Highest Authorities Endorse This Book

"I have carefully gone over this interesting collection of stories and believe the author has accomplished what he set out to do—to encourage the readers to find in real life real animate forms which, in their many transformations and habits, are as marvelous as many of the airy tales and far more interesting, as many of them have proved to be our real friends or enemies. I think a book of this nature will create a love of observing, collecting, and studying insects. Wish to compliment you upon the mechanical execution of the work and the many beautiful illustrations accompanying it."—G. M. Bentley, State Entomologist, University of Tennessee.

"The effort to attract young people to the study of insects has my entire approval. I know of only two books which have approached this subject as Mr. Bralliar has done. Mr. Bralliar's book is quite distinct from either of these. The illustrations are very beautiful and Mr. Bralliar's stories are very well told. You have put out an attractive book, and one which I think will not only be widely read, but will do much good."—L. O. Howard, Chief of the U. S. Bureau of Entomology.

PRAISE FROM THOSE WHO KNOW

"This book is bound to be of great value in interesting children in out-of-door observations and in the study of some of the most fascinating of living forms. The style is simple and attractive. The addition of the keys to important groups makes the book valuable to older students as well as for beginners."—*Wm. A. Riley, Chief of Division of Economic Zoology, University of Minnesota.*

"It has been a joy and delight to read your new book. I expected a treat and this certainly comes up to my highest expectations. It is just the thing we have been needing."—*Myrtle L. Kaufman, Principal, Teachers' Training School, Springfield, Ill.*

"It is a book that will be taken up again and again by the adult or child who once finds interest in insect life."—*Springfield Republican.*

"In this book the butterflies, bees, and wasps, and other field and forest folk are introduced to us in a particularly fascinating way."—*Brooklyn Standard Union.*

"The book is delightfully written. It is scarcely too high praise to mention the writer as doing for America what Fabre did for Europe. The illustrations, some of them in color, are of high value."—*Cleveland Plain-Dealer.*

"A wonderfully interesting book for outdoor lovers. More absorbing for young people than fairy tales, and just as readable, too, for older folk. Truly a valuable book as well as interesting."—*Brooklyn Citizen.*
