notwithstanding the increased population.

The consequence is that all meat foods have doubled in price, and eggs, poultry and dairy products have had their share in the increase, and from the present indications will have more than their share in the future. These products can be grown on small farms in the more thickly settled parts of the country, and it is inevitable that they should replace beef to a great extent. The producer of eggs, broilers, roasting chickens and ducklings can confidently expect an increasing market that will become more and more profitable.

Opportunities in the Poultry Business

The poultry business presents larger opportunities than any other farm specialty, and, in fact, for the amount of money invested, a greater profit than most mercantile and manufacturing industries afford. The various branches of the commercial poultry business can be summed up as follows:

The egg business, where hens are reared and kept for market eggs; the broiler business, where a winter equipment is used to raise small birds for market during the off season; the winter roaster business, where large roasting chickens and capons are produced at a time when there is a scarcity of fresh-killed chickens, and the duck business, where ducks only are raised for market purposes.

There is no branch of the poultry business that presents less risk and surer gain, with quick returns, than the egg business. Its all-year-round income makes it the most popular branch of the poultry business.

We have a number of customers who raise stock chickens for sale or can furnish eggs.

We shall take pleasure in furnishing their names to anyone interested. We shall be glad to put any of our customers' names on this list who have chickens and eggs to offer.

DO YOU KNOW That the value of the eggs and poultry consumed in the United States every year exceeds that of the production of gold many times over?

Every day in the year there are about 125,000,000 eggs used in this country, and the value of them and the poultry consumed, per annum, is computed to be \$900,000,000.

Are you getting any of this?

The domestic egg supply is not equal to the demand. Millions of eggs are imported annually. If it pays to produce eggs in foreign countries, pack and ship them to this country with added costs of freight, won't it pay YOU to produce them HERE?

There's always a market for both eggs and poultry. The question is

How to Get Profitable Products

It used to be a general assumption, and is so yet, to a certain extent, that after a man had made a failure of anything or everything else, he could make a success keeping chickens. Anyone can keep chickens, is the way they figure it. Quite true, but not every one can make the chickens keep them.

To make the poultry business pay, the first requisite is to keep your poultry in a healthy condition.

Don't let your fowls get sick. That is our advice to you, and it is easy to follow.

How? First: Breed only from your best, most vigorous fowls.

Second: Set your eggs in properly constructed incubators, and raise the chicks in well-ventilated, well-heated Brooders or Hovers, thereby avoiding the lice that young chicks start with when hatched and raised with hens. This will give you a start with strong chicks. It's half the battle.

Chickens of whatever age require a ration containing feedstuffs of four different classes: Grains, Animal Food, Green Food and Mineral Matter.

These have been aptly called "Grains, Greens, Grubs and Grits." If any of these are omitted the results are bound to be more or less unsatisfactory.

While this list may seem somewhat imposing, it is in reality simple, and a ration containing all four groups need cost no more than one which is incomplete.

We carry a complete stock of the highest quality Grain, Feed, Grit and Shell, Beef Scraps, etc., which you will find described in this catalogue.

If you are a poultryman or stock-raiser and interested in prices, we will be pleased to add your name to our weekly price list, which we issue on grain, feeds, etc.

Mica Crystal Grit.—This Grit is prepared especially for poultry. Perfect material for both grinding and shell-making. We can supply this in sizes suitable for poultry, pigeons, ducks and small chickens. Grit is the chickens' teeth, and often means the difference between success and failure with poultry.

Crushed Oyster Shell.—Splendid for poultry, to help in the formation of egg shells and keep fowls healthy. Use it freely. Feed alone.

Coarse and Fine Cracked Bone.—Consists of ground beef bone, thoroughly dried. It is more economical and better in every way than common raw beef bone. Rich in bone phosphate of lime, which is so necessary for making good egg shells and for building up the frame of the chicken. Should be placed in liberal quantities in a clean, dry place, easily accessible to the chickens at all times.

Raw Bone Meal.—It is made from fresh bone, from which the moisture has been taken, leaving nothing but the phosphates, lime and protein. These are the only food properties of bone, green or dry. This bone will keep in any climate or any kind of weather if kept in a dry place. Bone is especially valuable as an egg producer.

Blood Meal.—Pure Blood Meal fed to your poultry will make your hens lay, your chicks grow fast, and keep your fowls healthy. Should be mixed with corn meal, bran or wet food.

RAISE POULTRY

With poultry and eggs at exceedingly high prices

Now is the Time

To raise poultry either for just your own use or on a commercial scale.

We will Help You Get Started

WRITE US

Darling's Beef Scraps.—For success with poultry, it is absolutely necessary to give them plenty of animal food in the winter, to take the place of insects, etc. For this purpose, Beef Scraps are one of the best foods that can be used. Feed mixed with meal or bran, at the rate of one-fourth pound of beef scraps per day to a dozen hens. We guarantee the purity of our Beef Scraps. No pork or fat is used to add weight. It analyzes 55 per cent protein.

Charcoal.—No poultryman can afford to be without Charcoal, and a little of it goes a long way. It aids digestion and promotes the health of the poultry at all ages. It is prepared in three grades: **Fine**, for use in mash mixture; **Medium Granulated**, for small chicks, and **Coarse**, for grown fowls.

Beef Meal.—Made from cooked beef scraps, thoroughly dried and ground. It is better and more economical than fresh beef scraps, because it is concentrated and free from moisture.

Alfalfa Meal.—Very necessary for the laying hen. It will insure a greater number of eggs, also a larger proportion of fertile ones. Alfalfa is also used to keep laying and breeding fowls in good health, and adds to the luster of the fowl's plumage.

NAPHTHALENE NEST EGG

This Nest Egg is used, not in reality as a Nest Egg, but is put into the nest to remove and kill the lice—the same as a camphor ball is packed in clothing to keep out the moths. If one of these Nest Eggs is placed in a nest with the nesting material it will remove all vermin, if put in a corner of the nest beneath the nesting material a setting hen can remain on the nest with comfort and watch chickens instead of lice and mites.

Unlike those made of plaster of paris or other similar materials, it retains its disinfecting and lice-killing qualities as long as there is anything left. Price, 5c each; 50c per doz.; postpaid, 5c each extra.

PORCELAIN NEST EGG

This article does not need any description as it is well known to all who keep poultry. They are made of a good quality of flint glass and will last indefinitely.

Price, each, 6c; per dozen, 60c.

Quickly assimilated. Insures even feathering.

We have recommended and sold these feeds for several seasons. We sell more every year. Our customers like them and come back for more. Insure your success in raising poultry by using **Blue Ribbon Feeds**.

AGE AND EVERY NEED

HAVE A CONKEY CORNER IN YOUR POULTRY HOUSE

And Be Ready when Disease Appears.

A healthy hen cannot keep from laying; therefore, make a study of poultry diseases and by having CONKEY'S REMEDIES AND TONICS always at hand, be ready to fight the trouble just as soon as it appears.

Check over the following list and send us your order. Every poultry owner should have on his shelf these remedies all the time—they are the best poultry insurance you can get.

Conkey's Roup Remedy is a scientifically prepared medicine. Coming in contact with the membranes of the throat and mouth, the seat of the disease, it kills the germs. It is quickly taken up by the system and, being a strong tonic and blood purifier, it cleanses the blood, builds up the system and assists nature in every possible manner to throw off the disease. **Price 30c, 60c and \$1.15.**

Conkey's Roup Pills.—For the individual treatment of birds and for use in the show room. **Price, 30c, 60c and \$1.15.**

Conkey's Canker Special.—A new remedy that effectively reduces the cankerous growth and brings the bird back to normal without a blemish. Also fine for treating colds, etc. **Price, 60c.**

Conkey's Sorehead Remedy.—This disease is known by different names in different localities, such as Sore Head, Pigeon Pox, Warts and Plan. Chicken Pox is very contagious, and is a very annoying and disgusting disease. If allowed to run, it leads to weakness and death.

Symptoms.—Scabby warts on the comb, lobes and face. **Price, 30c and 60c.**

Conkey's Poultry Tonic is the result of years of careful study and experiment. It contains no filler and is in no way harmful to the birds. It keeps the bowels in good condition, assists digestion and the assimilation of egg-producing and strength-making material gives vigor to the fowls.

Conkey's Poultry Tonic is not a food in itself, and in its use you escape paying for bran and middlings which comprise the bulk of inferior "egg producers." **Price, 30c, 60c.**

Conkey's Limberneck Remedy.—Limberneck, ptomaine cholera poisoning is a very fatal disease, requiring immediate treatment. It can be easily cured in all early stages. **Price, pkg., 60c.**

Conkey's Cholera Remedy.—We have put out this remedy in such a form that it must be given in the drinking water. **Price, 30c and 60c.**

Conkey's Bronchitis Remedy.—Bronchitis and Roup are frequently confused but they are separate diseases and require special treatment. It is an inflammation of the membranes of the bronchial tubes instead of the membranes of the nostrils and head passages. **Price, 60c.**

Conkey's Scaly Leg Remedy.—Scaly Leg is caused by a parasite working in and underneath the scales of the feet and legs. **Price, 60c.**

Conkey's Rheumatic Remedy cures those lame and useless birds, tones the system, limbers up the joints and gets them into profit-paying condition in very short order. It is absolutely dependable if used according to directions. **Price, 60c.**

Conkey's Gape Remedy.—This is a reliable remedy for this annoying and deadly disease. It is guaranteed to do the work and to satisfy YOU. **Price, 30c and 60c.**

Conkey's Buttermilk Starting Food Makes husky chicks. Conkey's Buttermilk Starting Food will put vim and vigor into your baby chicks at the time they need it most. It will make them strong and husky, so that they can fight off most of the chick diseases that carry off so large a percentage of the yearly hatch.

Conkey's Buttermilk Starting Food is a perfectly balanced ration for baby chicks to be fed over the critical first several weeks. It contains clean, wholesome grain and is mixed with pure buttermilk brought to a semi-solid state. This combination is then dried so that the entire grain is saturated with the buttermilk. After the eighth week use Conkey's Buttermilk Mash.

Prices subject to change

Conkey's Poultry Conditioner is a remedy specially valuable for fowls run down, off feed, recovering from disease, during molting season or when preparing for the show room. It is a general invigorator, quickly bringing birds to a normal condition. **Price, 30c.**

Conkey's Lice Powder is absolutely harmless to the fowl, and positively overcomes the lice. Dust the fowls thoroughly every ten days, or two weeks, particularly during hot weather, as the nits will hatch after the old lice are killed. Also use it in the dust bath. **Price, 30c, 60c, \$1.15 Pkgs.**

Conkey's White Diarrhea Remedy. When this disease prevails it usually kills a large percentage, sometimes destroying an entire hatch. It is accompanied by a white, pasty, fecal discharge, which pastes up the feathers and closes the vent. **Price, 30c and 60c.**

Conkey's Head Lice Ointment.—This article will destroy the head louse which annually kills thousands of little chicks. **Price, 15c and 30c.**

Conkey's Poultry Worm Remedy.—This is a most necessary article, as it aids in ridding the fowl of harmful as well as other worms, promoting the return of healthful condition. **Price, 60c.**

Conkey's Nox-I-cide.—(Formerly called Taroline). This is the poultrymen's best friend. The majority of dangerous poultry diseases may be traced to the presence of germs, which thrive unless a soluble disinfectant, deodorant and germ destroyer is used. Conkey's Nox-I-cide mixes with water, in correct proportion for using, one gallon making 101 gallons of ready-to-use liquid. It is the cheapest and most effective article of its kind ever put out. For poultry, it is an unexcelled article for cleaning and purifying the houses, runs, brooders, founts and utensils. For household use it is of wonderful value in almost every department. It is unequalled for the sick room and for purifying everything about the house, barns, outhouses, kennels, etc.

Prices, 1 pint, 50c; 1 quart, 75c; 2 quarts \$1.25; 4 quarts, \$2.00.

Conkey's Fly Knocker.—Many infectious and dangerous diseases are communicated by flies and other pests. Beside this they are a source of constant worry to man, beast and fowl. Conkey's Fly Knocker makes it possible for you to overcome such insects. Spray it on your stock and wherever flies congregate and you will find that your stock is far more profitable and your own comfort will be greatly increased. We guarantee it to give satisfaction. **Price, 1 quart, 75c; 2 quarts, \$1.25; 4 qts., \$2.00.**

Conkey's Sulphur Candles.—For fumigation. 15c; 3 for 35c.

Every Conkey Remedy is guaranteed to give satisfaction or money back.

Send 5 cents for Conkey's Poultry Book. It tells how to detect and cure poultry diseases.

Conkey's Poultry Tonic.—Contains no cayenne pepper. It is a laying tonic, molting powder and regulator of a high type and is prepared with the same care that has made the efficiency of Conkey Poultry Remedies world famous. A little in the food of breeding birds in early spring means vitality and strength in the hatching eggs.

You can give Conkey's Poultry Tonic to every bird in your flock every day in the year. It will pay you well to help your birds.

Pratts, Poultry and Stock Regulators and Remedies Baby Chick Food

Healthy birds and lots of eggs, the two big things in poultry raising, are made certain by giving

PRATT'S POULTRY REGULATOR

12 lb. palls, \$1.75; 25 lb. palls, \$3.00; packages, 60c and 30c.

It builds up vitality, insures sound digestion, sharpens appetite and prevents disease, thus putting birds in condition for heavy egg laying or winning blue ribbons.

Pratt's is the original Poultry Regulator of America and is in use by the most successful poultry raisers everywhere.

When regularly used, hens lay throughout the year.

It will prevent chicken cholera, gapes, roup, rheumatism, expel worms, prevent leg weakness and egg eating. It will greatly improve turkeys, geese, ducks, pigeons and guineas—insuring quick growth and keep them free from disease.

If poultry keepers would regularly spray the chicken houses, roosts, droppings boards and utensils with

PRATT'S POULTRY DISINFECTANT

most all of their troubles would vanish. This great disinfectant is a real wonder-worker in the poultry yard.

Three times as powerful as crude carbolic acid. A sure deodorizer, germicide and liquid lice killer. Use it for roup, colds and other contagious diseases.

We want you to notice the price, making it the lowest priced disinfectant on the market. Others of equal strength are usually sold for \$1.50 per gallon.

Half gallon, \$1.00; quart, 60c.

Get rid of lice on your poultry, in nests, dust-baths, incubators and elsewhere in a day's time by using

PRATT'S POWDERED LICE KILLER

60c and 30c.

Effective, non-poisonous, non-irritating. May be used wherever a powder is suitable. A splendid deodorizer.

It quickly and thoroughly kills all lice on little chicks, big chicks, setting hens and incubator chicks. It rids horses, cattle, hogs, dogs and cats of lice and destroys ticks on sheep. It destroys insects and bugs on vines, plants and flowers. A valuable deodorizer and disinfectant for all poultry houses, barns, stables and dwellings. Drives out moths from closets, furniture, carpets and clothing.

Mailed postpaid upon receipt of price.

From gratifying experience poultrymen have learned that the disgusting disease known as Sore Head or Chicken Pox can be successfully treated with

PRATT'S SORE HEAD (CHICKEN POX) REMEDY—60c and 30c.

It acts quickly, checking the spread of the contagion and curing the sores.

We guarantee a sure, rapid cure if Pratt's Sore Head (Chicken Pox) Remedy is used. Mailed postpaid on receipt of price.

Don't let Roup cut your profits. The sure and easy "ounce of prevention" against this dangerously contagious disease is

PRATT'S ROUP REMEDY

Tablets or Powder, 60c, 30c.

Quickly absorbed by the blood, purifies the system, reduces fever, allays inflammation. The safe remedy for roup, colds, catarrh and all bad weather diseases.

Mailed postpaid upon receipt of price. When baby chicks come, keep them healthy and growing and bring even the weak ones along by feeding

PRATT'S BABY CHICK FOOD

14 lbs. for \$1.50; packages, 60c and 30c.

A largely predigested baby food for baby chicks. Guaranteed to raise every livable chick. Costs a cent a chick for three weeks. Prevents leg weakness, white diarrhoea, "pasting up" and other chick diseases.

To protect your chicks from white diarrhoea, the most destructive of all chick diseases, it is only necessary to give

PRATT'S WHITE DIARRHOEA REMEDY

60c and 30c.

in the drinking water from the first drink. This remedy has saved many dollars' worth of chicks for poultry raisers. You can depend on it.

Mailed postpaid on receipt of price. Head lice causes the death of thousands of baby chicks every season. You can save these chicks if you will apply

PRATT'S HEAD LICE OINTMENT

30c.

An unfailing and guaranteed remedy for gapes, one which acts quickly and causes the worms to be expelled.

PRATT'S GAPE REMEDY

60c and 30c.

If used in the drinking water from the start until the chicks are four weeks old, gapes will be practically unknown and it will effect a positive cure in chicks already attacked.

Mailed postpaid on receipt of price.

Few diseases show greater fatality among poultry than chicken cholera. An unfailing remedy is

PRATT'S CHOLERA REMEDY

60c and 30c.

It is administered in the drinking water and will be found equally valuable for treating all digestive troubles such as sour crop, dysentery or diarrhoea.

Mailed postpaid on receipt of price.

More work out of your horses, more milk from your cows, fatter hogs—these are a few of the benefits which come with using

PRATT'S ANIMAL REGULATOR

Costs less than a cent a day per horse or cow. This is the original and pioneer stock regulator of America. Tested thoroughly for nearly half a century, its worth is known and recognized by stock owners the world over. Always sold in a guarantee that will satisfy you or money back.

Packages, 60c and 30c.

Give comfort to horses, cows and all other live stock in fly time by spraying them with

PRATT'S FLY CHASER

We guarantee it to be unapproached as a fly repellent. It has long efficiency, will not blister, remove the hair or damage the hide. Insures comfort at milking time for the cow and safety for the milker. Does not taint the milk or gum the hair. Soothing and healing on bites and sores. Has no injurious acids. Economical. Will rid dogs and cats of fleas. An effective poultry lice killer. 1 gal., \$1.50; half gal., 90c.

Pratt's Worm Powder, 60c and \$1.25.

Pratt's Veterinary Liniment, 30c, 60c and \$1.20.

Pratt's Cow Remedy. Packages 60c and \$1.20; 12 lb. pall, \$2.50; 25 lb. pall, \$5.00.

Pratt's Bag Ointment, 35c and 70c.

Pratt's Healing Ointment. 30c and 60c.

Pratt's Animal Dip. 1 qt., 60c; 2 qts., \$1.15; 1 gal., \$1.75.

Pratt's Distemper and Pink Eye Remedy, 75c.

Pratt's Veterinary Colic Remedy, 75c and \$1.50.

Pratt's Heave, Cough and Cold Cure, 60c and \$1.25.

Fixtures for Poultry Houses and Yards

Some New, Handy Sanitary Articles to Help You
Make the Chicks Thrive and Grow

The Apaco Poultry Feeder

Same mechanical features which have proven so successful in the Norwich Automatic, but of the hanging type. Designed for the small breeder or "backyarder," but not recommended for the commercial plant owing to swaying motion, present in all hanging feeders, if kept constantly in action by larger flocks. Rotary action, complete with the all-important adjustable valve for regulating feed discharge, and guaranteed the best automatic feeder on the market at its price.

PRICE

Made in one size only, 12 quarts capacity..... \$2.25
Shipping weight, 5 lbs.

PATENTED MAY 6, 1908

THE NORWICH CHICK FEEDER

Positively prevents chicks from wasting the mash, and it is impossible for them to get into the feed, thus making it an absolutely sanitary feeder. Top rod removable for fling and cleaning. Ends riveted and burred to brackets. The strongest and best Chick Feeder ever placed on the market. **Perfection as a sour milk feeder.**

PRICE LIST.

Made in three sizes.

10-inch. Shipping weight, 15 ozs.....	45c
15-inch. Shipping weight, 19 ozs.....	50c
20-inch. Shipping weight, 23 ozs.....	65c

With Rain Top, add 12 cents to list and 7 ozs. to weight.

SANITARY FEEDING TROUGHS

No. 21

No. 22

No. 23

Can be used for feed, wet mash or water.

Barred top prevents wasting of feed, and if used for water does away with the little chicks drowning. The feed saved by using this trough will more than pay for itself in a few weeks. Made of the best grade of galvanized iron in three sizes, namely:

No. 21—12 inches long, each.....	\$.60
No. 22—18 inches long, each.....	\$.85
No. 23—24 inches long, each.....	\$1.10

MOE'S ROUND BABY CHICK FEEDER

Moe's No. 11 Feeder.

Pure food for the baby chicks. A great feed saver, as the little chicks cannot get into it and contaminate the feed. Cannot be upset. Can also be used for water or milk. This is a practical, well-made feeding device that will last for years. Manufactured in two sizes.
No. 11—6 inches in diameter, 8 feeding holes, each..... \$.25
No. 12—8 1/2 inches in diameter, 12 feeding holes, each..... .40

CHICK GRIT AND SHELL BOX

Growing chicks should have grit, oyster shell and charcoal always before them; and for this purpose our Chick Grit and Shell Box is indispensable.

It is made of galvanized steel, with three compartments.

Height, 7 1/2 inches; width, 6 inches; depth (front to back), 4 inches at bottom and 2 inches at top.

Price.....60c; hen size, \$1.25

Shipping weight, 2 lbs.

CAPONIZING SET

Increased interest in caponizing has led us to have prepared for us, by one of the leading instrument makers of this country, this special set of caponizing tools, which are designed after the most approved models. Caponizing is easy to learn, and all surplus cockerels should be operated upon, as the birds then grow faster and fatten more quickly with less food. Full directions are furnished with this set, so that good results may be obtained by the amateur.

Price, complete, \$3.25, postpaid.

The New Revised and Enlarged

Standard of Perfection

The Only Recognized Authority On All Standard Requirement

Handsome cloth bound book of 368 pages, 112 full page illustrations of poultry, hantams, ducks, geese and turkeys.

A new nomenclature indicating each section of all Standard breeds and varieties, male and female. A glossary of fifteen pages describing and illustrating many technical terms used by poultry breeders. A complete list of recognized disqualifications for each American standard-bred and variety. A chapter on cutting for defects.

No poultry breeder should be without a copy.

Buy a copy and know the standard requirements for all American standard-bred breeds and varieties. Price, cloth, \$2.00, postpaid.

DRY MASH HOPPERS

Large in capacity and small in price. Does away with all trouble of feed logging, no matter how coarse. The gradual enlargement to the base together with the vibration of the fowls feeding from the trough will force the feed downward. It is a great feed saver. Every safeguard has been placed in the construction of the trough to prevent the birds from throwing out the feed. A trial will convince you that it is a hopper of the greatest merit. Manufactured of heavy galvanized iron in three sizes.

No. 35—8½ in. wide, 12-quart capacity, each..... \$1.50
No. 36—12 in. wide, 18-quart capacity, each..... \$2.00
No. 37—24 in. wide, 36-quart capacity, each..... \$2.50

**Raise More Poultry and Live Stock
Plant More Food and Feed Stuffs**

Convenient, cheap and sanitary. Provides greater drinking surface than the round fountain. Little chicks cannot get drowned. Can be used for feed as well as water. Manufactured in one size only.
No. 32.....20c each

Rectangular Chick Feed Hopper

This hopper is designed for young chicks, and made to either stand on the floor or ground, or hang against the wall. It is divided into three equal compartments holding about four quarts altogether. Made of galvanized iron with hinged lid to both hopper and trough.
Price.....\$1.35 each
Shipping weight, 3½ lbs.

LAY DOWN TO FILL

MOE'S WALL FOUNTAIN

This style made with permanent bottoms. A strong, substantial wall fountain at a low price. This fountain appeals to many breeders and is especially adapted for watering pigeons. Manufactured of the best grade of galvanized iron in three sizes.

No. 25—About ½-gal. capacity, shipping weight 1 lb. \$.60
No. 26—About 1-gallon capacity, shipping weight 2 lbs. \$.80
No. 27—About 2-gallon capacity, shipping weight 2½ lbs. \$ 1.00

WHEN FILLED, HANG UP, THEN READY FOR USE

MOE'S CLIP AND PUNCH

A poultry punch for marking baby chicks. Punches a clean hole in the web between the toes that will not bruise the foot. On the reverse side a cigar cutter that performs as neatly on the end of a cigar. Both guaranteed to work perfectly.
No. 38—Packed 1 doz. in, shipping weight, per doz., 5 oz..... \$ 2.50

BOTTOM FILL FOUNTAINS

A General Utility Fountain at a Low Price.

Made in two pieces. Easily cleaned and owing to its shape it will not burst from freezing. This fountain fills the breeder's needs for an inexpensive fountain. Made of the best grade of galvanized iron in three sizes.

Size	Packed Shipping Wt.	Price
No. 19—About 1-qt. capacity,	2 doz. in 18 lbs... each	\$.40
No. 20—About ½-gal. capacity,	2 doz. in 25 lbs... each	.50
No. 24—About 1-gal. capacity,	1 doz. in 16 lbs... each	1.00

No. 90—Four-compartment, round bottom

No. 9—Three-compartment, round bottom

No. 45—Two-compartment square bottom

GRIT AND SHELL BOXES

Grit, shell and charcoal have now become a recognized essential part of the diet, insuring healthy fowls. They cannot be more economically supplied than in one of our inexpensive compartment boxes. Can also be used as a feed hopper for little chicks. Made of heavy galvanized iron in three sizes:

No. 45—For baby chicks, each.....	\$.45
No. 9—For grown birds, each.....	1.00
No. 90—For grown birds, each.....	1.40

Be sure to specify size and style of incubator and brooder for which lamps are wanted.

RABBIT SUPPLIES

There has been a growing interest in the RABBIT INDUSTRY in our state for the past few years and the care and breeding of various BREEDS of RABBITS has reached proportions larger than can be realized. Recently an Association was organized for the promotion of this industry and officers were elected which should insure better quality and more scientific methods, as plans are already made for a State Show which should bring the breeders together and put this industry on a higher plane. The Association will be known as "THE FLORIDA BREEDERS' AND FANCIERS' ASSOCIATION." Rabbits, like other animals, require a mixed diet and balanced rations to maintain health and give maximum results. We have been having a big demand for a balanced grain Rabbit Food and to meet this requirement we have prepared three mixtures approved by Rabbit Breeders which are composed of the choicest grain and seeds.

No. 1. UTILITY RABBIT FEED (for general use) containing Cracked Corn, Oats, Barley and Wheat.
No. 2. FOR BREEDING DOES, to be used one meal a day with the Utility Rabbit feed and green stuff. This feed consists of Corn Meal, Barley, Meal, Oatmeal and Bran.

No. 3. FOR YOUNG RABBITS, consisting of Cracked Corn, Cracked Barley and Bran. Care should be taken that green feed given young Rabbits is not wet when fed and not fed too liberally. A good substitute for green feed is Alfalfa meal.

Prices on feed as follows: No. 1—UTILITY RABBIT FEED, 10 lbs., 60c; 25 lbs., \$1.25; 50 lbs., \$2.25; 100 lbs., \$4.25.
No. 2—BREEDING DOES, 10 lbs., 75c; 25 lbs., \$1.50; 50 lbs., \$2.50; 100 lbs., \$4.75.
No. 3—YOUNG RABBITS, 10 lbs., 75c; 25 lbs., \$1.50; 50 lbs., \$2.50; 100 lbs., \$4.75.

MOE'S HAY AND FEED RACK

For holding Roots or Hay, Alfalfa, Clover, etc. It prevents scattering Hay and wasting. The round trough at the bottom catches the small tender leaves. Feed saved soon pays for Rack.

No. 44—Packed 6 in. Weight 10 lbs. Price, each..... \$.75

MOE'S FEED AND WATER DISH

Made of Galvanized Iron. Rolled in top prevents wasting. Dish held to the floor of Hutch by simple locking device easy to remove for cleaning. Impossible for stock to tip over.

MARTIN'S PLANTS

Grown on Our Own Farm

Two years ago we decided to grow our own plants and since that time we have been furnishing our customers with Fresh-dug plants direct from our own plant farm. Our plant business is increasing rapidly as our customers appreciate the quality of our plants and now our plants are enjoying the same good reputation as Martin's Hy-Test Seeds always have.

We are striving to give our customers the best of everything and we know that if you haven't been buying our plants that if you order them and try them out this fall that they will please.

We expect to be able to supply all seasonable plants and we are listing below a few varieties. If you are in need of plants, write us for special price list and information as it is not practical to name prices at this time.

PLANT MARTIN'S FRESH-DUG PLANTS FOR BEST RESULTS.

One of the many hot-beds on our own farm where we grow our plants

CABBAGE PLANTS

BY PARCEL POST, PREPAID
(Frost Proof)

Grown from best seed and not imported seed; shipped direct from our growing stations—shipment from October to April 15th. Transplant deep, up to the first leaf, in deep, rich soil, and water plants well. Set out two to three feet in row; rows thirty inches apart, 7,000 to 8,000 plants per acre, ready for use in 100 to 150 days. Varieties: Jersey Wakefield, Charleston Wakefield, Succession and Early Flat Dutch. Terms, cash with order. No plants shipped C. O. D.

LETTUCE PLANTS

Ready for shipment from November 1st until May. Prices on application.

Ready for shipment October 15th.
Fine Georgia Collards and N. C. Short Stem.

FLOWER PLANTS

We can furnish **Shasta Daisy Plants, Pansy Plants, Cosmos, Salvia or Scarlet Sage.**
Get our price list in season.

SHASTA DAISY

A fine perennial plant bearing large white single blossoms, with yellow centers. Soak seed in warm water over night before sowing.

Note strong root growth of our Strawberry Plants.

STRAWBERRY PLANTS

FOR FLORIDA

Can be set out in July and August during the rainy season to procure best results for early berries in December.

One of the essential conditions for growing strawberries in Florida is the selection of a well-drained field, preferably pine land with a clay subsoil. The first step is to plow land thoroughly, then broadcast commercial fertilizer about one ton to acre. Harrow in thoroughly, and after this is done lay off the beds five feet wide with an eight-inch shovel running twice to the furrow; then pull the dirt from middle of furrow to center of bed. Lay off rows twelve inches apart, four rows to the bed. Set plants fifteen inches apart in the rows. After plants are set, work around plants one week after setting. Cultivate at intervals of two weeks during July, August and September to keep down the grass. First of October give second application of vegetable fertilizer at rate of one thousand pounds to acre. When bushes begin to show the bloom forms, apply five hundred pounds of fruit and vine fertilizer.

A slight mulch of pine tops or straw applied after cultivation will improve the quality and cleanliness of the fruit.

Klondyke.—The true Klondyke Strawberry we offer, proven to be one of the most valuable Southern berries. When fully ripe it is of excellent table quality, having a decided flavor, aroma and character of its own. Grows on a long stem. This keeps the berry clear of the ground, causing them to require less mulching than most kinds. This is also a safeguard against frost. It is a plant of remarkably vigorous growth and of enormous productiveness.

Missionary.—A new variety, very popular through the trucking districts. Strong grower, making plants freely; early to mature, coming in directly after Excelsior, and very productive. The berries are well colored, firm, large, and hold their size well throughout the season. Good shipping qualities, and is being planted on an extensive scale by berry growers.

We only offer two varieties, although the number of varieties are many. These two varieties have proved the best.
