WOOD'S CROP SPECIAL

FEB 14 1924

Giving Timely Information and Prices of Seasonable Seeds

PUBLISHED BY T.W. WOOD & SONS SEEDSMEN RICHMOND VA.

VOL. XVI.

FEBRUARY EDITION

1921

Our "Wood's Crop Special" is issued monthly during planting seasons. There is no subscription price, but is mailed free upon request. If any of our customers do not receive Wood's Crop Special regularly, and desire to do so, advise us and we will place your name on our regular mailing list.

SEASONABLE NOTES.

Prices of **Farm Seeds**, like practically all other marketable commodities, show a most decided reduction from those prevailing last year, and in many cases to pre-war levels. This rapid decline of commodities was partly brought on by the depressed condition of our foreign markets after the war, which cut off, to a large extent, the demand for our foreign products. These war stricken countries are gradually getting on a better business basis, which is evidenced by the recent advance in foreign exchange, and it is only a matter of a short time before the foreign demand and confidence of the people as a whole will give an impetus towards higher prices for farm products. It is an assured fact that the acreage of all farm crops will be greatly reduced this spring, owing to financial troubles and the low prices now prevailing. This must necessarily have a diminishing effect on the supply of farm products in this country as well as the world as a whole. Prices in many instances have declined far below the cost of production on present basis, and when the demand begins, there will be a rapid advance on all that the farm produces. When planning your farm operations, put in food crops that are marketable, or crops that will restore your land to a better state of productivity.

We believe that prices on practically the entire list of **Field Seeds** have reached their low level, and as the spring demand begins there will be an upward tendency rather than downward.

Regarding **Cotton and Tobacco**, the First National Bank of this city published the following:

"In our judgment the cotton and tobacco already on hand in the country, together with not over a half crop for the coming year, is all that the world will be able to purchase and pay for at reasonable prices.

"If large crops of cotton and tobacco are planted this spring it will result in continued low prices, and even lower prices during the fall and winter of 1921. Acreage planted to these crops should not exceed one-half of last year's acreage, and more feed and food crops should be planted to avoid sending millions of dollars away from home for feed and food."

OUR NEW 1921 SPRING CATALOG has been mailed to our regular customers, and if you have not received it, advise us at once, and we will cheerfully send you a copy. We consider this Catalog the most up-to-date that we have ever published, and know it will be of valuable assistance to you in planning your garden and farm operations.

Increase the Productivity of Your Soil by Sowing Red Clover

Every effort should be made to put all adaptable land in **Red Clover** this season. At a period such as we are now experiencing, when farm products are bringing such unusually low prices, we should take every opportunity of increasing the productivity of the soil for crops to follow, when later on will be more advantageous for putting in our standard money crops. The cost of seeding per acre is very small in comparison to former years, and consequently we cannot urge too strongly the use of this valuable legume and forage crop, as it is the sure path to better crops and prosperity on the farm.

We recommend the sowing of **Red Clover** on all fall sown grain crops very highly, as it furnishes an excellent seed bed, and saves an extra preparation of the land. A light harrow run over the grain crop after sowing the clover is all that is necessary. This gives the clover a light covering as well as giving the grain crop a cultivation, which is very desirable at this season of the year. This seeding can be done safely during February or early in March with very beneficial results, and will furnish a most nutritious pasturage this fall and winter.

A mixture of eight pounds of **Red Clover**, three pounds of **Alsike**, two pounds of **Alfalfa**, makes an excellent combination, and will insure an excellent crop, as the Alsike Clover will stand more adverse weather conditions as well as taking on most any kind of land, and the Alfalfa will make a good showing if dry weather prevails.

We call particular attention of our customers to the prices quoted in this issue of our "**Crop Special**." Prices of many articles are much lower than those listed in our Annual Catalog mailed last month. Some of the items on which we have had considerable reduction in prices are **Clover Seed, Oats, Potatoes and Fertilizers**. All orders entrusted to us are always billed at the lowest market price in effect at the time the order is received. Due credit will be given any customer who remits at higher price than ruling on that date.

We call particular attention to our **Parcel Post** service this year. The high freight and express charges, and the quick transportation by Parcel Post makes this a very effective addition to our service.

"Fulghum Yield More Abundantly Than Others."

My experience with growing Fulghum Oats has been very satisfactory, either fall or spring planting. I find they yield more abundantly than the other kinds. I plant them altogether.
—JOEL PATRICK, Pitt County, N. C., October 10, 1919.

CANADA FIELD PEAS sown with **Oats** produce a highly nutritious feed, but should be sown before the middle of March for best results. This combination makes a splendid yield, which can be fed green, or cured easily for hay or dry forage, and makes a complete food for feeding both to hogs and all kind of cattle, the feeding of grain being not necessary when horses and cattle are fed on oat-pea hay. Should be sown at the rate of one bushel of peas and one bushel of **Rust-Proof Oats** to the acre.

The **SEED OATS** which we offer are all choice, re-cleaned qualities, our Trade Mark Brand, being carefully selected, and will produce much heavier yields than the ordinary uncleaned stocks. For early planting before the middle of March, we recommend sowing the Rust Proof types, such as **Virginia Gray Winter, Applier, Fulghum** and **Rust Proof** varieties, and for late planting the **Burt, White Spring** and **Swedish Select**. We call special attention to our **Swedish Select Oats**. These are plump, heavy, white spring oats, and will produce a superior quality of grain when harvested.

RAPE, for best results, requires a cool, moist, growing season, and should be sown as early as possible, preferably before the middle of March. It is considered one of the most economical pasture crops, and is being used to a very large extent among our Southern farmers. **Rape** is a very quick growing pasture plant, making a full growth in about eight to ten weeks. Reports from our customers praise the use of **Rape** very highly, some claiming it the greatest grazing crop grown. Also furnishes excellent pasturage for poultry both for early spring and winter use, and will also make a splendid green for table use.

Never Had Seed to Do Better.

In regard to the Dwarf Essex Rape which I purchased from you last fall, will say that I never had seed to come up and do better. I sowed some of it last fall which did fine and made excellent feed, but what I sowed this spring has made a heavier growth, and at this time is looking fine.—C. M. THOMPSON, Sussex County, Va., June 12, 1919.

GRASSES AND CLOVER SEED MIXTURES should be sown as early now as the ground can be properly prepared. It is very essential that farmers sow all the acreage possible to **Clovers** and **Grasses**, not only for the purpose of making plenty of hay and pasturage, but because these crops can be handled at a minimum of labor, and will also conserve and increase the fertility of the soil. We have prepared, after years of careful study, a variety of mixtures for different types of soils, both for hay and pasturage. We highly recommend them to our customers, as our own experience and that of good authorities recognize the value of sowing these mixtures for increased yields. We have reduced our prices on these mixtures 10. per pound from our Catalog prices on account of reduction in prices of grasses and clovers. Full information regarding our **Special Grass and Clover Mixtures** are given on pages 70 and 71 of our Annual Catalog.

"No. 8 Grass Mixture the Only Grass."

I have been a customer of yours for several years. I can say that all seeds purchased from you have given excellent results, and as to the No. 8 Grass Mixture, it is the only grass, in my opinion. I have sowed it now for two years and have had more grass and hay than I had made in five years previous. You may expect my order for next spring's supply.—E. F. ELLISON, Mercer County, W. Va., October 13, 1919.

Both the **OREGON** and regular **HAIRY VETCH** can be secured at very reasonable prices this spring, and they will very probably be used to a larger extent than in previous years. Vetch is a very valuable crop to grow, both from a standpoint of soil improvement and feeding. It grows surprisingly well on poor soils, and is greatly relished by all kinds of live stock.

No Crop That Will Beat Vetch and Oats.

I am just through housing my crop of Applier Oats and Hairy Vetch. They make a heavy crop. I do not think there is any crop that will beat vetch and oats for making good, nutritious feed for stock. I have always found your seed O. K.—J. F. POLLARD, Pitt County, N. C., June 7, 1919.

When buying your requirements in **Field Seeds** the coming season, always demand the best quality, re-cleaned stocks, as a slight advance paid for high-grade seeds will doubly repay you at harvest time. Our **Trade-Mark Brand Seeds** are of the very best grades, being thoroughly re-cleaned and tested for both purity and germination. Specify them when ordering and see the results.

SEED POTATOES.

Potatoes of all kinds are extremely low in price this season. Owing to the very low price and the heavy crops on hand, truckers and growers are not planting as heavily this year as usual.

Following out the usual tendency this year to put in larger crops for home consumption, we would unhesitatingly advise that potatoes be one of the main crops. This applies particularly to medium crops for summer consumption. Be sure to have plenty of potatoes on hand so that you are not dependent on the market for this crop.

We would advise planting **Irish Cobbler** and **Early Ohio Potatoes** on or before the middle of March; **Green Mountain, Rurals** and **Spaulding No. 4 Rose** up to the middle of April. Plant plentifully of all varieties.

ARTICHOKES are one of the best and most satisfactory crops that can be planted for feeding to hogs. They are considered to yield much more largely than potatoes on the same land, and can be left in the ground after being grown until you are ready to feed or harvest the crop. The hogs can be turned into the field where they are grown and allowed to harvest the crop themselves. We strongly recommend to our customers to plant more extensively of artichokes, as it is a most healthy and nutritious food for hogs, as well as for cattle, sheep and horses. Plant and cultivate the same as potatoes. It requires from four to five bushels to plant an acre.

JAPAN CLOVER is considered the best summer legume pasture crop for poor soils, hillsides and woodlands, which has ever been introduced in the South. Its greatest value is for grazing, and its use is highly recommended by the Department of Agriculture and farmers who have used it for this purpose. It will stand very heavy grazing, but should not be grazed too heavily in the late summer if it is expected to reseed itself for the next season. **Japan Clover** also furnishes a good hay crop when sown on rich land, yielding from one to three tons per acre, but we would not recommend it for soil of this character, as other grasses and clovers can be sown to better advantage, except in the extreme Southern States. Although being an annual, **Japan Clover** will reseed itself even under normal grazing conditions, and the second season will furnish a wonderful pasturage. It can also be sown together with other grasses and clovers for an all-year-round grazing pasture, such as **Herds Grass, Bermuda Grass, Sweet Clover** and **Burr Clover**. The demand is increasing rapidly for this valuable legume, and from present indications there will be a shortage of good seed stocks before the season is over. Sow at the rate of fifteen pounds to the acre alone.

The Importance of Proper Feeding of Hens for Egg Production.

Large poultry raisers and poultry authorities know that feeding is one of the most important factors in egg production. A well balanced ration, composed of good, healthy, palatable feeds is repaid many times by the extra eggs obtained. At the present time there is a vast quantity of low grade poultry foods being offered at cheap prices, which are put up without any consideration of a balanced ration, and contain in a good many instances musty grains that are very injurious to a healthy flock. Our **HOLLYBROOK POULTRY FOODS** are the result of careful study, and are manufactured in our own Poultry Food Plant, so we know that they contain only the choicest grains and seeds, carefully compounded to meet all the requirements of egg production. Our poultry foods are thoroughly re-cleaned from dust and small inert matter that is lost in feeding in a litter. A trial of our celebrated poultry foods will convince you of their superiority.

WOOD'S LAWN GRASS SEED.

Lawn Grass can be safely and satisfactorily sown now and up to the middle of April—the earlier the better—as it enables the young grass to get a good start before the warm weather comes on. We have especially prepared a "Lawn Circular" for the benefit of our customers who are interested in beautifying their homes, which will be cheerfully sent upon request. It gives full information regarding the preparation of the soil, seeding and fertilizing.

WOOD'S CROP SPECIAL.

Prices of Field Seeds are always subject to market fluctuations. We always fill all orders entrusted to us at lowest ruling prices on date order is received. If prices decline, we give our customers the benefit of it. If they advance, we charge the advance prices. In case customers desire to limit us to filling orders at prices quoted on any particular date, they will kindly so state on order. Mention date and number of "Wood's Crop Special" upon which the order is sent.

Terms on all Field Seeds, net cash. Customers who have no regular accounts with us will kindly remit the amount with their order or name business reference as customary before opening new accounts.

While we exercise great care to have all seeds pure and reliable, we give no warranty, express or implied, as to description, quality, productiveness, or any other matter connected with the goods we send out, and will not be in any way responsible for the crop. Every order for articles named in this price-list will be executed on these conditions on **Y**.
