ANNUAL CATALOG
TURNER BROTHERS

TURNER BROTHERS (SONS OF A. S. TURNER) AT HOME AND
ENJOYING SNOWBALLS IN JUNE

All prices in this catalog subject to change without notice ten days
after the catalog is mailed out, however we expect no change.

BLADEN, 1921 NEBRASKA

WE ADVISE PARCEL POST SHIPMENTS ON GLASS CLOTH

Freight and express rates have advanced until we believe it invariably advisable to ship by parcel post. Again parcel post is by far the surest prompt delivery and mail always takes preference whenever any shipping difficulties arises and in some instances where freight or express shipments go a long distance they are held at traffic centers for carload dispatches.

For our customers convenience we make the following prepaid rates for parcel post. For Kansas and Nebraska we will prepay glass cloth by parcel post for one cent per yard.

In Arkansas, Colorado, Iowa, Louisiana, Minnesota, North Dakota, Oklahoma: Add two cents per yard.

In Alabama, Arizona, Illinois, Indiana, Mississippi, Missouri, Montana, New Mexico, Ohio, South Dakota, Tennessee, Texas, Utah, Wisconsin and Wyoming: Add three cents per yard for parcel post charges.

For Maine, Massachusetts, New Hampshire and Rhode Island: Add five cents per yard for parcel post.

For all states not mentioned add four cents per yard for parcel post charges.

For Canada add 6c per yard, for parcel post or express charges.

CANADIAN CUSTOMERS. Exchange on personal checks from Canada comes unreasonably high and we will therefore only send amount of goods that check will pay for after deducting exchange from checks.

WE WILL ACCEPT CANADIAN MONEY at face value when same is sent in registered letter, or you may remit by postal or express money orders.

ALL GOODS MUST BE PREPAID WHEN SHIPPED TO CANADA and we therefore demand the 6c per yard for Glass Cloth shipments whether express or parcel post. Ten yards is the limit in one package by parcel post and on the larger orders if you desire same in any special lengths same should be stated.

Here we have a view of a porch enclosed for the winter, and of course as the glazing on the Glass Cloth does not permit of a good view of surroundings two common windows were installed so that the outdoors could be viewed from inside the enclosure, and when the sun shines we would just like to have you step inside and see how much heat is actually generated, even though the porch is on the north side of the house and the sun can only strike the two frames of Glass Cloth.

The screen on this porch is on the inside of the framework and the Glass Cloth is on frames so that it only takes a few minutes to change to an open or closed porch by putting up or removing glass cloth frames.

GLASS CLOTH

Not glass, but a fabric treated with a preparation which makes it wind and water-proof, and still generates warmth and light about the same as glazed sash. It is adapted for all outdoor forcing such as hot-bed, cold frames, and its moderate cost makes it adaptable to forcing vegetables and flowers in rows and beds when used in the form of a cold frame in any desired shape or size. It is also highly recommended for the sunny side of poultry scratching beds as it keeps out the wind and admits of plenty of light and also generates warmth. Further it is adaptable for lights in barns, sheds, stables or any outbuildings and for enclosing screened porches during the winter months.

Glass Cloth is also used for temporary greenhouses, but in this case, as well as others mentioned above, wind exposure must be considered. Don't think of placing the cloth in an exposed position without plenty of cross supports to keep the wind from flopping it continually.

We advise in using Glass Cloth to use it on well made frames, only they can be lighter material than generally used for glass sash, but the usual cross supports should be used. For greenhouses, etc., use supports lengthwise or frames every 9 inches.

ONE DOLLAR TRIAL OFFER. Send us \$1.00 and we will send you by Parcel Post PREPAID a piece of Glass Cloth 3x9 feet. Use or test it out in any reasonable way you choose along aside of regular glass for 10 days and if for any reason you are not perfectly satisfied with results obtained just return the Glass Cloth to us and we will refund your dollar.

We make the above offer in order to induce you to give Glass Cloth a trial, we could send you a small sample but if you should then doubt its efficiency our change would be slim of ever getting you to give Glass Cloth a trial. The above offer gives you a safe trial and gives us the use of the best of advertising as these small trial orders are what bring us in the larger repeated orders.

TEST IT OUT. If you have not already tested Glass Cloth by actual use, try glass cloth on one frame and on another use common glass, now place a thermometer in each frame out of the direct rays of the sun so as to get actual heat generated and also notice the soft even light produced by the glass cloth and we will risk your order for more.

OUR GUARANTEE

We guarantee our Glass Cloth to generate warmth and light satisfactorily when compared with regular glass sash in the following way.

Order any amount of glass cloth desired. Use or test out one-third of amount purchased in any way for ten days. If it does not give perfect satisfaction when compared with glass sash under same circumstances, return both used and unused portion of glass cloth purchased and we will pay return transportation charges and refund purchase price.

GLASS CLOTH PRICES

1 to 5 yards at 35c per yard, 6 to 10 yards at 33c, 11 to 25 yards at 32c, 26 to 50 yards at 31c, 51 to 75 yards at 30c, 76 to 100 yards at 29c. All 35 to 36 inches wide. PARCEL POST see opposite page.

WRITE FOR PRICES ON LARGER QUANTITIES. We always make discounts if the market will afford it, or we will give as good discount if you just send along your orders of larger amounts and state whether you wish discount (providing we can offer same) in extra goods or returned in cash.

OUTSIDE VIEW OF GREENHOUSE

We show above a view of the outside construction of what is called the combined plan of hotbed and greenhouse. On the outside cover note interior view of same.

The alley way is dug into the ground while the foundation is constructed of lumber or cement. The glass cloth is made in frames which can be removed at will. If desired a heating plant can be installed to furnish heat under the beds! or proper room for manure if this method of heat is adopted may be provided under beds. This construction is very cheap and convenient and by using glass cloth most any size desired may be made by making longer or shorter frames and any number of them. The slope of roof can be very moderate but care should be used in construction to eliminate openings where cold air could creep in, in the way of joinings of frames.

FROM OUR MAIL BAGS

Under date of January 14, 1920, A. L. Childers of Independence, Mo., wrote as follows:

"Please send me prices on Glass Cloth and seed. I used your cloth last year; can truthfully say I like it better than glass. You can expect an order from me as soon as I get prices."

During the past few seasons we have shipped the Armstrong Greenhouses of Canada over two thousand yards of Glass Cloth.

Under date of November 24, 1920, F. L. Horst of Alabama wrote as follows:

"Please send 100 yards Glass Cloth. This makes the third hundred, I have ordered so far and will order more as I need it. This cloth is the most economical protection for plants I have yet used."

CELERY BLEACHERS

Celery bleaching tubes are made rapidly from paper stripped up in square form about 12 by 16 or 18 inches square. The best paper is probably the black insulating paper generally sold by hardware or lumber dealers and used over screen doors as a storm door in winter. Next choice would be Blue Plaste Board and common rosin sheeting paper will also give good results. Strip the paper up with the aid of a square or straight edged board.

By simply wrapping each plant with the paper square and slipping the spring on from the side you will have the most perfect celery bleaching tube made and a tube that will fit each plant perfectly as the spring holds paper up snug just as wrapped. This method of celery bleaching gives a quicker bleach than boards and much better, as the tube excludes all the light from the sides of plant, while the leaves drawn together form a perfect covering for top.

For prices of springs see Tree Protectors.

TREE PROTECTORS

Are formed in the same way, only common tar paper is used, and the paper is stripped up about ten inches wide and height desired for protector with short hooks on the ends of spring, and while the spring is simply slipped over the tube for celery bleachers, the ends are brought together and hooked when used as tree protectors, which makes a much smaller tube and making the same spring serve both purposes. The tar odor of the tar paper is the best thing known to drive away insects from the tree, while the tube gives further protection from all vermin and rodents.

Springs all one size and weigh 100 to the pound.

Price—100, 65c postpaid.

THE TURNER COMBINED PLANT FORCER, TRELLIS AND PROTECTOR

In offering this combination we believe it to be the most practical and durable convenience of its kind made.

The FRAMES—Are made of heavy galvanized wire with every joining welded, having no twists or loops to work loose and get out of shape. In all, there are ten separate welds on each frame. The corners or upright pieces of frames extend 4 to 8 inches (according to height of frame) below the main frame for the purpose of being inserted into the ground and anchoring it firmly. A straight wind simply can't blow them over anchored this way at each corner.

These upright wires also extend $\frac{1}{2}$ inch above main frame and make supports for all coverings. With the use of one common pin to hold the cover firm around lower part of frame the entire cover is held in proper place.

For convenience in shipping and handling, the frames are made a little larger at top than at bottom, so they telescope together nicely and take up a small space.

For beauty, efficiency, and actual results the Turner Combined Plant Forcer, Protector and Trellis can not be and is not duplicated, and there is no just as good on the market. And if you find any just as good, considering price and actual results, and wish to crate ours up and send them back, we will refund purchase price, if returned in 3 days after purchase. Don't buy a forcer that will make a quick tender growth for a few days and when removed will leave a big tender plant at the mercy of the wind or other weather elements, just because you have to remove the whole forcer or not at all. The Turner Forcer can be removed a part at a time, bringing the plant gradually to the open as the weather permits. Other makes are liable to be blown over by the wind if a part is removed or even opened for ventilation.

**OUR LARGEST FORCER IS SHOWN HERE WITH SIDES AND TOP COMPLETE,
WHILE THE NEXT SIZE SHOWS THE FRAME ONLY AND THE
TWO SMALLEST SIZES ARE WITH SIDE COVERINGS**

Our choice of all the combinations that can be formed on this frame in the way of plant protectors is the frame with a muslin top and the sides covered with our glass cloth. The sides alone being wind-proof protect the plant from any cold wind, while the sun shining through this cloth gives at the same time a great forcing effect similar, only much greater, than if you stand in the sun with a building to keep the wind off from you. You have also noticed how rapidly some vegetation grows behind a hedge or some building while that out in the open almost seems to be dormant.

With glass cloth forming the sides, we find the muslin top admits a slow change of air, keeping the warmth from getting too intense in midday and still protects the plants from any frost at night, besides keeping off all insect pests.

PAPER SIDES. During the last season we made some experiments on the three smallest sizes of frames in the way of using heavy wrapping paper to form the sides instead of glass cloth and was very much pleased with the results, and advise our customers to purchase frames of us and some heavy wrapping paper from your local hardware, while making some tops from flour or inside sugar sacks and thereby obtaining forcers at a very small cost.

If a tomato trellis is desired, when the proper time comes, remove all covering from frame and you have the trellis which can remain till crop is removed.

PRICE OF PLANT FORCERS AND FRAMES

Sizes of frame by inches—Top.....	10x10	8x8	8x8	6 ½ x 6 ½
Height	16	12	8	4
Price for 19 frames.....	\$ 2.25	\$ 1.90	\$ 1.80	\$0.70
Price for 50 frames.....	10.50	9.25	8.60	3.35
Price for 100 frames.....	20.00	17.50	16.40	6.30
Covers complete—Sides made from Glass Cloth and tops of muslin. Any quality, each..	.28	.20	.12	.08

All prices F. O. B. Bladen, Nebraska. And when comparing prices with other makes, consider that these have about twice the actual growing capacity as other makes of same pretended size.

SEED DEPARTMENT

WHOLESALE BULK PLAN. In offering seed under this plan we eliminate the greater expense of the catalog system of selling seed.

Our seed is all sent out in cloth bags containing only the seed, and inside label stating variety of seed and in large quantities which eliminates waste and expense of weighing up, and dishing out, small quantities.

GUARANTEE. We guarantee all our seed to be choice stock and strong germination and will gladly refund your money for any seed not perfectly what we claim it to be. We can't guarantee a crop but it is our business to put out seed with a vitality unquestionable.

COPENHAGEN MARKET CABBAGE.

The best flavored, finest grained, large quick growing cabbage yet grown. It produces a large, round head one-half heavier and just as early as early Jersey Wakefield. Is a much prettier shape and therefore a better seller while the fineness and flavor is second to none. It is our choice as a first early, also to be used for later plantings as a midseason cabbage.

COPENHAGEN MARKET CABBAGE

BEET

FIELD'S DAISY MUSKMELON

PERFECTION MUSKMELON

FIELD'S DAISY MUSKMELON. A good yielding, medium size salmon meated melon with the smoothest, sweetest flavor of any muskmelon grown. For home use, once eaten you will want no other; for the market, one sample to a customer will hold him for all time against any other melon on the market unless it might be Perfection. Oz., 25c; $\frac{1}{4}$ -lb., 45c; $\frac{1}{2}$ -lb., 80c; 1-lb., \$1.50.

PERFECTION MUSKMELON. A twin to the Daisy except it is larger and does not produce as many fruit, but it makes up in size, and its size makes it a first choice on the market. In conjunction with the Daisy you can get and hold the trade completely. Price same as Daisy.

JOHN BAER TOMATO

The John Baer tomato will come through the different variations of seasons and average the most marketable fruit per plant, and also the largest cash returns per plant, per season when taken for any number of consecutive years of any variety that we have tested out.

John Baer is a good sized, smooth tomato, perfectly red in color and while it may be a few days later ripening its first fruits than some of the earliest varieties. Its habit of setting plenty of fruit and maturing a large quantity of big marketable fruit, makes it a favorite with us both as a first early and for later plantings as a main crop. When you plant tomatoes plant some John Baer and give us a chance to prove that we furnish just as choice seed as others who charge much higher prices.

WATERMELON LORE

We believe you like watermelons and this is the way we raise them for market; and it only takes two or three pounds of seed per acre. Prepare the ground just as you would for corn and put watermelon seed in the box instead of corn but only plant every other row. It makes no difference whether you are listing or checking it works out fine anyhow. You know melon seed rot easy if the ground is cold so be careful to get them in at the right time and then keep right after them with the five shovel garden cultivator so that the weeds never get above the ground and you will have no hoeing to do, stop cultivation when the vines get good runners and what weeds come later will do little harm. Our choice of watermelons are KLECKLY SWEETS and TOM WATSONS and the returns from the melons we sell usually runs from fifty to one hundred dollars per acre. Now give the above one good honest trial.

KLECKLY SWEET WATERMELONS. An old variety and still on top. An early maturing, long dark green melon of medium to large size, thin rind and positively the sweetest and tenderest red fleshed melon grown. It is too tender and brittle to ship but if handled with reasonable care it makes the best melon grown for home use or nearby market.

¼-lb., 25c; ½-lb., 45c; 1-lb., 85c; 10 lbs., \$6.00. All prepaid.

TOM WATSON WATERMELONS. Another old standby of the Kleckly class, in fact we might call it a Kleckly Sweet with just a trifle of the sweetness sacrificed for a good tough rind and a little more size. Tom Watson is now about the most popular shipping melon grown and while some claim it to be just as sweet as the Kleckly Sweet, we discount the sweetness just a trifle, however it has as thin a rind and tough enough to stand a lot of handling which makes it a favorite with market gardeners and shippers. It ripens just a few days later than the Kleckly Sweet. Prices same as Kleckly Sweet and we will give you part of each on the 10-lb. price if you prefer.

Norwich, Conn., Nov. 1, 1920.

Turner Bros.

Gentlemen:—I would like to have you send me your catalog of seed as soon as you have it printed, I had very good success with those I got last spring.

C. L. SWAN.

ALL SEED PRICES LISTED IN THIS CATALOG ARE PREPAID

Will gladly quote you on prices F. O. B. seed house and can make some discount on large orders by express.

SEED SWEET POTATOES

We have grown for us a quantity of choice seed sweet potatoes, kiln dried, clear of black rot, soil rot and of all other dangerous diseases. Well sorted for seed and of a size that will produce an abundance of plants. These seed are grown for us in Missouri and put in storage right from the field which eliminates handling and bruising and enables us to guarantee to deliver them to the station in first-class condition.

All shipments are made in barrels and boxes and paper lined when necessary. And they should reach customer in good condition, but owing to delays in transportation which sometimes happen we ask our customers to be prompt in receiving all shipments when they arrive and if in bad condition be sure to have bad order properly made out before accepting the shipments from transportation company as we can not be responsible for delays in delivery which sometimes is a detriment to sweet potatoes. We further urge having the hotbed ready for the seed upon their arrival.

PRICES—Nancy Hall, Pumpkin Yam or Yellow Yam (running) per bushel, \$2.75. Porto Rico, Red Jersey, or Early Triumph, per bushel, \$3.25. Yellow Jersey, Golden Queen, Southern Queen, Red Bermuda, Yellow Nansemond, or Red Nansemond, any variety, per bushel, \$3.00. Any variety, 10 lbs. or less, at 20c per lb. Over 10 lbs., at 15c. Add 25c to bushel prices for half bushel lots. Deduct 25c from bushel prices on 5 bushel lots. Will gladly quote prices on larger quantities.

ALL SHIPMENTS made from Neosho, Mo., direct from storage and we advise placing all orders early and stating date you desire shipment made.

Enlarged View New-Way Nozzle

THE NEW-WAY IRRIGATION SYSTEM

The New-Way Nozzle is a brass tube shaped nozzle containing a removable spring core. With the aid of our little inserting tool these are inserted into any common garden hose, making a movable system that can be used anywhere that you can connect up to a water system, well or tank.

The object of the spring core is two-fold: First, it regulates the flow of water so that only a seepage is discharged from each nozzle, which allows the soil to absorb the water easily as fast as it is discharged. Or if desired, this spring core may be removed, allowing each nozzle to discharge a small stream of water. Second: we have a non-clogging nozzle as the spring core extends slightly through the tube, which keeps any large particles from entering the tube, and if any very small particles should enter at the side of core it would take a large number to hinder the flow of water. Should a stoppage occur it is instantly removed by removing the spring core.

FOR THE GARDEN. Perhaps the most common practice is to use the spring cores in the nozzles and lay the hose along close up to each row of vegetables until well watered and then move to next row. In this way every bit of water is saved and the plants get full benefit of the water as it is applied right up to the roots. This is better than sprinkling for lawns. Try soaking lawn up deep for 30 days.

PRICE....Inserting tool and small box of nozzles Post Paid, 50 cents. Large box of Nozzles and inserting tool, Prepaid, \$1.00.

The most practical tool for transplanting tobacco, tomato, cabbage, sweet potato, peppers, cauliflower, egg plant, strawberries and all similar plants.

Yes, and it beats a hoe for planting melons, corn, etc.

8,000 to 15,000 plants can be set per day, every one watered and no lame back.

MASTER RAPID PLANT SETTER

The roots of each plant are placed in the ground almost as natural as if they grew there, and firmly set by the absorption of water so that the plant takes hold and starts to grow at once, making it possible to set plants in much more adverse weather than could be done in any other way.

Every plant setter guaranteed to give perfect satisfaction or your money refunded. The setter is made of heavy block tin with strong steel jaws and brass fittings and carries water for 125 to 150 plants at each filling.

The writer, A. S. Turner, has personally used one of the above machines for the past few years and finds it all that the manufacturers claim for it. If you only have a few hundred plants to set per season it will be a great investment at a small price. The Plant Setter actually sets plants better than common hand work, saves much valuable time and you don't get that awful feelings in the back and knees.

PREPAID BY PARCEL POST.....\$6.75 Each

The above price is the price at time of issuing this catalog, and if at any time the manufacturer should change the above price our price will change also and we will fill your order as cheap as any published price on above plant setter.

FROM OUR MAIL BAG

January, 1917, we sent E. Georget of Canada 2 yards of Glass Cloth and on April 8, 1920, he sent up an order for 100 yards.

On August 5, 1919, A. A. Turnbarger of Alaska, sent us an order for 100 yards of Glass Cloth and on July 6, 1920, he ordered an additional 200 yards.

In the past few seasons we have shipped Blackman Bros. of Iowa, a total of almost a thousand yards of Glass Cloth.

On January 19, 1920, Lee Dick of W. Virginia, had the following to say:

"A few years ago I used some of your Glass Cloth with great satisfaction. Please send me catalog and prices at your earliest convenience."

(See Page Three)

DOES IT SUIT YOU

How do you like our method of listing seeds without descriptive matter and directions of plantings, culture, etc., and giving our customers the benefit of the saving on catalog expenses in the way of cheaper seed.

Our system of producing choice seed with extra strong germination is the most modern, and we invite you to test our seed out right along aside of any other seed purchased at higher prices.

We also sell to seed dealers and if you happen to deal in seeds, or can use quite a quantity, give us a list and quantity of your requirements and let us tell you what we can furnish them at. Write us a seed letter anyway.
