Buechly's Price-List and Brief Description of Perennials

IN issuing this my third brief descriptive price-list I have discarded a few varieties, and added others that appeared to have merit. I have complied with the request of the officers of the A. P. A. in prefixing the grading from 1 to 10 as reported on in a recent symposium in which an average of the reports is given by a large number of growers. This will be a great help in making selections of varieties where high quality is desired. Those varieties not grading above 5 being considered unworthy of cultivation, 10 being considered a one hundred per cent perfect flower. As will be seen, my collection runs largely 8 and above and includes most of the leading varieties that have been tried out.

The society has also recommended that to reduce the present lengthy variety list, that such as were introduced earlier than 1900 and rating at 6 or below in above symposium should not be further propagated. There are also a large number of kinds on which no report is made by these growers. These two classes, comprising some 350 kinds, are recommended for the discard, and I am glad to say that I find but one of either class in my collection. The fact that with blooms of our growing, after being carried over 600 miles to Reading, Pennsylvania in 1920 won \$47.00 in cash premiums, is further evidence that I have quality stock.

Prices herein given abrogate all former lists and are net cash before shipment unless otherwise arranged. No charge for packing and delivery to express or post office.

Three to five eyes, with sufficient body of root to push growth with vigor, is the size of plants sent out. These will often show bloom the first year. In many kinds I can furnish strong one year plants if desired, at an advance of 25 to 50 per cent above list price, but a good strong division is better than a small yearling. I exercise extreme care that all plants are true to label, and hold myself in readiness to replace two for one either in cash or plants any that should prove otherwise.

PEONIES

The following abbreviations are used in the peony list: Brand (B.), Crousse (Cr.), Lemoine (Lem.), Kelway (Kel.), Hollis (Hol.), Richardson (R.) Guerin (G.), Calot (Ca.), Pleas (P.), Donkalier (Don.) Rosenfield (Ros.), Gombault (Gom.), Verdier (Ver.)

Price of a dozen is ten times the price of one.

My list of twenty or more leading varieties of Gladioli will be issued later and can be mailed on application.

Address all communications to,

E. M. BUECHLY,
Greenville, Ohio.

Peonies and Irises thrive in most any soil that is not too wet. Should it be inclined to be acid, a light dressing of lime will be beneficial. Never permit fresh manure to come in contact with the roots. Bone-meal is a safe proposition, and well decomposed barnyard manure may be worked around the plants but not over the crown of the plants. Peonies should be planted $2\frac{1}{2}$ to 3 feet apart, and for field culture rows should be 4 feet apart. The plants should be set so the top buds are 2 to 3 inches below the surface of the soil. Deeper planting may cause shy blooming. September and October are the best months to set peonies, but they may be set any time before the ground freezes. The plants start growth too early to handle well in the spring; we therefore never advise spring setting.

Irises should be planted rather shallow, just covering the rhizome, and both peonies and iris are better planted in the full sunlight away from trees and shrubs and not too close to the walls of a building, although they will endure partial shade. Give good, clean, shallow cultivation and you will be rewarded with fine bloom.
