FARM PRODUCTION, FARM DISPOSITION AND VALUE
OF FIELD AND SEED CROPS, 1951 and 1952

May 1953

Estimated farm disposition of grains, hay, certain seeds, potatoes and a few other commodities are presented in this report, which is one of a series dealing with farm disposition of major farm products. Total estimated production of each commodity is that published in the December 1952 Annual Summary of Crop Production. Estimated sales from 1951 and 1952 crops and portions of production used or to be used for designated purposes on farms where grown are shown in this report.

Quantities shown as fed to livestock and poultry represent that portion of the crop fed only on the farms that produced it; they are not the quantities ultimately used for livestock feeding. Grain purchased for feed and seed does not enter into these feed grain estimates. Some of the products shown as "sold" from farms are used for feed and seed on other farms in the same or other States. For corn, the quantity sold pertains only to grain corn; the quantity fed includes not only the grain corn fed, but also that portion of all corn production representing the equivalent of corn used as silage and forage.

Quantities of principal feed crops sold and used in farm households, if any, are estimated directly and the residual--production less household use and sales--is shown as used for feed and seed. For certain commodities, of which there is virtually no farm use, the entire production is shown as sales. Sales of some commodities are estimated directly from the analysis of surveys in which farmers report production and sales. For others, special disposition inquiries are made in which farmers report their production of each commodity and the quantities used on their farms for each purpose. Whenever possible, sales have been checked by enumerations, such as reports of processors, or by records of handlings and shipments by rail, truck and boat. For certain crops total seed requirements are shown, and for some a further breakdown is made to show home grown seed. The difference between total seed and home grown seed would thus represent purchased seed, which is included in the quantity sold.

Season average prices are, in most cases, the estimated mid-month prices received by farmers, weighted by estimated quantities sold in each month of the crop marketing season. The marketing season is shown below the table for each crop. Season average prices for popcorn, broomcorn, sugarcane for sirup, maple products, hops, and most seeds are based primarily upon special survey data. For sugarcane sirup (except Louisiana) and sorghum sirup, the prices are those reported on December 1 of each year. Price estimating procedure makes allowance for loans unredeemed at the end of the crop season and for quantities bought by the Government under purchase agreements when such transactions are of significant volume.

These season average prices for quantities sold are used also to evaluate total quantities produced, and quantities used on farms. Value of sales is thus the unit price applied to quantity sold during the marketing year. In like manner value of production and of home consumption are computed by applying the season average price to the quantity produced or used. These value estimates should not be confused with cash receipts which relate to the calendar year irrespective of the year of production.

First in the series of farm disposition reports for 1951 and 1952 crops was the report for fruits and tree nuts published in January 1953. Estimates for cotton and cottonseed will appear in the Cotton Report of May 8; those for tobacco appear in the May 11, 1953 issue of Crop Production; estimates for sugar beets and sugarcane are scheduled for the June 10 issue of Crop Production. A report covering farm disposition of turkeys was issued in March; separate reports for chickens and eggs, for milk, and for meat animals appeared in April 1953.

1/Consists of potatoes sold for all purposes including food, seed, processing and livestock feed.
2/Revised.

3/Includes an estimated 1,093,000 bushels of early commercial crop not marketed because of low prices.

The beginning of the crop marketing season varies between States from December 1 preceding the year shown for Florida and Texas to August 1 of the year shown for certain northern States. The marketing season comprises 12 months in all States except California, which has a 14-month season beginning April 1 of the year shown.
