FOREST SERVICE

SOUTHEASTERN FOREST EXPERIMENT STATION
ASHEVILLE, N. C.

and

SOUTHERN FOREST EXPERIMENT STATION
NEW ORLEANS, LA.

in cooperation with

SOUTHERN PULPWOOD CONSERVATION ASSOCIATION
ATLANTA, GA.

PREFACE

Through the McSweeney-McNary Act of 1928, Congress authorized the Secretary of Agriculture to conduct a survey of the forest resources of the United States. The Forest Survey was organized by the Forest Service to carry out the provisions of the Act. The Southeastern Forest Experiment Station, Asheville, North Carolina, is responsible for the work in Virginia, North Carolina, South Carolina, Georgia, and Florida. The Southern Forest Experiment Station, New Orleans, Louisiana, directs the work in Alabama, Arkansas, Louisiana, Mississippi, Oklahoma, Tennessee, and Texas.

The work of the Survey is divided into five major phases:

1. Inventory. Determination of the extent, location, and condition of forest lands, and the quantity, species, and quality of timber on these lands.
2. Growth. Determination of the current rate of timber growth.
3. Drain. Determination of the amount of industrial and domestic wood used, and the total loss resulting from fire, insects, disease, suppression, and other causes.
4. Requirements. Determination of the current and probable future requirements for forest products by all classes of consumers.
5. Policies and plans. Analysis of the relation of these findings to one another and to other economic factors as a basis for public and private policies and plans of forest land use and management.

ACKNOWLEDGMENT

The statistics presented herein are based upon reports furnished by the wood procurement officials representing 65 mills located in, or drawing wood from the South. Reports showed either production by county or by shipping points which were used to assign production to counties. County data are approximate, but totals for small groups of counties should have little error.

Figure 1.--Pulp mills drawing wood from the South, 1953. Numbered areas are Forest Survey units. Small numbers at mill locations correspond to numbers in tables 16 and 17.

PULPWOOD PRODUCTION IN THE SOUTH

In 1953 pulpwood production in the South amounted to 16,127,000 cords, 61 percent of the total 1953 receipts of domestic pulpwood at all mills in the United States. Southern production in 1953 was 10.7 percent more than in 1952 and 14.7 percent more than in 1951. The harvest of pine pulpwood was 14,147,600 cords, or 9.7 percent more than in 1952. Hardwood production, exclusive of dead chestnut, amounted to 1,918,300 cords, 13.4 percent more than in 1952. The trend is toward a gradual increase in the proportion of hardwood in the total pulpwood cut. Only 9 percent of the pulpwood cut in 1950 was hardwood; in 1953 hardwood amounted to 12 percent. These percents do not include dead chestnut used for pulp, which totaled only 61,100 cords in 1953.

Georgia led the South in production (fig. 2), accounting for 18 percent of the South's and 11 percent of the Nation's cut. All southern states except Tennessee harvested more pulpwood than in 1952 (table 1). The largest increase, 366,000 cords, was in Georgia.

Figure 2.--Pulpwood production in the South, 1953

Pulpwood was cut in 767 counties of the South (figs. 3 and 4, pp. 33, 34), but one-fourth of the total was produced in the 35 counties having cuts of over 60,000 cords each. Clinch County, Georgia, led with nearly 147,000 cords. Other counties with production of more than 100,000 cords each were Baldwin in Alabama, Winn and Union (parishes) in Louisiana, Fairfield in South Carolina, and Montgomery in Texas.

^{1/} Includes 61,100 cords of chestnut used for pulp.

^{2/} Includes 91,100 cords of chestnut used for pulp.

Other Wood Used for Pulp

In addition to the rough round pulpwood reported above, the pulp industry obtained nearly 76,000 cords of wood residues from other forest products plants. About 50,200 cords were veneer cores, cull crossties, and pole and piling ends, with veneer cores making up the largest part of this volume. Five sawmills manufactured pulp chips from slabs and edgings, of which the total volume used by pulp mills amounted to 25,700 cords. The amount of pine and hardwoods in each class of material is shown below in cords:

	<u>Pine</u>	<u>Hardwoods</u>	<u>Total</u>
Veneer cores	1,692	48,465	50,157
Sawmill chips	25,697	--	25,697
	27,389	48,465	75,854
