Annual Seed List

Prepared by the

Minnesota Crop Improvement Association 1921

A Seed List Containing

Seed Inspected and Certified by the Association.

Seed reported for sale by Members of the Association.

Seed reported for sale by other farmers of the State.

Seed offered for sale by the Experiment Station
and Substations.

Also a list of Commercial Seed Houses and others who
buy and sell seeds.

Compiled by
T. E. Odland, Secretary,
University Farm,
St. Paul, Minn.

Annual Seed List

This seed list has been prepared by the Minnesota Crop Improvement Association. It contains names of growers who have seed for sale inspected by a representative of the Association; members of the Association who have reported seed for sale; and also names of other growers in the state reporting that they have good pure seed. We have on file samples of seed which have been inspected and certified.

WRITE TO GROWERS FOR SAMPLES AND PRICES

Buy on sample only. See that the germination and purity of the seed is marked on the tags. This is required by law.

A field must be inspected sometime before harvest and the seed again after it is ready for sale in order to qualify as **Certified** seed. The field and seed must come up to the standards of the Association for purity, quality, and freedom from weeds before a certificate is issued. Where the final bin inspection has not been made but the field passed inspection, the seed is listed as **Field Inspected**. Seed which has passed the field and bin inspection and has come from the experiment station within the last two years is classed as **Registered**. This stands for the highest degree of purity.

RECOMMENDED VARIETIES

The Experiment Station is recommending the following grain varieties to farmers of the state. These recommendations are based on the record made in many different variety tests carried on in different localities in the state.

Common Spring Wheat—Marquis.

Durum Wheat—Mindum, Minn. No. 470.

Barley—Improved Manchuria, Minn. No. 184.

Oats—Medium early varieties for Central and Northern Minn. Victory, No. 514; Minota, Minn. No. 512; Improved Ligowa, Minn. No. 281. Early varieties for southern Minn.—Iowa No. 103.

Soybeans—Chestnut, Minsoy, and Wisconsin Black. For Southern Minnesota also Elton and Habaro.

Flax—N. D. No. 52 and 114.

Marquis wheat was hard hit by rust last year but it is recommended for general planting because of its high milling value and a good yielder when there is not much rust. **D.5** is a red durum originated in North Dakota. It is not recommended on account of its low milling value. **Kubanka**, **D-1**, and **Acme** are all amber durums of good quality and recommended when Mindum is not available. **Ruby** is a new early wheat originated in Canada. It is from four to seven days earlier than marquis and has a high milling quality. It did not yield as well as marquis at any of the sub-stations where tried the past year. **Kitchener** is a fife wheat similar to marquis. **Reb Bobs** is also a Canadian product. It did not do as well as marquis where tried this year. **Kota** is a new rust resistant wheat developed by the North Dakota station. Very little seed is available at present.

The North Dakota Flax varieties are recommended because they are the most resistant to wilt of any of which there is any amount of seed available. Flax seems to lose its resistance to wilt when grown on wilt-free soil for some years so that these varieties cannot always be depended on as being wilt resistant. Two new wilt resistant flax varieties are now being increased at University Farm and at the Crookston Station. The secretary would like to get in touch with anyone who has had difficulty with flax wilt and who would like to grow increase fields of these varieties. Only a small amount is available this year but next year there will be enough seed for a number of small fields.

Iowar is a new early oat variety highly recommended by the Iowa station. It made a very good record in tests this year* at the different stations. A new Minnesota selection of Sixty Oats, **Minn. No. 674**, looks especially promising. There is no seed available for distribution this year.

Minsturdi, Minn. No. 439, is a new selection of six-row barley which looks very promising. It is especially suited to rich soil where a good stiff straw is desired. Only about 100 bushels are available for distribution this year.

Minsoy is the earliest of the soybean varieties. It is a good seed producer and is best suited for raising for seed. It is too short for growing with corn for silage.

SEED POINTERS

The Association calls your attention to the following suggestions:
First—Grow only standard varieties and secure neighborhood effort to establish the one (possibly two) best adapted to the local conditions.

Second—Select all seed by means of fanning or grading to secure uniformity of size and weight and free from foul seed.

Third—Treat grains with formaldehyde to prevent smuts and wilt.

Fourth—Test for an exact showing of vitality or germination power.

Fifth—Buy all seeds on sample. Know what you are getting before the order is placed. Buy only the best grades.

Sixth—Those who may be in doubt as to the best varieties to grow should write the Experiment Station, University Farm, St. Paul, Minn., or the Secretary.

WHAT THE ASSOCIATION IS DOING

1. Inspecting and certifying seeds of standard farm crops.
2. Keeping records of registered seeds.
3. Publishing seed lists in order to bring grower and buyer of seeds together.
4. Publishing annual reports of meetings, shows and work accomplished.
5. Interesting people in the production and use of better seed crops.
6. Organizing local crop improvement interests as County Branches.
7. Holding annually a seed fair and meeting for educational purposes.
8. Standardizing varieties of farm crops and improving their adaptation to localities.
9. Helping to establish a reputation for our state as the best source of good seed.
10. Helping to make Minnesota more productive, more prosperous, and better known.

You are invited to become a member—the annual fee is only one dollar.

TO GROWERS HAVING SEED LISTED

If you want to build up a reputation for having good, dependable seed that a buyer will keep in mind for next year and also tell his neighbors about, please consider the following carefully.

1. Give every inquiry **prompt** attention. Acknowledge an order at once. If your supply is gone and you know where he can obtain the seed, refer him to this party. Keep a supply of postal cards on hand so you can notify your party promptly.

2. **Notify** the **Secretary** when your supply is gone.

3. Send out only good, **clean** seed.

4. See that the germination and purity tests are marked on the tag.

5. Notify the buyer when the seed is shipped.

METHODS OF DISTRIBUTING AND CERTIFYING SEED.

Each year the Central and Sub-stations grow increase plots of the recommended varieties. These plots are carefully rogued during the growing season. The crop is carefully harvested, threshed and cleaned, particular attention being paid to the elimination of mixtures. This improved seed is then sold to certain farmers who will further grow and increase it.

The Experiment Station co-operates with the Minnesota Crop Improvement Association in keeping a record of the recommended varieties after they have been distributed to the farmers. A farmer obtaining seed which is being increased from any of the stations may apply through the Association for a field and bin inspection of his field and threshed grain respectively. If the field is in such condition that the inspector thinks the crop will produce good, unmixed seed, and if the variety is relatively free from noxious weeds and diseases, the inspector reports favorably. Another inspection is made of the seed after it is cleaned and ready for use or sale by the farmer. If it then comes up to the standard qualifications for good, pure seed as set by this Association, a certificate of inspection is issued to the grower and a record is made of the seed. The grower is required to report to whom his seed is sold so that a complete history can be kept.

A crop produced from seed which was obtained from the station increase fields is recorded as second generation seed. Seed can be **registered** for two generations after being obtained from a Station. It may be registered after that only if the grower maintains a special seed plot from which he makes a head selection, or if he obtains new stock from the Experiment Station. Seed from a farmer's seed plot can be registered for three generations providing that it passes the inspection. A grower may have his seed recorded with the Association after the third year as certified seed if he does not care to maintain a seed plot. **Any variety** may qualify as **certified** seed providing it meets certain standard of purity, freedom from disease and obnoxious weeds.

The method of inspecting and certifying may be summarized as follows:

1. The grower wanting to have his crop inspected writes to the Secretary of the Minnesota Crop Improvement Association, University Farm, for an application blank.
2. The application blank is filled out by the grower and sent to the secretary. The application contains information as to crop, variety, number of acres, and where seed was obtained. It must be accompanied by a fee of \$3.00. One dollar of this is for membership in the Association and \$2.00, is the initial field inspection fee.
3. The secretary makes arrangements to have an inspector visit the farm sometime before harvest to make the field inspection.
4. The inspector makes a report on the condition of the crop, its purity, freedom from weeds and diseases, and general condition of the farm. If everything is found satisfactory, a final bin inspection is recommended, otherwise the field is rejected for registered or certified seed.
5. After threshing, the grower sends in an application for bin inspection. This must be accompanied by a half-pint sample of grain cleaned as he expects to have it for sale, and a final inspection fee of \$2.00. A laboratory test is made as to purity and germination. If the sample is found satisfactory, arrangements are made to inspect the seed in the bin. If this is found equal to the sample submitted and up to all requirements, the inspector recommends that a certificate be issued

for the seed. The inspector takes a 2-quart sample of grain, 5 ears of corn, or 1 quart of grass seed to keep on file at the office.

6. The Association sends the grower a certificate showing that his seed has been inspected both in the field and the bin and is classified as either registered or certified seed. Tags are also provided to be used by the grower as his guarantee to the buyer of the seed.

7. The grower is furnished with cards for reporting sales of his seed so that a record can be kept of the same after it leaves his hands.

8. The Association publishes an annual seed list of both fall and spring sown crops where all registered and certified seeds are given a special notice. These seed lists are given a wide distribution throughout this state and adjoining states.

No definite price is fixed by the Association for the various classes of seeds. This is left to the individual. Usually enough is secured to well repay the grower for his extra work.

SHIPPING TAGS.

Sent with Certificate of Inspection.

The tag features a large outline of the state of Minnesota. Inside the outline, there are several small illustrations: a farm with a barn, a field of corn, a horse-drawn plow, and a person working in a field. To the right of the state outline, the text reads: "MINNESOTA IN U.S. CORN BELT. EVERY COUNTY GROWING CORN." Below the state outline, the text reads: "MINNESOTA Crop Improvement Association". Below this, there is a section for shipping information: "Ship to" followed by a blank line. Below that, there is a section for shipment details: "This shipment contains _____ Seed". Below this, there is a table with columns for "Variety Name", "% Purity", "% Germ.", and "Tested". The "Tested" column is further divided into "Month" and "Year". The "Year" column has the number "19" written in it. Below the table, there is a section for grower information: "Grown by:" followed by a blank line. Below that, there is a section for company information: "P. O. _____ Co. _____".

MINNESOTA
Crop Improvement Association

Ship to _____

This shipment contains _____ Seed

Variety Name	% Purity	% Germ.	Tested	
			Month	Year
				19

Grown by: _____

P. O. _____ Co. _____

The tag is a simple rectangular shape with a hole at the top. It contains the following text: "Certified Seed. Grower's Certification." followed by a paragraph: "I hereby certify that the seed contained in this sack was produced by me in 19 _____ in accordance with the rules of the Minnesota Crops Improvement Association. That it is of the kind, variety, amount and germination as stated on the reverse side of this tag. That it conforms to the standard of purity, grade, and cleanliness for certified seed." Below this, there is a section for inspection number: "The Inspection Number is _____". Below that, there is a section for minor impurities: "Minor Impurities are _____". Below this, there is a section for signature: "(Signature of Grower)" followed by a blank line. Below that, there is a section for company information: "P. O. _____ Minn. _____".

**Certified Seed.
Grower's Certification.**

I hereby certify that the seed contained in this sack was produced by me in 19 _____ in accordance with the rules of the Minnesota Crops Improvement Association. That it is of the kind, variety, amount and germination as stated on the reverse side of this tag. That it conforms to the standard of purity, grade, and cleanliness for certified seed.

The Inspection Number is _____

Minor Impurities are _____

(Signature of Grower) _____

P. O. _____ Minn. _____

(Reverse side.)

CERTIFICATE OF INSPECTION.

Issued when seed meets requirements.

Minnesota Crop Improvement Association

CERTIFICATE OF INSPECTION

Grower's No.-----

Application No. -----

Certificate No.-----

Kind of seed

Variety name

Quantity Inspected

This is to certify that the above mentioned kind, variety, and quantity of seed produced by

Mr. -----

Name

P. O.

County

Minnesota,

was inspected by an authorized representative of the Minnesota Crop Improvement Association and is recorded as **Certified Seed** in accordance with the rules of the Association, which require high standards of grade, purity, cleanliness, and vitality.

In testimony whereof, the duly authorized officer of the Association hereunto subscribes his name and has caused the seal of the Association to be hereto affixed.
