ASHEVILLE, N. C.

and

SOUTHERN FOREST EXPERIMENT STATION

C. A. CONNAUGHTON, Director NEW ORLEANS, LA.

in cooperation with

SOUTHERN PULPWOOD CONSERVATION ASSOCIATION
ATLANTA, GA.

PREFACE

Through the McSweeney-McNary Act of 1928, Congress authorized the Secretary of Agriculture to conduct a survey of the forest resources of the United States. The Forest Survey was organized by the Forest Service to carry out the provisions of the Act. The Southeastern Forest Experiment Station, Asheville, North Carolina, is responsible for the work in Virginia, North Carolina, South Carolina, Georgia, and Florida. The Southern Forest Experiment Station, New Orleans, Louisiana, directs the work in Alabama, Arkansas, Louisiana, Mississippi, Oklahoma, Tennessee, and Texas.

The work of the Survey is divided into five major phases:

1. Inventory. Determination of the extent, location, and condition of forest lands, and the quantity, species, and quality of timber on these lands.
2. Growth. Determination of the current rate of timber growth.
3. Drain. Determination of the amount of industrial and domestic wood used, and the total loss resulting from fire, insects, disease, suppression, and other causes.
4. Requirements. Determination of the current and probable future requirements for forest products by all classes of consumers.
5. Policies and plans. Analysis of the relation of these findings to one another and to other economic factors as a basis for public and private policies and plans of forest land use and management.

ACKNOWLEDGMENT

The statistics presented herein are based upon reports furnished by the wood procurement officials representing 59 mills located in, or drawing wood from the South. Reports showed either production by county or by shipping points which were used to assign production to counties. County data are approximate, but totals for small groups of counties should have little error.

1949 PULPWOOD PRODUCTION IN THE SOUTH

In 1949 pulpwood production in the South was 9,923,100 cords, a decline of 12.6 percent below 1948 but 7.4 percent more than in 1947. The production of pine pulpwood was 8,944,900 cords, of hardwood 808,700 cords, and of dead chestnut 169,500 cords. Pine production was 11.3 percent below 1948, hardwood 14.5 percent less, and dead chestnut 47.8 percent less.

Total receipts of domestic pulpwood at all mills in the United States were 17,547,000 cords in 1949, indicating that the South produced close to 56 percent of all the pulpwood cut in the Nation. Among the southern states, Georgia was the largest producer and the only one, aside from Oklahoma, where production was more than in 1948. Approximately 10 percent of the Nation's pulpwood was cut in Georgia in 1949.

Production per county varied from none to nearly 130,000 cords. Over 60,000 cords were cut in each of ten counties distributed throughout the South. The three leading counties were Mobile in Alabama, Camden in Georgia, and Fairfield in South Carolina (fig. 3).
