DIVISION OF FOREST ECONOMICS

Frank A. Ineson, Chief

Anthracite Forest Survey

Miles J. Ferree, Forester

This is the fifth of a series of seven brief reports on the forest condition in the counties of the Anthracite Forest Region. This region includes 15 counties shown on the map on the back of this publication, which contain or surround the hard-coal deposits of Pennsylvania. Because of basic similarities, Northumberland, Columbia and Montour Counties are treated together. The purpose is to present tabular data from the Anthracite Forest Survey for local use, together with enough general information about the three counties to make the forest situation understandable. Forest areas and present condition of the forest were determined through interpretation of aerial photographs, and the distribution of the major forest types was ascertained largely by reconnaissance. Data on species, size-classes, volume, and growth applicable to the several forest types and condition classes were collected by detailed field surveys.

Acknowledgment is made to John A. Buttrick and Donald F. Robinson for aid in compiling and writing the report, and to Robert Bartlett for preparation of charts and maps.

FIGURE 1.— FOREST AREA IN NORTHUMBERLAND, COLUMBIA, AND MONTOUR COUNTIES OF PENNSYLVANIA

THE FOREST SITUATION IN NORTHUMBERLAND, COLUMBIA, AND MONTOUR COUNTIES

Northumberland, Columbia, and Montour Counties present a complex picture: mining in the south, farming through the greater part of the north and central sections, and manufacture along both branches of the Susquehanna River. Except in Columbia County, the forests are of little economic importance, and even in Columbia they play a minor role.

General Description

Northumberland, Columbia, and Montour Counties lie in the foothill country between the Allegheny Plateau and the Appalachian chain. The southern rim of the plateau forms the northern boundary of Columbia. The southern parts of both Columbia and Northumberland are broken up by the narrow ridges and valleys which constitute the northernmost spur of the Appalachian chain. The north branch of the Susquehanna flows south and west through the middle of this territory. The west branch, which joins the north branch at Sunbury in Northumberland County, is the western boundary. The total area of the three counties is 1089 square miles, or 696,960 acres.

Transportation

Transportation facilities in the three counties are good. Three railroads, the Delaware, Lackawanna, and Western, the Pennsylvania, and the Reading, serve the entire area, and the Lehigh Valley provides additional freight service to the southern part of Northumberland County. There are about 900 miles of improved State highway and many miles of rural road, reaching to virtually all parts of the area. Buses provide passenger transportation to the principal towns.

Population

The population in 1940 was 193,766. This is an increase of over 47,000 since 1900, an increase which has occurred entirely in Northumberland and Columbia Counties and largely as a result of the development of the mining industry. The largest towns in the area are the boroughs of Shamokin and Mount Carmel in southern Northumberland, which had populations of 18,810 and 17,780 respectively in 1940, nearly a fifth of the total population of the three counties. Next largest are Sunbury, county seat of Northumberland County with a population of 15,507, and Berwick in Columbia County with a population of 13,115. Bloomsburg, the county seat of Columbia County and the only municipality in the State incorporated as a "town," has 9,799 inhabitants. And the county seat of Montour County, Danville, has 7,122. The greater part of the total population of the three counties is urban and industrial. Only 12 percent (23,781 persons) lives on farms.

Occupations

Manufacture provides the major source of income, with metal manufacture in the lead ^{1/}. In 1940 the output of this industry was valued at about \$28,000,000, and the total wages paid amounted to somewhat more than \$6,000,000. By 1942 the output had increased under the impact of war-time demands to nearly \$274,000,000, and the wages to over \$29,000,000. This industry is located chiefly in Berwick, Bloomsburg, and Danville, along the north branch of the Susquehanna River, and in Milton on the west branch.

Next in importance is the textile industry, which in 1940 was running the metal industry a close second in value of output and was providing nearly twice as much employment, though the total wages paid out were only \$7,000,000. This industry has increased somewhat, but in no such proportions as the metal industry. Between 1940 and 1942 the output was increased from \$27,000,000 to \$39,000,000 and the wages from \$7,000,000 to \$11,000,000. The textile industry is scattered about in the industrial centers of the three counties, relying largely for its working personnel on the wives and daughters of the employees of the heavier industries.

In southern Columbia and adjoining parts of Northumberland Counties lies the western end of the western middle coal field, and here the principal industry is mining. According to the report of the Pennsylvania Department of Mines there were 5,525,830 tons of coal mined and 9061 persons employed in mining in 1940. By 1942 the output had been increased to 6,294,037 tons, but employment had dropped to 7984 ^{2/}. As appears from comparison with the Census figures, not all these employees were residents of these three counties.

North of the coal fields, to either side of the north branch of the Susquehanna River and running north to the forested region of Lycoming and Sullivan Counties, is a rolling country of sharp ridges and broad well-watered valleys devoted largely to agriculture. Here 253,000 acres, or 36 percent of the total area of the three counties, were in cropland in 1940. Altogether there are 4548 farms producing corn, truck produce, potatoes, poultry, and dairy products, with a total yearly value of approximately \$8,000,000 (1939):

Forest Description

The greater part of the forests of this area was cut off during the nineteenth century by farmers clearing land for agricultural use. In the decades immediately before and after the turn of the century commercial loggers cleared off the remaining stands. In a small way lumbering is still carried on, chiefly in Columbia County. And the more accessible stands in the neighborhood of the mines have been repeatedly reduced to unmerchantable condition by frequent clear-cutting for mine timbers.

3/ This table, based on the U. S. Census for 1940, indicates the primary occupations of the residents of Northumberland, Columbia, and Montour Counties. The figures given in the text, on the other hand, are based on the employment provided by industries located within these counties. Discrepancies are due to the fact that many people live in one area and work in another.

Type symbols indicate areas where the given types predominate, but the frequent local occurrence of other types is not precluded.

FIGURE 2. - AREAS CHARACTERIZED BY THE MAJOR FOREST TYPES IN NORTHUMBERLAND, COLUMBIA, AND MONTGOMERY COUNTIES

Forest area

Compared with other parts of the Anthracite Region, this three-county area has little forest land (fig. 1). Only 42 percent of the total area is in forest; and in Montour County only 28 percent is forested. The only extensive tracts are along the ridges, the rest being in scattered woodlots in predominantly agricultural areas. Really small tracts, however are not common. Over 85 percent of the forest land is in tracts of 50 acres or larger $\frac{4}{5}$.

	<u>NORTHUMBERLAND</u>		<u>COLUMBIA</u>		<u>MONTOUR</u>	
	<u>Acres</u>	<u>Percent</u>	<u>Acres</u>	<u>Percent</u>	<u>Acres</u>	<u>Percent</u>
Forest land	121,700	41	148,100	47	23,200	28
Nonforest	178,800	59	164,500	53	60,400	72
Gross area	300,500	100	312,600	100	83,600	100

Forest types

Two forest types predominate in Northumberland, Columbia, and Montour Counties (fig. 2) $\frac{5}{5}$. Through most of Columbia County and in the southernmost portion of Northumberland is the white pine - white oak - red oak type. And the red oak - black oak - white oak type covers most of Northumberland, virtually all of Montour, and the western edge, the southern tip, and several small areas in the eastern part of Columbia. Other types occur in relatively small areas only. There is a little sugar maple - beech - yellow birch and a minute area of aspen - gray birch - pin cherry in the northern tip of Columbia. Chestnut oak is to be found along the ridges in southern Northumberland and in a lesser degree in central and southern Columbia. A few small areas of scrub oak have resulted from fire in the oak stands near the mines in Northumberland and Columbia Counties. Patches of almost pure Virginia pine and scarlet and black oak occur in Northumberland, and there is a small area of Virginia pine in southern Montour. Some hemlock and white pine - hemlock stands are to be found, chiefly in Columbia. And the river birch - sycamore type occurs along both branches of the Susquehanna River and on the banks of Mahanoy Creek.

4/ For detailed supplementary tables see Appendix

5/ Maps showing the location of all forest tracts are available in a scale 1" = 1 mile for each county; except for Columbia similar maps showing forest condition are also available. These maps may be ordered through the Northeastern Forest Experiment Station, 614 Bankers Securities Bldg., Philadelphia 7, Pa. A postal or express money order, draft, or check made out to the Treasurer of the United States, covering the full amount, should accompany the order. Prints will be forwarded from the Forest Service, Division of Engineering in Washington, D. C. Each map will cost: Northumberland County \$.68, Columbia County \$.44, Montour County \$.25.

Figure 3.- THE CONDITION OF THE FOREST

Forest condition

The condition of the forests in these three counties varies from one section to another; but nowhere is it really good (fig. 3) 6/. In Columbia County 6 percent of the forest area is in saw-timber stands and 22 percent in pole-timber stands. In Northumberland and Montour Counties 91 percent of the area is unmerchantable, and only a little more than 1 percent is in saw-timber stands.

Timber volume

The volume of saw timber and the green weight of all timber are shown in the following table 7/.

	<u>NORTHUMBERLAND</u>		<u>COLUMBIA</u>		<u>MONTOUR</u>	
	<u>Total</u>		<u>Total</u>		<u>Total</u>	
	Saw timber	green weight	Saw timber	green weight	Saw timber	green weight
	M bd.ft.	Tons	M bd.ft.	Tons	M bd.ft.	Tons
Saw-timber stands	6,000	67,400	36,700	376,600	1,000	12,000
Pole-timber stands	10,500	146,600	26,300	625,800	1,400	28,200
Unmerchantable stands	31,700	598,900	78,400	1483,600	5,700	124,200
Total	48,200	812,900	141,400	2486,000	8,100	164,400

The distribution of the cubic-foot volume in the pole-timber stands by tree size may be seen in figure 4. Over two-thirds of the green weight of all timber is in oaks. Other hardwoods in Columbia County are chiefly in the sugar maple - beech - yellow birch area in the north. In Northumberland County there is an appreciable proportion in conifers.

6/ The condition classes recognized are; 1. Saw-timber stands; stands of 10 acres or larger, each of which contains at least 2000 board feet of saw timber. 2. Pole-timber stands; stands of 10 acres or larger, each acre of which contains a minimum timber volume of approximately 5 standard cords in trees 5.0 inches diameter breast high (hereafter denoted by the initials d.b.h.) and larger, and less than 2000 board feet of saw timber. 3. Unmerchantable stands; areas of forest land which contain less than the minimum volume for pole-timber stands, plus stands of saw timber and pole timber of less than 10 acres in extent, whether isolated tracts or stands within larger forest areas.

7/ Saw-timber volume is the net board foot of sawlog-size material in conifers 9.0 inches d.b.h. and larger, plus the net volume of sawlog-size material in hardwoods 11 inches d.b.h. and larger. Board foot volumes were based on the International 1/4" log rule, which closely approximates green lumber tally. Deductions were made for cull. Total green weight is the weight of all trees 5.0 inches and larger, including bark and the tops and limbs to a 4-inch diameter. This was computed in cubic feet and converted to tons (green weight) by the application of cubic foot-per-ton factors, varying by species groups and averaging about 35 cubic feet per ton.

Figure 4. - CUBIC FOOT VOLUME IN MERCHANTABLE POLE - TIMBER STANDS
BY DIAMETER CLASS - ALL SPECIES.

NORTHUMBERLAND COUNTY

COLUMBIA COUNTY

MONTOUR COUNTY

	NORTHUMBERLAND		COLUMBIA		MONTOUR	
	Tons	Percent	Tons	Percent	Tons	Percent
Conifers	32,000	22	64,200	10	1,900	7
Oaks, hickory, sugar maple	95,400	65	439,300	70	13,200	82
Other hardwoods	19,200	13	122,300	20	3,100	11
Total	146,600	100	625,800	100	28,200	100

Over 80 percent of the area in saw-timber stands is in Columbia County, and throughout the three counties the bulk of the volume is in young stands. Nearly 60 percent of the area bears less than 4,000 board feet to the acre, and only 9 percent has as much as 8,000 to the acre.

	NORTHUMBERLAND		COLUMBIA		MONTOUR	
M bd.ft. per Acre	Acres	M bd.ft.	Acres	M bd.ft.	Acres	M bd.ft.
8 and more	130	1,200	900	8,400	20	170
6 to 8	150	1,000	1,000	6,400	30	210
4 to 6	260	1,100	2,000	8,800	20	110
2 to 4	1,060	2,700	5,200	13,100	230	510
Total	1,600	6,000	9,100	36,100	300	1,000

Figure 5.- BOARD FOOT VOLUME IN MERCHANTABLE SAW-TIMBER STANDS
BY DIAMETER CLASSES - ALL SPECIES.

NORTHUMBERLAND COUNTY

COLUMBIA COUNTY

The species in the saw-timber stands is much the same in Northumberland and Montour Counties as that of timber in the pole-timber stands. In Columbia County, however, there is almost as high a percentage in conifers as in oaks.

	NORTHUMBERLAND		COLUMBIA		MONTOUR	
	M bd.ft.	Percent	M bd.ft.	Percent	M bd.ft.	Percent
Conifers	1,200	20	15,300	42	100	10
Oaks, hickory, sugar maple	3,600	60	15,700	43	700	70
Other hardwoods	1,200	20	5,700	15	200	20
Total	6,000	100	36,700	100	1,000	100

The distribution of this volume in saw-timber stands by tree size may be seen in figure 5 ^{8/}.

8/ The 1 million board feet of saw timber in Montour County is distributed approximately as follows;

10% in 12-inch trees, 20% in 14-inch, 20% in 16-inch, 20% in 18-inch, 10% in 20-inch, and 20% in trees 22 inches and larger in d.b.h.

Current forest growth

The following table shows the total timber growth and the saw-timber growth of the different condition classes in the three counties:

	<u>NORTHUMBERLAND</u>	<u>COLUMBIA</u>	<u>MONTOUR</u>
	<u>M cu.ft.</u>	<u>M cu.ft.</u>	<u>M cu.ft.</u>
Total timber growth			
Saw-timber stands	72	460	12
Pole-timber stands	314	1,288	55
Unmerchantable stands	1,907	4,129	434
Total timber growth	2,293	5,877	501
Saw-timber growth	<u>M bd.ft.</u>	<u>M bd.ft.</u>	<u>M bd.ft.</u>
Saw-timber stands	250	1,560	40
Pole-timber stands	780	2,040	100
Unmerchantable stands	2,100	5,400	380
Total saw-timber growth	3,130	9,000	520

Forest Products Industries

The place of the forests in the economy of these three counties is small. Only one percent of the employment of the area, two-thirds of which is in paper or furniture manufacture, is for forest products industries. Furthermore, these industries import virtually all of their raw material, even so small an amount being from native resources. Yet, for all that, many of those who are primarily engaged in agriculture or some other related occupation owe their living in part to the forests of the area. The number of sawmills by production classes is shown in the following table. There are no mills in Montour County.

<u>Production class</u>	<u>NORTHUMBERLAND</u>	<u>COLUMBIA</u>
<u>Thousand board feet</u>	<u>Number of mills</u>	
Idle	1	4
1 to 50	3	2
50 to 500	5	14
500 to 1000	0	2
Total	9	22

Forest Land Ownership

91 percent of the forest land in these three counties is privately owned. Of the total area, 8 percent belongs to coal companies, 5 percent to water companies, 28 percent to farmers, and 50 percent to other private owners. Of the publicly-owned land, four-fifths, most of it ridge country, is under administration by the State Game Commission, and the rest by the counties.

The ownership distribution of the forest land is as follows:

	<u>NORTHUMBERLAND</u> <u>Acres</u>	<u>COLUMBIA</u> <u>Acres</u>	<u>MONTOUR</u> <u>Acres</u>
Public ownership			
State Game Commission	9,400	12,600	200
County	<u>1,600</u>	<u>3,200</u>	<u>300</u>
Total public ownership	11,000	15,800	500
Private ownership			
Coal companies	20,000	4,900	--
Water companies	8,000	5,100	500
Farmers	29,100	41,500	11,300
Others	<u>53,600</u>	<u>80,800</u>	<u>10,900</u>
Total private ownership	110,700	132,300	22,700

Future Outlook in Brief

The forests of these three counties are in an extremely depleted condition, especially those above and adjacent to the coal measures. Almost without exception, however, they are potentially productive and care and common sense will bring them back to merchantability. Oak is the predominant species and gives promise of future utilization for high quality products - of furniture, cooperage, flooring. White pine is an important component of many of these stands, largely in the farm woodland section, and a large proportion of the needs of the area for softwood lumber could be filled through the encouragement of this species. Some forest land owners in this section have already adopted sound management practices for their woodlands and it should be possible to expand this nucleus of interest.

Development of productive forests will require aggressive action on the part of landowners, public agencies, and the citizens generally. The principal needs of the area are:

1. Continued progress in the prevention and control of forest fires. The State Department of Forests and Waters has made real progress in the control of forest fires in these counties during the last twenty-five years. Progressive methods which have stimulated local support for their program have been used. Forest fires are still a major problem in the coal fields, however, and efforts to reduce their numbers and the area burned annually should be further intensified.

2. Stop clear-cutting and improve timber stands. In the neighborhood of the mines the forests have been clear cut as soon as they would produce mine timbers. For some years to come the mines in this area will require mine timbers and these should be produced as economically as

possible. Already in sections more remote from the mines and ultimately, with the exhaustion of the coal resources, near the mines, management for the production of higher quality material is called for. Thinnings which will improve the species composition and the quality of the stands could provide a large proportion of the mine timber requirements. Eventually, the industries of the area which are now dependent upon imported raw materials would be able to rely on local supplies.

3. Waste areas should be planted and the composition of many stands could be improved by planting. The forests near the mines have been so devastated by cutting and repeated fires that it will usually require planting of commercial species to restore these areas to fully-productive forests. Large areas have been laid waste through stripping and the establishment of mine waste banks. Although planting of such areas would add little to the commercial forests, they would serve to reduce the silting of streams and the blowing of coal dust, and improve the appearance of this section. Some open areas in the farming section might well be restored to forest, especially to conifers.

4. Public ownership should be increased. It will require so many years to restore productive forests to the coal field section of Northumberland and Columbia counties that public ownership is probably desirable for a large portion of this area. Elsewhere, some consolidation of public ownership along the ridges may be called for but generally the forests are potentially productive and continued private ownership can be profitable under sound management.

1/ Principally white pine and hemlock with some pitch pine and red spruce.

2/ Principally red, white, and chestnut oak with some black, scarlet, and pin oak, hard maple and hickory.

3/ Principally red maple, aspen, yellow birch and black birch with some white ash, black cherry, basswood, yellow poplar, walnut, sycamore, willow, black locust, elm, red birch, black gum, beech, dogwood and gray birch.

MONTOUR COUNTY

Table 1. Land use

Land use	Area <u>Acres</u>	Proportion of class <u>Percent</u>	Proportion of gross area <u>Percent</u>
Forest <u>1/</u>			
Tracts less than 10 acres	1,400	6.0	1.7
Tracts 10 up to 50 acres	2,000	8.6	2.4
Tracts 50 acres and over	19,800	85.4	23.7
All forest land	23,200	100.0	27.8
Nonforest			
Crop land <u>2/</u>	42,300	70.1	50.6
Water <u>2/</u>	800	1.3	1.0
Other	17,300	28.6	20.6
All nonforest land	60,400	100.0	72.2
Gross area	83,600	100.0	100.0

1/ Based on aerial photographs taken in 1938.

2/ Bureau of the Census, 1940.

Table 2.--Forest area by minor civil divisions

Civil division 1/	Gross area	Nonforest area	Forest area	Proportion gross area in forest	Proportion of county forest la
	<u>Acres</u>	<u>Acres</u>	<u>Acres</u>	<u>Percent</u>	<u>Percent</u>
Anthony t.	16,500	12,300	4,200	25.7	18.2
Cooper t.	4,500	3,400	1,100	23.5	4.6
Derry t., Washingtonville b.	10,500	8,200	2,300	21.6	9.8

All types	300	100.0	1,700	100.0	21,200	100.0	23,200	100.0

* Negligible.

Table 4. - Volume by forest types

Forest type	Saw-timber volume	Total volume
	<u>M bd.ft.</u>	<u>M cu.ft.</u>
Sugar maple - beech - yellow birch	--	--
Aspen - gray birch - pin cherry	--	--
White pine - hemlock	300	120
White pine - white oak - red oak	--	20
Red oak - black oak - white oak	7,800	5,470
Chestnut oak	--	--
Scrub oak	--	--
Other	--	--
All forest types	8,100	5,610

MONTOUR COUNTY

Table 5.--Forest area by forest conditions and volume-per-acre classes

Forest condition and volume-per-acre classes	Area	Proportion of each condition	Proportion of total forest land
	<u>Acres</u>	<u>Percent</u>	<u>Percent</u>
Merchantable:			
Saw-timber stands <u>1/</u> (bd.ft. per acre)			
8,000 and over	20	6.7	0.1
6,000 to 7,999	30	10.0	0.1
4,000 to 5,999	20	6.7	0.1
2,000 to 3,999	230	76.6	1.0
All saw-timber stands	300	100.0	1.3
Pole-timber stands <u>2/</u> (cords per acre)			
10.0 and over	200	11.8	0.9
5.0 to 9.9	1,500	88.2	6.4
All pole-timber stands	1,700	100.0	7.3
All merchantable stands	2,000		8.6
Unmerchantable:			
Saw-timber stands less than 10 acres	1,100		4.7
Pole-timber stands less than 10 acres	3,800		16.4
Young growth stands	16,300		70.3
All unmerchantable stands	21,200		91.4
All forest land	23,200		100.0

1/ In stands 10 acres or larger each acre of which has at least 2,000 board feet (lumber tally).

2/ In stands 10 acres or larger each acre of which has at least 5 cords (400 cubic feet) but less than 2,000 board feet.

Table 6.--Volume by forest conditions and volume-per-acre classes

Forest condition and volume-per-acre classes	Saw-timber volume (lumber tally) 1/ M bd.ft. Percent		Total volume (including bark)			
	M bd.ft.	Percent	M cu.ft.	Percent	Cords	Tons
Merchantable:						
Saw-timber stands (bd. ft. per acre)						
8,000 and over	170	2.1	40	0.7	500	1,200
6,000 to 7,999	210	2.6	70	1.2	900	2,100
4,000 to 5,999	110	1.4	40	0.7	500	1,200
2,000 to 3,999	510	6.2	250	4.5	3,400	7,500
All saw-timber stands	1,000	12.3	400	7.1	5,300	12,000
Pole-timber stands (cords per acre)						
10.0 and over	300	3.7	150	2.7	2,000	4,300
5.0 to 9.9	1,100	13.6	820	14.6	10,800	23,900
All pole-timber stands	1,400	17.3	970	17.3	12,800	28,200
All merchantable stands	2,400	29.6	1,370	24.4	18,100	40,200
All unmerchantable stands	5,700	70.4	4,240	75.6	56,500	124,200
All forest land	8,100	100.0	5,610	100.0	74,600	164,400

1/ Based on the International 1/4-inch rule which closely approximates green lumber tally.

Table 7.--Volume in merchantable stands by species groups

Merchantable class and species group	Saw-timber volume (lumber tally)		Total volume (including bark)			
	M bd.ft.	Percent	M cu.ft.	Percent	Cords 1/ Percent	Tons 2/ Percent
Saw-timber stands						
Conifers	100	10.0	10	2.5	2.3	200
Oaks and hickory	700	70.0	330	82.5	82.7	10,200
Other hardwoods	200	20.0	60	15.0	15.0	1,600
All species	1,000	100.0	400	100.0	100.0	12,000
Pole-timber stands						
Conifers	200	17.0	100	10.3	9.2	1,900
Oaks and hickory	1,000	70.0	750	77.3	78.3	28,200
Other hardwoods	200	13.0	120	12.4	12.5	3,100
All species	1,400	100.0	970	100.0	100.0	33,200
All merchantable stands	2,400		1,370			45,200

1/ Based on 85 cubic feet per cord for conifers and 75 cubic feet per cord for hardwoods.

2/ Based on cubic feet-per-ton converting factors for the principal species.

MONTOUR COUNTY

Table 9.--Cubic foot volume in merchantable pole-timber stands by diameter classes and species groups

Diameter class (d.b.h.)	Conifers 1/			Oaks and hickory 2/			Other hardwoods 3/			All species		
Inches	M cu.ft.	Percent	Tons	M cu.ft.	Percent	Tons	M cu.ft.	Percent	Tons	M cu.ft.	Percent	Tons
6	10	15.0	300	170	22.0	5,100	30	25.8	800	210	21.7	6,200
8	20	18.0	300	160	21.5	5,000	40	31.7	1,000	220	22.6	6,300
10	20	20.0	400	150	20.0	4,600	30	20.0	600	200	20.6	5,600
12	20	20.0	400	100	14.0	3,300	10	10.8	300	130	13.4	4,000
14 & up	30	27.0	500	170	22.5	5,200	10	11.7	400	210	21.7	6,100
All classes	100	100.0	1,900	750	100.0	23,200	120	100.0	3,100	970	100.0	28,200

1/ Principally white pine, hemlock, and pitch pine, with some Virginia pine.

2/ Principally white, red, and chestnut oak, with some hickory and black and scarlet oaks.

3/ Principally red maple and black birch, with some walnut, aspen, sycamore, willow, black locust, elm, yellow birch, red birch, basswood, black gum, dogwood, and beech.
