Wholesale Price List of

Strawberry

And Other Small Fruit Plants

Spring 1920

7 1923

Grown by

F. W. DIXON, Holton, Kansas

TO THE TRADE

We have been growing strawberry plants for the trade for 31 years. The crop of plants in the spring of 1918 was probably the shortest crop throughout the United States that was ever known. Will say that the crop of plants at the present time is little better than a year ago. To begin with the acreage planted was short. Lack of help at the proper time, was the main cause. The entire growing season has been a season of extremes. The weather in the east has been so wet plants have not done well. In all western sections the weather has been too dry. These conditions added to a short acreage and higher wages could not help but increase the price of plants. We planted about fifty acres which is less than we usually plant. We had late rains enough to guarantee the quality. We probably grow more everbearing strawberries than any other plant grower in all western and central sections. Everbearing strawberries have come to stay and everyone who has a garden must have some ever bearers. If I were confined to any single variety for home use, I would plant Progressive and if any single variety for market I would plant Superb. Primarily a nurserman's business should be to supply his customers with good plants of those varieties that can be grown successfully. Therefore with that object in view I have confined myself to growing a few varieties, that I know will give satisfaction. A long list of varieties of doubtful value are a detriment to any nursery; confuse the planter, and in the long run, are loss to every one concerned. Hence, the reason we have cut our number of varieties short.

TERMS AND CONDITIONS

Cash with the order, or satisfactory references.

Remit by Check, Draft or Money Order.

Holton is located in northeastern Kansas. Has three railroads and 14 express trains daily and all parts of the country can be reached in a short time by express. We always ship plants by express unless otherwise ordered.

Packing is done in the most thorough manner and no charges made.

TIME OF SHIPMENT

We usually can begin digging plants March 1st. No substitution unless ordered to do so. We take great pains to have all our stock true to name, guarantee it to be true to name and to reach our customers in good condition by express. We can not be responsible for more than cost price of plants.

ENTOMOLOGICAL COMMISSION OF KANSAS

Office of State Entomologist
Agricultural College

Manhattan, July 11, 1919.

CERTIFICATE OF NURSERY INSPEC- TION

This is to certify, that in accordance with chapter 386, section 7, of Session Laws of 1907, the nursery stock now growing for sale by F. W. Dixon, of Holton, Kansas, has been inspected by a duly authorized inspector, and found apparently free from dangerously injurious insects or plant diseases.

Invalid after June 1, 1920.

Geo. A. Dean, State Entomologist.
