REDDINGS' FROST-PROOF CABBAGE PLANTS.

To the Market Gardener who grows cabbage for either shipment, or nearby markets, earliness or quick maturity of the crop is a prime necessity if largest profits from a sure market are to be secured.

To the Home Gardener who wants earliness in maturity together with avoiding all the trouble of cabbage seed sowing and necessary protection of all early sown seed and plants, REDDINGS' FROST-PROOF AND PRACTICALLY FREEZE PROOF CABBAGE PLANTS are both a convenience and a necessity.

In the fall we sow our cabbage seed in the open field where they make a slow, vigorous and hardy growth during the winter and can be taken from there and planted anywhere in the Southern States between December 15th and April 15th with perfect safety; a thing that is impossible with hot bed or green house grown cabbage plants.

The use of Reddings' open air, frost-proof plants enables the Gardener to put full grown heads of cabbage on the market three or four weeks ahead, and naturally he gets the early season top price for his crop.

We make a specialty of our cabbage plants. We know they are the best plants grown. We sow only GENUINE LONG ISLAND SEED in the OPEN FIELD, consequently we produce a STRONG, STOCKY and HARDY PLANT.

To mature good heads the plants must not be too old when shipped. Once a cabbage plant gets too old before it is transplanted it is very apt to run to seed instead of producing salable or unsalable heads of cabbage.

You can't afford to take chances on such things and you take no chances with "REDDINGS' FROST-PROOF PLANTS."

EARLY JERSEY WAKEFIELD.

SOMETHING YOU SHOULD KNOW.

An acre of cabbage, well taken care of in an ordinary season, will produce 15,000 heads, or 30,000 pounds of good, wholesome food for man or beast. If you can realize the small sum of one cent per head, you would realize \$150 per acre, and at one cent per pound would sell for \$300. Ask your local grocer the market quotation on cabbage. You can follow this same acre of land with cotton, corn or potatoes and make a good crop without additional fertilizer.

CHARLESTON
WAKEFIELD

LATE FLAT DUTCH

VARIETIES.

EARLY JERSEY WAKEFIELD—This is one of our most popular varieties, especially among American gardeners. There is no early sort which heads with greater certainty, or more solid; the heads are of good size, cone form, broad at the base, with twisted top. To those who have never tried this variety, we say by all means, plant it.

LARGE TYPE CHARLESTON WAKEFIELD—Our strain of this variety is **EXTRA EARLY**. Each year sees this variety grow in popularity, and the demand greater. It has not been very long since its growth was confined almost exclusively to Market Gardeners of New Jersey, but is now well known and highly appreciated by all the leading Market Gardeners of this country. Is a week later than Early Jersey Wakefield, always forms fine, solid heads, and is the largest heading of all the early varieties. A strong favorite with Southern Growers.

SUCCESSION—A thoroughbred second early cabbage, pronounced by experts the most perfect type grown. Especially recommended on account of its uniform size and shape. One of the surest varieties to make a crop under all conditions, and does well in all seasons, no matter when planted.

DRUMHEAD—One of the oldest varieties in existence, producing large solid heads of bluish-green, with a broad and flat surface, when touched with frost, the outer leaves become tinted with reddish-brown; the head is white, crisp and tender.

LARGE LATE FLAT DUTCH—This variety needs no introduction, as it is one of the oldest in cultivation. Exceedingly valuable for its quality,

and for its ability to resist heat. Heads very solid, round, flattened on top, tender and fine grained.

Redding Seed and Plant Co.,
Texarkana, Texas.
Gentlemen:—

Thanks for your prompt shipment of such fine cabbage plants. The onion plants are fine and am enclosing you several orders for my neighbors. Just wanted to let you know how we received the plants.

Yours very truly,

JNO. D. HALCOMB.

Opelousas, La.

Simpson Co., Miss., Jan. 5th, 1919.
The Redding Seed and Plant Co.,
Texarkana, Texas.
Dear Sir:—

Received the cabbage and onion plants ordered from you, they are fine as can be. Such fine plants and prompt shipment has won my confidence. Will always order my plants from you in the future.

J. C. WEBB.

Lyons, Kans.

Redding Seed and Plant Co.,
Texarkana, Texas.
Gentlemen:—

Your "Frost Proof" cabbage plants you shipped me are "Frost Proof" and then some, they have gone through a heavy freeze that killed my neighbors' plants while I only lost a few out of my patch.

W. D. CHANCELLOR.

School, Mo., May 2nd, 1919.

Redding Seed and Plant Co.,
Texarkana, Texas.
Dear Sir:—

We received those Sweet Potato slips yesterday and was glad, they were fine plants. We wanted you to know we received them promptly in good condition.

AMERICA MOODY.

REDDINGS' TOMATO PLANTS.

The tomato is one of the most important and best paying truck crop that can be raised in the South, especially if they can be raised in time for the early market. In order to do this you should buy your plants in March and set them out in cold frames from four to five inches apart, and protect them from frost with sheeting. When all danger from frost is over they should be blocked out with a spade and taken to the field with the soil adhering to the roots and set out. By doing this you will be able to put tomatoes on the market three weeks earlier than tomatoes grown from plants set direct from the seed beds to open field. We begin shipping tomato plants March 15th.

NEW STONE TOMATO.

TOMATO VARIETIES.

NEW STONE TOMATO—The greatest canning tomato in the world. The largest, bright red, perfectly smooth, highest yielding, best keeping, finest flavored main crop variety in existence. The stone is always of good size, deep through from stem to blossom end and very firm. Skin is bright scarlet, perfectly smooth and strong enough to stand shipping and long distance hauling to perfection. Flesh is now recognized by all as the greatest canning tomato. Large quantities of Stone Tomatoes are sold by others, but The Genuine Stone of our own growing can only be bought direct from us.

EARLIANA, 90 DAY TOMATO—Very early, Habits of vine dwarf and compact. Fruit borne in clusters. A remarkable variety and one which is in great favor among Market Gardeners.

LIVINGSTON GLOBE—Is an extra good all round sort, of a distant globe shape, with quite a large percentage of elongated fruits. It is a very beautiful variety, and on account of its shape one

that permits of a great number of slices to be made from each fruit. It is early. We class it with the first earliest, both in our green houses as well as in our field trials along with many other varieties. The fruits are of large size, and a good marketable size is retained throughout the season. It is always smooth, of firm flesh and few seeds; ripens evenly; color, a fine glossy rose, tinged with purple, and without the slightest tinge of yellow at any stage of ripening. It is an exceedingly productive variety. Its bright proof quantities are remarkable. May be picked quite green, will carry to distant markets in excellent shape and ripen up uniformly to meet quick and profitable sales.

LIVINGSTON GLOBE TOMATO.

TUCKERS FAVORITE—A purple fruited sort of excellent quality, highest esteemed in many Eastern and Southern Markets. Grows to uniformly large size which is maintained until late fall. Fruits are invariable smooth, solid and the flesh is of finest color throughout. Unexcelled for slicing or cooking. Plants are very thrifty and bear continuously until killed by frost.

Boley, Okla.

Redding Seed and Plant Co.,
Texarkana, Texas.

Dear Sirs:—

Your plants are all you claim and more. I never saw such cabbage as I had when others near me had none. I have ordered plants before but never received such prompt shipment. Your firm will receive lots of orders from here next year.

Very sincerely,

MRS. E. F. COOKER.

REDDINGS' EGGPLANT PLANTS.

Egg Plants are coming more and more into favor throughout the country, being more generally used. Truckers can make large sums raising them where they live near small towns or cities in furnishing home trade, or by shipping them to the cities in bushel baskets or hampers. They are extremely profitable truck. An acre will make 800 or 900 bushels if properly handled, and the price is seldom as low as \$1.00 per bushel in the leading markets. We list below the three leading varieties. They bear until frost kills them. We begin shipping March 15th.

BLACK BEAUTY EGG PLANT.
VARIETIES.

BLACK BEAUTY—A greatly improved kind. Remarkably healthy, with vigorous growth, and the first to bear fruit. Rich purplish-black color, making the fruits very attractive. Entirely spineless. The quality is all that could be desired. The flavor is excellent.

FLORIDA HIGH BUSH—Originated in Florida by truckers and successfully grown in all parts of the South. Extremely heavy fruiter of a delicious flavor and of easy culture. Its fine appearance makes it a favorite on the market.

MAMMOTH PURPLE—This splendid variety was obtained by a very careful selection and cultivation. It is quite early for such a large sort, and is a sure cropper. The plants are large, vigorous, productive and spineless. Fruits are uniform in color and shape; very large, usually seven to nine inches in diameter. Skin a very handsome dark purple, smooth and glossy. Flesh white, of superb quality.

REDDINGS' PEPPER PLANTS.

Reddings' Pepper Plants are money makers for all truckers, and no successful trucker overlooks them; no home garden complete without them. Our strain of peppers are of the purest; below we list the leading varieties:

RUBY KING—A general favorite where known, and we add it should be known everywhere. To indicate its popularity, will record that one meat packer in the West ordered over one million pounds of salted Ruby King Pepper for use in his meat packing business. It is the largest of the monstrous peppers, in a brilliant red, producing from 10 to 15 fruits to the plant. The fruits are often six inches long, three and one-half inches wide across the shoulders. The walls are thick and sturdy. The flavor sweet, that is free from heat. It is a sort that resists decay longer than many others. Altogether most desirable.

PIMENTO—This is a new, superb pepper, mildest of all. Southern origin. Can be eaten like an apple, stuffed with meat and baked, used as salad or canned any time. Has thick, firm flesh which permits of being scalded and peeled.

CHINESE GIANT—Largest mild red pepper known. Plants strong and stocky. Peppers enormous size. Square form with thick, mild flesh.

MEXICAN CHILE—Cone shaped fruits of bright red color, borne in profusion. Flesh sharp and pungent.

Batchelor, La., August 14th, 1919.

The Redding Seed and Plant Co.,
Texarkana, Texas.

Dear Sir:—

Please let me know at once how early or at what time will your fall cabbage plants be ready for shipments, and what other plants you will have on hand for fall planting.

Your spring plants did fine, I sure want to be in time for fall setting. Let me hear from you at once.

Yours truly,

ROBT. HAMILTON,
Care Northern Lumber Co.

STRAWBERRY VARIETIES

AROMA—A good grower and a reliable variety. Berries are of large size, rich in color, with smooth surface and prominent yellow seeds, and a high aromatic flavor. It ripens late and in many sections of the South is the best of the late variety.

KLONDIKE—This variety is noted for its large yields of beautiful berries, uniform in shape, rich blood-red in color and having a flavor that is neither sweet nor sour, but mildly delicious.

EXCELSIOR—This variety is one of the very best extra earlies yet introduced, and is a vigorous, healthy grower, unusually productive for so early a sort, outyielding other standard earlies two to one, while the fruits average large, is very handsome and firm.

GANDY—A reliable late variety, berries bright crimson, very uniform in size and shape, large and firm. Plants vigorous and healthy.

BRANDYWINE—A fine, large, late, handsome, productive berry of excellent quality; regular conical form; dark glossy red, extending to the center. Plants healthy and vigorous, abundant producer.

LADY THOMPSON—Early, strong, upright plants, roots deeply; many long runners. Thrives in all soils, but best in rich loam or sand. Berries medium to large, regular, glossy pink, solid, meaty and excellent.

EVERBEARING STRAWBERRY VARIETIES.

SUPERB EVERBEARING—This is the most wonderful Everbearing Strawberry ever produced. It out-rivals its parents both in its large size and wonderful productiveness. Plants are strong, healthy and deeprooted. The fruit is medium to large in size, very firm, uniform shape, bright red, and has the native strawberry flavor.

PROGRESSIVE EVER-BEARING—This is the strongest growing plant of the Ever-bearing varieties we have seen. The plants are very large and heavily rooted, producing a phenomenal crop of medium to large fruits, of a dark red color both inside and out.

ONION

CULTURE—Large, sweet, mild onion from plants. Onion plants produce a much larger and milder onion than sets. If you have not used the plants before we say by all means try them this year. To grow large onion the plants should be transplanted when the plants are the size of a goose quill, transplant to row 12 inches apart and 4 to 6 inches between the onions. Can be transplanted from October 1st to April 1st.

BERMUDA VARIETY—Of a mild and delicate flavor and keeps long. They produce full grown onion from seed the same season. In the South, seed sown in August or September, (our seed sown in September) produce large onion for market for early spring. This valuable onion is especially adapted to the Southern States and is the most profi-

Wilbert, La., August 11th, 1919.

Redding Seed and Plant Co.,
Texarkana, Texas.
Gentlemen:—

I should have written you long ago of my success in buying plants from you. They were really the most and the best I ever grew. I wish to know by return mail if you have any plants for fall or autumn. If you can supply me please let me know at once as many of my neighbors are anxious to use your plants for fall and winter cabbage.

Please send me your price list by return mail.

Yours as ever,

S. W. HUNTER.

PLANTS

table of all varieties of onion for the grower. Ease of cultivation, large size and mildness of flavor makes it the most valuable of all kinds. The Crystal Wax is preferred to all others by growers of the South. Our plants are grown from seed obtained direct from the Isle of de Teneriffe, one of the canary Islands, the home of the Bermuda onion. Remember plants are better and much cheaper than sets, producing a larger and milder onion.

CRYSTAL WAX—This is the pure white Bermuda variety, having a splendid waxy appearance. Never fails to create a great sensation wherever grown.

RED BERMUDA—This variety has the same shape, size and mildness of the Crystal Wax; color, pale red.

DeLeon, Texas, April 8th, 1919.

Redding Seed and Plant Co.,

Gentlemen:—

Received the Tomato and Pepper Plants in record time and in fine shape, you pack your plants as they should be packed. Am enclosing you orders for Potato plants for myself and two of my friends to be shipped April 15th.

MARTIN GILLISPEE.

Houston, Texas, April 15th, 1919.

The Redding Seed and Plant Company,

Got the Sweet Potato Plants the day before yesterday. Have not had time to write you before. Thank you.

Respectfully, JOHN NORFMARK, 205 Hogan St.

REDDINGS' SWEET POTATO PLANTS.

The field for the production and use of this valuable farm product is broad and constantly growing. The large Eastern markets, where a few years ago the Sweet Potato was practically unknown, are now consuming large quantities.

Yielding well, as it does, under a wide range of conditions, and with a rapid increasing demand, this crop is bound to become of greater importance to our Southern farmers.

In Florida the Sweet Potato blooms and produces seed, just as does the morning glory to which family it belongs. These seedlings are the source of many of our new varieties.

All varieties thus obtained tend toward quick maturity and are heavy yielders.

The Nancy Hall, Porto Rico and Triumph are perhaps the best known Florida seedlings.

With the passing of each year the Sweet Potato is fast becoming of greater importance as a commercial truck crop in the United States. During a long period it has formed one of the principal sources of feed for the people of the Southern States and of Tropical America. As a commercial crop the Sweet Potato would be included among the five of greatest importance, ranking perhaps about third on the list. In many of the islands of the Pacific, especially in the Philippines, the Sweet Potato is the principal vegetable food for large numbers of the population, at certain seasons being almost the only food available to the lower classes. The Sweet Potato industry in this country readily divided into two classes of production: (1) For home use; (2) For market. A quantity sufficient for home use can be grown under a wide range of conditions, while production on a commercial scale is somewhat restricted by climate and soil and also by market transportation facilities.

CLIMATE CONDITIONS AND SOIL ADAPTED TO SWEET POTATOES.

Being of a tropical nature, the Sweet Potato thrives best with abundant sunshine, a moderate rainfall and warm nights. A growing period of at least four months is required.

A moderately fertile sandy loam is an ideal soil for the production of the Sweet Potato, and it may be grown on almost pure sand, where there is a sub-soil of yellow clay. While this crop thrives best on newly cleared land, this character of soil is always desirable, it is by no means necessary; a good yield coming from land too poor for many ordinary farm crops.

Sweet Potato may be profitably grown on land considered worn out for cotton and tobacco. Under this condition the best results are obtained by rotat-

ing the crop with peas, or something of like character, to increase the humus of the soil.

Good drainage is, of course, essential, hence the idea of planting upon ridges.

In preparing the land for this crop the depth of plowing is an important factor. On land with a great depth of surface soil, particularly if it is of an alluvial nature, shallow plowing is best, otherwise the tendency is to produce long irregular potatoes instead of the more desirable thick spindle shape dones.

If, on the other hand, the surface soil is not deep enough, plow a little deeper each year and sub-soil in the furrow behind regular turning plow.

SETTING THE PLANTS

The ridges should be thrown up a week or ten days before the plants are to be set in order to allow the soil to settle and became compact. Plants start into growth quicker when set during a "season just before a rain being the best time, as the rain settles the earth about the roots of the plants and starts them off in good shope."

They may be successfully started, however, by pouring a small quantity of water into the hole where the plant is to bet set and pressing the earth firmly about the roots. Some growers prefer this method and claim a larger per cent will live.

The ridges are ordinarily made from 36 to 40 inches from center to center and the plants set 16 to 18 inches apart in the row.

An acre of good Sweet Potato land will easily support 9,000 to 11,000 plants, which will be about the number required in planting in this way.

VARIETIES.

We Begin Shipping Potato Plants March 15th.

PORTO RICA—Very quick growth and one of the most prolific of the yellow sort, turning out three to five thousand bushels to the acre. This potato is well shaped and of splendid quality. Pink skin, yellow flesh. A good keeper and a variety that is steadyily growing in popularity. We think this variety is the best of all the early varieties.

NANCY HALL—Thick oval tubers, having a smooth skin and deep yellow flesh. One of the earlier sorts; produces and keeps well.

IMPROVED EARLY WHITE TRIUMPH—A heavy yielder and popular in potato markets where a deep yellow potato is not demanded. Vines short; used extensively for canning.

PAPER SHELL PECANS

You can buy Pecan trees for less money, but you cannot duplicate the quality of our trees, the care we exercise in digging and packing and our prompt delivery of freshly dug trees. And as surely as you live you will remember quality long after you have forgotten the price you paid for the trees.

Remember, too, that our trees are always full size, strong, thrifty and guaranteed to please you in every respect or not to cost you one cent. Get your neighbors to club in with you and get trees in large lots and at lower prices.

VARIETIES.

SCHLEY—Said to be the ideal pecan. It is an early bearer. Fills veary full. Cracks easily and very thin shelled. The tree is a rapid grower and has a beautiful foliage. The nuts bring the highest price on the market and are of extra-large size. Our stock is mighty fine in this variety.

STURAT—The Stuart Pecan is one of the oldest of the grafted varieties known and has been tried out thoroughly in more places than any other pecan, and is ranked at the top of the entire list as a commercial success. The nuts are large to very large, fills unusually well and always command a good price on the market. The Stuart is a beautiful nut and the tree is the hardiest and easiest pecan to grow, being very vigorous and healthy and a heavy bearer. You are safe in planting the Stuart Pecan for it is giving better results than any other variety in the South today. Our Stuart trees are extra choice in every respect.

VAN DAMAN—A very large, long, soft-shelled nut of unusually fine flavor and exceptional quality, one of the finest eating nuts ever grown. It is popular on the markets and is one of the finest of all for planting generally. The tree is a very rapid grower, healthy, and a heavy bearer. No orchard is complete without some of our genuine Van Deman pecans in it.

SUCCESS—This grand nut has probably attracted more attention than any other nut recently introduced. Though not the largest nut in existence, the kernel has proved to be the heaviest in a test of fourteen leading varieties made during a series of years. Ovate in form, with thin shell of splendid cracking quality; kernel plump and heavy; flavor excellent, color bright and fine form. Tree of good sturdy growth and heavy annual bearer. Select nuts, forty to the pound. Keeping quality the best.

REDDING'S COUNTRY GARDEN COLLECTION.

The idea behind these collections is one of service. This is a service to the amateur and to the experienced gardener alike. There are many reasons why a collection of vegetable seed that is made up by experts is a desirable and economical purchase. The main reason is that when you buy a Redding's collection you are getting the results of years of experimenting in order to obtain the best possible.

Another reason is that these collections are packed before the busy season begins, and they are made up with the view of giving extraordinary value for the price.

Soil and climatic conditions have been carefully considered, so that the purchaser of either of these collections can be sure of a collection as nearly perfect as our long experience can make them.

REDDING'S "GARDEN OF PLENTY" COLLECTION.

(Mailed to your address, Post Paid, for \$3 50)

Here is the most popular collection ever put up by Redding. Every item chosen for this list is one of the vegetables for which there is the greatest demand. This assortment contains enough seed to plant a large garden—45 different kinds of vegetables as listed below:

- 1 15c pkg. Burpee's Bush Stringless Green Pod Beans.
- 1 15c pkg. Wardwel's Dwarf Kidney Wax Beans.
- 1 15c pkg. Kentucky Wonder Pole Beans.
- 1 15c pkg. Henderson's Bush Lima Beans.
- 1 15c pkg. King of the Garden Pole Beans.
- 1 15c pkg. Extra Early Garden Peas.
- 1 15c pkg. Champion of England Garden Peas.
- 1 15c pkg. White Marrowfat Garden Peas.
- 1 15c pkg. Golden Bantam Sweet Corn.
- 1 15c pkg. White Evergreen Sweet Corn.
- 1 10c pkg. Flat Egyptian Beet, Extra Early.
- 1 10c pkg. Detroit Dark Red Beet.
- 1 10c pkg. Early Jersey Wakefield Cabbage.
- 1 10c pkg. Charleston Wakefield Cabbage.
- 1 10c pkg. Premium Late Flat Dutch Cabbage.
- 1 10c pkg. Chinese Cabbage (Pe-Tsai).
- 1 10c pkg. Georgia or Southern Collard.
- 1 10c pkg. Oxheart Carrots.
- 1 10c pkg. Black Beauty Egg Plants.
- 1 10c pkg. Early White Spine Cucumber.
- 1 10c pkg. Extra Early Green Prolific Cucumber.
- 1 10c pkg. Early Curled Simpson Lettuce.

- 1 10c pkg. May King Lettuce.
- 1 10c pkg. Big Boston Lettuce.
- 1 10c pkg. Giant Southern Curled Mustard.
- 1 10c pkg. Rocky Ford Canteloupe.
- 1 10c pkg. Tom Watson Watermelon.
- 1 10c pkg. Kleckley Sweet Watermelon.
- 1 10c pkg. Red Weatherford Onion.
- 1 10c pkg. White Velvet Okra.
- 1 10c pkg. Plain or Single Parsley.
- 1 10c pkg. Hollow Crown Parsnip (Long).
- 1 10c pkg. Ruby King Pepper.
- 1 10c pkg. Pimiento Pepper.
- 1 10c pkg. Early White Bush Scallop Squash.
- 1 10c pkg. Yellow Summer Crookneck Squash.
- 1 10c pkg. Early Scarlet Turnip Radish.
- 1 10c pkg. Long White Icicle Radish.
- 1 10c pkg. White Strassburg Radish.
- 1 10c pkg. Purple Top White Globe Turnip.
- 1 10c pkg. White Egg Turnip.
- 1 10c pkg. Yellow Purple Top Tutabaga.
- 1 10c pkg. Chalk's Early Jewell Tomato.
- 1 10c pkg. Matchless Tomato.
- 1 10c pkg. New Stone Tomato.

REDDING'S "SMALL GARDEN" COLLECTION.

(Mailed to your address, Post Paid, for \$2.00).

Here is the most popular small collection ever put up. If you have but a small garden, you will be safe in ordering this splendid collection. If purchased separately, these seed will cost you \$3.00.

- 1 15c pkg. Burpee's Bush Stringless Green Pot Beans.
- 1 15c pkg. Wardwell's Dwarf Kidney Wax Beans.
- 1 15c pkg. Kentucky Wonder Pole Beans.
- 1 15c pkg. King of the Garden Pole Lima Beans.
- 1 15c pkg. Extra Early Garden Peas.
- 1 15c pkg. White Marrowfat Garden Peas.
- 1 10c pkg. Flat Egyptian Beet (Extra Early).
- 1 10c pkg. Detroit Dark Red Beet.
- 1 10c pkg. Early Jersey Wakefield Cabbage.
- 1 10c pkg. Premium Late Flat Dutch Cabbage.
- 1 10c pkg. Oxheart Carrots.
- 1 10c pkg. Black Beauty Egg Plant.
- 1 10c pkg. Early White Spine Cucumber.
- 1 10c pkg. Early Curled Simpson Lettuce.
- 1 10c pkg. Red Weatherford Onion.
- 1 10c pkg. White Velvet Okra.
- 1 10c pkg. Early White Bush Scallop Squash.
- 1 10c pkg. Yellow Summer Crookneck Squash.
- 1 10c pkg. Early Scarlet Turnip Radish.
- 1 10c pkg. White Strassbug Radish.
- 1 10c pkg. Purple Top White Globe Turnip.
