PRICES SUBJECT TO CHANGE

To Correspondents

WE HAVE pleasure in presenting this catalogue to our patrons and friends and thank them for their support and recommendations. Great care is taken by us to select first-class stock in executing all orders and our customers can rest assured that we will always send the best procurable at all times.

Prices in this catalogue are f. o. b. New York or nurseries. We make no charge for packing or carting.

Orders. Order early and do not wait until you are ready to plant, as delays may occur. All stock should be unpacked on arrival and trenched until you are ready to plant it permanently.

Our Responsibility. We endeavor to send to our patrons the highest grade stock that it is possible for us to procure. We do not guarantee our stock, or assume any responsibility after they leave us, as conditions always exist over which we have no control.

Complaints. All orders and omissions in the execution of orders will be satisfactorily adjusted if we are notified immediately upon receipt of goods.

References. All orders from unknown correspondents must be accompanied with the amount of the order, or satisfactory references furnished. Goods will be sent C. O. D. if desired, if one-fourth the amount accompanies the order.

A deposit is required on all orders left at our store to be called for.

Gardeners and Farmers

Parties requiring the services of reliable men, married or single, should consult with us, as we have the names of a number on our register, thoroughly experienced in every branch of the business. We make no charges, our only wish being to assist our customers in what is often a difficult matter.

Hardy Perennial Plants

For Permanent Planting in Open Borders

Herbaceous plants should be used where a constant supply of flowers is desired, for, out of the large lists of herbaceous or perennial plants, such varieties may be selected as begin to flower very early, others that are almost continuous bloomers and some that continue to bloom even after frost sets in.

The approximate height of the Hardy Perennials in this catalogue is represented in feet and inches and the flowering periods are taken in the vicinity of New York.

ACANTHUS mollis (Bear's Breech). Shapely foliage and showy purple flowers. 3 feet. July, Aug.

ACHILLEA Millefolium roseum. Finely cut, rich green leaves; pink flowers in compact heads. 2 feet. June-Sept.

HARDY ROSES

Hybrid Perpetual, or Remontant Roses

These are commonly called the June Roses, owing to their greatest crop being borne in that month. Require hard pruning annually. Our list of varieties is selected with a view to suit all lovers of the Rose who desire the best. This collection contains only the finest and best sorts in cultivation.

The Rose delights in an open, airy situation. All types are very partial to clay loam, but will do well in any ordinary soil if enriched with well rotted barnyard manure. Dig the soil thoroughly to the depth of 12 to 15 inches, as the roots penetrate deep when they can. Do not raise the surface of Rose beds. They suffer less from drought when left level with the turf. After the plants have been set out, keep the soil loose to the depth of an inch or two by frequent stirrings. An occasional soaking with weak manure water is a great help to Roses of all sorts.

Extra strong, 2-year-old, field-grown plants, 70c. each, \$6.50 for 10, \$60 per 100.

All varieties marked with a * can be supplied in standard or tree form. Prices on application.

Alfred Colomb. Large, full, bright carmine flowers of perfect form; fragrant.

American Beauty. Very large, deep pink to soft carmine cerise flowers.

Anna de Diesbach. Clear, bright carmine; very large, full and fragrant.

FRUIT TREES

Planting.—Make the holes large enough to admit the roots without cramping or bending, and deep enough to set the trees to their natural depth. Fine surface soil should be used for covering the roots, and this should be carefully mixed among them. If the ground is dry, it is well to pour in some water when the hole is partially filled. See that the ground is firmly and solidly packed over all parts of the roots. Fill the holes full enough to be even with the surrounding surface after the fresh earth settles. Never use manure in contact with the roots.

Strong trees, 75c. to \$1.00 each.

WALNUTS

cinerea (Butternut). A handsome native tree, with grayish colored bark, producing a large, elongated nut, with sweet, oily kernel.

Strong trees, 6 to 8 feet, \$1.50 each.

English. This rich nut is quite hardy and makes a vigorous growth. \$1.00 each.

Strong trees, \$1.50 each.

Sieboldiana (Japanese Walnut). Rapid growing tree, of handsome form and immense foliage; bears abundant clusters of smooth, thin-shelled nuts; meat sweet and good. Bears when young.

Strong trees, 5 to 6 feet, \$1.00 each.

INSECTICIDES

Arsenate of Lead (Paste Form). For spraying trees and shrubs against attacks of leaf-biting insects of all kinds. It adheres well to the foliage and does not injure tender foliage. Remains well suspended in solution, so that an even distribution is obtained. Being white in color it shows just where it has been applied. Is rapidly replacing Paris Green. Use from 3 to 5 pounds to 50 gallons of water.

Arsenate of Lead (Dry Powder). This form extensively used. Is easily suspended in water. One pound equals 2 pounds of Arsenate of Lead in paste form. Use 1 pound to 50 gallons of water. (Not mailable).

Bordo-Lead. An excellent combination of 50 per cent. Arsenate of Lead Paste and 50 per cent. Bordeaux Mixture Paste. Has the virtues of best gelatinous Bordeaux (fungicide), combined with the virtues of the highest grade Arsenate of Lead (insecticide), giving a combination which will in one operation kill the insects and prevent blight, mildew, and rust. It sticks like paint and remains on the foliage, insuring results.

Fish Oil Soap and Tobacco. For mild forms of scale. An excellent Summer spray. For San José scale and all soft-shelled insects. Makes a good wash for trees and plants where bark is affected by insects; also for smearing on trunks of trees as a preventive against worms. Dissolve in water according to directions.

Lime-Sulfur. Dry. The modern form of Lime-Sulfur solution from which the water has been evaporated, leaving the dry Lime-Sulfur in concentrated form, requiring only the addition of water to produce a spray possessing all of the well-known virtues of the Lime-Sulfur solution. This is not a substitute for Lime-Sulfur solution but is an actual Lime-Sulfur in dry, powdered form, possessing all of the advantages of Lime-Sulfur solution with none of its disadvantages. Is less bulky, lighter, easier and more convenient to handle, will not freeze and is cheaper than Lime-Sulfur solution. For dormant spray use 10 to 14 pounds to 50 gallons of water. For Summer spray use 2 to 3 pounds to 50 gallons of water.

Scale Killer (Soluble Oil, Key Brand). A dormant spray for San José scale and soft-bodied sucking insects. No disagreeable odor. Mixes easily and has no sediment. Dilute 1 gallon to 20 gallons water.

Tree Tanglefoot. A sticky compound similar to that used on Tanglefoot Fly Paper. Especially adapted for protecting trees from attacks of climbing and creeping insects, such as gypsy and brown-tail moths, canker worms, ants, etc. One application remains sticky three months and longer; works alike in rain, sun, winds, etc.; does not soften, run, or melt, yet it is elastic, expanding with the growth of the tree. Will not injure trees. One pound makes 9 to 10 lineal feet of band.

For prices and sizes of any of the above see our Spring Catalogue.
