Everything for the Farm, Garden and Lawn

JOSEPH BRECK & SONS
SEEDS

Free Delivery of Seeds

*Our Retail Prices Include Delivery
Charges to any Post Office*

OUR retail prices include delivery charges to any Post Office, Railroad, Express Office or Freight Station in the United States, on cash mail orders for Bulbs at the single and dozen rates; vegetable and flower seeds at the package, ounce, $\frac{1}{4}$ -lb., $\frac{1}{2}$ -lb., and 1-lb. prices; books and other publications, except where otherwise noted.

Seeds in bulk, plants, nursery stock, fertilizers, insecticides, horticultural sundries, agricultural hardware and woodenware and other goods forwarded by Parcel Post, express or freight, as purchaser may direct at his expense; or in the event of there being given no shipping instructions, we will use our judgment and endeavor to ship in a way that will best protect our customer's interests.

After taking receipt for goods in good order from transportation company, our responsibility ceases.

We recommend that all plants and nursery stock be shipped by express; all such orders will be forwarded direct from our Nursery, the Breck-Robinson Nursery Co., Munroe Station, Lexington, Mass., and at our customer's expense, unless special arrangements are made regarding delivery at time order is placed.

Free Packing

We make no charge for boxes or packing on orders at catalog prices.

We charge for cotton bags as follows: 2 bushels, 45c. each; 1 bushel, 25c. each; $\frac{1}{2}$ bushel, 20c. each; $\frac{1}{4}$ bushel, 12c. each; $\frac{1}{8}$ bushel, 10c. each. On flower pots and other fragile articles, packages will be charged extra at cost.

PRICES.—For large orders, or on orders for export, we will be pleased to quote special prices.

SHIPMENTS BY PARCEL POST.—Seeds in packages and in bulk, bulbs and the majority of the articles shown in the Horticultural, Sundry, Insecticide, and Hardware Sections of our catalog, can be delivered at your door or post office by Parcel Post. To enable our customers to estimate the amount which they should remit to cover Parcel Post charges, we give herewith a table of Parcel Post rates.

NOTICE: We give no warranty express or implied as to description, quality, productiveness or any other matter of any Nursery Stock, Seeds, Bulbs or Plants we sell, and will not be in any way responsible for the crop. If the purchaser does not accept these goods on these terms, he must return them at once, and all payments therefor will be refunded.

JOSEPH BRECK & SONS Corporation.

JOSEPH BRECK & SONS

51 NORTH MARKET STREET, BOSTON, MASS.

Everything for Farm, Garden and Lawn

ONE HUNDRED YEARS

1822 - 1922

*W*HEN the House of Breck was founded in 1822 the Mowing Machine, Horse Rake, Tedder, Steel Plow, Disc Harrow, Tractor, Power Lawn Mower and many other machines and implements now in common use were unknown.

The varieties of vegetables, plants, and flowers were few and the products vastly inferior to those of the present day. Then the few varieties of seeds, bulbs, plants, and fruit trees offered by seedsmen and nurserymen were imported from foreign lands; now, practically all the enormous quantities of the new and improved varieties of these articles produced and sold annually are grown in this country.

The House of Breck enters on its one hundred and first year supported by a host of friendly and appreciative customers.

All who favor us with their business are assured of faithful service and satisfaction by the able men of long experience who head the departments of our business; by competent officers including members of the third and fourth generations of the Breck family; and by stocks of tested seeds and carefully selected bulbs, plants, implements, machines, and woodenware.

OFFICERS AND DIRECTORS

LUTHER A. BRECK, *President*
JOHN BENBOW, *Vice-President*
JOSEPH F. BRECK, *Treasurer*
ARTHUR D. FORBUSH, *Secretary*

NOVELTIES AND SPECIALTIES FLOWER SEEDS AND BULBS

ACACIA BAILEYANA (Cootamundra Wattle)

Valuable acquisition to our winter flowering plants, can be flowered in February without any forcing. There is scarcely a more beautiful plant with its drooping yellow racemes, small foliage graceful and fernlike, extremely free flowering, splendid for cutting and makes a beautiful pot plant. Pkt., \$0.25.

KURUME AZALEAS

This race of lovely Azaleas is remarkable for the abundance of its flowers and the lustre and purity of their colors. The flowers vary from pink to rose, cerise, lavender, mauve to magenta, salmon, vermilion, bright-red to deep scarlet and to purest white. Many of them have a petaloid calyx and hose-in-hose flowers. In such flowers the stamens, which are always five, and the pistil are perfect and there is no malformation as in ordinary double-flowers. The anthers, which are light to dark, varying with the color of the corolla, add not a little to the pleasing appearance of the flowers. The flowers, each about half to three-quarters of an inch across and borne in clusters of from two to several at the end of every twig, are in such profusion as to almost completely hide the leaves. Grown from seed they will produce flowering sized plants in about three years. Per pkt., \$1.00.

PETUNIA VELVETY VIOLET BLUE COMPACTA

This splendid novelty is similar in color to our original Velvety Violet Blue Petunia, but as a bedding plant it will be found more useful as the plants only grow about 12 inches in height, compact and very free flowering. Per pkt., \$0.50.

GLADIOLI PRIMULINUS HYBRIDS (Seeds)

This species introduced a number of years ago is fast coming into popular favor. The slenderness of the spike and the gracefulness of the flower, as well as the wonderful variety of color, make the type especially interesting. Our Matchless strain can be flowered the first year if seeds are sown early, and make flowering sized bulbs for the following season.

Breck's Matchless Strain, per pkt. \$0.50

BROWALLIA SPECIOSA MAJOR ALBA

This new white Browallia is of the easiest possible culture and almost perpetual flowering. The flowers are large and numerous grown to a height of two feet; fine winter blooming species. Per pkt., \$1.00.

For additional novelties and specialties see ★ varieties

Antirrhinum

ANTIRRHINUM

The following new greenhouse forcing varieties we consider the best for use under glass, treated for winter flowering they produce flower stems nearly a yard long and are invaluable for cutting.

	Pkt.
Breck's Matchless Pink.....	\$0.60
Breck's Matchless White	.60
Breck's Matchless Yellow.....	.60

MARGUERITE ASTER GENERAL JOFFRE

This novelty in single Asters bears large sized flowers of intense crimson scarlet, excellent for cutting. Planted in beds or borders they have a brilliant effect. Per pkt., \$0.25.

ASTER BRECK'S DWARF QUILLED

New dwarf bedding Aster especially adapted for edgings, compact plants covered with perfect formed flowers, each individual plant forming a neat bouquet.

	Pkt.
Cardinal.....	\$0.35
Purple.....	.35
White.....	.35
Mixed.....	.35

BRECK'S PRIZE MEDAL DAHLIAS

Choice Dahlia Novelties

We would advise placing orders early. As our stock of tubers becomes exhausted we will fill orders with strong grown, well-rooted plants from 2½ inch pots.

The following abbreviations show the various types of Dahlias: C., Cactus; D., Decorative; P. F., Paeony.

	Each	Doz.		Each	Doz.
Amy Peabody, P. F. A most beautiful sort, rich, velvety maroon distinctly tipped white. A striking contrast and an unusual flower.....	\$0.75	\$7.50			
Azalea, D. A big bloom formed of many rows of long, narrow florets giving an unusually attractive as well as an uncommon shape. The color is a soft, creamy-yellow and at times the outer row of petals is tinged red.....	1.00	10.00			
Ben Wilson, D. One of the largest grown. Color brilliant red to yellow at tips. Heavy built flower.....	2.00				
Beverly, C. One of the finest new Cactus Dahlias. The flowers measure from six to eight inches in diameter borne on stiff, wiry stems often two feet in length. The color is an exquisite rosy-lavender-pink...	.50	5.00			
★ Bill Hart, D. A most attractive flower of bright scarlet, distinctly tipped white...	1.00	10.00			
Copper, P. F. Large, free blooming Paeony growing from 6 to 10 inches in diameter. It throws a profusion of copper-colored blossoms shaded and tinted with bronze and apricot, at times a suggestion of sal-			mon pink, with broad fluffy petals twisted and often incurved. The bloom is held well above the foliage on long stiff stems.	1.00	10.00
			Dr. H. L. Tevis, D. A magnificent novelty flower, nine to eleven inches in diameter, erect on long vigorous stems. Color a rich combination of salmon-rose suffused with old gold shading to apricot.....	1.00	10.00
			★ D. Titus. A most pleasing combination of canary yellow at the centre, shading to old gold towards the outer petals. The flowers are gigantic with massive petals of great texture. Flowers are carried on long straight stems showing the flower on a slant. Plants are tall growing and of good habit.....	1.00	10.00
			Francis J. Burns, Jr., D. Soft pink shading to white in the centre. Stiff stems hold blooms well above plant.....	1.00	10.00
			Gay Gordons, P. F. Extra large well formed flowers of intense brilliant colors. A rich clear yellow, splashed, striped and blotched with carmine. A most wonderful fancy variety.....	.75	7.50

	Each	Doz.
Gen. Custer, D. A splendid Dahlia of superior quality. The large, elegant flowers are of a rich cream shaded pink with a golden stripe through each petal. Stems are fully two feet in length.	1.00	10.00
★ George Walters, C. A splendid California Novelty and one of the largest and best Hybrid Cactus. Pinkish-salmon touched with gold towards the centre.	1.00	10.00
Glory of New Haven, D. Clear lavender pink of the largest possible size, one of the best of the new varieties. Beautiful exhibition flower.	2.00	
Grizzley, D. Without a doubt the largest deep, bright red grown; ten inches is very easy to attain with this monster. For a large Dahlia it is very free-flowering.	2.50	
Harry Davidson, D. Mulberry pink, tipped gold; a very pretty variety.	1.00	10.00
★ Henry C. Gifford, P. F. Flowers are very large of unusual formation. The long narrow petals grow to a perfect centre and roll outwards, giving the appearance of a ragged Chrysanthemum. The color is a rich oriole yellow shaded to cream and pink and slightly touched orient red. A variety we can highly recommend.	2.00	
Henry Penn, D. Large flowers of true decorative type for exhibition and garden decoration. It is the most striking and valuable addition that has been offered in recent years. The color of this charming variety is a white ground daintily flaked and marbled soft rose pink extending over the whole flower. Strong grower, free-flowering.	2.00	
Howitzer, P. F. The largest fancy Paeony Dahlia produced. The gorgeous yellow blooms are striped and splashed scarlet. It has all the good qualities, immense size, free-flowering habit, and long stems which make it an excellent cut-flower.	1.50	
Jane Selby, D. This variety is as large as any Dahlia grown. A delicate mauve-pink of great substance and beautiful formation. The stem is wonderfully long and stiff, and the flower grows well above the foliage. It is a cut flower par excellence, as it has splendid lasting qualities.	1.50

Ben Wilson

	Each	Doz.
Kalif, C. The most massive fiery crimson Hybrid Cactus, measuring over nine inches in diameter. Erect growing plant, the gigantic flowers borne on long, stout stems above the foliage. Very free-flowering.	.75	7.50
La Favorita, D. A pleasing shade of orange-salmon. A flower which is much in demand for decorative purposes.	1.00	10.00
Lady Helen, D. Cream white, suffused carmine. One of the best, having large size, long stems, and very free-flowering.	2.00	
★ Lavendera, D. Monster flower on very long stem. Color, lavender-pink, white centre. The best of its color.	2.00	
Mable B. Taft, D. The coloring is novel, yellow, suffused with pinkish apricot, lighter in the centre and shading deeper towards the outer petals. The very large flower is composed of small, peculiarly shaped petals which give it refinement as well as beauty. It is particularly lovely under artificial light, stems are long, and absolutely stiff and straight. As a cut flower it has most unusual lasting qualities. A word of advice in growing: this Dahlia will produce more blooms to a bush than any we have ever grown, but it must be freely disbudded. It wants lots of space as it is a most luxuriant grower.	2.50	
Minister Talma, P. F. A smoky mauve shading lighter; a very odd shade. Has all the good qualities for garden decoration or exhibition.	.60	6.00
Mount Talmepais, P. F. Dark red Paeony Dahlia, one of the largest to date. Flowers measure eleven inches across; very prolific and good stems. A sure prize winner.	1.50	
★ Mrs. Ashley Low, C. Large Cactus Dahlia with perfectly straight petals of great length. Color, rich, deep orange. Flowers measure eight to nine inches across on good flower stems.	1.00	10.00
Mrs. F. C. Burns, D. A lovely shade of shell pink. Always good.	.75	7.50
Mrs. John Bray, P. F. A most distinctive Paeony Dahlia; ground color white. speckled, striped and splashed maroon, forming a good contrast to the yellow disc. Splendid habit, free-flowering, stem long and stiff; a very ornamental variety.	1.00	10.00
Mrs. R. R. Strange, D. Burnished copper and bronze. This color is the new shade that is so popular.	2.00

Henry C. Gifford

The Millionaire

Mrs. Woodrow Wilson, D. One of the gems; large flowers on good stems. A fancy. Color, pink white ground marked crimson.....	Each	Doz.
	3.50	
Pitt-Sing, P. F. A most fascinating Dahlia. It is the most brilliant oriental red with gold suffusion.....	1.00	10.00
★ Pres. Woodrow Wilson, D. Our best and largest seedling. A monster flower, often nine inches across on long, stiff stems. Color is a beautiful shade of deep crimson distinctly tipped pink and white. A very handsome variety.....	3.50	
Pride of California, D. This is the best red Decorative for all purposes. It has size, stem and splendid keeping qualities when cut.....	1.00	10.00
Ruth Gleadell, C. A fine hybrid of sunburst shades; soft yellow shading to pink on the outer petals. Good stem, large size, excellent formation, and a free bloomer....	1.00	10.00
Salmon Queen, D. A most beautiful rich shade of salmon; quite distinct. The blossom is large and regular. Splendid long stems hold the flowers well above the foliage.....	.75	7.50
Sunkist, P. F. The uniformity and perfection of this splendid new Dahlia shows unusual quality. The size of the flowers average eight inches in diameter, the color being a brilliant orange shade, the reverse of the petals tinted a delicate orange pink. The flowers are borne on long, straight stems and make one of the very best sorts for cutting.....	1.00	10.00

Tom Lundy, C. Another California Novelty with immense flowers on good stems. Splendid shaped hybrid Cactus of deep velvety crimson.....	Each	Doz.
	1.00	10.00

★**The Millionaire, D.** A monster Dahlia. This remarkably large Dahlia of the Decorative Type is certainly a wonderful production. The shade cannot be surpassed in daintiness of colorings in the most delicate of lavender with a faint pink cast overshadowing it. The depth of this flower and the number of large, finely shaped petals in its formation has never been equaled, in any Dahlia. The fullness of the centre of this flower is very remarkable, as the immediate centre of this flower when it is perfectly matured, is a pure white and the flower can be preserved until all of the lavender petals wither away and the whole flower becomes white. Another very unusual feature of this Dahlia is that the immense heavy flower stands erect on its stem.....

2.50

W. D'Arcy Ryan, D. A striking Fancy of violet-purple heavily tipped white which always attracts attention because of this unusual and beautiful coloring. A characteristic of this Dahlia is that it is always tipped white, and never has any solid color blossoms like the usual Fancy sorts. Stem is good size, large and very free-flowering.....	1.00	10.00
--	------	-------

White Mountain, D. We consider this variety to be the best white Decorative yet introduced. The large full flowers are borne into profusion. The type is perfect, the flowers measure from seven to nine inches across.....	1.00	10.00

NEW GLADIOLI FOR 1922

Varieties of More Than Usual Merit

When we offer new varieties of Gladioli, it is with the sincere endeavor to distribute something that possesses distinction in both appearance and quality; something clearly different from any other. The following were in the collection that won the Massachusetts Horticultural Society's Gold Medal at the great show in Boston in the Summer of 1921.

SIX "GLORY" KUNDERDI Ruffled Varieties

Kunderdi Glory. Creamy-apricot with tint of light pink; fine markings of bright red on lower petals.	.10	1.00	6.00
Orange Glory. Rich orange with beautiful lighter throat.	.35	3.50	25.00
★ Purple Glory. The giant of the "Glory" race. Color deepest velvety maroon red, with almost black blotches.	1.50	15.00	

Rose Glory. Purest rose-pink with deeper throat.	.50	5.00	100
--	-----	------	-----

White Glory. A gorgeous pure white, with beautiful iris-blue throat. A grand new sort.	.35	3.50	25.00
--	-----	------	-------

White Ivory. Tall, intensely ruffled. Snow white ground with beautiful red blotches on lower petals.	.30	3.00	20.00
--	-----	------	-------

★**The Glory Collection.** One each of the above 6 varieties for \$2.50.

GOLD MEDAL EXHIBITION VARIETIES

Bertrex. Lustrous white with pencil stripes of lilac in throat.	.25	2.50	15.00
Corinna. An extraordinary flower. Remarkably large, almost coal-black throat, bordered white.	.35	3.50	
Dixie. Very deep, rich almost black, red... ..	.15	1.50	10.00
Elkhart. Deep cerise. Tall spike with ten or twelve blooms open at once.	.40	4.00	
★ Evelyn Kirkland. Rosy-pink, darker at the edges, fading to shell-pink in the center.	.25	2.50	15.00
Giant White. Pure white, very large.	.20	2.00	15.00
Herada. Pure mauve with deeper markings in throat.	.20	2.00	15.00
Leibesfeur. Vivid, deep scarlet, large number of flowers open at once.	.20	2.00	15.00
Mary Pickford. Delicate creamy-white, with soft sulphur-yellow throat.	.35	3.50	25.00
Mrs. Dr. Norton. White, shading to soft pink at edge of petals, lower petals blotched with sulphur. A very choice variety.	.75	7.50	

★ Marshal Foch. Flower is of immense size, well opened and beautifully ruffled. The color is a warm salmon pink, flaked and striped deeper salmon towards the edges of petals. It is a most unusual and striking flower, and is universally admired. Must not be confused with the Holland variety of the same name. (Kunderd.)	.35	3.50	
---	-----	------	--

1910 Rose. Tall, stately spike, six to eight flowers open at once. Color a clear rose-pink.	.20	2.00	15.00
---	-----	------	-------

★ Peach Rose. Deep rose-pink of remarkable distinction. Very choice.	.75	7.50	
--	-----	------	--

Pride of Lancaster. Brilliant orange-salmon with deep orange throat.	.50	5.00	
--	-----	------	--

Snow Boy. Clear ivory white, lily-like shape petals of good substance.	.30	3.00	
--	-----	------	--

★**The Gold Medal Collection.** One each of the above 15 varieties for \$4.50.

KUNDERD'S HYBRID PRIMULINUS

Albion. Very large salmon rose pink. Each Doz. 100 Beautiful throat..... .20 2.00 10.00	Iola. Tall, graceful. Many medium-sized Each Doz. 100 blooms open at a time. Deep yellow. Very fine..... .25 2.50 18.00
⊛ Alice Tiplady. Primulinus species X yellow Kunderdi. A grand, large Primulinus of most beautiful orange saffron color..... .25 2.50 18.00	Mintaka. Tall spike with 14 or 15 blooms, 6 or 8 open at once. Color soft pink, much brighter at edges of petals. Soft canary yellow throat..... .20 2.00 15.00
Altair. Extra tall, of finest salmon saffron. A grand color..... .25 2.50 18.00	North Star. Good size; very rich, deep yellow. Throat very beautiful deeper yellow. Extra..... .15 1.50 12.00
Anamosa. Extra tall. Finest orange sal- mon. Many open. Golden throat. Very large and beautifully marked. . . .20 2.00 15.00	Perseus. Tall spike with 12 to 14 blooms. Large flowers, about 5 inch diameter, bright salmon with pale yellow throat. Scarlet buds..... .20 2.00 15.00
Angola. A fine salmon pink..... .15 1.50 10.00	Regulus. Tall. Large flowered, richest orange salmon with delicate yellow. Extra grand..... .20 2.00 15.00
Anita. An extra tall, richest canary yellow. Deeper throat. Many open. Very good..... .20 2.00 15.00	Rigel. Tall, softest salmon blush on delicate yellow. Extra fine..... .20 2.00 15.00
⊛ Antares. Tall spike with 12 blooms, 4 or 5 open at once. Flowers pale salmon orange, deeper salmon toward edges of petals. Pale yellow throat. Buds bright salmon..... .20 2.00 15.00	Roanoke. A vigorous and large, rich, yellow Prim. XK. Glory. Very fine. .20 2.00 15.00
Argo. Grand, tall, large. The Primulinus Myrtle. Extra..... .25 2.50 18.00	⊛ Salmon Beauty. Very large flowered Primulinus. Deep salmon, rich salmon, yellow throat..... .25 2.50 18.00
Aurega. Tall spike with 10 or 12 blooms. Bright rose pink, pale in throat. Edges of petals slightly ruffled..... .25 2.50 18.00	Sedan. A fine ruffled Primulinus hybrid. Rich yellow with crimson bar on lower petals..... .25 2.50 18.00
⊛ Butterfly. Kunderi Glory X species Prim- ulinus. Very strong and vigorous. Large, pale, salmon yellow, ruffled flowers..... .15 1.60 10.00	Seneca. Almost transparent, faintest wine- pink, on a delicate yellow ground. Distinct..... .25 2.50 18.00
Canopus. Large, rich, solid yellow, fine shade of deeper yellow throat. Extra .25 2.50 18.00	Sirius. Large, dark salmon, rich throat. Fine ruffled Primulinus hybrid..... .15 1.50 10.00
Capella. Tall, very bright, fiery orange red. Very large and choice..... .25 2.50 18.00	Spica. A richly colored and finely ruffled Primulinus hybrid..... .15 1.50 10.00
Dorothy Wheeler. Beautiful rose pink with lighter throat, slightly ruffled, tall, many flowers open at once. . . .25 2.50 18.00	Sweet Orra. Tall, fine pale sulphur. Rich pink line in throat..... .15 1.50 10.00
Elberton. Tall, finest creamy yellow. Lower petals much deeper. Large. Very pure, rich color..... .15 1.50 10.00	Vega. A very fine all-yellow, similar to "Canopus." Not quite so large a bloom, but more open at a time..... .20 2.00 15.00
Golden Gate. Tall, vigorous. Large, showy yellow, finely ruffled..... .25 2.50 18.00	⊛ Breck's Primulinus Mixture , comprising all of the named varieties in a beautiful combination of colors. 15c each; \$1.00 per doz.; \$6.00 per 100.

VEGETABLE SEEDS OF SPECIAL MERIT

1922

Breck's Bantam Crosby—Actual Size

BANTAM CROSBY

The midget extra early Sweet Corn. Ready for the table before one can secure satisfactory ears of either Red or White Cory. Our customers will find Bantam Crosby a distinct novelty and a most interesting addition to the home garden. The Bantam Crosby has been carefully tested. We can recommend it with assurance for greenhouse culture as well as the open garden. The illustration shows the actual size of the matured corn for the table. Mr. Gardner Metcalf of Milford, Mass., who during the past season carefully watched the developments of this corn reports it the sweetest variety he has ever placed on his table. One can expect about three good mouthfuls from an ear. They will range in length from $2\frac{1}{2}$ to $3\frac{1}{2}$ inches. The fodder is about $\frac{1}{2}$ feet high carrying from 2 to 3 ears to the stock. The ears are mostly 8-rowed. The supply of corn this year being necessarily limited we can offer it only in sealed packages containing sufficient corn for about 100 hills.

Price, 50 cts. per package, postpaid.

Sunset Hill Farm,
Annisquam, Massachusetts.

January 13, 1922.

Joseph Breck & Sons Corp.,
51 and 52 North Market St.,
Boston, Mass.

Dear Sirs:

I wish to tell you that I gave the Bantam Crosby Corn a trial this year and from the results obtained I feel sure that it is really a valuable acquisition for the home garden. Of course, the ears are very small, but against this you have the fact that they are unusually sweet and tender, earlier than any other corn that I ever grew, and the stalks are so short and small that it can be grown in the smallest kind of a garden.

I planted the Corn in hills about eighteen inches apart and the stalks measured from two and one-half to three feet tall and nearly every one bore two perfect ears.

Yours very truly,
(Signed) ELLIOTT C. ROGERS.

Breck's Round Pod Bountiful Wax Bush Bean

Breck's Round Pod Bountiful Wax Bush Bean

The most prolific round podded wax yet introduced. It is extremely early, tender, fleshy, almost entirely stringless in all stages of development. Pods often grow to seven inches in length, and of a beautiful, light golden color. The plants are of rapid growth, free from disease, branching habit, highly desirable in every way.

Prices, per package, 25 cts.; per lb., \$1.00 postpaid.

French Perfection Bean

A dwarf popular French variety — stringless, green pods almost round, extremely fleshy, succulent, remaining in excellent condition for cooking long after the ordinary dwarf beans have become dry and tough. Perfection is of branching habit, sturdy growth, and heavy cropper. Considered by many much more desirable for a forcing bean than either Masterpiece or Superlative. Price, large package, \$1.00 postpaid.

Masterpiece Stringless Bush Bean

An extremely prolific, quick-growing variety. The plants are unusually strong and bear long, straight, fleshy pods which are tender and delicious as well as handsome. A fine variety for exhibition and for those who demand quality. Sold only in 4 oz. sealed packages at 50 cts. each; per lb., \$1.00, postpaid.

Superlative Bush Bean

A truly remarkable dwarf stringless bean of French origin which is thoroughly acclimated in New England. It is a heavy cropper, fine for the open ground or for forcing. That the plants are robust and long standing is easily seen because their foliage remains green when ordinary varieties planted at the same time are all done. Second to none in quality or flavor, the pods are exceedingly large and long. Sold only in 4 oz. sealed packages at 50 cts. each; per lb., \$1.00, postpaid.

New Italian Pole Bean

Introduced by our Italian gardeners. A green podded, pole string bean, slightly streaked with purple. An enormous and continuous cropper. Beans of excellent flavor and quality, absolutely stringless, remaining in good condition on the poles ten days or more. We have selected a few of the most promising varieties from a large number. Price per packet 50 cts., postpaid. Per lb., \$1.00, postpaid. Seed sufficient for twelve poles.

New Dwarf French Bean

Thiebaut's Hatif Le Belgique

A splendid dwarf French Bean, bearing pods on long branching stems. The pods are round and very long and tender. In our opinion the very best green podded bean for the home garden. Packet, 50 cts; per lb., \$2.00

Boston Greek Squash

A very desirable summer Bush Squash introduced by our friends from Southern Europe. The fruits are oblong and average about 12 in. in length; color dark green, often striped or mottled with lighter green or yellow. They may be prepared for the table in the same way as any Summer Squash, but are most delicious and palatable when sliced and fried like Egg Plant. Picked when about 8 in. in length and cooked as described above, the Greeks and Italians esteem it a great delicacy. The best size for the Boston market is a squash 7 or 8 in. long. Prices, Pkt., 10c.; oz., 75c; ¼-lb., \$2.50.

Tomato—Smith's Special

TOMATO, SMITH'S SPECIAL

A variety developed especially for us by W. H. E. Smith of Beverly. Highly recommended for growing under glass. Early and prolific. One of the finest varieties for either indoor or outdoor cultivation. A customer who grew it last year reports as follows: "The first fruit as good as the prime of the season — free from wilt and blight. It grows in large clusters at short intervals. Tomatoes, of an average size $10\frac{1}{2}$ inches in circumference. Immense cropper. The fruit is sweet flavored, all smooth, extra solid, and nearly round with practically no eye, ripening evenly right up to the stem." Price, per package, 50c.

RED CABBAGE—DANISH STONEHEAD OR ROUND HEAD

A very superior variety of large, late Red Cabbage. Head round and compact, color deep red. The outer leaves are medium size, covered with a silvery sheen. Good keeper; always salable. Price, per packet, 10 cts.; per oz., 60 cts.; $\frac{1}{4}$ lb., \$2.00.

EXTRA EARLY HACO RED CABBAGE

The earliest of all Red Cabbage of Danish introduction; seed from Denmark. Always an attractive and profitable vegetable. Planted in April; ready for use in midsummer. Heads medium size, solid, rock-like; delicious flavor; color rich dark red. Price, per packet, 10 cts.; per oz., 60 cts.; $\frac{1}{4}$ lb., \$2.00.

YELLOW TURNIP PETROWSKI

A small yellow table Turnip. Sweet, tender, quick growing; smaller than the Golden Ball. Prices, per packet, 15 cts.; per oz., 50 cts.; $\frac{1}{4}$ lb., \$1.50.

BRECK'S EASY BLANCHING CELERY

A variety very popular in the South and Southwest. Will bleach as quickly as White Plume or Golden Self Blanching. Almost blight proof, quality excellent, fairly good winter variety if stored quite green. Price 10 cts. per package; 75 cts. per oz., $\frac{1}{4}$ lb., \$2.50.

FARMOGERM

Through the use of this recognized standard of seed inoculants you insure the growing of bigger crops because it makes poor soil good soil. Farmogerm is always fresh — the only culture sold in the bottles with the patented stopper which enables the bacteria to breathe air, insuring long life without deterioration.

FARMOGERM is a culture of pure strain nitrogen-fixing bacteria, which are as carefully bred and selected as fine seed. It replaces essential elements in the soil in an effective and economical manner.

FARMOGERM, used on your seed, furnishes nitrates to the plants. It increases their growth and enriches the soil. When the seeds sprout the bacteria enters the root and makes large supplies of nitrates which benefit greatly the growing crop and the crops that follow. Soils can be built up to a high standard of fertility at small cost and little labor. Means the reduction of your fertilizer bill by from one-third to one-half.

FARMOGERM is easy to use. It is only necessary to fill the bottle three-quarters full of water, shake thoroughly to break up the jelly and apply the contents to the seed. Then stir the seed until all are moistened, permit them to dry and then plant in the usual way. Farmogerm is always fresh and active and can be used even months after receipt. Packed safely for mailing.

FARMOGERM is prepared for the following crops: Alfalfa, clovers, vetch, cow peas, soy beans, lucerne, peas and beans and all legumes. Vetch six feet long, yielding three tons of hay to the acre, has been produced from seed inoculated with Farmogerm at a cost of only \$2.00 an acre. From 100 to 200 per cent. increase in clover has come from Farmogerm-inoculated seed at the same cost per acre. Farmogerm makes possible the growing of two crops at the same time, each helping the other.

FARMOGERM is sold in three sizes as follows:

Bottles containing enough bacteria to inoculate seed for twelve acres	\$9.00
Three acres	2.50
One acre	1.00
Garden size (quarter acre)	.50

OKA
A New Montreal Melon

Originated by a Canadian Horticulturist, selected at the Oka Agricultural Institute near Montreal, Canada. The Melons grown adjacent to Montreal have long been famous for their fine quality. The Oka Melon is a selection of the Montreal Market crossed with a red flesh variety, resulting in a most delicious, sweet, juicy Melon of strong habit; a fine setter, bearing good size fruit up to 10 lbs. The Melon is clearly netted, cream colored flesh, bright salmon, small seed cavity. One grower reports picking fruit on the 29th of June near Montreal. This would indicate rapid growth and quick maturity. The bearing season is extended over 6 to 8 weeks.

The supply of seed being limited we can offer it only in sealed packages at 50c a package; 3 packages for \$1.25.

SKINNER SYSTEM SECTIONAL SPRINKLERS AND GARDEN SPRINKLING LINES

Sectional Peacock Sprinkler

Section shown above is covering 15 x 60 feet. No moving parts. Several sections may be connected together. A wonderful lawn and golf green sprinkler. Per section.....\$15.75

TESTIMONIAL ON SKINNER SYSTEM OF WATERING

Hose watering by hand is expensive. Dragging hose around wears it out fast. It gets kinked up, and soon is in holes. Mending takes time, and it takes up lots of time watering. Come to figure up the time it takes to water, and the cost of hose, we decided to put in a Skinner System, and found our judgment was correct. But this isn't all: — the Skinner System does an infinitely better job. It is particularly effective in that the water slowly penetrating during a few hours, lasts longer than drenching during a short time. After plants are established five to six hours' watering once a week is enough; with new plantings we give less at a time, and oftener.

We find it useful to have a few spare lengths of pipe around, to attach to hose, so as to get odd corners not reached by the regular system.

Yours truly
T. D. HATFIELD.

Lawn Mist Sectional Sprinkler

Sections are 15 feet long and each covers 20 feet wide with a fine mist. Fine for borders and shrubbery as well as lawns. "Border Mist" same as above but throws one side only. Price of either, per section.....\$12.50

BRUCE BUTTERTON
NEWPORT, R. I.

JOSEPH BRECK & SONS,
51 Market Street,
Boston, Mass.

September 2, 1921.

Dear Sirs:—

I am very much pleased with the three sections of Skinner Sprinklers which I received from you some time ago. It waters the lawn evenly and thoroughly with no waste of water and is a great labor saver on a large lawn. It is surprising how well it works at "The Elms," where the water pressure is very low.

Very truly
BRUCE BUTTERTON
Gardener to Edward J. Berwind, Esq.

60 LEICESTER STREET
BROOKLINE, MASS.

December 21, 1921.

I am pleased to testify that the Skinner Sprinklers supplied to me have given every satisfaction.

BASIL S. NOYCE.
Supt. for Mrs. John M. Longyear
Leicester Terrace, Brookline.

SPECIAL LITERATURE ON REQUEST

BRECK'S HIGH GRADE VEGETABLE SEEDS

THIS IS OUR NINETY-NINTH ANNUAL CATALOG. We believe our knowledge and reputation acquired during all these years is of value. Through integrity and experience we have built up a business which stands second to none in reliability, and which is exceeded in volume by that of only one or two concerns in this country. If you want any information regarding horticultural or agricultural matters write us, or better still, call if possible and your inquiries will receive intelligent attention. Our policy is to do business in the good old-fashioned way, giving the best service and selling only goods of the highest quality at fair prices. If you have never dealt with us, surely some of your neighbors can tell you about our goods. If you desire "the best" send us a trial order; one small transaction will convince you.

NOTICE—We give no warranty, express or implied, as to description, quality, productiveness or any other matter of any Nursery Stock, Seeds, Bulbs or Plants we sell, and we will not be in any way responsible for the crop. If the purchaser does not accept these goods on these terms, he must return them at once, and all payments therefor will be refunded.

JOSEPH BRECK & SONS Corporation.

NOTICE.—All prices quoted in this catalog are based on stock now on hand or in transit and are subject to change without notice.

ARTICHOKE—(*Cynara Scolymus*) German, "Artischok e ." French "Artichaut."—Spanish, "Alcachofa."

CULTURE. A rich sandy loam is desirable, but any soil made fine by deep culture and enriched with plenty of well-rotted manure will answer. Sow seed in hot-bed early in spring, in rows 6 inches apart; transplant when large enough into boxes or pots. After danger of frosts is past plant in the open ground, 2 feet between the plants and 3 feet between the rows.

This method of cultivation will produce heads for culinary purposes by September. Seed may, if desired, be sown in the open ground in May, but the little tender plants should be given protection until the cold weather of spring has passed.

Plants raised from seed sown outdoors will not give edible heads until the second summer. One ounce of seed will sow 30 feet of drill.

Pkt. Oz.

Large Green Globe. The best and most popular	Pkt.	Oz.
sort	.25	1.00
Early Purple, or Violet	.25	1.00

JERUSALEM ARTICHOKE — (*Helianthus tuberosus*).

A species of sunflower. A tuber that thrives well upon light, dry soil and is cultivated for feeding sheep and swine. It is also used for pickles. The tops when cut and cured make an excellent dry fodder. It is propagated by tubers, which should be set in rows four to five feet apart and one foot apart in the rows. Three bushels are required to plant an acre. Ot., 40c; pk., \$2.50, net.

Asparagus

ASPARAGUS—(*Asparagus officinalis*) German, "Sparget."—French, "Asperge."—Spanish, "Esparragos." (For prices on Asparagus Roots, see Vegetable Plants, page 17.)

Although Asparagus is grown satisfactorily on various types of soil, it does best on sandy loams. Two or more years may be saved by planting a bed with roots instead of sowing seed. Roots may be set in the spring in trenches 8 or 10 inches deep and 3 or 4 feet apart, leaving 12 or 15 inches between plants in the row. The bed should be thoroughly worked over to a depth of at least 18 inches, forking in a liberal quantity of manure. It is well to spread the roots over a low mound of fine soil, rather than plant them directly in the hard bottom, of the trench. Cover the crowns with not more than 2 or 3 inches of moist soil, firming it well over the roots and as the young shoots appear and grow, fill in the trench gradually. Either in the spring or after cutting season, fork in a good dressing of stable manure between the rows. The bed may be cut two or three times the second season after planting, but only a small percentage of the shoots should be taken.

Seed may be sown in drills 2 feet apart and 1 inch deep, as early in spring as the ground can be worked. One ounce of seed will sow 60 feet of drill.

Beans

DWARF OR BUSH

BEANS—*Dwarf or Bush* (Phaseolus) German, "Bohne."—French, "Haricot."—Spanish, "Frijoleno."

To obtain a continuous supply of beans throughout the season, make plantings every two weeks from early May until about the middle of July. Beans are usually planted 2 inches deep in drills sixteen or eighteen inches apart. Many growers claim, however, that larger yields are obtained if three or four beans are planted in a hill, the hills being about eight inches apart in the row. Cultivate frequently, but not deeply, and only when the plants are dry, as earth scattered on the foliage or pods when moist will often cause the development of rust.

Two pounds of beans will sow 100 feet of drill.

☛ **Breck's Tewksbury Dwarf Horticultural.** Due to the unusual beauty and size of its pods, this variety brings consistently higher prices than any other Horticultural Bean sold on the Boston Market. When ready to pick, the yellowish surfaces of the pods are beautifully marbled and splashed with bright crimson. The vines bear great numbers of long pods, inclined to curve slightly, generally containing six beans each, although seven are not unusual. Until they have attained full size the pods are comparatively dull and inconspicuous, the color intensifying rapidly as maturity is reached. It is characteristic of the vines to throw out tendrils like those of pole beans, but the plants are distinctly dwarf and upright, displaying no tendency to climb or sprawl over the ground. .20 .40 .70 2.50

long, flat pods, quite immune from rust,
stringless, the most popular variety for
home garden. .35 .60 2.25
- ★ **Wardwell's Kidney Wax.** Early, long, flat
pods, good quality, good shipper, the stand-
ard wax variety with market gardeners in
this vicinity. .40 .75 2.75
- ★ **Crackerjack Wax.** Pods rounder and more
meaty than Wardwell's, good size, color,
splendid market variety, stands shipping
well; very popular with the Western market
gardeners. .35 .60 2.50
- Davis Kidney Wax.** The best white seeded
wax bean; long, well shaped pods, good
quality; a general favorite. .35 .60 2.25
- Hardy Wax.** A popular quick growing bean
better known in the middle west than in
New England. Hardy Wax is an early,
stringless, round podded sort, excellent
quality, quick growing, hardy and most
desirable for the home garden. .45 .85 3.00
- Sure Crop Stringless Wax.** A new stringless
variety, very prolific, resembling somewhat
Currie's Wax. Early and of good flavor.
Seed black, pods of good size, thick, flat . .40 .75 2.50

Beans

Pole or Running

BEANS—Pole or Running. German, "Stangen Bohne."—
French, "Haricots a Rames."—Spanish, "Jidas."

It is a good policy to plant Pole Beans at least a week
later than the first planting of dwarf varieties because
they are not as hardy. The poles are usually set at the time
of planting. Plant four or five beans to a hill in hills three
or four feet apart, each way. Some growers raise the hills a
little to insure good drainage. Hill-applications of well
composted manure are of value. One quart of Limas will
plant 100 hills, one quart of the smaller seeded sorts about
200 hills. All large seeded Limas should be planted eye
down to insure quick growth.

Beans at Packet Prices sent post-paid.

All Beans sold by weight. Two pounds equals about
one quart.

Green Podded Varieties

Pkt. 1 lb. 2 lb. 8 lb.

Horticultural or Speckled Cranberry.

Large green pods, streaked with red,
good either as a string or shell bean. .20 .35 .60 2.25

★ **Kentucky Wonder or Old Homestead.**

A very prolific, long, green podded sort.
Sometimes known as the "Snake Bean,"
and without doubt the best pole string
bean offered. .20 .35 .60 2.25

Lazy Wife. Long pods, beans white,
wonderfully prolific. .20 .40 .75 2.75

Lima, Large White. An old, much es-
teemed variety. .20 .40 .75 2.75

Lima, Dreer's or Challenger. Round,
very thick beans, productive. .20 .40 .75 2.75

Lima, King of the Garden. Large
pods, productive, good market sort. .20 .40 .75 2.75

Lucullus Swiss Chard

Breck's Arlington Strain Crosby

Beets

BEET—(Beta vulgaris) German, "Runkel Rube."—French, "Betterave,"—Spanish, "Beteraga."

Any well-prepared, light garden soil will grow good beets. Successive plantings can be made from April until the middle of July. Sow in drills about one inch deep and 12 or 15 inches apart. The young plants are usually thinned to four inches apart in the row before they begin to crowd; many gardeners wait until the plants are six inches high so that those removed can be used for greens. One ounce of seed will sow 50 feet of drill.

Pkt. Oz. ¼lb. Lb.

- ★**Breck's Beets All.** Superior in all respects to others as an early or main crop variety..... .10 .25 .75 2.00

Barker's Strain Edmands Beet

Sludstrup Earres

Mammoth Long Red

Mangel-Wurzel and Sugar Beets

Because of the constantly increasing cost of mill feeds which are as constantly decreasing in feeding value, due to the incorporation in them of mill sweepings, screenings, and hulls, and because of the prohibitive cost of the best concentrated grains, the American farmer would do well to take more notice and thought of the practice of European stock raisers and dairymen, in the use of root crops as a succulent winter feed for stock. In England, Scotland, Holland, and Denmark where corn, either for silage or grain is unknown and only a limited amount of other grains for feed is available, the main reliance has always been Mangels and Sugar Beets. It must be admitted that these countries have produced the best of both beef and dairy animals. We too, could and should grow vast quantities of these crops, and we would gain; both in lessened cost of feed, and in the health and vigor of our animals.

The Poultry man also finds Sugar Beets and Mangels a valuable and much relished winter feed, and for maintaining the health and vitality of a flock of sheep through a long northern winter they are the best on earth barring none.

To obtain the best results in New England, the seed should be sown the latter part of May, in rich, moist, well drained soil, which has been prepared by very deep ploughing and thorough harrowing. Sow in drills $2\frac{1}{2}$ feet apart to permit horse cultivation and thin to about 10 inches in the row. Six to eight pounds of seed are required per acre.

Sludstrup Barres

Giant Mangel-Wurzel. The seed we offer is Oz. $\frac{1}{4}$ lb. Lb. Danish grown and Sludstrup has been repeatedly awarded the highest honors in Danish Agricultural Exhibitions. While the roots do not grow to as great a length as Mammoth Long Red the growth is more above ground, thicker and heavier, frequently weighing 15 pounds and more; color reddish yellow. A most desirable stock feed10 .35 1.00

★ **Breck's Mammoth Long Red.** A selection of the common long red variety The Mammoth is smooth skinned, fine grained, color deep red, roots straight and smooth, tops small. Under good cultivation immense crops can be secured with little labor. Ten to fifteen ton per acre are not unusual returns.10 .30 .75

Klein's Wanzleben. One of the most popular of the Sugar Beets and has been grown in this section for many years. . . .15 .50 1.50

Giant Half Sugar Mangel. Highly recommended for stock feeding. The skin is bright rose above the ground and white below. Flesh white, sometimes tinged with rose. Under good cultivation roots grow half out of the ground. . .15 .50 1.50

Champion Yellow Globe. Grows in shallow soils.10 .30 .75

Golden Tankard. A half-long variety of bright yellow color.10 .30 .75

Long Yellow. Differs from Long Red only in color.10 .30 .75

Norbiton Giant. Long Red; a valuable variety.10 .30 .75

Red Globe. Similar to Yellow Globe, except in color.10 .30 .75

★ **Lane's Improved Sugar Beet.** A well-known variety, valuable for feeding to cattle.10 .30 .75

All the above sold in 5 lb. lots at .70 per lb. and in 10 lb. lots at .65 per lb.

BORECOLE or KALE—(Brassica oleracea, acephala) German, "Blatterkohl."—French, "Chou Vert."—Spanish, "Bretón."

The Kales are very hardy, and make excellent greens for late fall and early spring use. Sow about May first in prepared beds, transplant in June, proceeding as with Cabbage plants. Siberian Kale may be sown late in August and handled like Spinach for spring greens. One ounce of seed will sow 150 feet of drill. Pkt. Oz. $\frac{1}{4}$ lb. Lb.

★ **Dwarf Green Curled Scotch.** Leaves bright green, closely curled, very tender. Quality is improved if the plants are touched by frost before being used . . .10 .25 .60 2.00

Siberian or Winter.10 .25 .75 2.00

Tall Green Curled Scotch. Similar to the dwarf, but more vigorous growth .10 .25 .75 2.00

BROCCOLI—(Brassica oleracea, betrytis) German, "Spargekohl."—French, "Chou Brocoli."—Spanish, "Broculi." Closely resembles the cauliflower, but is hardier. Like Cabbage and Cauliflower, it succeeds best in deep, rich, moist soil and in cool weather. Seed should be sown at the same time and plants receive the same general culture as cabbage. Completes its growth from seed in from 120 to 140 days. Five to ten degrees of frost will not injure the plants when they are approaching maturity. One ounce of seed will produce about 1500 plants.

★ **Early Purple Cape.** Hardy, heads of medium Pkt. Oz. size and compact formation.25 1.00

Veitch's. Self-protecting, large compact head. . . .25 1.00

White Cape. Like Purple Cape, but of a creamy white color.25 1.00

Amager Market Brussels Sprouts

BRUSSELS SPROUTS—(Brassica oleracea, gemmifera) German, "Sprossenkohl."—French, "Chou de Bruxelles." Spanish, "Berza de Vrusela."

This interesting vegetable produces small heads resembling miniature cabbages all over its tall stem. The sprouts, either cooked or pickled in the same way as cauliflower, are esteemed a great delicacy. Seed may be sown in May in a seed bed, and the plants afterward set out and cultivated like cabbage. Being small and hardy the sprouts are not in the least injured by frost. One ounce of seed produces about 1500 plants.

Pkt. Oz. $\frac{1}{4}$ lb.

- ✱ **Improved Paris Market.** A most desirable strain..... 10 .50 1.50
- Dalkeith.** The finest variety..... 10 .50 1.50
- Amager Market.** Largest sort, often grows 3 feet high, sprouts closely set and develop uniformly..... 10 .50 1.50
- ✱ **Long Island Mammoth.** The giant variety so popular on the New York market. Seed we offer, from the best grower on Long Island. Highly recommended..... 50 2.00 6.50

CHERVIL—German, "Gartemkerbel."—French, "Corfeuil."—Spanish, "Cerafolio de Cafe."

Pkt. Oz. $\frac{1}{4}$ lb.

- Chervil Curled.** An aromatic sweet herb that resembles parsley. The young leaves are used in soups and salads. Sow evenly in May, in drills $\frac{1}{2}$ inch deep, 1 foot apart.. 10 .30 1.00
- Chervil, Tuberous Rooted.** Sow in May or June, after treatment same as for carrots..... 05 .30 1.00

CHIVES.

Pkt. Oz.

- Allium Schoenoprasum.** Resembles the Onion in growth and of the same family. Used largely as salad and for flavoring soups. Can be cut repeatedly during the growing season.... 20 .75

RICHARD MAYER COMPANY

184 Summer St.,
Boston, Mass., September 13, 1920.

Gentlemen: For several years I have been buying my seed at Breck's, and I have found that they are not only the most reliable but also the very best of the kind. I can make this latter statement without fear of contradiction because I have been travelling around in New England as well as in other parts of the country, and I have found that wherever my friends did not use Breck's Seed that the products of the garden did not come up to my specimens.

Yours for co-operation,
(Signed) RICHARD MAYER.

Cabbage

CABBAGE—(Brassica oleracea, capitata) German, "Kopfkohl."—French, "Chou Pomme."—Spanish, "Berza."

Cabbage will do well in any deep, rich, well-drained, and abundantly manured soil. Sow seed of the early varieties in hot beds about February 1st, and prick out into other hot beds as soon as the plants are strong enough, or set in cold frames in March. When danger of frost is past, transplant to the open ground. The late or winter crop seed can be sown in seed beds in May and plants set in the field in July. Late varieties are usually planted in rows 30 inches apart with 2 feet between plants, early sorts may be set 15 by 24 inches or even closer. One ounce of seed should produce about 2500 plants.

Pkt. $\frac{1}{2}$ oz. 1 oz. $\frac{1}{4}$ lb.

All Seasons. One of the best for second early and late crops, very large and a sure header..... 10 .20 .35 1.25

✱ **Breck's Winchester Savoy.** The market gardener's favorite. Seed we offer was obtained after many years' careful selection from only the best heads. Seed planted as late as June 20th will mature about the middle of October, heads large, of splendid shape, fine flavor, and as a keeper for winter use it is unsurpassed..... 15 .40 .75 2.50

✱ **Danish Ball Head.** A winter variety, large, round, solid heads, splendid keeper..... 10 .20 .35 1.25

Early Jersey Wakefield. Market gardeners can find nothing better for an early cabbage. Heads somewhat pointed, extremely solid, superior quality..... 10 .20 .35 1.25

Early Winnigstadt. An early variety with conical shaped heads..... 10 .20 .35 1.25

Early Spring. Extra early, flat round head, medium size..... 10 .20 .35 1.25

✱ **Copenhagen Market.** As early as the Wakefield, heads large, round, uniform size, averaging under good conditions about ten pounds each. This variety growing in popularity with the market gardeners. One of the best early cabbages..... 10 .25 .40 1.50

Fottler's Improved Brunswick. One of the best second early varieties. Large head, drumhead type..... 10 .25 .40 1.25

Copenhagen Market Cabbage

For free delivery offers and general instructions regarding orders and shipments see second page of cover.

Pe-Tsai or Chinese Cabbage

	Pkt. ½ oz. 1 oz. ¼ lb.			
Glory of Enkhuizen. Second early variety, solid head, almost globular; sure heading, vigorous growth.	.10	.25	.40	1.50
Henderson's Early Summer. Large flat head, about ten days later than Jersey Wakefield.	.10	.20	.35	1.25
Hendrickson's Long Island Savoy. Popular variety with Long Island, N. Y., market gardeners. Large heads, uniform size, a splendid late cabbage.	.10	.40	.75	2.50
Peconic Red. Large, solid, red variety, grown largely by the Long Island, N. Y., market gardeners.	.10	.40	.75	2.50
Pe-Tsai, or Chinese Cabbage. A quick growing, medium late, sort. Growth and heads resemble Cos Lettuce.	.10	.20	.35	1.50
Premium Drumhead. Breck's Selected. A standard main crop variety.	.10	.20	.35	1.25
Premium Flat Dutch. Breck's Selected. A favorite variety for winter market.	.10	.20	.35	1.25
Red Perfection. Breck's. Superior in size and quality to all other red sorts.	.10	.25	.40	1.50
Red Dutch, or Pickling. Fine solid, dark red heads, medium early.	.10	.20	.35	1.25
Savoy American Improved. Large, late, crumpled leaf, very sure to head, excellent keeper.	.10	.20	.35	1.25
Succession. Selected. Valuable second and late crop variety.	.10	.20	.35	1.25
Surehead. Heads large round, flat Dutch type, good keeper.	.10	.20	.35	1.25
Warren's Stone Mason. An improvement on the old type, rounder and solid.	.10	.25	.40	1.50
★ Warren's Stone Mason. Breck's Private Stock. This is a still further improved selection of the popular Warren strain. It is grown in Essex County especially for us. We recommend it as the very best type obtainable.	.25	.85	1.50	5.00
World Beater. The largest Drumhead variety. Late, solid, good keeper.	.10	.20	.35	1.25
Danish Stonehead of Round Head. A very superior variety of large, late Red Cabbage. Head round and compact, color deep red. The outer leaves are medium size, covered with a silvery sheen. Good keeper, always salable.	.10	.60	2.00	

★ **Extra Early Haco.** The earliest of all Red Pkt. Oz. ¼ lb. Cabbage of Danish introduction, seed from Denmark. Always an attractive and profitable vegetable. Planted in April, ready for use in midsummer. Heads medium size, solid, rock-like, delicious flavor, color rich dark red.10 .60 2.00

Carrots

CARROTS—(*Daucus carota*) German, "Mohre."—French, "Carotte."—Spanish, "Zanahoria."

Carrots are grown extensively both for culinary purposes and for stock feeding; the "Horn" and medium varieties for the former; the long sorts for the latter use. Fine, mellow, sandy loams, which have been manured liberally for some previous crop, such as potatoes or onions, will produce smooth, well-shaped roots. Carrot seed may be sown towards the end of April, in May, or for late crops for table use, up to the middle of June, in drills 12 or 15 inches apart and not over 1 inch deep. For an early crop sow the "Horn" or medium varieties a searly in spring as the ground can be prepared. If a horse cultivator is to be used the rows should be 28 or 30 inches apart. Thin out the plants from 3 to 5 inches apart, according to the variety. As Carrot seed is slow in germinating, cultivation may begin earlier if a little radish seed is sown with the carrot to mark the rows.

One ounce will sow 100 feet of drill; 4 pounds, 1 acre.

	Pkt. Oz. ¼ lb. Lb.			
★ Breck's Market Garden Danvers Half Long. Selected strain half long carrot. Color deep orange, blunt point. Favorite with the market gardener trade.	.10	.35	1.00	3.00
★ Chantenay. A type of Danvers Half-Long, but earlier and smaller.	.10	.25	.75	2.50
Danvers Half Long. The most desirable main crop variety; an excellent keeper.	.10	.25	.75	2.00
Early Scarlet Forcing. Very early and valuable for forcing.	.10	.30	1.00	3.00
Early Scarlet Horn. Medium-sized half-long variety of fine color.	.10	.25	.75	2.00
★ Guerande, or Oxheart. Intermediate between half-long and Horn sorts.	.10	.25	.75	2.00
Half-Long Scarlet Carentan. Stump rooted, coreless, red flesh.	.10	.30	.85	2.50
Nantes Stump Root. Medium-size, medium-early table variety.	.10	.30	.85	2.50
Long Orange Improved. Large long-rooted variety, suitable for table or stock.	.10	.20	.65	1.85
Large Yellow. Desirable variety for feeding farm stock.	.05	.15	.40	1.25
Large White. Largest and most profitable for feeding farm stock.	.05	.15	.40	1.25

For all root crops use MAPES POTATO MANURE

Ammonia, 4.50%; Ava. Phosp. Acid, 8%;
Actual Potash, 5 to 6%. \$3.75 per 100 lb. bag;
\$7.00 per 200 lb. bag; \$65.00 per ton.

Breck's White Bouquet Cauliflower

Cauliflower

CAULIFLOWER—(Brassica oleracea, botrytis, German) "Blumenkohl."—French, "Chou-fleur."—Spanish, "Coliflor." (Price on Cauliflower Plants, see Vegetable Plants.)

Cauliflower is the most delicate and delicious member of the cabbage family. Although the ideal soils for this vegetable are well-drained, rich, moist, heavy loams, it will do well in any soil that grows good cabbage. Plants from seed sown in the hot-bed late in February will be ready for the open ground about the first of May. The seedlings should be transplanted as soon as they are strong enough; later, when the time for setting in the field is approaching the plants should be gradually hardened by exposure. For late plants sow the seed sparingly in a well-prepared seed-bed in May, selecting a cool place; treat the seedlings as if they were Cabbage, but exercise greater care. In the field make the rows 30 inches apart and set the plants 18 inches apart in the row. When the heads are forming tie the tops of the leaves together with raffia or soft twine in order to shut out the sun and rain; pure white attractive heads can not be grown without protection.

✶ **Breck's White Bouquet Cauliflower.** For early or for main crop; those who have grown it, private and market gardeners alike, agree that Breck's White Bouquet Cauliflower has no peer. It will head when other varieties fail; moreover it is a strain well-adapted for forcing under glass during winter and spring. The plants are comparatively short stemmed, have small leaves, and produce medium to large close-grained, snowy-white heads of the finest quality. We feel confident that no better strain has ever been developed, and that it is the earliest and most reliable variety for New England. Pkt., 25c; ½ oz., \$3.00; oz., \$5.00.

Early Dwarf Danish. A variety of the Pkt. Oz. ¼ lb. Erfurt from Denmark. It matures evenly and is a reliable header. .25 4.00 10.00

Early Short Leaf Snowball. A week earlier than Dwarf Erfurt—a sure header. Recommended for greenhouse forcing. Heads large, white, and solid. Danish grown from the same grower who developed our strain of White Bouquet Cauliflower. .25 5.00 12.00

Earliest Dwarf Erfurt. A very choice strain of the well-known Erfurt Cauliflower. .25 5.00 12.00

Extra Early Paris. Old but still popular. .25 4.00 10.00

Early Snowball. A reliable early variety, grown largely for market. .25 5.00 15.00

Early London. Large and hardy. .10 1.00 5.00

Veitch's Autumn Giant. A desirable large, late variety. .15 1.00 2.50

CARDOON—(Cynara cardunculus) German, "Kardon."—French, "Cardon."

Cardoon is grown for the edible midrib of the leaf, which requires blanching in the same manner as celery. Sow sparingly, early in spring, in drills 1 inch deep and 4 or 5 feet apart; later, thin out the young plants to about 2 feet apart in the row. Pkt. Oz. Lb.

Large smooth Spanish. Grows about four feet high. .05 .25 3.00

COLLARDS, or COLEWORT—German, "Blatterkohl."—French, "Chou Cabu." This vegetable is allied to the cabbage family.

Sow seed as for cabbage, at intervals of about three weeks during May, June and July. When a month old, set out the plants in the garden in rows 3 feet apart, leaving 2 feet between the plants. The leaves are esteemed as greens. One ounce of seed will produce about 3000 plants. Pkt. Oz.

Georgia. .10 .25

De Lue's Golden Giant

Sweet Corn

SWEET CORN—(*Zea mays*) German, "Mais."—French, "Mais."—Spanish, "Mais."

While sweet corn is often grown in hills, experienced gardeners prefer drills. Make the first planting the latter part of May in a rich, warm soil; successive sowings should be made at intervals of about ten days until July. Sow in drills from $2\frac{1}{2}$ to $3\frac{1}{2}$ feet apart, according to the height of the variety, and thin out the plants to 10 or 12 inches apart in the row. If grown in hills, 3 or 4 feet apart each way gives ample space; never allow more than four plants to remain in one hill.

One pound of seed will plant 100 feet of drill, or about 150 hills.

✪ **Early Crosby.** The standard and favorite early variety; a little later than the Cory, but sweeter and with a larger ear. 5 to 6 inches long, corn fodder 5 to 6 feet high. 1/2 1 2 12 lbs. .20 .30 .50 2.75

✪ **Breck's Early Hampshire.** An extra early variety which may be relied upon to mature ahead of Early Crosby. Ears comparatively large, evenly filled with small white kernels of fine quality. The plants which average about five feet in height, always bear two and often three ears on each stalk. Our seed grown in New England. 1/2 1 2 12 lbs. .20 .30 .50 2.75

Bearsfoot (Washington). A vigorous growing medium late variety of very good quality; popular among the market gardeners in the vicinity of Boston. Ears large, with somewhat irregular rows of deep kernels. 1/2 1 2 12 lbs. .20 .30 .50 2.75

Black Mexican. Said to be the sweetest corn in cultivation, medium early, ear of good size, kernels purplish-black. 1/2 1 2 12 lbs. .20 .30 .50 2.75

Country Gentleman. Late, large ear, kernels white and sharp pointed, placed in irregular rows on cob. A fine late variety and a general favorite. 1/2 1 2 12 lbs. .20 .30 .50 2.75

✪ **Early Mayflower.** An extra early White Sweet Corn. Matures about one week in advance of White Cory; growth of stocks $4\frac{1}{2}$ to 5 feet. Ear larger than Cory, having eight to twelve rows of kernels. A profitable market garden variety. 1/2 1 2 12 lbs. .20 .30 .50 2.75

Early Minnesota. A little later than $\frac{1}{2}$ 1 2 12 lbs. White Cory, sweet, medium sized ear, small fodder.20 .30 .50 2.25

Early Red Cory. A very early sort with good-sized ears and large kernels, an old favorite.20 .30 .50 2.25

Early White Cory. Differs from the preceding only in color of cob.20 .30 .50 2.25

Mammoth White Cory. Quite as early as other Cory, but with much larger ears.20 .30 .50 2.50

Peep-O-Day. An extra early, white variety, very sweet, large well filled ear.20 .30 .50 2.50

Platt's Strain, Stowell's Evergreen Sweet Corn. The standard main crop variety for market and for home garden. Ears large, kernels deep, sugary and tender, remaining in green stage for an unusually long time. We are placing on the market this year the improved strain, known as Platt's, which is earlier than the common stock (which has been for so long the standard late sort), Stowell's Evergreen and the yield most extraordinary, running as high as 175 bushels per acre, the majority of the stalks having two ears. Our grower reports that this year's stock was ready for the market 10 days in advance of the original Stowell's Evergreen. It is not uncommon for the ears to have 18 to 20 rows. Pkg. .15 .20 .35 2.25

Pocohontas. An extra early white variety. Five to five and one-half dozen ears fill a bushel box. A most desirable variety for the market gardener. The ears are of uniform size, kernels large and tender, good flavor, filling the cob evenly and compactly. Pocohontas is preferred by a great number of the market gardeners in and around Boston over any other white variety. It can be highly recommended.20 .30 .50 2.75

Potter's Excelsior. The most popular main crop variety, fodder and ears of good size, sweet, well filled.20 .30 .50 2.75

Quincy Market. Larger and earlier than the common Crosby. Popular market garden variety.20 .30 .50 2.75

(All varieties on this page 15c. Pkt. Postpaid)

Yellow Sweet Corn

GOLDEN DAWN

An extra early yellow variety, sweet and tender, ears slightly larger than Golden Bantam. Kernels large and deep set in even rows and filling the cob to the tip. Stocks about 6 feet high. Our stock of Golden Dawn is grown in eastern Massachusetts and has been most carefully selected. Prices, per package, 15 cts.; per lb., 30 cts.; 2 lbs., 50 cts.; 12 lbs., \$2.75.

DE LUE'S GOLDEN GIANT

Awarded the Silver Medal for novelty and excellence at Massachusetts Horticultural Show. Ears twice the size of Bantam and being from 14 to 16 rowed gives nearly four times the yield per acre; richer in color, more delicious, equally early. The husks are striped with red and very heavy. Golden Giant can be highly recommended to the market gardener because of the large ears and good shipping qualities of the corn.

Golden Giant is the result of eleven years' selection by Dr. F. S. De Lue of Boston, Mass., from a product of "Howling Mob crossed with Golden Bantam." Prices, $\frac{1}{4}$ lb., 25 cts.; $\frac{1}{2}$ lb., 35 cts.; 1 lb., 65 cts. Postpaid.

BANTAM EVERGREEN SWEET CORN

A yellow variety maturing about 10 days after the Golden Bantam and a week earlier than the Stowell's Evergreen white. It has an ear three times the size of Golden Bantam and runs 12, 14 and 16 rows to the ear. The stalk is about 6 feet tall and is perhaps 1 foot dwarfer than Stowell's Evergreen and 2 feet taller than Golden Bantam. The Bantam Evergreen has the tender and sweet qualities of the Golden Bantam and combines the quality of the Golden Bantam with the productiveness of Stowell's Evergreen. As a table variety it is unexcelled. Prices, per package, 15 cts.; per lb., 25 cts.; 2 lbs. 50 cts.; 12 lbs., \$2.75.

POP CORN FOR SEED

White Rice. Western Grown, selected for seed. Prices, per lb., 15 cts.; per 100 lbs., \$10.00.

GOLDEN ORANGE SWEET CORN

A popular sort among the farmers and market gardeners in southern New Hampshire, Maine and eastern Massachusetts. Can be classed as an extra early sort, from 7-8 inches in length, slender, with small cob, kernels large, deep; set in even rows and filling out the ears to the tip. Prices, per packet, 15 cts.; per lb., 30 cts.; 2 lbs., 50 cts.; 12 lbs., \$2.75.

Breck's Selected Massachusetts Grown Golden Bantam

THE most popular variety of yellow sweet corn ever offered; also one of the earliest and hardiest. It can be planted safely earlier than other varieties. The plants rarely grow over $3\frac{1}{2}$ feet in height, and usually bear at least two ears, 5 or 6 inches long, on each stalk. Many people assert that Golden Bantam is the sweetest of all corns; its plump, rich, cream-yellow kernels are tender, milky, and delicious. All our Golden Bantam seed is Northern grown, making it especially valuable for growth in sections where the summers are cool and short.

1 lb. 25 cts.; 2 lbs. 40 cts.; 12 lbs. \$2.25

Stowell's Evergreen Sweet Corn

JAPANESE PEARL

A small seeded white corn popping pure white without kernel. Ears very small. A pleasing novelty for the home garden. Prices, per lb., 25 cts.; per 100 lbs., \$20.00.

CORN SALAD, or FETTICUS—German, "Lammersalat." —French, "Mache."

Sow very early in spring in shallow drills 1 foot apart. For an early spring crop, sow in September and winter over in cold frames, or cover with litter. One ounce of seed will sow 100 feet of drill.

Pkt. Oz. $\frac{1}{4}$ lb.

Large-leaved..... 10 30 1.00

CHICORY—(Cichorium intybus) German, "A-chorie".—French, "Chicoree."

Large Rooted. Sow and treat in the same manner as carrots. This is the Chicory of commerce used to mix with coffee. The roots are taken up, washed, cut in small pieces and carefully dried before being used..... 10 35 .75

Witloof. Sow in May or June in drills, thin out to six inches apart, treat as Endive until end of summer, when it should be banked up like Celery. The blanched stalks are used as a salad. It is also used as a boiled vegetable prepared in the same way as Cauliflower..... 10 40 1.25

Golden Self-Blanching Celery

Celery

CELERY—(*Apium graveolens*) German, "Sellerie."—French, "Celeri."—Spanish, "Apio." (For price on Celery Plants, see Vegetable Plants.)

Since celery seed is extremely small and rather slow in germinating, it is important that the seed-bed be of good, rich soil, thoroughly prepared. About the middle of April sow thinly in a hot-bed or cold frame, in rows 2 inches apart, taking care to cover the seed with not more than $\frac{1}{8}$ of an inch of fine soil. Place pieces of burlap over the bed until the seeds have germinated, and water by sprinkling the burlap. When the seedlings are $2\frac{1}{2}$ or 3 inches high transplant into a moist seed-bed, setting the plants 4 by 4 inches. To ensure stocky plants the tops may be cut back once or twice before setting in the field. Celery does well in any deep, richly-manured soil. Make the rows about 4 feet apart, and leave 5 or 6 inches between plants in the row. Cultivate frequently, but not deeply, to keep down weeds and to conserve moisture. With the advent of cool fall weather, begin to draw earth up about the plants, keeping the stalks well together; continue this process of ridging until late autumn when only the tops of the leaves should remain uncovered. The golden Self-Blanching variety is usually blanched by means of boards 12 or 15 inches wide set on edge on either side of the row. Celery should be stored where the air will remain cool and fairly moist. Simply set the plants close together in an upright position with several inches of soil about the roots. Cold frames, when dug to the proper depth, afford very satisfactory conditions for storing this crop. The frames should be covered with boards, lapped to shed the rain; if sash is used, under the boards, it can be blocked up slightly on mild days to give ventilation. The turnip-rooted variety, which does not require blanching, may be planted in rows about 15 inches apart.

One ounce of seed should produce about 3000 plants.

Easy Blanching Celery. Will bleach Pkt. Oz. $\frac{1}{4}$ lb. as quickly as White Plume or Golden Self Blanching. Almost blight proof, quality excellent, fairly good winter variety if stored quite green. .10 .75 2.50

★ **Giant Pascal.** A strong grower, and wonderful keeper, quality very fine. .10 .50 1.75

★ **Breck's Golden Self-Blanching.** Pkt. Oz. $\frac{1}{4}$ lb. Lb

The variety most extensively grown in all sections of the country, for all purposes, by both market and private gardeners. The plants are compact with abundant foliage, short, thick stems and large, solid hearts. The stalks, which are rich in flavor, tender, crisp and brittle, may be blanched readily to a beautiful creamy white. Our selected strain of this grand variety is a favorite among commercial growers in this locality. .10 1.00 3.00

★ **Breck's Boston Market.** Popular market garden variety; tender, mild flavor; good keeper. .15 .85 3.00

White Plume. This variety can be blanched with boards. It is usually solid, and of pleasing nutty flavor. .10 .50 1.75

Winter Queen. Medium height, late, solid stalks keep well, blanches creamy white. .15 1.00 3.00

Celeriac, or Turnip-Rooted. The turnip-shaped roots of this variety are cooked and sliced and with vinegar make excellent salad. .10 .50 1.50

Celery Seed for Flavoring. .05 .10 .20 .60

CRESS

★ **Curled, or Peppergrass** (*Lepidium Sativum*). The popular sort. Sow thickly in drills, $\frac{1}{4}$ of an inch deep and a foot apart as early in spring as the ground can be prepared. One ounce will sow about 100 feet of drill. .10 .20 .35 1.25

Upland Cress (*Barbarea vulgaris*). A perennial variety resembling Water Cress. .10 .25 .75

★ **Water Cress** (*Nasturtium officinale*). This variety succeeds only in damp soils on the border of ponds or streams, or where its roots are partially submerged in water. Seed should be sown about a quarter of an inch deep. .10 .75

Improved White Spine Cucumber

Cucumber

CUCUMBER—(*Cucumis sativus*) German, "Gurken."—French, "Concombre."—Spanish, "Pepino."

Seed should be started under glass about May 1st, for an early crop in order to have plants ready to set out in the garden 3 or 4 weeks later when the ground has become thoroughly warm. Plant the seed in paper or earthen pots not less than 4 inches in diameter, in berry baskets, or other receptacles which can be handled easily and carried to the field without disturbing the young plants; leave only the 3 or 4 strongest seedlings in each container. Well-rotted manure or fertilizers may be dug into the hills a week or two before planting time. In every good soil the distance between hills should not be less than 4 by 5 feet; in less fertile soils 4 by 4 feet will answer. It is generally safe to plant seed in the garden until late in May; for pickles the middle of June is early enough. Cultivate often, and continue as late in the season as is possible without injuring the plants. Always pick cucumbers before they begin to turn white or yellow. One ounce of seed will plant about 50 hills.

Pkt. Oz. $\frac{1}{4}$ lb.

Boston Pickling. Abundant crop of short, dark green fruit.10 .20 .60

Breck's Forcing White Spine. This seed raised from selected specimens by a Massachusetts market gardener, and is the best obtainable.Lb., 20.00 .50 2.50 6.00

Cool and Crisp. Extra early, long straight and slender, dark green color.10 .20 .60

Cumberland. Very best pickling sort.10 .20 .60

★**Davis Perfect.** Splendid variety, dark green, 10 to 12 inches.10 .25 .75

Early Cluster. Grows in clusters. Bluish green color.10 .20 .60

Early Frame. Medium size. Valuable for both table and pickling.10 .20 .60

Early Russian. Earliest variety. About 4 inches long.10 .20 .60

Everbearing. Medium size, early and productive.10 .20 .60

Evergreen. Without an equal, quantity and quality considered.10 .20 .60

Japanese Climbing. Productive, fine quality. Excellent climbing vine.10 .25 .75

Long Green Improved. Late, 12 inches long, tender, excellent flavor.10 .25 .75

Klondike. Medium sized, uniform cucumber, 7 inches long, diameter of about 2 inches, when in first class condition for slicing. Color a rich dark green. Highly recommended.10 .25 .75

West India Gherkin. Short green oval cucumber for pickling.10 .25 .75

White Spine Improved. General favorite Pkt. Oz. $\frac{1}{4}$ lb. and most popular variety, early, uniform in size, splendid slicing cucumber.10 .20 .60

★**White Spine Arlington.** Seeds from selected stock of the Improved White Spine, giving cucumbers of more uniform size and better color. This strain used largely for forcing in the greenhouse.15 .30 1.00

English Frame Varieties

These are grown chiefly by private gardeners. They attain a length of from 12 to 30 inches, and are of fine quality.

Tender and True, Blue Gown, The Rochford, Pkt. Rollinson's Telegraph. Each.50

Dandelion

DANDELION—(*Taraxacum officinale*) German, "Pardeblum."—French, "Pisse-en-lit."—Spanish, "Amargon."

When growing in deep rich soil cultivated varieties produce large, tender leaves much superior to those of the wild dandelion, both in size and flavor. Sow seed early in May in shallow drills about a foot apart; later, thin the plants to 6 inches apart in the row, and cultivate to keep down the weeds. If blanched with soil the leaves make excellent salad. The plants may be held over winter by covering with litter, after the ground freezes, but before the advent of severe weather.

Pkt. Oz. $\frac{1}{4}$ lb.

★**American Improved.** Large fleshy leaves.25 1.50 5.00

French Garden.10 .60 1.75

Thick-Leaved French. Large and tender.15 .75 2.00

EGG-PLANT—(*Solanum melongena*) German, "Eierpflanze."—French, "Aubergine."—Spanish, "Berengena." (For price of Plants, see Vegetable Plants.)

Owing to their extreme tenderness, egg-plants should not be set out in the garden much before the middle of June. This vegetable may well be planted in soil heavily manured for some earlier crop such as radishes. Sow in a hot-bed about April first, transplant into another bed, and later shift into 4 or 5 inch pots. In warm, settled weather transfer to the garden, setting the plants 2 by 3, or 3 by 3 feet. Conservation of moisture is important. One ounce of seed will produce about 1000 plants.

Pkt. Oz. $\frac{1}{4}$ lb.

★**Black Beauty.** Early, fruit jet black, round in form and very solid.15 .85 3.00

Early Long Purple. Differing only in shape from the foregoing; hardy and productive.15 .85 3.00

★**New York Improved.** The leading market variety; excellent and very productive.15 .85 2.75

For free delivery offers and general instructions regarding orders and shipments see second page of cover.

Endive

ENDIVE—(Cichorium Endiva) German, "Endivien."—French, "Chicoree."—Spanish, "Endiva."

Although endive is sown chiefly in the latter part of July for winter use, an early crop may be started in April. Sow in shallow drills a foot apart in rich, moist soil, and later thin the plants to one foot apart. Unless wanted for soups, the leaves should be blanched when 6 or 8 inches long by tying the tops together around the heart with coarse twine or raffia. This should be done only when the plants are dry or they will rot. Moreover, do not blanch the plants faster than they can be used. Blanching usually requires 15 or 20 days. Before freezing weather the plants may be lifted with some earth adhering to the roots, and reset in a cool cellar or shaded cold frame. Stored in this way endive may be preserved well into the winter. One ounce of seed will sow 150 feet of drill. Pkt. Oz. $\frac{1}{4}$ lb.

✱ **Broad Leaved (Escarolle).** A very sweet variety for fall and winter use. 10 .30 1.00

✱ **Green Curled.** The standard sort, suitable for fall and winter. 10 .35 1.00

Moss or Parisian Curled. A small, very beautifully curled sort. 10 .35 1.00

White Curled. Grown for early use. 10 .35 1.00

FLORENCE, or SWEET FENNEL—(Foeniculum dulce) Fenouil de Florence. Finnochio di Napoli.

A delicious Italian vegetable which tastes quite like Celery, but is a little sweeter and more delicate in flavor. The enlarged leaf-bases are usually boiled in preparation for the table.

Sow at intervals in the spring, in rows 18 inches apart. Thin the seedlings to 6 or 8 inches apart in the row, and cultivate frequently. Later, blanch the bottom and stalks by earthing-up like celery. Pkt., 10c; oz., 50c.

KALE—See Borecole.

KOHL-RABI (Turnip Rooted Cabbage)—(Brassica oleracea canlorapa) German, "Kohl-Rabi."—French, "Chou-Rayé."—Spanish, "Col de nabo o Nabicol."

This vegetable, the enlarged stems of which are superior to the turnip in flavor, is closely related to cabbage, and no more difficult to grow. Early plants can be started in hot beds in the same manner as cabbage. Seed may be sown in the garden in May, June and July, in shallow drills 18 inches apart; later, thin the plants to 8 inches apart in the row. Kohl-Rabi should be eaten when about 3 inches in diameter, before the flesh becomes woody. One ounce of seed will sow 150 feet of drill. Pkt. Oz. $\frac{1}{4}$ lb.

✱ **Early White Vienna.** Flesh white. 10 .50 1.50

Early Purple. Differing from the above in color. 10 .50 1.50

✱ **LEEK**—(Allium porrum) German, "Lauch."—French, "Poireau."—Spanish, "Puerro."

Sow the seed in moist soil as early in spring as the ground can be prepared. In July cut back the tops severely and transplant the seedlings forthwith, setting them at least 4 inches apart in trenches 5 inches deep and one foot apart. As the plants grow, gradually fill in the trenches.

One ounce of seed will sow 100 feet of drill.

Pkt. Oz. $\frac{1}{4}$ lb.

✱ **Large Flag.** A hardy and profitable sort, excellent for winter use. 10 .35 1.00

Large Rouen, Winter. Large and of fine flavor. Remains a long time in good condition. 10 .35 1.00

Musselburgh or Carentan. The famous Scotch sort, large, hardy and distinct. 10 .50 1.25

Gentlemen:

Your vegetable seeds have produced fine vegetables and our products are a great wonder and admiration to our friends. The Cauliflowers are especially fine.

Very truly yours,
REV. C. H. EVANS,
535 Jaka Macki,
Mito, Japan.

Breck's Boston Market Lettuce

Lettuce

LETTUCE—(Lactuca Sativa) German, "Lattich-Salat."—French, "Laitue."—Spanish, "Lechuga." (For price on Lettuce Plants, see page S 40.)

Lettuce is the most popular of all salad plants, and, at the same time, is one of the easiest to grow due to its comparative freedom from disease and insects. While all types of lettuce thrive in properly enriched, loose, light loams, they will grow satisfactorily in any good garden soil; heading varieties, particularly should never be planted in compact heavy soils. A satisfactory way of starting the early crop is to sow in hot beds in March, and transplant to 2 by 2 inches preferably in flats, which may be transferred to cold frames when the plants are strong enough. Plants that have been properly hardened in cold frames may be set out of doors as early as the ground can be prepared; the rows should be made 12 or 15 inches apart, with plants 1 foot apart in the rows. Seed may be sown in the open from the latter part of April until the middle of August.

Most of the Cos varieties will be of finer quality if blanched by tying the tops together with soft twine or roffea when the plants have nearly attained their growth.

Breck's Boston Market, Big Boston and Hittinger's Belmont are especially suitable for growing under glass.

One ounce of seed will produce about 4000 plants.

Big Boston. Suitable for cold frames Pkt. Oz. $\frac{1}{4}$ lb. Lb. or open ground. 10 .30 .75 2.50

Breck's Boston Market. A carefully selected strain of White Seeded Tennis Ball. Grows very compact, and is a most profitable forcing variety. 15 .75 2.50

✱ **Breck's Black Seeded Tennis Ball.** Arlington strain. One of the most popular sorts for outdoor cultivation. The heads are tender and compact with outer leaves. 10 .40 1.25 4.50

Breck's Waban. Early, bronze edge, loose heading, crisp. 10 .40 1.00 3.50

Black Seeded Simpson. A superior variety, large, light colored heads. 05 .15 .30 1.00

✱ **Boston Curled.** Esteemed for its earliness, beauty and good table qualities. 10 .25 .75 2.50

Breck's Black Seeded Tennis Ball

Mushrooms

MUSHROOM—(*Agaricus campestris*) German, "Champignon."—French, "Champignon."—Spanish, "Hongo."

Mushrooms may be grown in cellars, sheds, under greenhouse benches, or wherever the temperature will range between 50 and 65 degrees and is fairly uniform. Fresh stable manure, composed of about equal amounts of horse droppings and straw or litter, is the best material of which to make the beds. Mix three parts of manure with one part of fresh loam. Before this mixture is used it should be piled in heaps about 3 feet high and moistened throughout, but not drenched. Every 4 or 5 days fork the heaps over carefully and tread them down. In from 2 to 3 weeks when the temperature in the heaps has dropped somewhat, the bed should be made. Spread a thin layer of the mixture and tramp or pound it firm; repeat this process until the bed is 10 or 12 inches deep; leave it thus for a few days until the temperature inclined to rise suddenly at first, has declined to about 70 or 75 degrees. Conditions will then be suitable for spawning, which is done by making holes about 3 inches deep and one foot apart each way; into each hole insert a piece of spawn about 1½ inches square and fill in the hole with compost. In about ten days, when the spawn has had time to diffuse itself through the bed, spread a layer of fine loam over the surface to the depth of 1 or 1½ inches. A light mulch of straw will help to conserve moisture. Ordinarily, mushrooms should begin to appear in from six to ten weeks and continue to come for about two months. If the surface of the bed becomes dry, sprinkle it with water at a temperature of about 80 degrees. When the bed is apparently exhausted it may often be stimulated to further production by spreading over it ½ an inch of fresh loam and watering thoroughly, using warm water to which sheep manure has been added at the rate of ½ a pound to 3 gallons.

One brick of Spawn is sufficient for ten square feet of bed.

Pure Culture Spawn can be relied upon to produce mushrooms of a uniform type and color. Its use positively precludes all danger of growing poisonous varieties. The culture with which the bricks are inoculated are taken from carefully selected, prolific mushrooms of the most desirable cream white variety—the sort preferred by connoisseurs. There are two kinds of bricks, Direct and Standard; the former are inoculated directly from an original culture; the latter from a pure culture produced from an original.

All bricks are fresh, being received at frequent intervals from the laboratory.

Mushroom Spawn. Direct Bricks, Standard American. Pure culture. 40 cents per brick; 20 bricks for \$6.50; 100 bricks for \$30.00.

"Mushroom Growing," by Duggar, \$2.00.

For free delivery offers and general instructions regarding orders and shipments see second page of cover.

Muskmelon

MUSKMELON—(Cucumis melo) German, "Melone."—French, "Melon."—Spanish, "Melon."

Good muskmelons may be grown in almost any soil if it is skillfully handled; a sandy loam that was heavily manured the previous year for some other crop such as onions, or carrots, is ideal. Begin to prepare the soil early in spring. Late in May, when the ground is warm, plant the seed 1 inch deep in hills 5 or 6 feet apart each way, putting in 8 or 10 seeds per hill. Frequent and shallow cultivation is essential to success. Much trouble with insects is often avoided by starting the plants under glass. Plant the seed in berry baskets, pots or other containers from which the seedlings can be removed easily, and without disturbing the soil about their roots.

Tobacco or plaster dust sprinkled on the plants makes them distasteful to insects. The striped cucumber beetle is perhaps the most destructive pest likely to attack melon vines. One ounce of seed will plant about 50 hills; 2 to 3 pounds, 1 acre.

Pkt. Oz. ¼lb. Lb.

- Vick's Early.** Early, medium size, oblong form, pink flesh .05 .10 .25

For free delivery offers and general instructions regarding orders and shipments see second page of cover.

Part of our Massachusetts Grown Yellow Globe Danvers Onion. Picture taken a short time before the seed was harvested.

Onions

ONION—(*Allium cepa*) German, "Zweibel."—French, "Oignon."—Spanish, "Cebolla."

The onion requires a very fertile soil for the best development of its bulbs. While muck and peat soils are ideal, sandy loams properly enriched with well-rotted manure furnish excellent conditions. Onions should always be grown on practically level land, or considerable loss may be sustained from washing. As early in spring as the land can be worked, sow seed sparingly in drills 1 foot apart and about $\frac{1}{2}$ inch deep. Unless the soil is quite moist it should be pressed firmly down on the seed to insure rapid and uniform germination. Weeding and thinning must be done by hand; at the first weeding, thin out to about 8 plants per linear foot of row. Cultivation should be shallow and frequent. When all the tops are yellow the onions are usually pulled and left on the ground, for 10 days or more if the weather is favorable, until the outer skin of the bulbs is dry; after the first three or four days, stir them occasionally with a wooden rake to hasten the process. One ounce of seed will sow 100 feet of drill; from 4 to 5 pounds, 1 acre.

Pkt. Oz. $\frac{1}{4}$ lb. Lb.

Ailsa Craig

Onion Sets

The sets should be planted out as early in spring as the ground is dry enough to work; plant them in rows 1 foot apart, with sets 3 or 4 inches apart. When raised from sets the onions can be used in the green state in June, or they will be ripened off by July.

Okra or Gumbo

OKRA OR GUMBO—(*Hibiscus esculentis*) German, "Essbarer."—French, "Gumbo."—Spanish, "Quibombo."

This warm weather vegetable grows freely in any ordinary garden soil. Its tender young seed-pods are used in soups and stews. About the middle of May, sow seed sparingly in drills 3 feet apart and 2 inches deep; later, thin the plants to 12 or 15 inches apart in rows. One ounce of seed will sow 50 feet of drill.

	Pkt. Oz.	¼ lb.
Dwarf Green. Early and productive, tender pods.....	.10	.25 .50
Tall Green. Later than the foregoing, an immense cropper, pods extra large and tender..	.05	.15 .25
White Velvet. Large, creamy-white pods, very tender.....	.05	.10 .25

Parsley

PARSLEY—(*Carum petroselinum*) German, "Petersilie."—French, "Persil."—Spanish, "Perejil."

Parsley is the most beautiful vegetable grown for garnishing and flavoring purposes. It will thrive in any fertile garden soil; a single row forms an effective edging for beds and walks. Sow early in spring, or at intervals until June, in shallow drills about 1 foot apart; when the plants are 2 inches high, thin out to 6 or 8 inches apart in the row. The seed germinates very slowly, and sometimes three weeks elapse before the seedlings appear. For winter use the plants may be set in protected cold frames. The Turnip-rooted variety should be treated in the same way as Carrots. One ounce of seed will sow about 150 feet of drill.

	Pkt. Oz.	¼ lb.
Breck's Double Green Crest. A splendid sort for frames or open ground.....	.25	.75 2.00

Lincoln Green. Famous English variety, compact growth, finely curled.....	.25	1.00 3.00

Parsnip

PARSNIP—German, "Pastinake."—French, "Panais."—Spanish, "Pastinaca."

Parsnips need a long growing season in order to reach maturity; consequently the seed should be sown early in spring. Any of the lighter types of soil, high in fertility, will grow smooth roots. Sow thickly in drills 15 or 18 inches apart and 1 inch deep; when the plants are well started, thin out to 5 or 6 inches apart in the row. Since parsnips are perfectly hardy, and freezing improves their quality, it is customary to dig in the fall only enough roots for winter use, leaving the balance of the crop in the ground until spring. One ounce of seed will sow about 100 feet of drill; 5 pounds, 1 acre.

Parsnip seeds of all kinds very scarce. Prices subject to change. Pkt. Oz. ¼ lb.

Breck's Market Garden. For flavor, texture of flesh, form, smoothness and as a cropper, this variety is without an equal..... .10 .30 1.00

Per Pound, \$1.50

Mustard

MUSTARD—(*Brassica*) Ger., "Senf."—Fr., "Moutarde."—Spanish, "Mostaza."

Mustard is usually cultivated for salad purposes, but may also be used for greens. Seed may be sown from April to August in shallow drills 12 or 15 inches apart. The leaves should be cut for use when about 2 inches long. One ounce of seed will sow 50 feet of drill.

Pkt. Oz. ¼ lb.
Brown or Black. More pungent in flavor than white..... .05 .25 .50

Chinese. Leaves twice the size of the ordinary white mustard, of a deeper green, flavor pleasantly sweet and pungent, and desirable as a salad..... .10 .25 .75

White London..... .05 .15 .40

Martynia

The seed pods are used for pickling, and should be gathered when green and tender. Although some gardeners prefer to start the plants in hot beds, sowing can be made out of doors late in May.

It is customary to plant several seeds together at 3-foot intervals in rows 3 feet apart. Later thin out so that the plants will stand 3 feet apart each way. Pkt. Oz.

Martynia Proboscidea..... .10 .50

Champion Moss Curled Parsley

Peas

(*Pisum sativum*). German, "Erbsen." — French, "Pois." — Spanish, "Chicaros."

The pea is one of the few vegetables which almost invariably find a place in home gardens. Peas mature earliest in light, fertile loams, but will give good results in any well-prepared garden soil. Sow the smooth sorts as early in spring as the ground can be worked; after that, make successive plantings every ten days until about the middle of June, giving the wrinkled sorts the preference. From the middle to the end of July, when the driest and hottest weather of the season is usually over, plantings of the extra early varieties may again be made with reasonable hope of a crop. Plant in trenches, or wide furrows, 3 or 4 inches deep and from 18 inches to 4 feet apart, according to the height of the variety. Brush, or supports of some kind, should always be provided for the vines of tall growing sorts. All peas sold by weight, not by measure. One pound equals about 1 pint, and 14 pounds about 1 peck, dry measure.

Two pounds of peas will plant about 100 feet of drill.

Peas by the packet, postpaid. At the prices noted below we do not deliver peas purchased by the pound, two pounds, etc. For Parcel Post rates to your address, see page 2 of cover.

Peas

EXTRA EARLY

- Pilot.** An extra early, round seeded or smooth pea. Can be planted as soon as ground can be worked. Pods as large as the Gradus. Very prolific, highly recommended as an extra early market sort. Pkt. .20 1 lb. 2 lb. 7 lb. .40 .75 2.50
- ★ **Pioneer.** An improvement on the popular Laxtonian. Vines about 20 inches high; color, light green. Vigorous growth. The pods pointed and a little darker in color than the vine. Considered fully four days earlier than Laxtonian Pkt. .20 1 lb. 2 lb. 7 lb. .40 .75 2.40
- Laxton Superb.** New early Pea which received Award of Merit from English Royal Horticultural Society. A very early, hardy, large podded, almost smooth seeded pea. Vigorous growth, very prolific; even growth of vine; height about 20 inches. Pkt. .20 1 lb. 2 lb. 7 lb. .40 .75 2.40
- Alaska, or Clipper.** An extremely early, smooth, blue pea. Vines about 2 feet high; dark green pods, well filled. Pkt. .20 1 lb. 2 lb. 7 lb. .30 .50 1.50
- American Wonder.** Height 12 to 15 inches. Very early wrinkled pea of fine quality. Pkt. .20 1 lb. 2 lb. 7 lb. .30 .50 1.50
- Breck's Excelsior.** The earliest and best, tall-growing smooth pea. Pkt. .20 1 lb. 2 lb. 7 lb. .30 .50 1.50
- ★ **Breck's Old Glory.** Superior to all other extra early varieties, size, quality, and productivity considered. A favorite market garden sort. Long, dark green pods packed with large, slightly wrinkled peas; vines tall growing and vigorous. Pkt. .20 1 lb. 2 lb. 7 lb. .30 .50 1.50
- Claudit.** An early, tall-growing variety of excellent quality. Peas large, deep green, and slightly wrinkled. Pkt. .20 1 lb. 2 lb. 7 lb. .30 .50 1.50

Gradus, or Prosperity. D deservedly the most popular early variety among both private and market gardeners in this locality. Pods large, pointed and uniform in shape; peas of fine flavor. Vines from 2½ to 3 feet in height. Pkt. .20 1 lb. 2 lb. 7 lb. .40 .70 2.25

Laxtonian. One of the best dwarf wrinkled peas for the market gardener. Pods about 4 inches long, resembling those of Gradus, but ripening a little earlier. Vines productive and vigorous; average height less than 18 inches. Pkt. .20 1 lb. 2 lb. 7 lb. .40 .75 2.40

Little Marvel. An extra early dwarf wrinkled pea, fast becoming popular in this locality. Vines bear a profusion of blunt-ended pods, well filled with large peas of fine quality. Pkt. .20 1 lb. 2 lb. 7 lb. .40 .75 2.40

Nott's Excelsior. The standard of quality in home gardens. No other dwarf wrinkled pea is as widely planted. Vines of regular habit and about 14 inches high. Pkt. .20 1 lb. 2 lb. 7 lb. .35 .65 2.00

Premium Gem. A desirable, early, wrinkled pea. Vines about 15 inches high. Pkt. .20 1 lb. 2 lb. 7 lb. .30 .50 1.50

Sutton's Excelsior. An early, dwarf, wrinkled pea with exceptionally large pods. Matures as early as Nott's Excelsior and is its equal in quality. Pkt. .20 1 lb. 2 lb. 7 lb. .35 .65 2.00

Thomas Laxton. This reliable pea is similar in type to Gradus, but has darker foliage and square-ended pods. Although a wrinkled sort of excellent quality, it may be planted about as early as smooth varieties. Pkt. .20 1 lb. 2 lb. 7 lb. .35 .65 2.00

Market Surprise. An extra early, almost smooth variety. Usually matures about seventy days from planting. Pods four inches long; vines grow to the height of about forty inches. Excellent flavor; gave highly satisfactory results in Massachusetts last year. Pkt. .20 1 lb. 2 lb. 7 lb. .40 .75 2.40

★ **The Record.** A popular large-podded extra early, wrinkled pea which matures several days earlier than the well-known Gradus. Its growth is quite similar to that of Gradus but somewhat dwarfer and stouter; pods uniformly large, measuring 4½ to 5 inches, nearly round and packed with handsome wrinkled peas of the finest flavor. The Record is an especially valuable sort for market gardeners because the peas will remain in good condition a remarkably long time after picking. Pkt. .20 1 lb. 2 lb. 7 lb. .40 .75 2.40

For free delivery offers and general instructions regarding orders and shipments see second page of cover.

Petit Pois. "Clamart Hatif." These small, delicate peas are much esteemed in Europe. Slender pods are about 3 inches long, slightly curved, and usually contain from 7 to 9 each. In France the vines grow to a height of 4 or even 5 feet..... Pkt. .20 .40 .75 2.75
(See Forage Crops for prices on Field Peas, Etc., page S 44).

Irish Cobbler

Early Ohio

Green Mountain

Potatoes

(*Solanum Tuberosum*)

(Prices subject to market changes.)
F. O. B. Boston.

A deep, mellow loam, rich in humus, furnishes ideal conditions for growing potatoes, but good crops are raised on both heavier and lighter types of soil. Early varieties may be planted as soon as the ground can be prepared. Cut the tubers into pieces the size of hen's eggs; drop a piece of seed every 15 inches in furrows 3 feet apart, and cover to a depth of 3 or 4 inches. Cultivate at intervals of a week or ten days, gradually throwing earth up around the stalks after the plants are 4 inches high. For potatoes, fertilizers are unquestionably better than barnyard manure.

We furnish only Aroostook Grown Potatoes from hill selected seed stock, carefully inspected during growing season, sorted and graded.

EARLY VARIETIES

	15 lbs.	60 lbs.	120 lbs.
✱ Irish Cobbler. The most popular and reliable early, white sort. Quite round with deep set eyes. Distinct type.....	1.00	3.75	7.00

Spaulding's Rose. Red skin, late maturing; considered the best keeping sort. Potatoes large, smooth, excellent quality.....	1.00	3.75	7.00

SWEET POTATO PLANTS

Plant rooted slips or cuttings the last of May or 1st of June in hills about 5 feet apart and 6 inches above the garden level. Light, rich warm soil is required.

Nansemond. Best sort for New England. Per 100, \$1.25; add 15c per 100 if wanted by parcel post.

Pumpkin

PUMPKIN (*Cucurbita*). German, "Kurbis." — French, "Courge." Spanish, "Calabaza."

Plant 1 inch deep in hills 8 by 8 feet apart, late in May, in any highly enriched soil that is not clayey. When the plants are beginning to run, remove all but the two strongest from each hill. Farmers find field pumpkins a valuable addition to their stock feed, and commonly grow them in the cornfield, planting a few seeds in every third or fourth hill in alternate rows. One ounce of seed will plant about 30 hills; 4 pounds, 1 acre.

	Pkt.	Oz.	1/4 lb.	lb.
Connecticut Field. Very productive; largely grown for feeding stock.....	.05	.15	.50	1.50

Potato Sprays

Seed Potatoes should be treated with Formaldehyde before planting. We can furnish Formaldehyde in pint bottles for 50 cts. with full directions for use.

For all leaf-eating insects use Corona Dry Calcium Arsenate.

To prevent blight, Corona Bordeaux Mixture Dry.

Against Plant Lice, Corona Tobacco Dust Dry, or Black Leaf 40 (Nicotine Sulphate 40%).

For additional information
see page S 54.

Sweet Upright Pepper

Pepper

PEPPER (*Capsicum annuum*). German, "Pfeffer."—French, "Piment."—Spanish, "Pimiento."

Sow the seeds in hot-beds about the middle of March, and transplant the seedlings to 2 by 2 inches apart as soon as they are strong enough. It is an advantage to shift the plants again, two or three weeks later, into pots of proper size. In the latter part of May, when the ground is warm, plant in the garden in rows 2 feet apart, leaving 12 or 14 inches between plants in the row. Peppers should be cultivated in the same way as egg-plants, and will thrive in any well-drained soil.

One ounce of seed will produce about 2000 plants.

	Pkt.	Oz.
Cayenne, Long Red. The pods of this variety are from 3 to 4 inches in length, cone shaped, and coral red when ripe.....	.10	.75
★ Large Bell, or Bull Nose. Fruit large, an early sweet variety.....	.10	.50

Sweet Mountain, or Mammoth. Similar in shape to the Large Bell, but of much larger size.....	.10	.85
★ Sweet Upright. A very desirable medium size sweet pepper. Fruits borne upright on plants, which are small and compact.....	.15	.85

RADISH—(*Raphanus Sativus*). German, "Rettig," "Rad-ieschen."—French, "Radis," "Rave," "Petit Rave."—Spanish, "Rabano."

Loose, fertile, light loams are to be preferred for radishes; in distinctly clayey soils, the crop not only matures slowly, but the roots are usually rough, ill-shaped and of inferior quality. For a constant supply, sow at intervals of two or three weeks from early April until September. An early crop may be grown in the hot-bed in February. For use during the winter, the roots may be stored in earth in a cool cellar, but should be placed in cold water, for an hour or so before they appear on the table.

One ounce of seed will sow 100 feet of drill; 10 pounds, one acre.

	Pkt.	Oz.	1/4lb.	1lb.

RHUBARB—(*Rheum Rhaponticum*) German, "Rhabarber."—French, "Rhubarbe."—Spanish, "Rhubarbo Bastardo." (For price of Rhubarb Roots see Vegetable Plants.)

Seed may be sown early in spring in shallow drills one foot apart; when the plants are 3 or 4 inches high, thin to about a foot apart in the rows. In the fall, or preferably the following spring, transplant into deep, rich soil, setting the plants about 3 by 3 feet apart. If propagated by dividing the roots, the work may be done either in spring or fall.

One ounce of seed will sow 100 feet of drill.

	Pkt.	Oz.	1/4lb.
Linnaeus. Early, large and tender.....	.10	.50	1.00
Victoria. Very large, later than Linnaeus....	.10	.60	1.25

RHUBARB ROOTS—For the Home Garden. Selected Roots, 35c. each; 3.00 per doz.

SALSIFY, OR OYSTER PLANT (*Tragopogon porrifolius*) German, "Boksbart."—French, "Salsifis." Spanish, "Ostra Vegetal."

The demand for this vegetable is increasing from year to year, but as yet its good qualities are not widely known. The roots are usually fried, boiled or stewed, but may be sliced raw for salad purposes.

The methods suggested for growing and keeping Parsnips apply equally well to this crop.

	Pkt.	Oz.	1/4lb.
One ounce of seed will sow 50 feet of drill.			
★ Breck's Improved Long White. Roots of medium size, white and smooth.....	.10	.30	1.00
Mammoth Sandwich Island. Twice as large as the preceding; fine quality.....	.10	.30	1.00

SCORZONERA, OR BLACK SALSIFY (*Scorzonera Hispanica*)

This vegetable should be cultivated in the same manner as Salsify, but being a little more difficult to raise, is rarely grown except by private gardeners. Though the roots have black skins, the flesh is white and very tender. Scorzonera may be cooked in the same ways as Salsify, and many people consider it superior in flavor. .10 Pkt. .50 oz.

Breck's Blue Hubbard

Our best winter squash, as the following letter will testify. Squash illustrated is the one referred to in letter. Photograph was taken October, 1921.

"Gentlemen:

I am sending you by Parcel Post a Blue Hubbard Squash. The seed was planted May 15th, 1920, and the Squash harvested September 28th, 1920. This Squash has never been in cold storage, but kept in a dry room, and as I purchased the seed from you thought I would send the Squash to show how well it has kept."

Yours sincerely,

(Signed) JOHN F. WATSON,
October 10th, 1921.

77 Washington St.,
Gardiner, Maine.

Squash

(*Cucurbita Pepo* and *C. maxima*). German, "Kurbiss."—French, "Courge."—Spanish, "Calabaza Tontanera."

Squash seed should not be planted until the ground has become thoroughly warm and the weather is settled. A rich, warm, mellow soil is conducive to high yields and early maturity, but squashes grow satisfactorily in almost any well-drained soil. If possible, enrich each hill with one or two forkfuls of rotted manure. For bush types, the hills should be at least 4 x 4 feet apart; for the running varieties, 10 x 10 feet. It is customary to plant 8 or 10 seeds in each hill, and thin out, later, to two or three strong plants. During the early stages of growth keep the plants well sprinkled with tobacco or plaster dust to make them distasteful to insects; the way to deal with the squash vine borer is to cover the joints with an inch or two of soil so that secondary roots may develop.

BUSH VARIETIES

One ounce of seed will plant about 30 hills.

	Pkt.	Oz.	¼lb.	Lb.
★ Giant Summer Crookneck. Yellow fruit, large and good.....	.10	.25	.75	2.50

Vegetable Marrow. A favorite English sort, distinct, flesh white.....	.10	.25	.75	2.00
Yellow Bush Scallop. A summer sort..	.05	.15	.30	1.00
Early Prolific Marrow, or Orange Marrow. Early, distinct, good, suitable for fall or winter use.....	.10	.25	.75	2.00
★ Boston Greek. Summer variety, color dark green, shape oblong. For complete description see Novelty Section.....	.10	.75	2.50	
Cocozelle (Italian Marrow). Green flesh about 20 inches long. Skin smooth, mottled light and dark green.....	.10	.25	.75	

Squash

RUNNING VARIETIES

One ounce of seed will plant 15 hills.

Bay State. Style of Essex Hybrid, color blue, good for fall and winter.....	.10	.25	.85	3.00
Boston Marrow. Follows the summer sorts in season, a good fall and winter sort.....	.05	.20	.60	1.50
Essex Hybrid. A hard shell Turban, fine for winter.....	.10	.25	.75	2.00
★ Delicious. A medium sized, fall and winter squash with thick fine-grained yellow flesh. Skin usually uniform dark green, but occasionally lighter and somewhat mottled. Many people consider this variety superior to the Hubbard in dryness, sweetness and flavor.....	.10	.25	.75	2.50
Hubbard. Deservedly the most popular variety of winter squash in all parts of this country. Its orange-yellow flesh is always rich in flavor, sweet and dry. Vines strong and productive. The dark green oblong squashes of our superior strain often weigh from 10 to 25 pounds each.....	.10	.25	.75	2.50
Hubbard, Golden or Red. A grand keeper.....	.10	.25	.75	2.50
Hubbard, Mammoth Warted. Large covered with warts, keeps well, fine quality.....	.10	.25	.75	2.50
★ Blue Hubbard. Hard shell, thick meat. Dry and fine quality, favorite winter sort for Boston Market.....	.10	.30	1.00	3.00
Marblehead. Light blue, very productive and a fine keeper; oblong in shape.....	.10	.25	.75	2.50

Spinach

SPINACH (*Spinacea oleracea*). German, "Spinat."—French, "Epinard."—Spanish, "Espinaca." (One ounce, 50 feet of drill; 12 pounds, one acre.)

Spinach thrives in rich soil, and may be planted as soon as the ground can be prepared in spring. Sow the seed in drills one inch deep and 12 or 15 inches apart. The main crop, for spring consumption, is sown in late August or September, the plants being protected during the winter by a covering of straw or litter. A single sowing of New Zealand Spinach will supply greens of excellent quality throughout the summer; plant the seed 3 or 4 in a hill, in hills 3 feet apart each way. Seeds of this variety are enclosed in very hard shells and should be soaked in hot water before sowing.

	Pkt.	Oz.	¼lb.	Lb.
Long Standing. Leaves thick and large; best for spring sowing.....	.05	.10	.30	1.00
★ New Zealand (<i>Tetragonia expansa</i>). A distinct, spreading plant, very productive.....	.10	.25	.85	2.50
Giant. Round, thick leaved.....	.05	.15	.30	1.00
Prickly, or Winter. Recommended for fall sowing.....	.05	.10	.25	.85
Monstrous Viroflay. Large, thick, dark green leaves.....	.05	.15	.30	1.00
★ Bloodsdaie or Savoy-Leaved. Large curled and wrinkled leaves.....	.05	.15	.30	1.00
Victoria. Very dark colored leaves, fine variety for spring sowing, later than Long Standing.....	.05	.15	.30	1.00

Tobacco

Pkt. Oz. ¼lb.

Connecticut Seed Leaf. Best adapted to the climate of the Northern and Middle States....	.05	.25	1.50
Havana. Imported seed.....	.10	.30	2.00

Breck's Belmont Tomato

Tomato

TOMATO (*Lycopersicum esculentum*). German, "Liebsapfel."—French, "Tomate."—Spanish, "Tomate."
(For Tomato Plants, see Vegetable Plants.)

Sow the seed sparingly about the middle of March, in drills $\frac{1}{4}$ of an inch deep and 2 inches apart, in a hot-bed, or sunny window where the temperature will not fall below 65 degrees. When the seedlings are two inches high, they should be transplanted to 3 inches apart each way in other flats of soil 3 inches deep, in which they may remain until time for planting in the garden. If a very early crop is desired, transplant again three weeks later, preferably into 4-inch pots of very rich soil. About the first of June the plants may be set in the open ground. A heavy soil is conducive to high yields but the crop matures much earlier on fertile, sandy loams; in the former, set the plants four feet apart each way; in the latter, 3 by 3 feet will give ample space.

One ounce of seed will produce about 2000 plants.

	Pkt.	Oz.	$\frac{1}{4}$ lb.
★ Breck's Belmont. The best early either for forcing or open ground cultivation, fruit bright scarlet, few seeds, finely flavored and solid.	.10	.40	1.50
Breck's Balshire Tomato. This variety resulted from crossing Balch's Fillbasket and Lister's Prolific. It is far superior to the latter parent in that it is a heavier cropper, of better shape, and shows less tendency to crack. In a recent trial under glass some of the plants carried at least 40 lbs. of fruit. We recommend it strongly either for forcing or for outdoor culture.	.25	4.00	
★ Chalk's Early Jewel Tomato. Extra early, bright red, fine flavor and very productive.	.10	.50	1.50
Dwarf Champion. Dwarf and strong habit of growth, very solid and of extra quality.	.05	.30	1.00
Dwarf Stone Tomato. The largest dwarf sort. Fruit bright scarlet.	.10	.40	1.25
Earliana. Earliest and best bright red tomato, smooth and firm.	.10	.40	1.25
Golden Queen. Good size and quality, bright yellow color.	.10	.40	1.25
Hubert's Marvel Tomato. Fruit medium size, almost round, solid, borne in clusters, of English introduction, recommended for either forcing under glass or outdoor cultivation.	.15	.60	2.00

Pkt. Oz. $\frac{1}{4}$ lb.

★ John Baer Tomato. A most profitable variety for the market gardener. It has been grown in New England for several years with great success and profit. The fruit of the John Baer is nearly round, color clear scarlet and of large size for an early tomato, flesh smooth and firm. Fruit stands shipping well. The vines are hardy, productive and continue to bear fruit for a long period.	.10	.50	1.75
June Pink. A very early market sort, smooth, color bright pink.	.10	.40	1.25
Lister's Prolific Tomato. A variety of recent introduction and now very popular about Boston, especially where a medium size tomato is desired. The color is rich scarlet, tomato is medium size, solid, fruit borne in large clusters.	.25	.60	
Perfection. Large and early, thick meat, few seeds, blood-red color.	.10	.40	1.25
Stokes' Bonny Best. Very early, a vigorous grower, and prolific.	.10	.50	1.50
★ Stone. Very smooth, solid, thick, flesh bright scarlet color.	.10	.40	1.25
Pear Shaped Red. Fruit handsome and solid, fine for preserves.	.10	.40	1.25
Plum Shaped Yellow. Uniform shape, used for pickles.	.10	.40	1.25
Red Cherry. A small, early variety, used for pickling.	.10	.40	1.25
Stirling Castle. Excellent for forcing, medium size, scarlet in color.	.10	.50	1.50
The Comet. Splendid for forcing, very prolific.	.10	.50	1.50
Strawberry, or Winter Cherry (<i>Physalis Alkekengi</i>). The fruit grows in a husk and will keep all winter. It has a pleasant strawberry-like flavor. It is much used for preserving, also for sauce.	.10	.40	1.25
Yellow Cherry. Similar to Red Cherry except in color.	.10	.30	1.00

Where orders are accompanied by cash WE DELIVER FREE to any Post Office, Railroad, Express Office or Freight Station at our expense, except where otherwise noted:—

Vegetable and Flower Seeds at the package, ounce, $\frac{1}{4}$ pound, $\frac{1}{2}$ pound and 1 pound prices, except Peas, Beans, Corn, etc., as noted in Catalogue.

Bulbs at the single and dozen rates.

Books and other publications.

For free delivery offers and general instructions regarding orders and shipments, see second page of cover.

White Egg

Purple Top Yellow Ruta Baga

Purple Top White Globe

Turnip

TURNIP—(*Brassica rapa*). German, "Steckrube."—French, "Navet."—Spanish, "Navo Comun."

Turnip seed may be sown at all season from April until the middle of August in our climate; but the roots will be of finer quality if seed is sown early in spring for the summer crop, and about August first for the fall and winter crop. A light soil, well-manured the previous year, furnishes ideal conditions; no manure should be applied at the time of sowing, unless it be well rotted compost, or the turnips are apt to be strong flavored, or bitter. The ground should be dug or plowed deep, and made mellow and fine. Sow the seed in drills $\frac{1}{2}$ inch deep and from 12 to 18 inches apart, dropping one good seed to every inch of furrow. Plants of the early varieties should be thinned to about 3 inches apart, while those of the larger late varieties should not be left closer than 5 inches apart in the row. Cultivate often, and keep the crop free from weeds. The Ruta Baga sorts, which are generally grown for winter use, may be sown from the 20th of June to the middle of July. For stock feeding, the late crop is often sown broadcast on well-prepared soil and raked in lightly.

One ounce of seed will sow 150 feet of drill; two pounds, one acre in drills. From 1 to $1\frac{1}{2}$ pounds will sow one acre broadcast.

Pkt. Oz. $\frac{1}{4}$ lb. Lb.

Early Snowball. Small and of quick growth, pure white.....	.10	.20	.60	1.50
Golden Ball. A small, golden-yellow variety, unsurpassed for table use.....	.10	.25	.75	2.50

Spray-Tabs

The new Spray for the home garden. Prevent plant diseases while fighting insects. Spray-Tabs combine convenience, reliability and economy in a modern, efficient and accurate insecticide and fungicide. The plant grower has never before had the advantage of spray materials in tablet form. Spray-Tabs' safety and accuracy are alone sufficient recommendation. All that is needed to make an ideal spray for garden crops is to put the required number of tablets in a specific amount of water, agitate the solution and apply it to the plants. There is no opportunity to improperly make the solution. Order them with your seed and plant order, that pest control may begin with garden making. **Thirty tablets for 30c.** Complete directions for every use with each package.

For free delivery offers and general instructions regarding orders and shipments, see second page of cover.

Field Corn

Prices subject to market changes and for seed f. o. b. Boston; bags extra at value. Special quotation made where large quantities are required. Our seed corn grown for us under contract and especially for seed purposes. We wish to call particular attention to our fine stock of Improved Leaming and also Virginian grown Eureka Ensilage.

	qt.	pk.	bu.
★ Breck's Mondamin. The earliest and best yellow flint variety; eight-rowed ears, well filled to the tips	.25	1.50	5.00
Breck's Angel of Midnight. One of the earliest yellow flint varieties, of the early Canada type. Ears long, with comparatively deep kernels	.20	1.25	4.00
Brewer's Yellow Dent. This variety originated in New England and is unquestionably the best strain of dent corn to grow for grain in the latitude of Boston; it is also valuable for ensilage. The stalks average ten to twelve feet in height; ears have about twenty rows of closely-packed kernels....	.20	1.50	4.50
Early Yellow Canada. An extra early eight rowed flint variety with large kernels and small cobs. Ears of medium size. A popular variety in Northern New England....	.20	1.25	4.00
Early Sanford. A popular white flint variety, equally valuable for ensilage or grinding. The eight-rowed ears average from 9 to 10 inches in length and have broad cream-white kernels.	.20	1.25	4.00
★ Eureka Ensilage. One of the most popular white dent varieties among dairymen. It is enormously productive of both foliage and ears. Our Virginian grown seed has given great satisfaction in New England	.20	1.00	3.50
★ Improved Leaming. A yellow dent variety very valuable for ensilage. The plants are tall with a large amount of foliage. Each stalk usually produces two good long ears with small red cobs, well filled with large, deep, golden kernels.....	.20	1.00	3.00
Longfellow. The variety most widely grown in New England. An early eight-rowed flint corn with long ears and comparatively small cobs, filled to the tips with large, broad kernels.	.25	1.00	3.50
Pride of the North. An exceptionally early dent variety. Stalks of medium height with broad leaves. The ears, which average 7 or 8 inches in length, have from 12 to 16 rows. Grains long and deep yellow, making meal of extra good quality.....	.20	1.00	3.00
Red Cob Ensilage. A red-cobbed, white dent corn with heavy foliage; popular among dairymen in Northern New England.....	.20	1.00	3.00
White Southern. A tall growing dent variety with leafy stalks; valuable for ensilage and fodder.....	.20	1.00	3.00
Sweet Fodder. Unexcelled for cutting green and feeding to stock. It should be included in all soiling schedules.....	.20	1.25	4.00
Minnesota Number 13. Extra early yellow Dent corresponding to Wisconsin Number 8. The chief points of excellency are earliness, productiveness, and adaptability to the great variety of soils and climate. The ears average eight inches in length and are usually borne two on a stock. The cobs are well filled, kernels plump, 16 to 20 rows on a cob, color rich yellow.			
In the Northwest this variety matures in from 95 to 100 days.			
The stocks grow to the height of seven feet and being leafy make excellent and nutritious fodder.....	.20	1.25	4.00

★**Sweepstakes Pedigree.** A Yellow Dent corn which has given wonderful results as an ensilage corn in many sections of New England.

Sweepstakes is of rank growth, large ears, large kernels, broader and deeper than Leaming. The seed corn has been very carefully selected, thoroughly cleaned, always showing satisfactory germination..

Our Golden Chaff Winter Wheat, 1919 Crop, Grown in Northern New York

AGRICULTURAL GRAINS

Prices subject to Market changes. Bags extra. All Grain Sold f. o. b. Boston

★**BRECK'S KING OATS.** A close or cluster headed variety. Our 1919 crop was grown in Montana on irrigated land; thus insuring seed free from fungous diseases, bright colored, large size, strong germination, and weighing over forty pounds to the measured bushel, an exceptionally fine crop grown especially for seed purposes.

Breck's King Seed Oats have given satisfaction during the past seventeen years and we can highly recommend stock just secured.

Plant King Oats and secure a good yield of heavy grain and a crop of stout, straight, clean straw.

Price:

Per bushel of 32 lbs.	\$2.00
10 bushel lots and over, per bushel.....	1.85

★**SWEDISH SELECT.** A variety of Swedish origin. Owing to its splendid vigor, hardiness, and productiveness most highly recommended for New England soil. The oats ripen early—the straw is strong, stiff, tall, and the grain is white, thin hulled, and plump. Weight per measured bushel, 40 to 45 lbs.

The spikelets usually contain 2 grains. The growth in the fall is unusually regular and upright. Our stock comes from Northern Wisconsin. It is free from disease and of high germination.

Price per bushel.	\$1.50
10 bushel lots and over, per bushel.....	1.25

★**IMPORTED SWEDISH WASA WHITE OATS.** Our supply of seed this year comes direct from Sweden. The grain is unusually large, thin skin, pearly white. In Sweden they claim for this Oats the highest yield of any white Oat. The panicle is short, quite small, with very stiff branches. The spikelets tend to be three flowered and the grains are firmly set, and do not fall off.

Per bushel of 32 lbs.	\$3.00
10 bushel lots and over, per bushel.....	2.50

Samples of all the above sent on request.

Wild Rice (*Zizania aquatica*). Price on application. Not kept in stock. Seed must be kept moist until sown.

BUCKWHEAT

Silver Hulled.....	Per Bu.	\$3.00
Japanese. Enormously productive....	"	3.00

WINTER WHEAT

★**Dawson's Golden Chaff.** One of the hardiest wheats we know of; heads bald, color of grain white (inclined to light amber), straw of medium length..... 3.00

★**MARQUIS SPRING WHEAT.** A variety produced by scientific cross breeding of the old Calcutta and the frost-resisting Red Fyfe variety. First introduced by the Central Experiment Station in Ottawa, Canada, and has since rapidly displaced many other varieties in the North West and in Canada. In appearance Marquis Wheat is similar to Red Fyfe, but the heads as a rule are heavier and the stalks shorter, making it less likely to lodge. The kernel is flinty, a little darker red and more plump than Fyfe. It is beardless having smooth yellow chaff, but its most valuable feature lies in its earliness as it matures a week or ten days earlier than Red Fyfe. Thrashing reports from the Northwest indicate yields of 40 to 50 bushels per acre. Weight 64 to 66 lbs. per measured bushel, and they report it to be of the highest milling quality. Not in many years has such a valuable variety been introduced. Our stock is strictly Canadian grown and of the highest purity and germination. Farmers who planted Marquis Wheat in New England last season had most satisfactory returns.

Prices:

Per quart.....	\$0.20
Per peck.....	1.25
Per bushel.....	3.50

Fyfe. A red, beardless wheat, with long smooth heads well covered with chaff; straw stiff, bright colored. Grain very hard, of a dull, reddish color. Very suitable for New England. Per bushel..... \$3.00

Alfalfa Field on World's End Farm, Hingham, Mass. For eight consecutive years this field gave three heavy cuttings a year. One of the most successful fields in Eastern Massachusetts.

ALFALFA

Prices Alfalfa seed variable; we recommend that you write for special quotation stating quantity required when in the market.

ALFALFA, or LUCERNE.

Alfalfa, the greatest known forage crop, is now grown successfully in all parts of the world and is steadily gaining favor with the intelligent New England farmer, for it is proving to be of the greatest value to him not only as a forage crop, but as a soil improver. It is a legume, taking free nitrogen from the air and storing it up in the deep growing roots. As green fodder or cured hay Alfalfa is relished above all other forage crops by stock.

To grow a good field of Alfalfa, it is important to select deep, loamy, well-drained land with loose sub-soil, as standing water will soon kill out the young plants. Plow and harrow the land thoroughly, and with the first harrowing apply at least one ton of Agricultural Lime per acre, thereby correcting any acidity in the soil and, what is more important, making conditions favorable to the activity of nitrogen-gathering bacteria upon the presence of which success depends. Continue to harrow the land at short intervals for some weeks, thereby thoroughly pulverizing the top soil and at the same time working out and killing the old grass roots and weeds that would otherwise get a quick start and choke out the young Alfalfa. If possible, give the ground a fair dressing of barnyard manure, and a short time before sowing the seed harrow in 600 or 800 lbs. per acre of high grade commercial fertilizer. Either the seed should be inoculated with Farmogerm before sowing, or soil from an old Alfalfa field should be sown broadcast at the rate of 300 to 500 lbs. per acre.

It has been found that in this latitude seed sown the last of July or early in August will escape being hindered by weed growth, and get a good stand before cold weather. Sow broadcast at the rate of 20 lbs. per acre.

Never cut Alfalfa before buds have appeared close to the ground at the crowns of the plants; always judge the time to cut by the presence of these basal shoots or buds and not by the period of bloom. Do not cut closely the first season; cut, allow the plants to wilt, put up in cocks and cure in the cock.

1 lb. 100 lb.

Yellow Sweet Clover (*Melilotus officinalis*).

More suitable for turning under than the White variety. A good crop with which to prepare land for Alfalfa. Height about 2 ft. 60 lbs. to the bushel..... 20 18.00

⊗ **Bokhara** (*Melilotus alba*). Will grow on 1 lb. 100 lb. very poor soils; excellent for plowing under as green manure. Valuable for bee keepers.

60 lbs. to the bushel..... 20 18.00

⊗ **GENUINE GRIMM ALFALFA** (*Medicago Sativa*).

As a result of extensive trials of numerous varieties of Alfalfa, at various Experiment Stations and on many farms, in the Northern States, the unanimous conclusion is that the Grimm strain is hardier and more productive than any other known variety. It originated in northern Minnesota from seed brought from the fatherland and sown by Ferdinand Grimm, a German farmer. During the many years he allowed his fields to remain in Alfalfa, the more tender plants winter-killed; from those which survived he saved seed, little thinking that by natural selection he was developing a strain of Alfalfa more valuable to the American farmer than any yet discovered. Professor Hayes, before being appointed Assistant Secretary of Agriculture, recognizing the superiority of Grimm Alfalfa for sections where ordinary varieties fail, took measures to have the Grimm strain kept pure and to have it tested in other parts of the country. In 1904 the Government contracted with Mr. F. E. Dawley of Dotshome Farm, Fayetteville, N. Y., to grow 18 varieties of Alfalfa, one of which was Grimm, devoting an acre to each strain. The original stand of Grimm is still in existence. In 1914 it yielded a total of over 6 tons of cured hay in four cuttings. During the first three years of the contract no seed was allowed to ripen on this plot, but since then a seed crop has been harvested every year until 1914. At the present time there are over 60 acres of Genuine Grimm Alfalfa on Dotshome Farm. Although Alfalfa occupies nine-tenths of the meadows in the Fayetteville section, no diseases or insect enemies have appeared. The seed, which is true to name, clean, and absolutely free from Dodder, never leaves the farm until shipped to us. Notwithstanding its higher price, we feel confident that our Grimm seed is the most economical for all farmers who desire to grow Alfalfa.

Price, per lb., 80c., 20 lb. lots and over, 75c. per lb.

NORTHERN ALFALFA.

This stock secured from the northwest, of high germination, our purity test over 99%. Northwestern grown Alfalfa is preferred by many New England farmers, and the stock has done very well in New England.

Price, 35c. per lb., \$30.00 per 100 lbs.

Dwarf Essex Rape

CLOVERS

Clovers are the foundation of permanent agriculture in the North and East. They have the faculty of taking nitrogen from the air, and also of rendering available much of the inert plant food of the soil. Their long, powerful tap-roots penetrate to a great depth, loosen the soil, admit air, and by their decay add immensely to the fertility of the soil.

	Per lb.	100 lbs.
❖ Medium Red (<i>Trifolium pratense</i>). This is the common Red Clover and by far the most important variety for the practical purposes of agriculture. 60 lbs. to the bushel. Price.....	.40	35.00
Mammoth Pea Vine (<i>Trifolium pratense magnum</i>). Of ranker growth than Medium Red and usually lasts longer; excellent for plowing under to improve exhausted soils. 60 lbs. to the bushel. Price.....	.45	40.00
❖ Alsike, or Swedish (<i>Trifolium hybridum</i>). The hardiest of all clovers; it resists cold and extreme drought, and for low, wet land is invaluable; excellent for bees. 60 lbs. to the bushel. Price.....	.45	40.00
White Clover (<i>Trifolium repens</i>). This variety should be included in all mixtures for lawns and permanent pastures. It is adapted to all soils. 60 lbs. to the bushel. Price.....	.85	75.00
Crimson Clover (<i>Trifolium incarnatum</i>). Also known as Scarlet, or Carnation Clover. A rapid-growing annual of great value where only one crop is desired; excellent as a cover crop in orchards, or for plowing under to improve poor soils. 60 lbs. to the bushel. Price.....	.15	12.00

Sweet Clovers and Alfalfa Listed on Page S 43.

SOUTHERN COW PEAS (*Vigna Catjang*). Make poor land rich. The plowing under of green crops is one of the best and cheapest ways of improving the soil. For this purpose the Cow Pea is most popular, especially for medium or light soils. Seed should be sown in May or June at the rate of 1½ bushels per acre and the plants plowed under as soon as they have attained their full growth.

	Qt.	Bu.
Clay, or Wonderful . Has matured in New England.....	.20	\$5.00
New Era . Early and large yielder.....	.20	5.00
❖ Whippoorwill . One of the earliest.....	.20	5.00

For free delivery offers and general instructions regarding orders and shipments see second page of cover.

RAPE — DWARF ESSEX, ENGLISH. Is easily grown, perfectly hardy and possesses remarkable fattening properties. Under ordinary field conditions the plants reach height of about 4 feet; the roots being strong growing, penetrate the soil to a considerable depth.

Rape is especially adapted to cool, moist conditions, such as prevail in New England, and for its best development requires a loamy soil, moist and rich; ground that has produced good crops of corn, turnips and cabbage will be found very suitable for Rape. Plant seed in New England from May 1 to middle or last of July in average seasons.

In preparing the land for the seed, take every care possible to have it free from noxious weeds. Have the ground well pulverized with a harrow, thereby giving a deep, mellow seed bed.

Dwarf Essex Rape will be found to resist summer drought if care is taken to get the plants well started before extreme summer heat may be expected. For sowing in drills, about 10 lbs. of seed per acre is required; broadcast 15 lbs. per acre.

Price, per lb., 20c.; per 100 lbs., \$15.00.

HUBAM CLOVER

❖ A new variety of annual White Sweet Clover. First brought to the attention of the country at large by the Iowa Experiment Station in 1916. HUBAM undoubtedly originated in Alabama about 30 or 40 years ago.

Favorable attention was first called to it in 1917 at the Ohio Station where it made a remarkable growth of 4½ feet while Red Clover growing under the same conditions made a growth of 5 inches approximately. In many cases 10-foot growths of the HUBAM have been reported.

Besides valuable as a hay crop it surpasses all other crops for green manure crops, and besides it is one of the most nutritious pasture plants, also as a food for bees.

Several small plantings in this vicinity have given highly satisfactory results. Under ordinary conditions HUBAM will make a very satisfactory growth on any soil of average fertility which is not distinctly acid. The best growth is shown on lime soils.

Price per lb. 1.25
1 lb. 100-lb. lots \$1.00

SOJA BEANS

(Prices subject to market changes.)

One of the most valuable and important forage and soil-improving crops.

The use of this crop is increasing everywhere. Soja Beans make a larger growth than Cow Peas and can be cut and cured to better advantage. They also furnish a richer and more fattening feed than the Peas, since they contain larger amounts of oil and protein. These properties make Soja Beans particularly valuable as a feed for milch cows and as a general forage crop. When cut together with Corn for the silo, they greatly improve the quality of the feed.

	Qt.	Pk.	Bu.
Yellow Soja . A large-growing, yellow-seeded variety, especially suitable for ensilage and plowing under. Sow at the rate of one bushel per acre.....	.20	1.50	5.00
❖ Medium Green . An earlier maturing variety than Mammoth yellow. Producing a larger yield of Shell Beans but not such a rank growth of forage. Recommended for planting in New England because of its earliness.....	.25	2.00	7.00
Ito San . An early, small-leaved variety recommended for latitudes having short season, especially New England.....	.25	2.00	7.00
Wilson . A rank growing variety, branching high, leaves large, both pods and leaves remaining on vines long after cutting.....	.25	2.00	7.00

(Special prices quoted for large quantities.)

SORGHUM

Twenty-five pounds per acre is sown in drills. For dry fodder, broadcast 100 pounds per acre.

	lb.	100 lbs.
Early Amber Sugar Cane . Will ripen where Indian corn matures.....	.12	8.00
Red Kaffir Corn, or Sorghum . Non-saccharine. The plants, which are stocky and perfectly erect, cure into excellent fodder, or may be fed green during all stages of growth.....	.12	8.00
White Kaffir Corn	.12	8.00

MISCELLANEOUS SEEDS

For Forage Crops, Plowing Under, Etc.

Prices subject to market changes.

Peas, Canada or White Field. Unsur-	1 lb.	100 lbs
passed as a green feed for milch cows.		
Usually sown with oats.	.12	10.00
Broom Corn, Long Brush Evergreen.		
Succeeds best in good, deep, moderately		
moist soil. Sow 12 quarts per acre, after		
danger from frost is past.	.25	20.00
Spurrey (<i>Spergula arvensis</i>). Annual. This		
plant will grow in land too dry and too		
thin to support clover. The crop may be		
fed either green or as hay. It grows very		
rapidly and is in condition to pasture sheep		
or cattle on about six weeks after sowing.		
Sow broadcast 20 pounds per acre.	.35	30.00
Winter Vetch (<i>Vicia Villosa</i>). Growth and		
appearance like Spring Vetch. Valuable		
as a cover crop or for early spring forage.		
In this latitude seed should be sown before		
Sept. 15, so that the plants may become		
well established before cold weather. It is		
customary to sow from two to four pecks		
of Winter Vetch with six pecks of either		
Winter Wheat or Winter Rye. If sown		
alone, broadcast one bushel per acre.		
Weight, 60 lbs. per bushel. Price.	.22	18.00
Spring Vetch or Tares (<i>Vicia Sativa</i>). Very		
much like common peas in growth and		
general appearance. An annual legume.		
Valuable as a summer forage when sown		
early in spring on well cultivated and en-		
riched ground at the rate of $\frac{1}{2}$ bushel		
Vetch and 2 bushels Grain, Barley or Oats		
per acre. Can also be sown alone at the		
rate of about 80 lbs. per acre as cover crop		
for orchard. Weight per bushel, 60 lbs.	.15	12.00

Millet

Hungarian Grass (<i>Panicum Germanicum</i>).	1 lb.	100 lbs.
This species of Millet is comparatively small		
and fine in its habit of growth. It is one of the		
most profitable hay and soiling crops, often		
yielding over three tons per acre. No other		
Millet adapts itself so readily to various con-		
ditions of soil and moisture. Broadcast at the		
rate of one bushel per acre. Weight 48 pounds		
per bushel.	.10	8.00
Japanese Millet, Japanese Barnyard Grass		
(<i>Panicum Crus Galli</i>). Distinct from other		
varieties. An enormous cropper growing over		
6 feet in height; excellent either green or as		
cured hay. Broadcast at the rate of 25 pounds		
per acre, or in drills 18 inches apart, sow 15		
pounds to the acre. Weight about 35 pounds		
per bushel.	.15	12.00
Liberty or Golden Millet (<i>Panicum Miliaceum</i>		
var.). An improved, medium early variety,		
growing from 3 to 5 feet high. The heads are		
closely condensed though the spikes are nu-		
merous. During the past few years, the fact has		
been established beyond doubt that Golden		
Millet seed grown in Southern latitudes will		
produce much larger yields of hay than seed		
grown in Northern or Western sections of the		
country. All our seed is Southern grown.		
Weight 50 pounds per bushel.	.10	8.00
Pearl Millet. A valuable and productive fodder		
plant. Seed should not be sown until after		
danger from frosts is past. Sow about 10		
pounds per acre in drills 18 inches apart.	.30	25.00

Part of a trial plot of Sudan Grass planted in our trial ground at Lexington, Season of 1916

SUDAN GRASS. Very closely related to the sorghum family, is a native of Sudan, Egypt, where it has withstood hot winds and drought for years.

Description. Sudan Grass is an annual of quick growth — the first crop being ready to cut in fifty to seventy days after planting, depending upon the length of seasons and moisture; the second and third crops about forty-five or fifty days later, respectively. It stools freely, sometimes as many as one hundred stems coming from one seed. It dies with killing frost, and has a short stalk root, which is easily eradicated. It is a strong drought resister.

It does well almost anywhere and especially flattering results have been obtained under irrigation. When seeded broadcast or in drills, it averages three to five feet in height, with stems about the size of a lead pencil. If grown in rows and cultivated, it reaches a height of six to nine feet, with somewhat larger stems. Like sorghum, it is easily injured by frost, and the number of cuttings depend upon the length of the growing season. In favorable years where growing period is long, as many as three and sometimes four cuttings can be obtained in one year. But in Northern sections where seasons are shorter, perhaps but two cuttings can be counted on.

Soil. Sudan has been grown successfully on almost every class of soil from heavy clay to light sand, doing best on a rich loam, but, of course, on light sandy soil a light yield may be expected. In any case, it should be well drained.

Seeding. The ground should be prepared as for corn and the seed not planted till soil becomes warm. It can be planted in this latitude from about May 1st to July 1st. Sown broadcast use sixteen to twenty-four pounds of seed per acre. If planted in drills 18 to 24 inches apart, from four to six pounds per acre will be sufficient.

Price, 15c per lb.; per 100 lbs., \$12.00.

Timothy, or Herd's Grass

Cover and Soiling Crops for Orchards

One of the most important points in successful orcharding is the intelligent use of proper cover crops, and the orchardists of New England are giving this particular subject more and more careful attention, as the proper use of such crops conserves the nitrates in the soil after the growth of fruit trees is stopped, which would otherwise be washed away by the heavy fall or winter rains. They also help to break up, during time of their growth, the old sod, and later in the season when plowed under, furnish humus for the soil.

We can recommend the following cereals and legumes as the best suited for cover crops under New England climatic conditions:

Winter Rye. Sow at the rate of $1\frac{1}{2}$ to 2 bushels per acre; this can be sown from the middle of August up to the time the ground freezes late in the fall.

Japanes Buckwheat. Sow at the rate of 1 to $1\frac{1}{2}$ bushels per acre. Especially valuable where it can be sown early in spring on newly plowed sod land, as it is very effective in rotting down the old sod and at the same time enriching the soil.

Yellow Soya Beans. $1\frac{1}{2}$ to 2 bushels per acre. These do best if sown in drills about the middle of June and cultivated several times to promote vigorous growth.

Winter Vetch (*Vicia villosa*). If sown alone, use 1 bushel to the acre broadcast. In this latitude it should be sown before September 15th, so that it may be well rooted and established before cold weather. One of the best to cover and protect the ground during the winter.

Crimson Clover. Sow at the rate of 15 to 20 lbs. per acre the last of June or first of July, and plow under early the following spring.

Agricultural Grasses

(Prices quoted are subject to market changes, net f. o. b. Boston, bags extra.)

The following list of Agricultural Grasses includes the varieties used most extensively in permanent pasture and other grass mixtures.

We make a specialty of mixtures for permanent pasture and mowing lands, to which we would call attention. Directly following these descriptions is a set of tables giving complete information about our special mixtures.

Awnless, or Smooth Brome Grass (*Bromus inermis*). An erect growing perennial that attains a height of from three to five feet. It is especially recommended for dry and arid soils, where the more delicate grasses will not grow. Weight, 12 lbs. per bushel.

Prices, 35c per lb.; \$30.00 per 100 lbs.

Creeping Bent or Firoin (*Agrostis Stolonifera*). The distinctive feature of this species is, as the name implies, its compact, creeping, rooting stems. It prefers low bottomlands, especially if they are somewhat sandy. It is rapid of growth, and spreading habit, and the stoloniferous roots form a strong enduring turf, that is positively improved by constant tramping. Being of fine texture, it is one of the most valuable of our lawn grasses. Prices quoted on application if seed can be obtained.

Timothy (Herd's Grass or Catstail) (*Phleum Pratense*). Perennial. Roots are fibrous in moist soils, but in dry soils often become bulbous; blooms in June and July. While this grass is commonly known as Timothy, it is frequently called Herd's Grass, as this is the name under which it was originally cultivated. It is the most valuable grass for hay, especially in the North, thriving best on moist, loamy soils of medium tenacity. Grows very readily and yields, on favorable soils, three or four tons of best quality hay per acre. Should be cut just when the blossom falls. Weight, 45 lbs. per bushel.

Prices, 15c per lb.; \$12.00 per 100 lbs.

Bromus Inermis

For free delivery offers and general instructions regarding orders and shipments, see second page of cover.

Red Top

Orchard Grass (*Dactylis glomerata*). Root fibrous, perennial, flowers in June and July. This is one of the most valuable and widely known of all the pasture grasses. Its rapidity of growth, its luxuriant aftermath, and its power of enduring the cropping of cattle, all commend it highly to farmers. Thrives well on light soils, and as its roots penetrate to a considerable depth, it withstands droughts better than most species. Weight, 14 lbs. per bushel. Price, 35c per lb.; \$28.00 per 100 lbs.

Kentucky Blue Grass (Meadow Grass, June Grass, Spear Grass) (*Poa Pratensis*). Root creeping; perennial; flowers in June. This valuable grass is very common in the soils of America, although some claim that its creeping root impoverishes the soil. It is a fact, however, that it grows very luxuriantly, producing the most nourishing food for cattle until late in the season in the North; in the South abundant herbage is furnished throughout the entire winter. It is a very valuable species in lawn mixtures. As Kentucky Blue Grass requires two or three years to become well set, and does not arrive at perfection as a pasture grass until the sward is at least four years old, it is not suited for alternate husbandry, where the land is to remain in grass two or three years and then to be plowed up. Weight, 14 lbs. per bushel. Price, 65c per lb.; \$60.00 per 100 lbs.

Red Top (Herd's Grass) (*Agrostis Vulgaris*). Root creeping; perennial; flowers in July. This valuable grass has been commonly cultivated in our fields for over a century. It is a fine permanent grass, and forms a nutritious pasture when fed close. It is valuable for all wet soils, producing a large return in good hay. Red Top is often sown with Timothy and common Red Clover, in which case the clover soon disappears, followed by the Timothy, the Red Top usually taking their places, and with some wild indigenous grass forming a close sward. When sown alone, 4 bushels of unhulled, or 20 pounds of the clean seed per acre are required. Weight, unhulled, 10 lbs. per bushel; fancy or clean, 40 lbs. per bushel. Price, unhulled seed, per lb., 20c; \$30.00 per 100 lbs. Fancy, or clean seed, per lb., 40c; \$35.00 per 100 lbs.

Italian Rye (*Lolium Italicum*). Annual. In nutritive value, earliness and quickness of growth, after it was been mown, it far surpasses the Perennial Rye Grass. It is, therefore, indispensable for alternate husbandry, but as it does not last over two years, it is of no use in permanent pastures. The soils best adapted to Italian Rye seem to be those that are moist, fertile and tenacious or of a medium consistency, and on such soils it is said to be one of the best grasses known to be cut green, affording repeated luxuriant crops. Weight, 18 lbs. per bushel. Price, 16c per lb.; \$14.00 per 100 lbs.

Meadow Foxtail (*Alopecurus pratensis*). Root fibrous; perennial; flowers in May. This is one of the best grasses for permanent pastures, and should always form a fair proportion of the mixtures for that purpose, because of its extremely rapid growth and great nutritive qualities. Thrives best on a rich, strong soil. As the Meadow Foxtail shoots up its flowering stalk much earlier than Timothy, it can be easily distinguished from the latter, which, at first sight, it greatly resembles. The nutritive qualities of Meadow Foxtail are most abundant at time of flowering. Weight, 8 lbs. per bushel. Price, 90c per lb.; \$80.00 per 100 lbs.

Crested Dog's Tail (*Cynosurus cristatus*). Roots fibrous and tufted; perennial. This is a most valuable permanent pasture grass. It is very tender and nutritious at time of flowering. If, however, it is left until the seed ripens, cattle will not eat it on account of its wiry stems. For parks this grass is well suited, because of its fine, close growth, and pleasant green color. It should form a portion of all mixtures for lawns. Weight, 28 lbs. per bushel. Prices, 55c per lb.; \$50.00 per 100 lbs.

Meadow Fescue, or English Blue Grass (*Festuca pratensis*). Root creeping; perennial; flowers in July; one of the most valuable of the Fescue grasses. This grass is well adapted for permanent pastures, and is also sometimes used for alternate husbandry. It grows rapidly in rich and rather moist soils, and makes an excellent pasture grass, its long, tender leaves being much relished by cattle. It should be always mixed with other grasses. Weight, 15 lbs. per bushel. Prices, 55c per lb.; \$50.00 per 100 lbs.

Sheep's Fescue (*Festuca ovina*). Somewhat creeping; perennial; flowers in June and July; especially desirable on light, dry sandy soils. It is much liked by sheep, and should always enter into the compositions of mixtures for lands on which they are to be pastured. Its compact and fine growth make it suitable for lawn mixtures. Weight, 12 lbs. per bushel. Prices, 60c per lb.; \$55.00 per 100 lbs.

Fine-Leaved Fescue (*Festuca Tenuifolia*). This is really a variety of *Festuca ovina* with much finer leaves. It will grow on very dry and inferior soils, and its dwarf habit of growth and fineness of leaf render it not unsuitable for dry slopes on lawns. It stands grazing well, is very hardy, and lasts long, and may therefore be recommended for permanent pasture on high and dry situations. Weight, 22 lbs. per bushel. Prices, 80c per lb.; \$75.00 per 100 lbs.

Tall Fescue (*Festuca elatior*). Root fibrous, somewhat creeping; perennial; flowers June and July. In appearance this species resembles the *Festuca pratensis*, but is larger and of stronger growth. It thrives well on moist soils, and yields abundant crops. Cattle and stock eat it greedily. It should form a portion of every mixture for permanent purposes on moist soils. Weight, 15 lbs. per bushel. Prices, 75c per lb.; \$65.00 per 100 lbs.

Rough Stalked Meadow Grass (*Poa trivialis*). Root fibrous; perennial. This grass is valuable on account of its quick growth, productiveness and nutritive qualities. Grows in perfection on moist, rich soils, and is also well adapted to ground shaded by trees. Grows early in the spring, and continues green until late in the fall. As it delights in shelter, its produce is always much greater when sown with other grasses. Does not thrive well on dry soils. Weight, 14 lbs. per bushel. Prices, \$1.25 per lb.; \$100.00 per 100 lbs.

For free delivery offers and general instructions regarding orders and shipments, see second page of cover.

New Zealand Chewing's Fescue. We offer genuine New Zealand grown Chewing's Fescue, re-cleaned, and of latest crop. This Fescue is highly recommended for Putting Greens. Requires sour soil for best results.
Price, \$1.25 per lb.; \$100.00 per 100 lbs.

Rhode Island Bent (*Agrostis canina*). Root creeping; perennial; flowers in July. A most valuable, permanent grass, largely used in New England for pastures and lawns. Soil and treatment same as for Red Top (*A. vulgaris*). Weight, 10 lbs. per bushel. Prices quoted on application and seed obtainable.

Perennial Rye (*Lolium perenne*). A very valuable grass; arrives early at maturity and produces a good supply of herbage, of which cattle are very fond. It grows freely on almost any soil, and shows a very early spring growth. Although a perennial grass, the root will not live over three or four years, and unless the plant is allowed to reproduce from self-sown seed it will die out in about that time. This is an objection to its extensive use for permanent pastures, but for hay crops it may be introduced to good advantage along with other grasses and clovers. Weight, 24 lbs. per bushel.
Price, 15c per lb.; \$14.00 per 100 lbs.

Pacey's Short Seeded Perennial Rye. For use in golf courses, lawns, etc.
Price, 15c per lb.; \$14.00 per 100 lbs.

Hard Fescue (*Festuca duriuscula*). This is one of the best grasses of the Fescue family. It is found in all the finest permanent pastures of the country, and is much valued for its dwarf habit. It resists summer drought, and develops remarkable verdure during winter. It should form a part of every mixture for lawn or pleasure grounds, as well as for permanent pasture and alternate husbandry. Weight, 14 lbs. per bushel.
Price, 50c per lb.; \$45.00 per 100 lbs.

Sweet Vernal (*Anthoxanthum odoratum*). Root fibrous; perennial; flowers in May. This grass is valuable on account of its early growth and its hardy and permanent nature, which, added to the fact that it throws up its flower stalks till the end of autumn, upholds its claim to a place in all compositions where permanency is an object. It is very fragrant and imparts a pleasant odor to the hay. Will grow in almost any kind of soil, but prefers those which

Perennial Rye Grass

are rich and moist. It is greatly relished by sheep, and is found growing naturally on upland pastures. As a component of "lawn mixtures" it is most valuable, being largely used for this purpose. Weight, 11 lbs. per bushel.
Price, \$1.00 per lb.; \$90.00 per 100 lbs.

Red or Creeping Fescue (*Festuca rubra*). This grass grows on light, dry, sandy soils, and from its creeping habit will be found of great value on sandy seacoast lands. It is a grass of better quality than some of the uncultivated species, but is not usually cultivated in this country as an agricultural product, except on elevated sheep pastures. Weight, 13 lbs. per bushel.
Price, \$1.25 per lb.; \$100.00 per 100 lbs.

Yellow Oat Grass (*Avena flavescens*). This deserves to form a portion of all mixtures for permanent purposes, and is well suited for lawns, croquet and bowling greens. It thrives on light, dry soils. Weight, 11 lbs. per bushel.
Price, 60c per lb.; \$55.00 per 100 lbs.

Tall Meadow Oat Grass (*Avena Elatior*). A fibrous-rooted perennial; flowers in July, of luxuriant growth, and valuable in permanent pasture mixtures, on account of its early and late growth. It succeeds best on deep, sandy lands, and is suitable for sowing in orchards or other shady places. Weight, 15 lbs. per bushel.
Price, 65c per lb.; \$55.00 per 100 lbs.

Wood Meadow Grass (*Poa nemoralis*). Root fibrous, flowers in June and July. This grass, as its name implies, is found naturally in woods and is well adapted for growing under trees. It is especially desirable, from its fine habit of growth, for sowing on shady lawns and under trees, on pleasure grounds. Weight, 14 lbs. per bushel.
Price, 95c per lb.; \$90.00 per 100 lbs.

Various Leaved Fescue (*Festuca heterophylla*). A very early hardy perennial, two to three feet high, thriving best in cool, moist soils. It yields heavily and is a valuable grass in mixtures for permanent meadows, either for mowing or grazing. Its great production of root-leaves makes it an excellent bottom grass. It grows well in the shade and is suitable to form part of a mixture for shaded lawns. Weight, 15 lbs. per bushel.
Price, \$1.00 per lb.; \$90.00 per 100 lbs.

Orchard Grass

Smooth, firm, ever-green lawns from Breck's Lawn Grass Mixtures

BRECK'S LAWN GRASS SEED

BRECK'S STANDARD LAWN GRASS SEED

We have given much thought and made many experiments in order to ascertain just what is the best mixture for permanent lawns, and the grasses which are best suited to this climate. By the proper blending of the va-

rieties which constitute Breck's Lawn Grass, we have obtained a mixture that from early spring to late fall will give to lawns made with it that rich, deep green so often admired upon the lawns and parks of England, but so seldom seen in this country.

One quart will sow 300 sq ft.	Price per qt.,	\$0.40
Two quarts will sow 600 sq. ft.	Price per 2 qts.,	.75
One half peck will sow 1,200 sq ft.	Price per ½ pk.,	1.25
One peck will sow 2,400 sq ft.	Price per pk.,	2.25
One bush. will sow 10,000 sq ft.	Price per bush.,	8.00
Four bushels will sow one acre.		

BOSTON PARK LAWN GRASS

The same mixture of grasses and clover as supplied by us to the City of Boston Park Commissioners for sowing on the Franklin and other parks administered by them.

Per pound	\$0.60
Per peck, 8 pounds	4.40
Per bushel, 32 pounds	16.00
Two bushels will sow one acre.	

Keep the lawn fresh and green by using liberally during the summer as a top dressing Breck's Ram's Head Brand Sheep Manure. No weeds—no odor. Per 100 lb bag \$3.25.

BRECK'S "SHADY SPOT" LAWN GRASS

This is a mixture of grasses that are naturally adapted for growing under trees and in places where the sun does not find ready entrance. If sown on such locations, in place of the ordinary Lawn Seed, bare and unsightly spots will be prevented.

Per quart	\$0.40
Per two quarts	.75
Per one-half peck	1.25
Per peck	2.25
Per bushel	8.00

BRECK'S BANK AND TERRACE GRASS MIXTURE

A mixture of deep-rooting grasses specially prepared for embankments and situations where it is impractical to get a successful catch of the less spreading rooted sorts. It produces a rich velvety turf throughout the season. No coarse-growing undesirable varieties are used in this mixture.

Per quart	\$0.50
Per two quarts	.80
Per one-half peck	1.35
Per peck	2.50
Per bushel	8.50

STERLINGWORTH LAWN COMPOUND

Kills the weeds but not the grass and makes the lawn green and velvety.

It seems incredible that a preparation can be made which will kill the weeds in lawns without injuring the grass. This is exactly what "STERLINGWORTH LAWN COMPOUND" will do and also it will help the grass to grow green and greatly improve the sward. It absolutely destroys Dandelions, Plantain, Chickweed and all weeds with hairy surfaces or broad leaves. It is a dry sandy powder to be applied by sprinkling over the grass.

Five pounds will dress 500 to 700 square feet. Full directions for use on each package. Prices:

5-lb cans	\$0.75
10-lb cans	1.25
50-lb. kegs	5.00
100-lb. kegs	9.00

ALTERNATE HUSBANDRY

All mixtures for Alternate Husbandry should include, say for one or two years' lay, only annual and biennial or other sorts that attain full maturity within that period; for two or three years' lay a greater quantity of seed is required, which should embrace a larger proportion of permanent sorts, so that the places of the dead annual kinds may be filled by the varieties that are of slower growth.

If a mixture principally for mowing is intended to lay more than three or four years, especial care is necessary in selecting and adjusting the several varieties of grasses in proper proportion. A three or four years' lay sown with grasses that are only of annual or biennial duration must be either very thin or foul at the end of the period for which it was laid down — the spaces vacated by the annual and biennial grasses being in all likelihood occupied by objectional weeds, when, if a proper selection of those species capable of lasting the whole of the desired period were sown, the lay would remain full of plants, free from weeds, and, in consequence, would be very much more profitable during the whole time the land is in grass.

The practice of mowing grass for hay when the plants are in blossom is acknowledged to be a good one, in that it is not so exhausting to the soil, and a more succulent hay, freer from dust, is obtained; it has, however, from the fact that all natural reseeding

is prevented, a tendency to weaken the plants and reduce their number; hence, when we see an old field of grass that was originally sown with Timothy, Redtop and Clover, and which has been mowed, perhaps, twice annually, we can readily account for either the enormous number of weeds or vacant places that are sure to be noticeable. Our system of mixture practically overcomes this difficulty by the continued growth and stooling out of some of the varieties included that do not attain full maturity under four to six years. Such mixtures, although in the first place more expensive than the ordinary orthodox seeding, are in the end more profitable; we have seen aftermaths from permanent mowing mixtures that more than equalled first crops of Timothy.

While it is true that the mixtures which we recommend are *seemingly* much more expensive than those commonly used, it should be borne in mind that a vastly increased value is given to the pasture not only for one year, but if the land is properly cared for it will remain in good condition for fifteen or twenty years without further sowing, and produce double the amount of fodder, while the *ordinary* sowing has to be repeated every three or four years; thus, in the end, costing more than four times as much as what would be paid originally for the proper mixture.

BRECK'S SPECIAL MIXTURES FOR PERMANENT PASTURES

Table showing the proper quantities to Sow on an Acre of Light, Medium or Heavy Soils, for Permanent Pasture

KIND		No. 1 Light Soils	No. 2 Medium Soils	No. 3 Heavy Soils	No. 4 For Orchards and shady places

PERMANENT GRASS SEED MIXTURES FOR GOLF LINKS

In order to better serve our customers and give them Golf Mixtures that are best adapted to the soils and climate of New England we have made careful study and comparison of the mixtures used on the finest Golf Links in Scotland and England. Our mixtures are the result of many years' experimenting and study in search of grasses that would make the finest and most permanent courses and greens.

Some of the largest and best golf clubs in this section of the country have used our mixtures and we have yet to hear of unsatisfactory results.

No. 1. For Putting Greens. This mixture should be sown at the rate of 80 lbs. per acre. Per lb. 85c.; Per 100 lbs. \$75.00.

No. 2. For Fair Greens upon light and dry soils. Per lb. 65c.; Per 100 lbs. \$60.00.

No. 3. For Fair Greens upon low and damp soils. Per lb. 35c.; per 100 lbs. \$30.00.

Mixtures Nos. 2 and 3 should be sown at the rate of 50 lbs. per acre.

We are prepared to furnish promptly choice qualities of **Re-cleaned Red Top, Kentucky Blue Grass, Perennial Rye Grass, Red Fescue, Chewings Fescue,** and other grasses that are sometimes used on **Golf Courses.** The prices of all these are subject to market changes, consequently it is to the customer's advantage to secure firm prices at the time seeds are required.

One of the best top dressings for **Golf Courses and Fairways — Breck's Ram's Head Brand Sheep Manure**—price \$3.25 per 100 lbs.; \$58.00 a ton. Free from weeds, finely pulverized.

Kentucky Blue Grass

BRECK'S SPECIAL MIXTURES FOR MOWING AND GRAZING LANDS

NOTE: It will be noticed that the different tables are all based on the quantity required to sow one acre. When ordering, simply give number and kind of mixture selected and the number of acres for which seed is desired; for example: "Send me No. 2 Mixture for Permanent Pastures for three acres."

Turnip		April to August	$\frac{1}{2}$	Thin to 4 x 18	60 to 75 "

DIRECTIONS FOR MAKING AND CARING FOR HOT BEDS

Early in March obtain a good quantity of fresh horse manure, mix with it one-third to one-half its bulk in leaves, and by tramping down the mass in layers, make a large pile, so that the fermentation will continue even in very cold weather. When this fermentation shows, by the escape of steam from the pile, turn it over and allow it to remain so for a few days or until the second fermentation shows; then place the manure in a pit at least 2 $\frac{1}{2}$ feet deep and tread it down firmly in layers to a depth of about 2 feet. Build your pit in a sheltered spot, facing the south or east if possible and line with heavy planks or concrete. The frame used to support the sashes covering the bed should be raised 6 inches higher at the back than the front, to give proper slope to the sash to catch the sunlight.

After the manure is firmly trodden down in the pit, scatter over the surface a good covering of air-slaked lime, to keep all slugs, worms, and other pests from infesting the surface soil. After this is done, fill in about 4 or 5 inches of good, rich, clean-sifted loam, level off and place a thermometer therein. Put on sashes and let the frame remain closed, until the thermometer registers about 70 to 75 degrees and remains steady. Sow your seed, covering it lightly. Keep the surface moist by an occasional watering with a fine spray. As the seedlings appear it is advisable to allow them a little air each day to prevent them damping off; when the plants are large enough they can be thinned out, transplanted into boxes or small pots and placed back in the warm frames.

SPRAYING CALENDAR

This calendar, based upon the recommendations of the Agricultural Colleges and Experiment Stations of the country, is a brief guide for the general treatment of insect pests and plant diseases.

Timeliness is one of the greatest factors in the control of diseases and pests; in order to spray intelligently, that is, to strike at the proper time, one should know at least the main facts in the life-history of the insect or disease sprayed against. Moreover, it will pay to remember that, for nearly all fungous diseases and some insects, spraying is a preventive, and to be most effective must be done at the time when attacks may be expected, without waiting for the enemy to become apparent.

Spray only on clear, sunny days and finish the work early in the afternoon, so that the application will dry rapidly and before dew falls. Spray evenly and thoroughly, using ample pressure and a nozzle that throws a fine mist, but do not continue until the foliage drips. Never spray when the trees are in blossom.

In general terms:

POISONS, such as Arsenate of Lead, are used to control leaf-eating insects. Examples—Canker Worm, Potato Beetle.

CONTACT INSECTICIDES, such as Tobacco Extracts, Soap Sprays, etc., are used in fighting sucking insects. Examples—Plant Lice, Squash Stink-bug. Sucking insects will not be killed unless they are **hit** by the spray.

Bordeaux Mixture and Lime-Sulfur are for use against plant **DISEASES**.

Plant	Enemy	Spray	1st Application	2nd Application	3rd Application
Apple	{ Bud Moth Codling Moth Scab Curculio	{ Arsenate of Lead and Bordeaux (Lime- Sulfur may be used instead of Bordeaux)	{ Just before blossoms open	{ Immediately after petals fall	{ 10 days later
	{ San Jose Scale	{ Lime Sulfur or Miscible Oil	{ Autumn after leaves have fallen	or { Early Spring before leaf buds swell.	{ If badly infested make both appli- cations
Cabbage Cauliflower	{ Green Worms	{ Arsenate of Lead if plants are not head- ing.	{ If heading, apply Hellebore		
Carnation	{ Red Spider	{ Clear Water	{ Syringe off the plants 3 times a week, being careful not to drench the beds		
	{ Rust	{ Copper-Sulphate 1 lb. to 20 gals. water	{ In the greenhouse once in 2 weeks In the field once a week		
Cucumber	{ Wilt	{ Bordeaux	{ Middle of July	{ 10 days later	
Melon	{ Mildew	{ Bordeaux	{ Keep the vines well sprayed to make them distasteful to the beetles		
Squash	{ Striped Beetle Borer	{ As soon as stems are long enough cover the joints with earth so that secondary roots will develop			
Currant Gooseberry	{ Currant Worm	{ Arsenate of Lead and Bordeaux	{ As soon as worms ap- pear	{ Use Hellebore after fruit is half grown	
	{ Mildew	{ Bordeaux	{ Before leaf buds open	{ After blossoming	
Grape	{ Flea-beetle	{ Arsenate of Lead	{ Before blossoms open		
	{ Mildew	{ Bordeaux	{ Before blossoms open	{ When fruit has set	{ 2 weeks later
Peach and Apricot	{ San Jose Scale	{ (See under Apple)			
	{ Peach Leaf-curl	{ Lime-sulfur or Bor- deaux	{ Dormant season before buds swell		
	{ Curculio	{ Arsenate of Lead	{ When shucks are shed- ding from the young fruit	{ One month after petals fall	
	{ Scab and Brown Rot	{ Self-boiled Lime-sulfur 8-8-50	{ One month after petals fall	{ One month before fruit ripens	
Pear	{ Psylla	{ Tobacco extract	{ After blossoms fall	{ 5 to 7 days later	
	{ Codling moth Scab Scale	{ (See under apple)			
Plum	{ Curculio	{ Arsenate of lead	{ Just after blossoms fall	{ 1 week later	
	{ Fungous diseases	{ (See under peach)			
Potato	{ Scab	{ Soak seed before cutting for 90 minutes in corrosive sublimate 1 oz. to 7 gals. water. Plant in clean soil			
	{ Beetles Blight or Rot	{ Arsenate of Lead and Bordeaux	{ When plants are 6 or 8 inches high	{ 2 weeks later	{ Repeat every 2 or 3 weeks, omitting arsenate of lead if beetles are not in evidence. Wet spells followed by hot weather are favorable to development of rot and blight
Raspberry Blackberry Dewberry	{ Anthracnose	{ Bordeaux	{ When new canes are 6 inches high	{ 2 weeks later	{ 2 weeks later
	{ Red Rust	{ Dig up and burn all infected plants			
Rose	{ Rose-chafer	{ Arsenate of Lead	{ When beetles appear	{ Repeat when necessary	
	{ Leaf spot	{ Bordeaux	{ As soon as spots ap- pear	{ Repeat when necessary	
	{ Mildew	{ Flowers of sulfur	{ Dust every 10 days if necessary

For Plant Lice (Aphids) use Tobacco Ext acts or Soap Sprays on all Plants

FLOWER SEEDS

HARDY ANNUALS are those which go through all stages of their growth, from germination to the final seed ripening, in the open ground without protection. They form a very useful class, and are invaluable for border decoration, whether sown in small clumps or used for lines of color. For summer display they may be sown in the open ground from March to May, or for later sowing in June. The greatest cause for failures in growing Annuals is in not thinning them out sufficiently; dwarf sorts should be thinned out about 6 inches apart, taller sorts from 10 to 15 inches. This allows them to branch, they will then flower for a longer period. The ground about them should be kept well stirred and loosened; this helps the young plants greatly by allowing them to take full advantage of the dew and rain.

HALF-HARDY ANNUALS are those which require artificial heat in the early stages of their growth, but which afterwards should be planted out to flower and ripen their seed in the open air. To this class a great many of our most beautiful Annuals belong. These Half-Hardy Annuals should be sown under glass during March and April, care being taken to prick them out at an early stage, and keeping them cool and close to the glass to prevent them being drawn. When watering, it is advisable to use tepid water. They should be well hardened off in a cool frame before planting out.

For complete list of hardy Perennials and Greenhouse Seeds See Pages S88 and S100.

★ Denotes varieties which we can specially recommend.

COMPLETE LIST OF ANNUALS

ACROCLINIUM. The Acrocliniums are perhaps the most valuable of the everlastings, bearing pretty rose-pink and white flowers which should be cut before they become fully expanded, and dried for winter decorations. 1 ft.

ADLUMIA (Mountain Fringe). Hardy climber with foliage resembling the Maiden Hair Fern and bearing rosy lilac flowers. Will blossom from seed the first season.

	½Oz.	Pkt.
5060 Cirrhusa. 15 ft.	1.00	.15

ADONIS. The annual varieties are, with their bright flowers, great favorites in the flower garden. ¼Oz. Pkt.

5065 Aestivalis. Scarlet, 1½ ft.	.25	.10
5066 Autumnalis. Bloodred, fall blooming, 1 ft.	.25	.10

For Perennial Varieties See Page S88

AGERATUM. (Floss Flower). Very effective, half hardy Annual. The pretty brush-like flowers are produced in clusters constantly all through the summer. The plant has a neat bushy habit. The various blue varieties are without doubt the most satisfactory bedding plants of this color.

	Oz.	¼Oz.	Pkt.
★5070 Blue Perfection. Dark blue; fine for beds; very choice, 1½ ft. ...	1.50	.50	.10
5072 Dwarf Blue. Deep blue, 9 inches.	1.00	.30	.10
5074 Dwarf White. Clear white, 9 in. ...	1.00	.30	.10

Ageratum Blue Perfection

- ★5076 **Little Blue Star.** A miniature compact plant with very small flowers; exceptionally good for edging or rockwork; 4 inches. 1/4 Oz. Pkt. 2.00 .25
- 5078 **Little Dorrit.** Azure blue, 6 inches. 1.00 .30 .10
- 5080 **Little Dorrit.** White, 6 inches. 1.00 .30 .10
- 5082 **Mexicanum.** Mixed, 1 ft.75 .25 .05
- 5084 **Nanum Luteum.** Pale yellow, 9 inches. 1.50 .50 .10
- 5086 **Roseum.** Rose, 9 inches. 1.50 .50 .10

AGROSTEMMA. A free-flowering border plant with attractive flowers that are excellent for cutting. The annual varieties are very attractive when grown in groups.

- 5090 **Coeli Rosa** (Rose of Heaven). Rose color, 1 ft. 1/4 Oz. Pkt. .25 .10
- 5091 **Coeli Rosa Alba.** Pure white, 1 ft25 .10
- For Perennial Varieties See page S88

ALONSOA. Suitable for conservatory decoration and bedding out of doors during summer. Half-Hardy Annual.

- 5095 **Albiflora.** White, 1 1/2 ft. 1/4 Oz. Pkt. .35 .10
- 5097 **Grandiflora.** Scarlet, 2 ft.35 .10

Alyssum

ALYSSUM. Excellent plants for the rockery or front of borders. Very sweetly scented and blooms profusely all summer.

- ★5100 **Lilac Queen.** Distinct new variety of the annual Sweet Alyssum with pure lilac flowers. The plants are of dwarf, compact, upright growth, and resemble when in full bloom a tiny Candytuft. Equally as useful for carpet bedding or ribboning as the other white flowering dwarf varieties 1.00 .30 .15
- 5102 **Little Dorrit.** Very compact, fine for borders, 6 inches 1.00 .30 .10
- 5104 **Little Gem.** White, grand for edging, 6 inches. 1.00 .30 .10
- 5106 **Maritimum.** White, very fragrant, 9 inches 1/2 lb. 1.50 .50 .05
- 5108 **Procumbens** (White Carpet.) White trailing habit, 6 inches. 1.25 .40 .10
- For Perennial Varieties See Page S88

AMARANTHUS. Very striking plants on account of their beautiful vari-colored foliage and peculiar mode of blossom. The leaves are always largest when plants are grown on rich soil, but rather poor soil enhances the coloring.

	Oz.	1/4 Oz.	Pkt.
5115 Bicolor Ruber. Red, 3 ft.	.75	.25	.10

Begonia

BARTONIA. A splendid annual succeeding best when grown in partial shade or in a moist situation.

5475 **Aurea.** Golden yellow, 2 ft..... $\frac{1}{4}$ Oz. Pkt.
..... .25 .10

BEANS (Phaseoli Multiflori). Well-known annual climbers with ornamental flowers and foliage, and long edible pods. $\frac{1}{4}$ Lb. Oz. Pkt.

5477 **Butterfly Runner.** Pink and White..... .50 .15

5478 **Scarlet Runner**..... .25 .10 .05

5479 **White Runner**..... .25 .10 .05

Begonias

BEGONIAS. These are valuable for pots and bedding out; especially adapted for slightly shady places. Seed should be sown from January to March in brisk heat in shallow, well-drained seed pans, filled with a compost of leaf-mould, loam, and sand. Cover the seed pans with glass to prevent rapid evaporation at the outset. Prick off when very small, and pot when large enough into 3 inch pots, giving a shift into larger size when necessary.

(Tuberous Rooted Varieties)

5485 **Breck's International Prize.**
Single mixed, 1½ ft. The seed is the product of the finest and newest varieties selected for their large size and perfect form..... Pkt.
..... .50

5486 **Breck's International Prize.**
Doubled Mixed. 1½ ft. A superb strain, producing a very large percentage of double flowers..... .75

★5487 **Breck's International Prize**
Fringed Mixed. A type of Single Begonias which has become a great favorite, the petals of the flowers being beautifully fringed or frilled and highly decorative..... .50

(Fibrous Rooted)

Everblooming Bedding Varieties. The Semperflorens varieties offered below are used mostly for bedding plants doing equally well in sunny or partially shaded locations. Seed sown in February or March will produce flowering plants from June till frost. Pkt.

★5490 **Erfordia Rubra.** Deep red. 1 ft.50

Coreopsis (Calliopsis)

Cosmos

COSMOS. A tall Hardy Annual in the front rank of our mid-season and fall flowers. Excellent for cutting.

Breck's Midsummer. A very early large flowered new type. The plants have a nice pyramidal habit, the flowers are very large with wide petals. We especially recommend this type as the most desirable and satisfactory for growing in New England.

- ¼Oz. Pkt.
★ 5780 **Pink** 1.00 .25
★ 5785 **White** 1.00 .25

Breck's Early Giant. This wonderful Cosmos makes a bushy plant and grows 4 to 5 feet high. It begins to bloom about the middle of July and bears large flowers 4 inches or more in diameter. Seeds should be sown in house or hotbed but can also be sown outdoors early in May.

Dahlia

DAHLIA. We offer seed from the finest collection in Europe. If the seed is started early in a hotbed an abundance of flowers will be produced the same season. Dahlias like a rich, deep soil. The roots should be housed during winter.

Breck's New Art Dahlia. A very interesting type, blooms abundantly the first season from seed. The flowers are medium in size, and for delicate colors well nigh rival Orchids. Flowers are single and semi-double and formed in cup shape. Stems are from 2 to 3 feet long and have very little foliage which renders them useful as cut flowers.

and white..... .30 .05
★6056 **Mexicana Grandiflora Alba**
(Moon Flower). Large white
flowers..... 1.00 .10
6057 **Noctiflora**. White..... 1.00 .10
6058 **Setosa** (Brazilian Morning
Glory). Rose colored flowers.. 1.00 .30 .10

KENILWORTH IVY (Linaria Cymbalaria). A creeping ivy-like plant, which bears small but very pretty blue flowers with yellow throat. Splendid for hanging baskets. Pkt.

- 6060.....15

KOCHIA (Summer Cypress). This interesting variety is a great improvement over any of the Kochias hitherto offered. It is of beautiful form and of graceful appearance, and makes a magnificent plant for grouping, or as a specimen in the border. Its remarkable features are its rapid growth and the beautiful red coloring the foliage takes on in the fall. Oz. ¼Oz. Pkt.

- 6062 **Trichophylla**. Bright red..... .75 .25 .10

LANTANA HYBRIDA. These new hybrids are most elegant and showy—quite a novelty in bedding plants of as easy culture as Verbena or Geraniums. Oz. ¼Oz. Pkt.

- 6064 **Dwarf Compact Hybrids**..... 1.00 .30 .10
6066 **Tall Mixed**..... 1.00 .30 .10

Larkspur

LARKSPUR (Annual Delphinium). The Larkspurs or Annual Delphiniums as they are called are fine for cut flowers. The taller sorts are very showy. These can be sown outdoors in April or May, and afterwards thinned out to about nine inches apart.

Breck's Giant Stock Flowered. This is the finest strain of Larkspur we can procure, exceptionally good for cutting. Oz. ¼Oz. Pkt.

- 6070 **Dark Blue**..... 1.00 .30 .10
6071 **Flesh Pink**..... 1.00 .30 .10
6072 **Lilac**..... 1.00 .30 .10
6073 **Red**..... 1.00 .30 .10
6074 **Rose**..... 1.00 .30 .10
★6075 **Rosy Scarlet**. Very striking color 1.50 .50 .15

Kochia Trichophylla (Mexican Firebush)

6133 Grandiflora. Mixed.....	.50		.05

Marigold

MARIGOLD (Tagetes). For adding shades of yellow to the garden effect in late summer and autumn the African and French Marigolds are unsurpassed. They make nice beds when grown together, and dwarf French sorts being used for edging; both sorts are also very desirable for borders or for brightening up any bare or colorless spots. Sowing should not be made outdoors until danger from frost is passed.

Double African Varieties

★6135 Breck's Perfection Strain ("Sunburst"). Lemon yellow. Clear lemon-yellow flowers of a perfectly globular form, 4 to 5 inches in diameter. 2 ft.....	.75	.25
★6136 Breck's Perfection Strain ("Sunburst"). Orange yellow. Deep orange yellow of perfect form, 5 to 6 inches in diameter. 2 ft.....	.75	.25

Breck's Sunburst Marigold

- ★6138 **Dwarf Orange Prince.** We feel that we can confidently predict for this novelty a great measure of popular favor. The symmetrical compact plants do not exceed 2 feet in height, bearing from ground to summit large well-formed flowers of glowing orange, quite equal in size, shape and quality to those of the finest tall sorts.

Single Varieties

- ★6150 **Breck's Pride of the Garden.** Very free-blooming, dwarf and compact, throwing the flower well to the surface; yellow with maroon blotch.
6151	Legion of Honor. Golden yellow with large brown blotch	.30	.10
6152	Signata Pumila. Miniature flowers of deep yellow, fine for edging	.35	.10

MARTYNIA. Gloxinia shaped flowers, sweetly scented. The flowers are followed by curiously formed fruit.

6154	Fragrans. Crimson and purple	Pkt.	.10

MATHIOLA (Evening Scented Stock). A hardy annual having flowers which throw out a strong pleasant perfume in the evening. Oz. ¼Oz. Pkt.

6156	Bicornis. Light Lilac	.60	.20 .10

MATRICARIA (Feverfew). A very pretty plant for the summer garden, growing into a densely compact bush about 1 foot high. Very profuse bloomer.

		Oz.	¼Oz.	Pkt.
6158	Capensis Plenissima. Fine double white	.60		.10
6159	Golden Ball. Suitable for beds or borders with very striking double golden yellow flowers. 1 ft.	2.50	.75	.15
6160	Silver Ball. Double white flowers which make a fine contrast with golden ball. The flowers remain in perfection for a long time and are excellent for cutting	1.50	.50	.10

MESENBRYANTHEMUM. Dwarf annuals well adapted for hot situations; very effective for edging and carpet bedding. Pkt.

6162	Cordifolium Variegatum. Trailing habit of rosy purple	.25
6163	Crystallinum. (Ice Plant.) White, trailing, has peculiar glistening foliage	.10
6164	Tricolor (Dew Plant). Rose	.10
6165	Tricolor Alba. White	.10
6166	Choice Mixed	.10

Mignonette

MIGNONETTE. Well known, fragrant favorites, delightful for working into bouquets. For winter flowering seed should be sown in July or August. All the sorts we offer are very fine, but especial attention is called to Breck's Pride of the Market and Breck's Colossal as being particularly good and the most desirable for pot culture. A succession of bloom during both summer and winter may be had by repeated sowings.

Oz. ¼Oz. Pkt.

- ★6170 **Breck's Pride of the Market.** We have secured what we believe is the best strain of forcing Mignonette ever developed. The seed we offer is grown under glass, and will produce enormous spikes of reddish-green, deliciously fragrant flowers.
6171	Breck's Colossal. Reddish-Green. Splendid for forcing	1.50	.25

	1/4Oz.	Pkt.
6290 Tropaeoloides. Yellow.	.50	.10

Pansies

PANSIES. Many years of scientific culture, hybridization, and selection in raising Pansies have gradually evolved a superior race of luxuriant, robust growth, and deep-rooting, drought-resisting qualities. The flowers have also correspondingly improved in size, substance, form and variety of colors. The varieties we offer are of the giant type, many wonderfully marked and blotched, and all of the most brilliant and attractive colorings.

Oz. 1/8Oz. Pkt.

- ★6295 **Breck's Boston Prize Mixed.** A distinct type of Pansies of greatest merit. The plants are of compact bushy form. They root unusually deep and in consequence are not susceptible to drought and heat. The flower stems are particularly strong and rigid, holding the flowers upright. Flowers are giant in size and profusion of colors. . . 10.00 2.00 .25

PHYSALIS (Chinese Lantern). An interesting plant, grown for its bright-orange-red fruit. 2 ft. Oz. $\frac{1}{4}$ Oz. Pkt.
6425 **Francheti**..... 2.00 .60 .10

Poppy

POPPY (Papaver). Our new strains of Poppies produce softer and more pleasing shades than we have offered hitherto. Sowing in May, and again several times during spring, produce a continuous bloom from early summer until frost. The seed should be sown where the plants are to bloom, as Poppies do not take kindly to transplanting. Cover seed very lightly, and firm the soil with a flat board. When large enough, thin out the plants. A sandy loam and early spring sowings produce best flowers.

Single Annual Varieties

★6430 **Breck's Selected Shirley Mixed.** $\frac{1}{4}$ lb Oz. Pkt.
An extra choice strain of these charming Poppies. We pay special attention to the selection of colors which contain pure white, pink, terra cotta, salmon, chamois, rosy carmine, to deepest crimson, and rosy red. Many of the flowers are beautifully flaked or edged with white. $1\frac{1}{2}$ ft..... 1.50 .50 .05
6432 **Breck's Dwarf Shirley Mixed.** 1 ft..... 1.00 .10
6434 **Danebrog** (Danish Flag). Single scarlet flowers with a large white blotch on each petal. 2 ft..... .35 .05

Shirley Poppy

6436 **English Scarlet Field Poppy.** $\frac{1}{4}$ lb. Oz. Pkt.
This single Poppy is so much admired by tourists in Europe where it grows wild on railroad banks and in the fields..... 3.00 1.00 .10
6438 **Flanders Field.** Our original stock having been saved in the fields of France will prove true. For a color effect there is nothing quite so brilliant as a bed of these crimson Poppies..... 1.00 .15

6450 **Picotee.** Beautiful white, with well defined crimson edge..... 1.00 .15
6452 **Umbrosium** (Caucasian Poppy). Crimson with a black spot on each petal. $1\frac{1}{2}$ ft..... .50 .05

Double Annual Varieties

★6455 **Austen's Double Shirley.** A new creation in annual Poppies. A marvel of beauty throughout the summer; flowers are double and semi-double. This strain includes an almost endless variety of colors. As a cut flower they should be obtained early in the morning, then they will last indoors for days. As a garden plant they are shorter and stouter and remain several days in flower. They should be sown as early in the spring as one can work the ground..... .50

Stock

STOCK (Gilliflower). Stocks are universally admired and have for long occupied a prominent position in almost every garden. For beauty, dazzling effect, and long continuance of bloom, they are unsurpassed, while their delightful fragrance renders them indispensable for bouquets, vases, etc. The seed we offer was saved from selected plants only, and will yield as high a percentage of double flowers as it is possible to obtain.

Breck's Perfection Cut-and-Come-Again. An extremely beautiful strain of stock, producing immense spikes of flowers in great profusion from mid-summer until frost. The flowers are unusually large and embrace a wide range of most beautiful and varied colors. 2 ft. $\frac{1}{8}$ Oz. Pkt.

6770	Alba. White	.30	.05
6771	Coerulea. Blue	.50	.10

Breck's Giant-Spencer Sweet Pea-Plants

POT GROWN

In order to give our customers the opportunity to enjoy Sweet Peas to their full value we are growing them in pots. The plants after being planted out, not nearer than a foot apart, should be allowed to grow naturally and staked at once either with bamboos or brush.

If the ground has been well prepared and enriched, Sweet Peas want nothing more than water in dry weather until they are well in blossom. Frequent waterings with liquid manure will be of great help while plants are in full bloom. Regular cuttings of the expanded flowers will greatly prolong the flowering season and insure a succession of good flowers.

We offer strong growing, well rooted plants in 2 1/2-inch pots in the following colors: Blue, Crimson, Cerise, Lilac, Lavender, Orange, Pale Pink, Mauve, Maroon, Scarlet, Rose, Cream, Purple, Salmon, White.

\$2.00 per dozen.

\$8.00 for 50.

\$15.00 per hundred.

Ready for delivery after April 19th.

Sweet Peas

(Our Seed is all Saved from Carefully Selected Stocks)

The Sweet Pea is today one of the most popular garden flowers. Their pretty flowers and delightful perfume make them universally esteemed.

Our list comprises all the latest novelties, also all the choicest varieties sent out of late years which have become

noted for their color and immense size of their flowers.

As the number of varieties has become so numerous and apt to be confusing, and lead to useless duplication of colors we have rigorously weeded out a great many of the older sorts which were considered good in their day, but have had to give place to newer and greatly improved varieties showing larger flowers and giving three to four blooms on a stem. We will, however, be pleased to supply any of the older sorts, or any Novelty which we may not have catalogued.

CULTURAL DIRECTIONS

In the fall or early spring when the site has been fixed upon where the Peas are to be planted, a trench should be dug about two feet deep, and then filled about one third with garden refuse, leaves, etc., then another third of well-rotted manure should be added, and the trench then filled up with good soil and left in the rough to the weather. It will be found beneficial before seed is sown to give the ground a good dusting of soot and land lime, and fork it well in.

During the month of April, or as soon as frost is out of the ground, select a suitable day for sowing the seeds which should be sown at a depth of six inches from the top of the trench. Spread the seeds as even as possible and do not let them run together, each Pea being from one to two inches apart in the trench. Cover the seeds two inches and fill in balance of the trench as the vines grow. As soon as the plants get about six inches high they should be supported by brush or trellis wire.

During their growth if the weather is dry, the vines will benefit by being watered twice a week. About the end of June the surface of the soil should be well mulched with good decomposed manure or coconut fibre. The time of blooming will be considerably lengthened by keeping the flowers well cut and allowing no pods to form.

Breck's Collections of Spencer Sweet Peas. In all the finest named varieties. We take great pains in the selection of varieties going into these Collections from actual study when they are in bloom, so as to give a wide range of best colors and largest flowers. Our selections of Sweet Peas are unsurpassed.

Breck's Giant Spencer or Orchid Flowering Mixture.

Under this name we have gathered all the newer forms of Sweet Peas. Their distinctions are above all and we confidently claim they are unapproachable for quality, perfection, and variety of colors—giants in size of blooms, robustness in growth, distinct wavy or ruffled form of flower resembling very much an orchid. As a most beautiful blending of color our mixture is sure to please the most critical flower lovers. One ounce is sufficient to sow a twenty foot row.

- 6896 **Margaret Atlee.** Duplex salmon-pink suffused on cream ground. 2.00 .60 .15
- 6899 **Rosalind.** Large waved flowers of bright deep rose, suffused with salmon. .35

FOR SUCCESS WITH SWEET PEAS USE
FARMOGERM Seed Inoculation

Lavender and Mauve Shades

- 6902 **Empress Eugenie.** A very charming flower; color, delicate tone of light grey, flaked with light lavender; a vigorous grower and free bloomer. 1.50 .50 .10
- 6905 **Florence Nightingale.** A soft rich lavender, faintly shaded rose; wings well frilled and waved. 1.25 .40 .10
- ★6908 **Hawlmarmk Lavender.** This is without doubt the purest lavender colored pea that has been offered. .35
- ★6911 **Lavender George Herbert.** The best of the lavender varieties; grand for exhibition and garden decoration, strong grower, gives plenty of fours while the individual flowers are very tall and refined. The color is of bluish lavender. All keen growers will include this variety in their collection. 2.00 .60 .15
- 6914 **Magic.** Standard rosy amethyst deepening to blue, overlaying a deep lavender. 3.00 .25
- 6917 **R. F. Felton.** One of the best lavender Spencers, a mauve toned lavender. Splendid exhibition variety. 1.50 .50 .10

Blue and Purple Shades

- 6920 **Blue Monarch.** Sunproof dark blue, vigorous grower. 1.50 .50 .15
- 6923 **Blue Stone.** Aniline blue, vigorous and striking, a lovely pea for all kinds of decorative work. 3.00 .25
- 6926 **Margaret Fife.** Pale sky blue, the blooms are large frilled and waved. 2.00 .60 .15
- 6929 **Mrs. Tom Jones.** Bright Delphinium blue, large blooms beautifully waved. 3.00 1.00 .20
- ★6932 **Royal Purple.** The color of this charming variety is a fine Royal Purple and beautifully waved. It is absolutely distinct. 2.50 .75 .15
- 6935 **Tenant Spencer.** Rosy purple self colored. 1.00 .30 .10
- 6938 **Wedgewood.** Flowers of good size, and a fine shade of Wedgewood blue; wings well waved; very free-flowering; considered by Sweet Pea experts to be the very finest blue variety yet introduced. 2.50 .75 .15

Maroon Shades

- 6941 **Black Knight.** Shining deep maroon. 1.25 .40 .10
- ★6944 **Hawlmarmk Maroon.** The best of all dark colored peas, a rich red maroon. .35
- 6947 **King Manoel.** Giant chocolate maroon self, one of the largest and best of this color. 1.50 .50 .10
- 6950 **Marks Tey.** The standard is a rich rosy maroon, the wings blush mauve. The flower is of excellent form; the plant is most vigorous and four bloom sprays are produced in profusion. 1.50 .50 .15
- 6953 **Othello.** A rich, deep glossy maroon. 1.25 .40 .10
- 6956 **Warrior.** New and quite distinct, color rich chocolate maroon. Flowers large, ruffled and long stems. 1.50 .50 .15

Carmine and Orange Shades

6959	Alexander Malcolm. A rich glowing scarlet cerise.	¼lb	Oz.	Pkt.
		3.00	1.00	.20
6962	Decorator. A magnificent Sweet Pea of great size and fine color which can best be described as cerise.	1.50	.50	.10
6965	Fiery Cross. Rich fiery orange or scarlet without any shading. Does not scorch or burn even in periods of intense sunshine.	3.00	1.00	.20
6968	George Herbert. Striking flower superior to John Ingman, bright cerise red.	1.50	.50	.10
6971	Hilary Christy. Standard frosted orange-cerise with crenulated fiery-scarlet edge, wings rosy-carmine, keel delicate fawny-lemon; its rich though subdued colorings are very chaste and refined.	2.50	.75	.20
6974	Illuminator. A distinct, new color; flowers well placed, upon long stout stems; color of flower ranges from salmon-orange through rich bright cerise-pink.	2.00	.60	.15
★6977	Robert Sydenham. A great advance on all orange shades and without doubt first class in every way. Deep rich orange, self-growing three and four blooms on a good stem.	2.50	.75	.20
6980	Rosabelle. A beautiful rose color; a giant form of Marjory Willis, a splendid grower and a fine exhibition variety.	1.50	.50	.10
6983	Stirling Stent. Bright orange pink; large flowers free blooming.	1.50	.50	.10

Crimson and Scarlet Shades

★6986	Boltons Scarlet. One of the best scarlet Sweet Peas, very bright color.	2.50	.75	.20
6989	Edward Cowdy. Glowing orange-scarlet, not as deep as the President.	2.50	.75	.20
6992	King Edward. Giant flower, self-colored bright crimson.	1.50	.50	.10
6995	Queen Alexandra. Beautifully curved and fluted, one of the best of the self-colored crimson scarlets.	1.25	.40	.10
6998	Scarlet Emperor. Large rich scarlet.	2.00	.60	.10
7001	Sincerity. A beautiful scarlet cerise, does not burn.	2.50	.75	.20
★7004	The Cardinal. Intense shade of Poppy scarlet, extra large blooms and more vigorous growing than any other of the same color.	2.00	.60	.15
7007	The President. The name given this magnificent variety is most appropriate. The intensely rich and dazzling orange-scarlet color of the flower equals in brilliance the Oriental Poppy. Large and true Spencer form. Both for exhibition and garden decoration.	2.50	.75	.15
★7010	Vermilion Brilliant. The most brilliant scarlet Spencer yet produced, a strong grower and unlike other scarlets the stems often produce fours. Unequalled for exhibition.	1.50	.50	.10

EARLY FLOWERING OR LONG SEASON SPENCERS

The following new varieties of Sweet Peas begin to blossom 106 days after planting the seed in the open ground; six weeks earlier than the late flowering varieties planted at the same time. They usually blossom for four full months. Splendid type for greenhouse forcing.

		Oz.	½Oz.	Pkt.
7020	Early Asta Ohn. Lavender.	1.75	1.00	.15
7022	Early Blanche Ferry. Pink and white.	1.75	1.00	.15
7024	Early Cream. Identical to Dobbies Cream.	1.75	1.00	.15
7026	Early Enchantress. Rose pink.	1.75	1.00	.15
★7028	Early Fairmaid. Blush pink suffused salmon on a white ground; of robust growth with long stems carrying flowers regularly.	2.00	1.25	.25
★7030	Early Fancy. Pale salmon pink on cream ground deeply overlaid buff.	2.00	1.25	.25
7032	Early Heather Bell. Beautiful mauve lavender.	1.75	1.00	.15
7034	Early Hercules. Mammoth rosy pink.	1.75	1.00	.15
★7036	Early Irene. Very fine bluish lavender and is especially recommended to all who prefer a clear lavender without mauve in it.	2.00	1.25	.25
7038	Early Lavender King. Fine lavender.	1.75	1.00	.15
★7040	Early Madonna. This is an early Constance Hinton of the purest white. We recommend this as one of the finest novelties raised.	2.00	1.25	.25
7042	Early Melody. Deep rose pink.	1.75	1.00	.15
7044	Early Morning Star. Deep orange scarlet.	1.75	1.00	.15
7046	Early Mrs. A. A. Skach. Fine clear pink.	1.75	1.00	.15
7048	Early Mrs. Charles Zvolanek. Large clear lavender.	2.00	1.25	.25
7050	Early Mrs. Spanolin. Pure white.	1.75	1.00	.15
7052	Early Red Orchid. Bright shade.	1.75	1.00	.15
★7054	Early Rose Charm. Bright rose with large blooms; very much admired.	2.00	1.25	.25
7056	Early Rose Queen. Rose pink.	2.00	1.25	.25
7058	Early Snowflake. Pure white.	1.75	1.00	.15
7060	Early Songbird. Pale blush pink.	1.75	1.00	.15
7062	Early Spring Maid. Light cream pink.	1.75	1.00	.15
7064	Early Wedgewood. Bright blue.	1.75	1.00	.15
7066	Early White Orchid. Pure white.	1.75	1.00	.15
7068	Early Xmas Pink. Pink and white.	1.75	1.00	.15
7070	Early Yarrawa. Bright rose pink.	1.50		.15
7072	Early Zvolaneks Blue. Blue jay shade.	2.00	1.25	.25

SWEET WILLIAM. A distinct new type. Seeds sown in spring will be in flower in early summer. The flower heads are large, very fragrant, and beautifully marked in a great assortment of colors. Oz. ¼Oz. Pkt.

7080	Breck's Annual Mixed.	2.00	.60	.15
------	--	------	-----	-----

For Perennial Varieties See Page S98

THUNBERGIA. A slender trailing vine with neat green foliage and numerous extremely pretty flowers. Splendid for hanging pots, vases, etc. Half-hardy annual.

		¼Oz.	Pkt.
7085	Alata. Yellow with black eye.	.50	.10
7086	Alata Alba. White with dark eye.	.50	.10
7087	Mixed.	.50	.10

TORENIA. Very graceful, free-flowering plants producing an abundance of beautifully-colored flowers all summer. Tender annual, 1 ft.

★7090	Baillonii. Golden yellow deep red throat.....	Pkt. .25

Zinnia

ZINNIA. One of the most popular and most extensively used of all our hardy annuals for beds, mixed borders and for cutting purposes. They require very little attention, will grow in any good garden soil. Seed sown early in heat will begin to bloom in June and continue until frost, or seed may be sown where they are intended to bloom as soon as frost has gone.

Breck's New Giant (Grandiflora Plenissima). The flowers of this variety measure from 5 to 6 inches across, are mostly very double, borne on long stiff stems. It is the finest strain of Zinnias we can procure.

★Collection (6 varieties).....			.75

Achievement. The raising of this beautiful new Zinnia is undoubtedly an "achievement" in the field of horticultural endeavor. It is distinct from all other Zinnias hitherto raised by the shape of its petals, which are partially tubular at the base and expand in a cactus-like form towards the tip, thereby displaying a rich variety of color, mostly of the warmer shades. On the reverse side the petals are of a lilac tint, they produce in the flower a rare and beautiful combination of color never before seen in Zinnias. Oz. ¼Oz. Pkt.

★7185 2.50 .75 .20

Dahlia Flowered. New type of large flowered broad petal Zinnia, being much larger than the giant type. They include many gorgeous new shades. Oz. ¼Oz. Pkt.

BRECK'S SURPRISE GARDEN MIXTURE

For this mixture we have collected several hundreds of the easier growing flower seeds and blended them into a regular Surprise Garden Mixture, something different, which at any time from spring until frost will make your Surprise Garden charmingly beautiful.

Seeds are not to be sown too thick, in fact, the more ground you can cover with a package the better results will be shown. For naturalizing purposes or sowing broadcast for effect and cutting, nothing approaches our Surprise Garden Mixture, and as the season advances something different comes into bloom all the time.

The splendid results sure to be obtained from our mixture, and the little amount of time and labor in growing, makes it unrivalled.

To those who cannot give the care and attention to a formal planned flower garden, we especially recommend our Surprise Garden Mixture on account of the completeness of the Mixture and the brilliant contrast of the great number of varieties.

Breck's Surprise Garden Mixture Tall Varieties. Tall growing sorts, upwards of two hundred varieties which grow above three feet. lb ¼lb Oz. Pkt.

BRECK'S COLLECTIONS OF FLOWER SEEDS

Collection "A," price .25, contains one package each of Mignonette; Alyssum white; Sweet Peas, fine mixed; Phlox Drummondii, fine mixed; Portulaca, fine mixed; Chinese pink, fine mixed.

Collection "B," price .50, contains the varieties in Collection "A," with the following additions: Nasturtium, Tom Thumb, fine mixed; Candytuft, finest mixed; Aster, fine mixed; Pansy, finest mixed; Eschscholtzia, fine mixed; Morning Glory, fine mixed.

Collection "C," price .75, contains the varieties in Collection "A" and "B," with the following additions: Coreopsis, fine mixed; Balsam, fine mixed; Zinnia, fine mixed; Petunia, finest mixed; Calendula, yellow. Mourning Bride, fine mixed.

Collection "D," price 1.00, contains the varieties in Collection "A," "B," and "C," with the following additions: Tall Nasturtium, fine mixed; Marigold, French striped; Larkspur; Poppy, double mixed; Convolvulus, dwarf mixed; Chrysanthemum, fine mixed; Antirrhinum, finest mixed.

Collection "E," price .50. This assortment produces a fine effect in the garden and all the sorts are suitable for bouquets. Abronia, Ageratum, Amaranthus Bicolor, Aquilegia, Aster, Calliopsis, Collinsia, Dianthus Chinensis, Godetia, Mignonette, Phlox Drummondii, Zinnia.

Collection "F," price .25. The following kinds are specially suitable for growing in vases or hanging baskets. Alyssum Maritimum, Convolvulus Mauritanicus, Dwarf Nasturtium, Lobb's Nasturtiums, Lobelia Gracilis, Mimulus Moschatus.

BRECK'S HARDY PERENNIAL SEEDS

For complete list of Annuals and Greenhouse Seeds See Pages S55 and S100

BIENNIALS are plants which require two seasons to come to full maturity, after which they ripen their seed and die off. Some of them will flower the same season from seed if sown under glass early in February. Perhaps the best mode of treatment is to sow in frames early in September and winter them in boxes; plants treated in this way will flower early in summer.

PERENNIALS, or as they are often termed, Herbaceous Plants, go on living and increasing for a number of years, the stems dying down each season and coming again from the roots each spring. Perennials are easily raised from seed which should be sown during spring and summer in the cold frame. These should be ready for planting out into beds in autumn and then transferred to their permanent quarters in spring.

ABRONIA. Sweet scented, verbena-like trailers, suitable for growing in rock gardens and similar locations. Tender perennial. $\frac{1}{4}$ Oz. Pkt.

7300	Arenaria. Yellow.....	.75	.10
7303	Umbellata Grandiflora. Rose.....	.50	.10
7306	Villosa. Purple.....	1.00	.10

ACANTHUS (Bear's Breech). Suitable for backgrounds of borders and for sub-tropical effects. Leaves large, rough, and beautifully outlined. Oz. $\frac{1}{4}$ Oz. Pkt.

7310	Latifolius. Purple.....	.60	.20	.10
7312	Mollis. Pure white.....	.60	.20	.10

ACHILLEA (Yarrow). A very free flowering hardy plant producing a wealth of pure white double flowers which are borne in clusters; blooms all summer. An excellent plant for rock work. $\frac{1}{8}$ Oz. Pkt.

7315	Ptarmica Fl. Pl. Double white.....	1.00	.10
★7317	Ptarmica the Pearl. Improved variety.....	1.50	.15

ACONITUM (Monkshood). Flowers bell-shaped, produced on long spikes. Root tuberous. An old garden favorite, and an excellent plant for the hardy border. $\frac{1}{4}$ Oz. Pkt.

AMPELOPSIS.

7375	Quinquefolia (Common Woodbine, or Virginia Creeper). A vine of most vigorous growth. The foliage is glossy green in the summer, turning to intense crimson in the autumn.....	.50 .10
------	--	---------

- 7378 **Veitchii** (Boston, or Japanese Ivy). Used generally to cover walls, its fine shoots extending to the roof of tall buildings. The vine can be made to grow on wood. In the fall the leaves assume the most gorgeous and varied tints. .50 .10 Pkt.

ANCHUSA (Alkanet). A useful perennial. Blooming constantly if not allowed to go to seed. Foliage rough, flowers in numerous small panicles resembling those of the Forget-Me-Not. 1/8Oz. Pkt.

- 7380 **Barrelieri**. Double blue. .30 .10

- ★7383 **Italica Dropmore Var.** This is a great improvement on the above variety. We think this is one of the finest herbaceous plants grown. The flowers are of a most lovely shade of gentian blue, excellent for cutting. .75 .15 Pkt.

- 7386 **Italica Opal**. Fine bright blue. .50 .20 Pkt.
For Annual Varieties See Page S 56

ANEMONE (Wind Flower). Hardy perennials blooming in the spring and autumn. The Japonica varieties produce a wealth of bloom from August until frost.

- 7390 **Coronaria**. Mixed. 1 ft. .10 Pkt.
7392 **Japonica** (Queen Charlotte). Pink. 2 ft. .25
7394 **Japonica Alba**. Pure white. 2 ft. .25
7396 **Japonica Rosea**. Rose color. 2 ft. .25
7398 **Japonica Sylvestris** (Snowdrop Wind Flower). Pure white. 1 1/2 ft. .15
★7400 **St. Brigid**. Poppy-flowered, mixed. 1 ft. .10

ANTHEMIS (Chamomile). A profuse bloomer and very showy. A good border plant. Flowers about 1 1/2 inches across, daisy-like. 1/8Oz. Pkt.

- 7405 **Arabica**. Yellow. 1 ft. .25 .10
7408 **Montana**. A pretty small flower like a white chrysanthemum. 6 in. .25 .10
7412 **Tinctoria**. Yellow. 2 ft. .25 .10

ANTHERICUM. Beautiful white, fragrant, lily-like flowers; excellent for cutting. 1/8Oz. Pkt.

- 7416 **Liliago** (St. Bernard's Lily). White. 1 1/2 ft. 1.00 .25
7418 **Liliastrum** (St. Bruno's Lily). White with green-spotted petals. 2 1/2 ft. 1.00 .25

Aquilegia

AQUILEGIA (Columbine). This family is one of the most beautiful and popular among hardy perennials. The different varieties present an unusual wealth of color and form. For growing in borders or filling up bays in shrubbery they are unsurpassed. Any ordinary garden soil is suitable for their growth. The flowers are fragrant. 1/4Oz. Pkt.

- 7420 **Alba. Fl. Pl.** Double white. 2 ft. .50 .10
★7422 **Breck's Long Spurred Hybrids**. 3 ft. Choice mixed. This strain is the finest we can procure. The colors range through the most beautiful combinations of blue, bright rose, pink, mauve, white, yellow and orange. 1.00 .50 1/8Oz. Pkt.

Columbine, Long Spurred

- 7424 **California** (Californian Columbine.) Very distinct. Spurs long, orange-red. Petals yellow-brown. Foliage broad. 1.00 .20 1/8Oz. Pkt.
- 7426 **Canadensis** (Wild Columbine). A good plant for the rocky or hardy border. Very free-flowering. Scarlet and yellow. 1.00 .10 1/4Oz. Pkt.
- 7428 **Chrysantha** (Golden-spurred Columbine). Fragrant and showy. Spurs very long and slender. One of the best golden yellow. .75 .10
- 7430 **Chrysantha, Fl. Pl.** Double yellow. 3 ft. .20
- ★7432 **Coerulea** (Rocky Mountain Columbine.) Foliage much divided. One of the best. Particularly good for rocky planting. Violet and white. 1.00 .25 1/8Oz. Pkt.
- 7434 **Coerulea Hybrida** (Long-spurred Columbine). A free-flowering species. Flowers in shades of white, blue, and rose-purple. Excellent for the border or rock-garden. 1.00 .15 1/4Oz. Pkt.
- ★7436 **Erskine Park Hybrids**. This strain of Aquilegia originated at Erskine Park, Lenox, Mass., U. S. A., being the result of hybridizing the finest European and American varieties. For best results sow during July and plant in permanent position in the fall. Superb mixed colors. 1.00 .15
- 7438 **Glandulosa** (Siberian Columbine). One of the best and hardiest. Flowers very large. Blue and white. .25

7440	Jaetschaul. Yellow and red. 2 ft.	1.00	.15	1/4Oz. Pkt.
7442	Olympica. Blue. 2 ft.	.50	.10	1/8Oz. Pkt.
7444	Olympica. Fl. Pl. Blue and white. 2 ft.	.50	.15	Oz. 1/4Oz. Pkt.

HIBISCUS (Mallow). Flowers sometimes 5 inches across, with purple centres. Shrubby in growth Good among shrubs or in the flower border.

		Oz.	¼Oz.	Pkt.
7942	Moscheutos Alba. White. 5 ft. 1.00	.35	.10	
7944	Moscheutos Roseus. Pink. 5 ft. 1.00	.35	.10	
7946	Palustris Roseus. Rose. 4 ft.... 1.00	.35	.10	

For Annual Varieties See Page S69

Hollyhock

HOLLYHOCK. Grand summer flowering plants bearing long spikes of flowers to a height of six feet and over. These old inhabitants of our gardens, on account of their stately growth, are unexcelled for planting along fences or buildings, or for background effect. It is perfectly hardy and when established will bloom year after year.

Chater's Double Flowered. A magnificent strain remarkable for form and coloring. The flowers are very double and all the well known colors are represented.

		Oz.	¼Oz.	Pkt.
7950	Apple Blossom	2.00	.60	.10
7952	Blush White	2.00	.60	.10
7954	Carmine	2.00	.60	.10
7956	Crimson	2.00	.60	.10
7958	Dark Maroon	2.00	.60	.10
7960	Lemon Yellow	2.00	.60	.10
★7962	Newport Pink. Double flowers of beautiful pure pink.....	2.50	.75	.15
7964	Pure White	2.00	.60	.10
7966	Rose	2.00	.60	.10
7968	Salmon Pink	2.00	.60	.10
★7970	Breck's Silver Medal. Mixed. Very choice, contains every desirable color.....	2.00	.60	.10
7972	Chater's Double. Mixed.....	2.00	.60	.10
★	Collection, Double, 12 distinct colors		1.00	

Breck's Single Flowered. Many people prefer the single flowering Hollyhock. When covered with their artistic blooms they are very attractive.

		Oz.	¼Oz.	Pkt.
7975	Black	2.00	.60	.10
7977	Bright Rose	2.00	.60	.10

8026 Latifolius Mixed	.75	.25	.10

LAVENDER (*Lavendula*). An old garden favorite valued for its sweet-scented leaves and flowers.

	Oz.	1/4Oz.	Pkt.
8030 Spica (Sweet Lavender). Blue. 2 ft.....	1.00	.30	.10
8032 Vera. Blue. 1 1/2 ft.....	1.00	.30	.10

LIATRIS. Showy flowers in long spikes which are very effective among other perennials or shrubs. Foliage grass-like.

	Pkt.
8036 Pyenostachia (Kansas Gay Feather). Rose Purple 3 ft....	.15
8038 Spicata (Blazing Star). Purple.. 1 1/2 ft.....	.15

LINUM (Flax). Very attractive in clumps among other perennials or in the rockery. Foliage delicate; flowers borne on slender, erect stems.

	Oz.	1/4Oz.	Pkt.
8042 Flavum (Golden Flax). Yellow. 1 ft.....	.75	.15	
8044 Perenne Album. White. 1 1/2 ft.....	.75	.25	.10
8046 Perenne Blue. 1 1/2 ft.....	.75	.25	.10
8048 Perennial Sorts. Mixed. 1 ft.. For Annual Varieties See Page S 71	.50	.05	

LOBELIA. A lovely hardy plant; particularly good near streams or in moist, shaded places. Flowers in large brilliant spikes.

	1/16Oz.	Pkt.
8052 Cardinalis (Cardinal Flower). A native variety with spikes of brilliant flowers; succeeds best in rather moist situations. 2 ft.	1.00	.25
8054 Queen Victoria. Brilliant scar- let with dark foliage		.25
For Annual Varieties See Page S 71		

LUNARIA (Honesty). Interesting plants with showy purple flowers and transparent, silvery seedpods, which are very ornamental, and much used for winter bouquets. Hardy biennial. 2 ft.

	1/4Oz.	Pkt.
8058 Biennis.	.35	.10

LUPINUS. Leaves Palmate. Flowers pea-shaped, in long spikes. An old garden favorite.

	Oz.	1/4Oz.	Pkt.
8062 Arboreus (Snow Queen). Large pure white flowers. 3 ft.....	1.25	.40	.10
8064 Polyphyllus Blue	.50		.05
8066 Polyphyllus Roseus. Very pretty rose shade.....	1.50	.50	.15
8068 Polyphyllus White	.50		.05
8070 Polyphyllus Yellow	1.50		.25
8072 Polyphyllus Mixed	.50		.05
For Annual Varieties See Page S 71			

LYCHNIS. Very striking perennials having many brilliantly colored flowers borne on long stems. Splendid for cutting.

	1/8Oz.	Pkt.
8075 Arkwrightii. A cross between Lychnis Chalcedonica and Haageana, resulting in something different and better than either parent. Has the upright habit of the former with the flower form of the latter, but greatly improved. Covered with blooms of rich effective colors.. 2.00 .25		
8077 Chalcedonica. (Jerusalem Cross). Scarlet. 2 ft.....	.50	.20 .05
8079 Chalcedonica Alba. White. 2 ft.....	1.00	.35 .10
8081 Chalcedonica Mixed. 2 ft....	1.00	.35 .10
8083 Flos Cuculis (Ragged Robbin). Pink. 2 ft.....	.50	.15
8085 Fulgens. Scarlet. 1 ft.....	1.00	.35 .15
8087 Haageana Hybrida. Mixed. 1 ft.....	.50	.15

LYTHRUM (Loose Strife). Foliage willow-like; flowers in graceful spikes. Good in the bog-garden or along streams.

	Oz.	1/4Oz.	Pkt.
8090 Roseum Superbum. Rosy pur- ple.....	1.50	.50	.10

MALVA (Mallow). Hardy perennials. Large, showy flowers growing well in almost any good garden soil, and blooming all summer.

	1/8Oz.	Pkt.
8095 Alcea (Hollyhock Mallow). Rose. 3 ft.....	.50	.10
8097 Moschata (Musk Mallow). Rose- colored. 2 ft.....	1.00	.35 .10
8099 Moschata Alba. White. 2 ft...	1.00	.35 .10

MIMULUS (Monkey Flower). A genus of handsome, profuse-flowering plants, with singularly shaped and brilliant colored flowers.

	Pkt.
8102 Cardinalis. Scarlet, 1 1/2 ft.. 8104 Tigrinus. Fine spotted varieties	.25 .25
For Greenhouse Varieties See Page S 103	

MONARDA (Bee Balm). An aromatic herb having showy bright red flowers. Moist, shady locations are most suitable. 2 ft.

	Pkt.
8108 Didyma	.25

Myosotis

MYOSOTIS (Forget-me-not). Plants of the Forget-me-not can be flowered first season from seed if started early in the spring. Specially suitable for border and bedding, producing little blue star-like flowers early in the spring.

	Oz.	1/4Oz.	Pkt.
8112 Alpestris Alba. White. 1/2 ft...	3.00	1.00	.10
8114 Alpestris Coerulea. Blue. 1/2 ft.....	2.00	.60	.10
8116 Alpestris Rosea. Rose. 1/2 ft.. 2.00 1.00 .10

Myosotis (Forget-me-not)

	Oz.	1/4Oz.	Pkt.
8118 Alpestris Victoria. A beautiful variety of dwarf bushy habit, bearing a profusion of large flowers. 1/2 ft.	4.00	1.25	.15
8120 Alpestris Mixed. 1 ft.	1.00	.35	.05

8124 Azorica Blue. Double blue. 1 ft.			.25
8126 Palustris Semperflorens. True water forget-me-not. Bright blue. 1/2 ft.		1.50	.25
	Oz.	1/4Oz.	Pkt.
8128 Royal Blue. 1/2 ft.	2.50	.75	.15
8130 Stricta Alba. White. 1/2 ft.	2.00	.60	.10
8132 Stricta Coelestina. Blue. 1 ft.	2.00	.60	.10
8134 Stricta Rosea. Rose. 1 ft.	2.00	.60	.10
8136 Tom Thumb. Blue. 1/4 ft.			.25

OENOTHERA (Evening Primrose). Vigorous in growth, with decumbent, slender branches. These are completely covered with single flowers which are about 1 1/2 inches across. Particularly good for the rockery.

8 40	Afterglow. Clear yellow with bright red calyx; the flowers remain expanded in brightest sunshine.....	1.00	.15	
		1/4Oz.	1/8Oz.	Pkt.
8142	Fraseri. Yellow. 1 1/2 ft.....	.50		.10
8144	Lamarckiana	.25		.10
8146	Youngii. A very showy variety with large bright yellow flowers all summer.....			.15
8148	Perennial Varieties Mixed ...			.10
	For Annual Varieties See Page S74			

PAEONY. A well-known perennial especially suitable for massing, and for combination with shrubbery. 2 ft.

	Oz.	1/4Oz.	Pkt.
8152 Double Mixed.	2.00	.60	.25
8154 Single Mixed	1.00	.30	.15

PENTSTEMON. A most useful and ornamental class of perennials. For mixed borders or massing in beds they have few rivals. They have a most wonderful range of colors with penciled throats.

	1/8Oz.	Pkt.
8160 Digitalis. Spotted; magnificent large flowers.	.50	.10
8163 Breck's Giant Hybrids. Seeds saved from the largest flowers. Having a wide range of bright colors including rose, pink, lavender, crimson, purple, etc., seeds sown in heat in January or February will bloom the same year.		.25

For Annual Varieties See Page S75

PHLOX (Perennial Phlox). The perennial Phloxes are among the best known and most satisfactory garden plants.

	Oz.	1/4Oz.	Pkt.
8168 Decussata Mixed.	2.50	.75	.15
8170 Decussata Nana Mixed.	2.50	.75	.25

For Annual Varieties See Page S77

PHYSOSTEGIA (False Dragonhead). Elegant bushy plant, suitable for the border, bearing spikes of pink, white, purple and red flowers throughout the season. Excellent for cutting. 2 ft.

	1/4Oz.	Pkt.
8175 Virginica. Rose pink.	.75	.10
8177 Virginica Grandiflora Alba. White.	1.00	.15

PLATYCODON (Balloon Flower). Numerous bell-shaped flowers on erect stalks. Bushy in habit and a very showy perennial. Flowers resemble somewhat the Canterbury Bells.

	1/8Oz.	Pkt.
8190 Grandiflora Blue.	.50	.10
8192 Grandiflora Alba. White.	.50	.10

POLEMONIUM (Jacob's Ladder). A handsome border plant, with feathery fern-like foliage and clusters of bell-shaped flowers. 2 ft.

	Oz.	1/4Oz.	Pkt.
8195 Flavum. Yellow.			.15
8197 Grandiflorum Album. White.	1.00	.35	.10
8199 Grandiflorum Coeruleum. Blue.	1.00	.35	.10
8201 Richardsonii. Double blue.	1.50	.50	.15

POPPY (Papaver). The large flowering perennial Poppies are among the very handsomest plants in the garden. Large clumps of them have a magnificent effect in shrubberies, in grass and for naturalizing.

Alpinum. A charming little Poppy with bright flowers resembling those of Papaver Nudicaule but dwarfed. Splendid for sunny borders or rock-work. 1 ft.

	Pkt.
8206 Fringed Mixed. Beautiful fringed varieties.	.15
8208 Mixed	.15

Nudicaule (Iceland Poppy). This beautiful dwarf perennial Poppy, if sown early in the season will flower the same year. The bright and showy blossoms are borne on slender stems.

	1/4Oz.	Pkt.
8215 Alba. White.	.75	.25
8217 Aurantiacum. Orange.	.75	.25
8219 Coccineum. Double scarlet.	1.00	.25
8221 Luteum. Double yellow.	1.00	.25
8223 Scarlet.	.75	.25
8225 Striped	.75	.25
8227 Yellow	.75	.25
8229 Single Mixed	.75	.25

Oriental Poppy. We are now able to offer an entirely new range of colors in the following varieties:

	1/4Oz.	Pkt.
8235 Apricot Queen.	1.00	.15
8237 Beauty of Livermore. Crimson with dark blotch.	1.00	.15
8239 Mrs. Perry. Orange apricot, a beautiful shade.	1.00	.15
8241 Orientele. Orange scarlet flowers, having a conspicuous black blotch on each petal. 2 ft.	.50	.10
8243 Orientele Hybrids. Splendid mixture.	.75	.10
8245 Parkmanni. Deep scarlet. 2 ft.	1.00	.15
8247 Queen Alexandra. Rosy salmon with Crimson blotch.		.25
8249 Salmon Queen. Rich salmon yellow.	1.00	.25

For Annual Varieties See Page S77

POTENTILLA. Very useful border plants with handsome foliage and showy flowers. 1½ ft. Pkt.

- 8255 **Double Mixed**..... .15
8257 **Single Mixed**..... .10

PRIMULA (Primrose). These hardy sorts require protection during the winter. They do best in a northern exposure. All are very beautiful and useful for garden and pot culture. Pkt.

- 8262 **Auricula Alpina.** Mixed. Flowers in clusters. Foliage coarse and dense; good for the border or rock-garden where protection can be given in winter. ½ ft.25
8264 **Japonica** (Japanese Mixed). 2 ft.15
★8266 **Veris Giant Fancy** (Polyanthus). Mixed. The earliest of the primroses to bloom. Flowers in loose clusters, large and very fragrant. Good under trees, particularly on sheltered hillsides, or in the rock garden. 1 ft.25
8268 **Veris Gold Laced.** Yellow. 1 ft.15
8270 **Veris Elatior** (Cowslip). Mixed. 1 ft.15
8272 **Yellow English** (Vulgaris)..... .15
8274 **Mixed Hardy Sorts**..... .25
For Greenhouse Varieties See Page S 108

PYRETHRUM. Very beautiful hardy perennials with large, showy flowers and fine-cut foliage. Very desirable for beds and borders and useful as cut flowers.

- 8280 **Atrosanguineum.** Red. 2 ft. ¼Oz. Pkt. 1.00 .15
★8282 **Roseum Double Hybrids Mixed.** Saved from the finest named varieties, splendid for cut flowers. 2 ft. 3.00 .25
8284 **Roseum Single Hybrids Mixed.** Most effective in the border for their vivid colors and long lasting blooms. 2 ft. ¼Oz. Pkt. 1.00 .15
8286 **Uliginosum.** White. 3 ft. 1.00 .15
For Annual Varieties See Page S 78

ROSE. Beautiful varieties of Roses can be raised from seed and can be flowered outside in beds or in pots.

- 8292 **Multiflora Nana** (Dwarf Polyanthus Rose). Flowers first season from seed.25
8294 **Hybrid Perpetual Mixed.** Saved from the choicest collection producing about 75% of really fine double flowers.25

RUDBECKIA (Cone Flower). Strong, robust growing plants, popular for borders. They are of very easy culture and flower all summer and late fall.

- 8300 **Fulgida.** Shades of yellow. 4 ft. ¼Oz. Pkt. .75 .15
8302 **Newmanni.** Yellow with maroon centre. 3 ft.75 .15
For Annual Varieties See Page S 78

SALVIA (Meadow Sage). Flowers in large spikes, very showy. Foliage coarse and downy. A good border plant.

- 8306 **Pratensis.** Large spikes of rich blue flowers. ¼Oz. Pkt. .50 .15
For Annual Varieties See Page S 79

SCABIOSA. A very free-flowering perennial with semi-double, daisy-like flowers about 2½ inches across. A good border plant.

- 8310 **Caucasica Alba.** A beautiful variety with large, pure white flowers. ¼Oz. Pkt. .75 .20
8312 **Caucasica Blue.** A splendid variety similar to the preceding, having light blue flowers.60 .15
8314 **Japonica.** Very desirable hardy sort with delicate lavender blue flowers borne on long slender stems.60 .15
For Annual Varieties See Page S 79

SENECIO. A handsome perennial with rich orange-yellow flowers and large leaves. Well adapted for growing by the sides of lakes and streams. 4 ft. Pkt.

- 8320 **Clivorum.**25

SIDALCEA. A fine hardy plant for the border bearing long spikes of flowers. Each plant develops a sheaf of spikes 5 to 6 feet high, well furnished with beautiful rose-colored flowers during June and July. Pkt.

- 8325 **Rose Queen**25

SOLIDAGO (Goldenrod). Hardy perennial producing large heads of deep golden yellow flowers, often more than a foot long, blooms late in summer. 3 ft. Oz. ¼Oz. Pkt.

- 8330 **Latifolia**75 .25 .10

STACHYS (Lamb's Ears). Hardy perennial with silvery-white leaves, much used in ribbon borders and edgings. 1½ ft. Oz. Pkt.

- 8335 **Lanata** 1.00 .10

STATICE (Sea Lavender). Beautiful tiny flowers in large spreading sprays. Foliage dark green and leathery. One of the best perennials for cutting, also good in the border or rock-garden. Oz. ¼Oz. Pkt.

- 8340 **Gmelini.** Light Blue. 1.50 .50 .10
8342 **Latifolia** 1.50 .50 .10
8344 **Mixed** 1.50 .50 .10
For Annual Varieties See Page S 80

STOKESIA (Cornflower Aster). A most beautiful and charming hardy Perennial, easily raised from seed, and flowering the first year if started early. The plant grows about 2 feet high. ¼Oz. Pkt.

- 8350 **Cyanea Alba.** White. 1.00 .15
8352 **Cyanea Lavender** 1.00 .15
8354 **Cyanea Mixed** 1.00 .15

Sweet William

SWEET WILLIAM (Dianthus Barbatus). Popular hardy biennials of easy culture extensively used in old-fashioned gardens, flowers of brilliant colors borne in large clusters, fine for cutting. 1½ ft.

- 8360 **Breck's Auricula-Eyed Choice Mixed** Oz. ¼Oz. Pkt. 1.00 .30 .10
8362 **Crimson** 1.00 .30 .10
★8364 **Holborn Glory.** A mammoth strain of the most perfectly formed and largely developed flowers. The markings are regular and well defined centers. 1.50 .50 .10
8366 **Newport Pink.** Color watermelon pink, fragrant. 18 inches high. 3.00 1.00 .15
★8368 **Pink Beauty.** Improved deep pink. 2.50 .75 .15
8370 **Salmon Pink** 2.50 .75 .20
★8372 **Scarlet Beauty.** The color is a distinct shade of rich scarlet, very effective in borders where the shade is very uncommon. 2.50 .75 .20
8374 **White** 1.00 .30 .10
8376 **Double Mixed** 2.50 .75 .15
8378 **Single Mixed**75 .25 .05
For Annual Variety See Pages S 67, S 85

YUCCA (Adam's Needle). Showy plants with long, narrow sword-like leaves and tall branching stalks of bell-shaped flowers. Very effective when planted in masses and among other perennials. Pkt.			
8455	Filamentosa. Creamy white...		.25

Breck's Collections of Hardy Perennial Seeds

The following collections will be very useful to those not familiar with this popular class of plants. They will contain only the best of the various varieties, and such as are adapted to the various situations.

- No. 1. Perennial Border Collection.** Varying in height from 2 to 4 feet, suitable for sunny or shady locations, flowering at various seasons.
6 Varieties our Selection for	.50
12 Varieties our Selection for	1.00
25 Varieties our Selection for	2.00
- No. 2. Dwarf Perennial Border Collection.** Suitable for front rows of a sunny or shady garden, average height of plants from 6 to 15 inches.
6 Varieties our Selection for	.50
12 Varieties our Selection for	1.00
- No. 3. Rock Work Collection.** For growing in moist shady positions in rockeries, also for hot dry situations.
6 Varieties our Selection for	.50
12 Varieties our Selection for	1.00
25 Varieties our Selection for	2.00

BRECK'S SEEDS FOR GREENHOUSE CULTURE

For complete list of Annuals and Hardy Perennials See Pages S55 and S88

TENDER GREENHOUSE PLANTS

The seeds of these plants are very minute in most cases, and require great care and delicate handling to prevent failure. They should be sown in pans, in soil in which sufficient sand has been mixed to keep it from caking. In many cases, such as Begonias, Streptocarpus, Calceolarias, etc., no attempt should be made to cover the seed; it should be simply pressed into the surface, after which it should be sprayed with tepid water, and a glass placed over it to prevent too much evaporation; but as soon as the plants are up see that they are ventilated, or they will soon become mouldy and soft. On no account must they be left in the sun, as shade and moisture are the two principal conditions required for success. As soon as the young plants show their two seed leaves, they should be carefully pricked out into boxes, care being taken not to damage the roots. Many minute plants from the finer seeds are destroyed by drenching them with water. A vaporizer or sprayer should be used for watering.

ABUTILON. Free-flowering greenhouse shrubs excellent for conservatory decoration and for bedding out of doors in the summer. Seeds sown indoors in February or March produce flowers the same season. Tender perennial. 5 ft. Pkt.
8500 **Breck's Choice Hybrids Mixed** .25

ACACIA. Tender Perennial Shrub with graceful branches and sweet scented flowers. 8 to 10 ft. Pkt.
*8510 **Baileyana.** Quick growing Acacia flowering the second year from seed. Fine long flower sprays excellent for cutting25
8512 **Dealbata.** Golden yellow ornamental foliage, large, silvery and fern-like15

ACHIMENES. Fine summer-blooming tender greenhouse perennial; valuable for pots or hanging baskets. The flowers vary considerably in size and are of the richest colors. Pkt.
8520 **Choice Mixed**50

AGATHEA (Blue Marguerite). Tender perennial with small daisy-like flowers. Very useful for pot culture. 2 ft. Pkt.
8525 **Coelestis.** Blue with yellow centre15

Antirrhinum

ANTIRRHINUM (Snapdragon). The following good greenhouse varieties we consider the best for use under glass; treated for winter flowering they will produce flower stems a yard long; invaluable for cutting. Pkt.

8535 **Giant Yellow.** Golden yellow60
*8538 **Golden Pink Queen.** Golden pink1.00
8541 **Keystone.** Delicate pink60
*8544 **Nelrose.** A beautiful shade of silvery pink60
8547 **Phelps White.** Very free-flowering, pure white60
8550 **Silver Pink.** True silver pink1.00
For other varieties of Antirrhinum See Pages S56, S100

ARALIA. Easily grown plants with bright green foliage very useful as house plants. Pkt.
8560 **Moseri.** A stronger grower with foliage more graceful than Sieboldii35
8564 **Sieboldii.** Large green leaves which resemble Ricinus25
(New seeds ready in April.)

ASPAGUS. Elegant greenhouse plants for hanging baskets or cutting for bouquets and table decorations.

*8570 **Decumbens.** This variety produces long tremulous sprays of delicate foliage. Splendid for hanging baskets50
8573 **Plumosus Nanus.** Valuable for hanging baskets and table decorations on account of its graceful finely cut foliage25
8576 **Sprengeri.** Valuable as a pot plant for conservatory decoration. Very useful for bouquets, wreaths or sprays1.00 .25

BEGONIAS (For Hanging Baskets). This magnificent class of plants have been improved in late years; for greenhouse and conservatory decorations they make a splendid display as they are very light and graceful in appearance. Pkt.

8580 **Breck's Superb Mixture**1.00
BROOM. Splendid decorative plants for greenhouse and conservatory. Pkt.
8585 **Andreana.** Scarlet and yellow15
8588 **White Gem.** Pure white flowers borne on long upright stems, excellent for winter flowering and decorative purposes15

Calceolaria

Calceolaria

CALCEOLARIA. Ornamental conservatory and house plants bearing numerous pocket-like flowers of brilliant self colors and handsomely spotted. We can strongly recommend our Special Strain for habit, size and making of flowers.

- ★8595 **Breck's Scotch Prize Mixed.** Pkt.
Grown for us by a specialist, and is a great improvement in these gorgeous plants. Flowers are beautifully blotched and striped in exceedingly rich colors of yellow, maroon, crimson, white, etc. 1.00
- ★8598 **Clibranii.** A very beautiful form of Calceolaria, the flowers are of deep golden yellow and produce in great abundance on long slender stems.75
- 8601 **Dwarf Large-flowered.** Mixed.50
- 8604 **Giant Spotted.** Mixed.50
- 8607 **James's Giant.** Mixed. Finest for exhibition.75
- 8610 **Large-Flowered Selfs.** Mixed. Comprising a wide range of colors unsurpassed for quality and excellence.50
- 8613 **Rugosa.** (Shrubby) for bedding Mixed.50

CHEIRANTHUS. A valuable hybrid Wallflower for greenhouse decoration; the plants grow to a height of 2 feet, branch freely and each stem carries a long spike of flowers. Pkt.

- 8620 **Kewensis.** Primrose and mauve.25

CHRYSANTHEMUMS. For blooming either outside or in the conservatory. These can be flowered the same year from seed and are splendid for cut flowers or pot plants as they contain a great variety of color. Pkt.

- 8625 **Chinese and Japanese Mixed..**20
- ★8627 **Chinese Mixed.** An extra fine variety for greenhouse or autumn flowering.25
- 8629 **Chinese and Pompom Mixed.** Very free-flowering with small flowers; very desirable. 2½ ft.20
- 8631 **Comtesse de Chambord** (Yellow Paris Daisy). 1½ ft.25

Cineraria

- 8633 **Frutescens.** (White Paris Daisy) Pkt.
An excellent plant for the greenhouse or summer bedding outdoors. 1½ ft. 1.10
- ★8635 **Japanese Mixed.** Extra large double flowers with long twisted petals.25
- For Annual Varieties See Page S64
For Perennial Varieties See Page S92

Cineraria

CINERARIA. To produce good plants for decorative purposes sow in May or June. These magnificent plants are indispensable for spring decoration in the conservatory or window garden.

- ★8640 **Breck's Columbia Strain. Tall mixed.** This includes every conceivable shade of pink, carmine, crimson, and blue as well as pure white. The flowers are of immense size, borne on plants of robust habit. 2 ft.75
- ★8642 **Breck's Columbia Dwarf Mixed.** Dwarf compact variety about 15 inches high.75
- 8645 **James Prize.** Choice varieties mixed. Seed is saved for us by one of the foremost growers in England from prize varieties and contains a magnificent range of colors.50

CINERARIA HYBRIDA (Separate shades).

- 8650 **Antique Rose.** 1.00
- 8653 **Azure Blue.** 1.00
- 8656 **Crimson.** 1.00
- 8659 **Pure White.** 1.00
- 8665 **Stellata** (Star Cineraria). Mixed.
A splendid plant for conservatory decoration during the winter and spring. The immense heads of flowers are borne on long stalks, the individual blooms are star-shaped.50

CLERODENDRON. Attractive greenhouse plant easily grown from seed. The large heads of flowers are as invaluable for decoration as the popular Poinsettia. Pkt.

- 8670 **Fallax.** Bright scarlet.50

CLIANTHUS (Glory Pea of Australia). Valuable greenhouse Perennial which can also be flowered in the open. Pkt.

- 8675 **Dampieri.** Scarlet and black.25

CLITORIA (Blue Pea). A handsome greenhouse climber of easy culture. Pkt.

- 8680 **Coelestis.**25

COLEUS. Bedding and greenhouse plants with beautifully colored foliage. Easily grown from seed. The dwarf, large-leaved strain is especially desirable. The colors range from light to dark red; leaves beautifully marbled and spotted. Pkt.

- 8685 **Fringed and blotched.** 2 ft.25
- 8688 **Large Leaved Varieties.** 2 ft.20
- 8691 **Large Leaved Dwarf.** 1 ft.20
- 8694 **Choicest Mixed.** Saved from a very choice collection. 2 ft.35

Cyclamen

CYCLAMEN. (Breck's Giant Strain). A superior strain with flowers of largest size and perfect form displayed well above the foliage. Seed may be sown at any time during the spring or summer. 100 Seeds Pkt.

- ★8700 **Breck's Imperial Mixed.** Contains all the brilliant colors. 2.00 .75
- 8703 **Bush Hill Pioneer. Persicum.** 3.50 1.00
- 8706 **Bush Hill Pioneer. Rose.** 3.50 1.00
- 8709 **Bush Hill Pioneer. Salmon.** 3.50 1.00

Sunrise. Rich rosy red. Double.

Winter Cheer. Rosy carmine. Semi-double.

Each of the above varieties, \$2.50

FRAU HELENE HARMS. A Begonia that thrives in strong sunlight. Originally introduced into this country in 1910. This Begonia will grow equally well in pots, greenhouse, house conservatory, or out of doors in the open border. Tuberous rooted, foliage dark green, of rank growth, with small leaves, and flowers freely with blossoms about the size of half a dollar. Full grown plants are about eight inches in height. Flowers out of doors are a beautiful clear orange color, in-door or under glass, a light yellow. Thus far the stock has been remarkably free from disease, and will stand up under long continued wet weather. If beaten down by heavy rain and wind storms a few hours of sunshine will revive the plant and blooms. AN UNUSUAL FEATURE OF THIS BEGONIA IS THE FACT THAT THE STRONGEST SUNSHINE HAS NO EFFECT UPON IT, EXCEPT TO PROMOTE THE GROWTH OF THE PLANT AND BLOOMS.

Frau Helene Harms

"Frau Helene Harms" was awarded first class certificate of merit by the Massachusetts Horticultural Society in 1921. In 1921 it was awarded the silver medal by the same society, also certificate of merit from the Newport Horticultural Society. The amount of propagating stock available is limited. If ordered now, we will be able to furnish strong grown, well-rooted plants in April and May, 1922. These plants will be in 2¼ inch paper pots, securely packed with full cultural directions. We will insure their safe arrival. They will be about ready to bloom, when received, and, if accorded the usual treatment for tuberous begonias, "Frau Helene Harms" will continue to bloom from May till Thanksgiving under glass, and out of doors from May until the first killing frost.

Orders for delivery in April or May, 1922, should be placed NOW, as we shall only propagate enough plants to cover the actual orders.

Per doz..... 2.50; per 100, 18.00

Roses

(For Greenhouse)

✧ **Columbia.** A pleasing shade of rose pink double flowers; an excellent winter blooming variety.

✧ **Double White Killarney.** Large double pure white flowers of great substance, recommended as the best white rose for forcing.

Evelyn. A sport of Ophelia, very double, similar in color except that the salmon is a trifle more pronounced at the base of the petals.

✧ **Golden Ophelia.** Bright yellow shading to pale yellow at the edge of the petals; fragrant, vigorous and robust in growth.

Hadley. Beautiful deep crimson, good strong grower; fragrance is unsurpassed; a great favorite.

✧ **Hoosier Beauty.** Vigorous grower producing long flowering shoots which come to maturity quickly. Flowers of deep crimson and are of exceptional keeping quality.

Killarney Brilliant

✧ **Killarney Brilliant.** The best dark pink rose for general growing.

Lady Alice Stanley. Deep clear rose pink double flowers; grows well and flowers freely; can be highly recommended.

Lady Hillingdon. Glorious shade of copper yellow improving in color as the flower matures; good habit and free-flowering.

✧ **Ophelia.** The best light pink rose, salmon flesh shading to yellow at the base; very attractive.

Premier. Free and easy grower, clear pure shade of rose pink, stems stiff and almost thornless; distinct and valuable variety.

✧ **Radiance.** Produces good flowers of cerise-pink, free-flowering and easy grower; a favorite rose for forcing.

Red Radiance. Red sport of Radiance; highly recommended.

Richmond. Beautiful formed flowers of bright scarlet, an improvement on any other variety of red roses.

✧ **Sunburst.** Long pointed buds that open perfectly with a sunburst of deep golden yellow; the best yellow rose grown.

White Killarney. One of the best white sports of Killarney, it is a stronger grower than the parent.

Prices of any of the above varieties for delivery after May 1st.

at once

HARDY LILIES FOR GARDEN AND POT CULTURE

We give to the Lily a large space, because it is first in importance in the bulb garden, in the history of flowering plants, and in the hearts of all true lovers of the beautiful in floral form and color. It is, moreover, the best representative of the natural order to which it belongs.

The Lilies are among the most beautiful and ornamental of cultivated bulbous plants, their stately habit and variously-colored flowers (which are in many cases, highly perfumed) rendering them indispensable subjects for greenhouse decoration, and for outside flower garden embellishment. Nearly all the species and varieties may be termed hardy in most localities, if provided with a well drained soil.

The commoner and more plentiful species may be effectively employed for grouping or naturalizing. Many of them are excellent border plants when in flower, being extremely attractive in mixed arrangements, if properly placed in respect of height. Many of the strong-growing Lilies are well adapted for planting among shrubs, where the latter are not too thickly placed. By growing a selection of species in pots, to flower at different times, a valuable addition to greenhouse decorative subjects is secured over a long period, in summer and autumn. Lilies should always be planted not less than three in a clump (thus . . .).

Auratum (Golden Banded Lily of Japan). Immense white flowers, each petal marked with a wide gold band.				Each	Doz.	100

"ADJUSTO" PLANT SUPPORT

There have been many plant supporters offered and sold but they were all ungainly and unsatisfactory in a great many ways. We can offer the "Adjusto" under a positive guarantee that it will please you and give you entire satisfaction. The "Adjusto" is a very simple, unbreakable, practical and cheap support which will last a lifetime.

It is adjusted in a "jiffy" to any height, to conform to the plant's growth. It is indispensable for Tomatoes, Roses, Hydrangeas and Dahlias. In fact everything on the lawn or in the garden that needs a support.

The stake is made of hardwood, having a protecting coat of green paint, the heavy spring wire is also painted green and so will not rust.

The price is very moderate and is within the reach of all. Price, 3 ft. \$0.15 each, \$1.60 per doz. Price, 5 ft.20 each, 2.50 per doz.

Small sizes as above, 18 and 24 in. for potted plants, carnations, etc.

Price, 18 in. \$.07 each, \$0.75 per doz. Price, 24 in.10 each, .90 per doz.

SIMPLEX WEATHERPROOF PLANT LABELS

Neat, convenient, permanent. The writing is protected by the transparent cover, and will last indefinitely if done with lead pencil. Whatever water enters at the sides will not deface the markings as the graphite of the pencil is not soluble to any extent and requires friction to remove it. This friction is prevented by the transparent cover.

Directions: Slide transparent cover to one side, mark with ordinary lead pencil, replace cover, pass wire through both holes and attach. Waterproof India Ink may also be used for marking with excellent results.

Prices, Including Copper Wire for Attaching

No.	Sizes	Per Doz.	Per 100	No.	Sizes	Per Doz.	Per 100

2	4 x ¾"	.50	4.00				

Special sizes to order.

LABELS. Improved Indestructible Tree. These labels are made of copper alloy, and so constructed that the wires can not cut through the metal from constant flapping in the wind. If properly attached there is no danger of it becoming unfastened. By using a stylus or hard lead pencil the metal is indented and the writing is permanent.

No. 1. 3¼ x ¾", per 100 \$1.50
No. 2. 5 x 1½", suitable for two lines writing, per 100 2.00

WIRE RODS or STAKES. To be used with Indestructible or other hanging label, \$6.00 per 100.

FOLDING WIRE PLANT STANDS

The most compact, strong, durable plant stand ever offered for sale, and at prices less than all others of the same capacity. They pack closer than any other plant stand for shipment. The ends are made of flat steel and have porcelain castors. The steel and iron work is finished in green and bronze. The construction of the shelves or trays is such that there is more room for the pots and foliage than any other plant stand that takes up the same amount of room on the floor.

GLAZETITE GLAZING CEMENT

A perfect compound for Glazing, Reglazing and Repair Work on Greenhouses and Sash. Glazetite is black, made from a long fibre asbestos and elastic gums. For glazing purposes it requires about three gallons to each thousand feet of glass. Prices as follows:

55 and 35 gallon steel drums	\$1.50
5 gallon cans	1.70
1 gallon cans	1.75

COTTON BATTING

For packing flowers, etc. Per 10c sheet.

PENCILS

Wolff's Indelible Garden. For writing on wood labels, with point protector. Each, 20c; doz., \$2.00.

TAPE, ELECTRIC

Exceedingly useful for mending rubber hose. It is a strong adhesive ribbon, ¾ of an inch wide, can be wound tightly around a leaking part. Per coil, 25 and 50 cts.

COTTON TAPE

For tying bunches of Asparagus Tips about a quarter of an inch wide, in spools of 1000 yards, color red. Price, \$3.00 per spool.

TINFOIL

For bouquets. Plain, 1 lb. pkgs. 35c. per lb. Violet color, 50c. per lb.

TWINE

Soft, for tying cut flowers, vines, etc. Per ball, 25c.

TWINE PARCELLING

All sizes. Per ball, 10 to 25 cts.

WAX GRAFTING (Trowbridge's)

The best in the market. This brand should not be confounded with the many cheap makes now offered, that are not possessed of an even consistency, and give unsatisfactory results. Put up in 1 lb., ½ lb., and ¼ lb. packages; price 50 cts., 30 cts., and 20 cts. respectively.

WIRE, BOUQUET

Bright, cut in lengths of 9 and 12 inches, in boxes of 12 lbs. (one stone) each.

Per box, either length, Nos. 20, 21 and 22	} Prices quoted on application
Per box, either length, Nos. 23 and 24	
Per box, either length, No. 25	
Per box, either length, No. 26	
Per box, either length, No. 34	

PROTECTING CLOTH FOR HOTBEDS

Used as a substitute for glass for protecting plants in early spring. Per yard, 22c, per piece of 60 yards, 20c per yard.

PUTTY BULBS

A simple and useful device for applying putty to sashes, \$1.25 each.

WHITE WAX PAPER

For packing and protecting flowers and plants. Size, 12 x 18 inches, 90c per ream. Size 24 x 36 inches, \$3.50 per ream.

KRAFT WRAPPING PAPER

In 18, 24 and 30 in. rolls. For wrapping parcels, boxes, etc., per pound, 17c. Price subject to change.

TWINE, MELON NETS

30c each; \$3.00 per doz. For supporting melons growing in greenhouses.

PROTECTORS, ARLINGTON PLANT

Protect from bugs, bores and fowls, also subdues wind, rain and cold. Each, 30c; doz., \$3.00.

MASTICA

(For Greenhouse Glazing)

We originally introduced Mastica to the horticulturists of New England. It is superior to any and all other preparations for the purpose, and when results and labor in setting or resetting glass are considered it is decidedly the cheapest article to use.

We are the Manufacturers' Distributing Agents for Boston

For glazing greenhouses, new or old. The use of Mastica avoids the necessity of frequent reglazing. It can be used to bed in or on the outside, with a machine; one gallon will cover about 290 running feet (one side).

Gallon cans	\$3.00
Machines for applying Mastica	3.00

ROFFEA

This grass, long used by gardeners for tying plants and bunching vegetables, has been adapted to new uses. While it is likely to hold its place as the best tying material yet produced, there will be a great demand for it for a few years for making baskets, mats, etc. Per lb. 25c., 10 lb. lots, 20c. lb. Special price quoted on bale lots.

GARDEN GLOVES

Used for growing smilax and asparagus on, also for tying in bouquet work; per reel, 35 cts.

Scollay Sprinkler

Straw Hot Bed Mat

Hot Bed Sash

DOUBLE GLASS HOT BED SASH

Two sashes in one frame, doing away with the extra mat and board covering which must be used in this section during our severe winter, if one is to be sure of plants growing in Hot Bed or Cold Frame.

The double layer of glass, $\frac{5}{8}$ inch apart, provides dry air space, which is the best non-conductor known, and while acting as a protecting mat or blanket, lets in the sun with its heat rays. Our sash is all puttied into the frame, which is made of

the very best material and well painted and the standard 3 x 6 size; lights of glass, 10 x 12.

Price: per single sash, \$8.25; 5-sash at \$8.00 each; 10-sash and over \$7.75 each; delivered to railway station or express, Boston. Crating extra.

SINGLE GLASS SASH FOR HOT BEDS OR COLD FRAME**Crating Extra at Cost**

Made from thoroughly seasoned lumber. Frame, well puttied and painted, $1\frac{3}{4}$ -inch stock; glass, 8 x 10. The best sash offered today in Boston.

Price: Single sash, \$7.25 each; 5-sash or over, \$7.00 each.

BRECK'S SPECIAL HOT BED SASH WITH FRAME, COMPLETE

The outside dimensions of **Frame** are three feet one inch long, and four feet eight inches wide, made of one inch **Cypress**; the back piece is nine inches wide and the front piece is six inches wide, grooved together, and held in place by eight strong hooks.

Being fastened together by the hooks enables one to take it apart at the end of the season and store away in a very compact form, which we consider an essential feature, as by so doing, the frame may be made to last for years.

The **Sash** is also made of **Cypress** of one and one-half inch stock, put together and glazed in the very best manner. On the under side of the **Sash** is fastened a cleat, one inch from the outer edge, all around, thus forming a rabbet which makes the frame very tight, preventing the cold air from entering or the heat escaping.

The construction of the frame is so simple that any one with a hammer and screwdriver can put it together in a few minutes.

In offering this **Special Hot Bed** to our customers we feel that we have something that will give entire satisfaction and will supply a long felt want.

Our price for **Frame** and **Sash** complete is only \$7.50 delivered at the railroad in Boston.

HAWK EYE TREE PROTECTOR

A sure protection against sun-scald, rabbits, mice, and other vermin. Width, 10 inches; 20 inches high, cut with the grain of the wood, and chemically treated on one end. These strips of thin veneer are easily applied and permanent.

Price per hundred \$2.50
Price per thousand 20.00

BRECK'S EXTRA HEAVY HOT BED MATS

Weight about 11 lbs. Dimensions about 76 inches by 76 inches. Heavily quilted, heavy drill both sides.

Each Per Doz.

INSECTICIDES AND FUNGICIDES

In general terms: Arsenate of Lead and Paris Green are specifics for leaf-eating insects. Kerosene Emulsion, Tobacco, Fish Oil Soap for sucking insects. Bordeaux Mixture and Lime and Sulphur for fungus.

Prices subject to change without notice. See spraying calendar on page S 54

"CORONA DRY" ARSENATE OF LEAD

A pure Arsenate of Lead containing 33% arsenic oxide, absolutely chemically combined with lead and the lowest percentage of "free" or water soluble arsenic. It is the ideal compound for spraying potatoes because it combines the quality of quick poisoning (superior suspension), giving even application; absolutely safe from "burning" and great adhesiveness. It gives an even application, covers more thoroughly and sticks to the foliage longer. It mixes easily and readily in water. No working up to prepare for the spray tank. No straining. It is only necessary to shake the proportional amount into the spray tank. By using the same weight each time you spray, your mixture is always

the same strength. No guess work. Standardization is alone worth the price. No freight to pay on water; cannot freeze or dry out, cake, or lose its strength.

CORONA DRY BORDEAUX MIXTURE

Bordeaux Mixture has been used in the past as a spraying compound and the standard remedy for fungus diseases and is generally recommended. The home-made freshly prepared Bordeaux compounded on one of the standard formulas has been the most efficacious product that could be used by commercial orchardists and potato growers. In the home garden it may be used dry as well as in liquid form and is needed for regular use the season through. Corona Dry Bordeaux Mixture is the result of extensive experiments to retain the values of the freshly prepared substance to the fullest extent. The intense greenish blue color of the freshly prepared mixture has been retained to a large degree and its practical use in the field has shown that we have been very successful towards preserving the fungicidal and stimulating values as well. But Dry Bordeaux can often be substituted with Dusting Sulphur especially in combating Mildew wherever found, as well as in the greenhouse. This substitution is recommended when possible, particularly on flowers and roses because the Dusting Sulphur does not stain the foliage. Uses of Dry Bordeaux are mentioned under the different headings. It is put up in standard sizes.

CORONA TOBACCO DUST

For use in the garden, the Tobacco Dust should be in the form of a fine powder and this is the standard we have approached in Corona Tobacco Dust. When dusted over young plants it is very efficient in repelling many kinds of bugs and in keeping the foliage free from Aphids and Lice. Its specific uses have been indicated under the different plants and vegetables enumerated. There need be no fear of using too much, it does no harm and is a good fertilizer.

FORMALDEHYDE

Solution 40% (Poison). Used to prevent potato scab. Full directions for use accompany bottle. Sold in pound bottles only. 50c lb.

CORONA DUSTING SULPHUR FOR FUNGUS PESTS

Pure refined superfine flour sulphur. No other ingredients. This pure sulphur is especially prepared for dusting. It can be used for all purposes of commercially pure sulphur. There are many insects, and even more fungus diseases, that have no known remedies at the present time. The fungus diseases are the harder of the two to handle, but some of the most common ones can be controlled by use of an efficient sulphur product.

SCALECIDE (WITH FUNGICIDE)

A reliable simple and economical spray for San Jose Scale, Brown Scale, Red Scale, Cottony Maple Scale, Pear Psylla, Rust Mite, White Fly, and many other scale and soft bodied sucking insects. Scalecide is not an emulsion, but a soluble miscible oil that mixes instantly with cold water and stays mixed. We believe it to be more effective than any other soap or oil emulsion, and if used as directed will not injure the trees. Spray thoroughly or not at all, using finest nozzle. Fogging is better than drenching. Full directions for use accompany each package.

DRY LIME SULPHUR

In Rogers Brand of Dry Lime Sulphur we find successfully combined lime and sulphur in a dry form and producing a compound which has all of the insecticidal and fungicidal qualities of the liquid material and all of its advantages with none of its disadvantages. Safe and effective not only as a dormant spray but also as a summer spray in combination with arsenate of lead. Tested by experiment stations and found superior to all dry compounds on the market, in safety and in effectiveness.

From 10 to 12 pounds of Rogers Dry Powdered Lime Sulphur dissolved in 50 gallons of water should be used as a dormant spray against scale, etc.

From 2 to 3 pounds to 50 gallons of water in combination with the usual preparation of Dry Powdered Arsenate of Lead or Paste Arsenate of Lead should be used for summer spraying on all seed fruits such as apples, pears, quinces, etc.

From 1 to 1½ pounds to 50 gallons of water in combination with the usual strength of Arsenate of Lead should be used for summer spraying of peaches, plums and all stone fruits.

RAT CORN

Is not an experiment. On the contrary, it is a thoroughly tried and proven destroyer of rats and mice. It is poison to rats and mice. When dead they leave no odor, as they are mummified. Keep away from fowl. It is sure death to rats and mice. Rat corn is guaranteed to do everything we claim, and this statement can be used as our guarantee

with each box you buy. Rat corn will kill rats and mice. It is safe, sane and sanitary; rats die in their nests. You find no dead ones around, no odor and no danger of being infected as you do not have to handle dead rats to bury them when killed with rat corn. Start to use rat corn now before it is too late. Sold in 25cts., 50 cts. and \$1.00 packages. Sent postpaid on receipt of price.

VAPORITE

A fine, dry powder, most effective for killing ants, beetles, wire worms, cut worm and similar insects in the garden soil. To destroy ants one should dust the Vaporite over the ground near the largest ant hills and runs, then wet the insecticide down thoroughly with hose or watering pot, that it may be driven as far into the soil as possible. To use it most effectively against the cut worm, Vaporite should be thoroughly worked into the surface soil 5 or 6 days before planting time.

CHEMICALS AND FERTILIZERS

BRECK'S LAWN AND GARDEN DRESSING

Its superiority over stable manure can scarcely be estimated, as the latter, in addition to disfiguring the lawn by its unsightly appearance, also gives out an unpleasant odor, and always contains weeds and other undesirable seeds. Great care should be taken to distribute the dressing evenly, and in no greater quantities than recommended on the tag which accompanies each bag, as a too liberal application will injure the sward. It can be applied at any time during the year, from April to November, as often as the grass seems to need nourishment. Never apply the dressing while the grass is

wet with dew or rain. Any time the grass is perfectly dry will answer, but the best time to apply it is just before a shower.

TOLMAN LAND LIME

LIME benefits the soil in the following ways:

LIME sweetens a sour soil.

LIME mellows heavy and clayey soils.

LIME makes available certain valuable potash compounds others lose.

LIME increases the capacity of the lighter soils to retain moisture.

LIME makes phosphatic fertilizers more effective.

LIME makes organic matter decompose more rapidly and easily, thereby rendering the vital plant food contained more promptly available.

LIME in the soil combats organisms causing diseases among cabbages, cauliflower, turnips, beets and the like.

TOLMAN LAND LIME has been prepared with great care under the advice of experts and practical farmers to satisfactorily meet the rapidly increasing demand for lime in agriculture. It comes from unusually pure calcium lime-rock testing approximately 96% straight CaCO_3 with less than 2% MgCO_3 present and is thoroughly kiln burned (not unburned limestone). On leaving the kiln it is carefully mixed with limehydroxide in the proportion of one-third lime oxide to two-thirds lime hydroxide, yielding a mixture sufficiently caustic to do its work but amply tempered with the lime hydroxide to prevent soil and root burning as well as discomfort in handling. Our product is thus powerful, and safe even on light soils.

In order to make TOLMAN LAND LIME easier and pleasanter to use it comes in a uniformly sand grained size, coarse enough not to sift and blow about like pulverized lime and still sufficiently fine to promote ready absorption by the soil and work easily in spreaders.

We claim that our LIME accords with the latest recommendations of the various Agricultural Experiment Stations and that it is safe, powerful, economical, uniform and comfortable to handle. It comes packed in convenient, durable, cotton cloth sacks, one hundred pounds to the sack.

Price, \$1.25 per 100 lbs., \$16.00 ton.

BRECK'S RAM'S HEAD BRAND PULVERIZED SHEEP MANURE—(Odorless)

A standard dressing for lawns and around private homes or cemeteries; on golf courses and wherever a strong, luxuriant growth of grass is needed. No time is lost waiting for Pulverized Sheep Manure to rot, as is the case with stable or Barnyard Manure, and no necessity for raking off refuse after an application of Breck's Ram's Head Brand, or danger of tracking into the house, or making the lawn unsightly or evil smelling.

Apply Ram's Head Brand two or three times during the season before rain or watering at the rate of one pound or over to 30 square feet or less. This will keep the lawn or golf course in flourishing condition.

Ram's Head Brand is pure and unadulterated. We get it from Sheep Corrals where the animals have been kept under cover, hence it retains its full strength, and besides has been put through a mechanical drying and grinding process which destroys absolutely all weed seeds, rendering Ram's Head Brand very valuable for the florist to be used as a bench fertilizer.

We are selling increased quantities of our brand to the Florist for this purpose and we can highly recommend it.

SCOTCH SOOT

This is much used by florists and gardeners, both as a fertilizer and fungicide. Mixed with Flowers of Sulphur (two-thirds soot, one-third sulphur) there is nothing better to prevent and cure mildew. Used as a fertilizer either in the dry state or in liquid, it quickly promotes growth. Per bag of about 2 1/2 bu., \$7.00 per 100 lbs.

BRECK'S EXTRA MARKET GARDEN MANURE

A high-grade, properly balanced, complete fertilizer. Can be used either with or without barnyard manure, and for general use on all farm and garden crops. Especially recommended for market gardeners.

Per ton.....	60.00

For free delivery offers and general instructions regarding orders and shipments see second page of cover.

STIM-U-PLANT**Plant Stimulant Tablet**

Stim-U-Plant is the richest plant food on the market and must not be confounded with the ordinary plant foods now offered to planters. The very highest grade commercial fertilizers are very low in fertility compared with Stim-U-Plant. The better grades of commercial fertilizers do not contain more than 3 to 5 per cent of Nitrogen, 6 to 10 per cent Phosphoric Acid, and 3 to 5 per cent Potash; Stim-U-Plant contains a guaranteed analysis of 11 per cent Nitrogen, 12 per cent Phosphoric Acid, and 15 per cent of Potash. The fertilizer ingredients in commercial fertilizer are for the most part in a relatively slow acting form, while in Stim-U-Plant they are water soluble, which causes them to become immediately available to the plants.

Stim-U-Plant tablets are designed for use by all who grow plants—home gardeners, market gardeners, small-fruit growers, fruit growers, florists and farmers. Their most valuable use is in feeding the growing plants. Being composed of water soluble materials of great feeding power and of known weight and percentage of plant food, Stim-U-Plant tablets can be used directly to the soil at the base of the plants to feed them definite amounts of available food. Once in the soil they immediately dissolve and mingle with the soil water, pass into the root-hairs and roots to begin feeding the plants. No matter how fertile the soil may be Stim-U-Plant is effective in feeding the crops because of its rich, available food content.

No Plants Can Slack as Stim-U-Plant Acts.

Stim-U-Plant tablets are packed in four sizes:

Trial size.....	\$0.15
Small Size.....	.25
100 tablets.....	.75

INCH OR GRAPE BONE

This is unmanipulated bone, broken into pieces that vary in size from one-quarter to an inch. It is unsurpassed as a lasting fertilizer for grape vines, fruit trees, shrubs and trees of all kinds. It should be used liberally in grape vine borders and when setting out vines and fruit trees. Mix with soil to a depth of one foot or more.

------------------	--------

Ben Franklin Agricultural Gypsum

SOIL FERTILITY depends upon the presence in the soil of ten chemical elements. If any of these elements is lacking, the soil will be deficient in fertility.

Six of these elements are abundantly supplied by rain or moisture or else are present in sufficient quantities in nearly all American soils. The four remaining elements the farmer must put back artificially in order to maintain maximum fertility. These four are:

Sulphur	Nitrogen
Calcium	Phosphorus

Of these four needed elements, Ben Franklin Agricultural Gypsum supplies three. It directly supplies sulphur in the immediately available form of sulphate. It supplies calcium. And it supplies nitrogen in the only way that is economical for general farming.

Four Main Uses

1. For leguminous and other crops of high sulphur requirement.
2. As a preserver of nitrogen in manure.
3. In combination with ground rock phosphate as a complete, economical substitute for acid phosphate.
4. As a specific for black alkali soil.

How to Apply Ben Franklin Agricultural Gypsum

Broadcast or sow with a lime sower Ben Franklin Agricultural Gypsum at the rate of 300 to 500 lbs. per acre as follows:

For legumes in rotation, such as red clover, sweet clover and also for Alfalfa and white clover-blue grass, apply in the early Spring of the year the crop is to be mown.

With the perennials, such as Alfalfa and white clover-blue grass, repeat the application every two or three years. In stubborn cases where a stand is difficult to obtain, apply at the time of sowing the seed.

Gypsum may be applied alone or, much better, in combination with farm manure.

\$1.25 per 100 lb. \$20.00 ton.

CLAY'S FERTILIZER

(Prices on English Fertilizers
subject to change)

A safe and reliable preparation. In great favor with successful gardeners in England. Prices:

1/8 cwt. (14 lbs.).....	Bag,	\$2.25
1/4 cwt. (28 lbs.).....	"	4.00
1/2 cwt. (56 lbs.).....	"	8.00
1 cwt. (112 lbs.).....	"	15.00

THOMSON'S VINE, PLANT AND VEGETABLE MANURE

A safe and reliable food and stimulant for every fruit-bearing plant, also for foliage and flowering plants and vegetables of all descriptions. Prices. 1/8 cwt. (14 lbs.) \$2.25; 1/4 cwt. (28 lbs.) \$4.00; 1/2 cwt. (56 lbs.) \$8.00; 1 cwt. (112 lbs.) \$15.00.

THOMSON'S SPECIAL CHRYSANTHEMUM MANURE

Entirely soluble and very powerful, especially suitable for top-dressing chrysanthemums and similar plants. It is meant to be used as an additional stimulant during the growing season. A heaping dessert-spoon full will be sufficient for a 10-inch pot, sprinkled over the surface of the soil, and watered in with tepid water. This may be given three times during the growing season. Price, 14 lbs., \$2.25; 28 lbs., \$4.00; 56 lbs., \$7.00.

BOWKER'S AMMONIATED FOOD FOR FLOWERS

A dressing made expressly for plants grown in the house, garden, or conservatory. Clean, odorless, and producing early and abundant blossoms of rich and brilliant color and healthy, luxuriant plants free from vermin. Price, small pkg., 20 cts.; large pkg., 30 cts.

COCOANUT FIBRE

A chemically prepared cocoanut fibre, rich in plant food. Its peculiar character especially adapts it to induce root growth and cause healthy vigorous plants. For potting bulbs use one-third fibre to two-thirds of the usual soil preparation and you will be surprised at the results. Cocoanut Fibre is unsurpassed as a medium in which to sprout seeds. Price, 5 lbs., 35 cts.; 15 lbs., 60 cts.; 25 lbs., 85 cts.; 50 lbs., \$1.60; 100 lbs., \$3.00, net.

HUMUS

Untreated, finely ground, dry Humus for renovating lawns, golf greens, improving pot soil, etc. \$2.00 per 100 lb. bag, \$35.00 per ton.

THE BARRIE FORCING FRAME

Under these frames corn, cabbage, cauliflower, lettuce, cucumbers, tomatoes, melons, egg plant, etc., as well as all tender flowers, can be started and grown in the open ground and brought to maturity much earlier than usual.

The frames placed over rhubarb or other permanent plants, either vegetables or flowers, greatly hasten their maturity in the spring.

Lettuce, etc., can be grown under or protected by the frames through the late fall.

Excellent for the starting of tender flower and vegetable seeds for transplanting into the open ground.

The frames also protect their contents from the ravages of the cut worm.

Placed over bulbs in the spring time, in the small garden, blooms of greater perfection may be had much earlier than usual.

The frames are constructed of Galvanized Iron unpainted, and can be instantly set up or taken apart without the use of tools.

Any light of glass can be easily replaced, in case of breakage, without taking apart the frame, and the top glass slides open for ventilation.

The metal frame weighs two pounds without the glass and is absolutely strong and rigid. The glass consists of four panes 10 x 12 inches, and one pane 12 x 13 inches, standard sizes, easily obtainable anywhere.

To assemble, fit the corners of the top and bottom squares into the slits in the ends of the posts. Pass the stay rods, bent end up, through the holes in the squares, inside the posts. Attach nuts and tighten slightly. Slip in the glass and the frame is complete.

Carefully packed, knocked down, in heavy corrugated cartons, each containing six frames and glass complete.

Price, \$1.75 each; \$20.00 a dozen.

THE MAPES MANURES

Delivered F. O. B. cars, Boston

Prices subject to change without notice

THE MAPES POTATO MANURE—Guaranteed Analysis:

Ammonia, 4.50 to 5%; total Phosphoric Acid, 8 to 10%; available Phosphoric Acid, 7 to 9%; Soluble Potash, actual, 5 to 6%.

It is also well adapted for all vegetables at planting or any hoeing, particularly where starch and sugar formation is desired—superior quality of crop as well as large yield; also for sweet potatoes, asparagus, sweet corn, sugar beets, strawberries, and all small fruits—pears, grapes, etc.

The Phosphoric Acid and Organic Nitrogen are derived exclusively from animal bone, animal and organic matter. No Rock or Acid Phosphates used.

The Soluble Nitrogen and Ammonia are in form of high-grade Salts of Ammonia and Nitrogen.

The Potash is in form of high-grade Salts of Potash.

Directions for Use.—

May be used in the hills or rows, mixing and covering with earth, provided it is scattered well. Scatter it down the rows, mix as thoroughly as possible in any manner which best commends itself—with plow, hoe, brush, sled, chain, etc. Use 800 pounds and upward per acre on ordinary land.

The quantity of this manure may be increased to one ton per acre, and this quantity is successfully used by many growers, particularly when potato crop is followed by wheat, grass, corn, etc.

Price, per 100 lb. bag, 3.75. 200 lb. bag, 7.00. Per ton, 100 lb. bags, 65.00.

MAPES TOP DRESSER

—Ammonia, 10%; Phosphoric Acid, 6% (available, 4%); Soluble Potash.

Use at the rate of 300 to 500 lbs. per acre. Comprised of the very highest grades of soluble fertilizer material. Highly recommended for dressing worn-out hay fields, pastures, lawns, and golf courses.

Price, 4.75 per 100 lbs.; 9.00 for 200 lbs; 85.00 per ton.

THE MAPES CORN MANURE—Guaranteed Analysis:

Ammonia, 3 to 3.50%; total Phosphoric Acid, 10 to 12%; available Phosphoric Acid, 8 to 10%; Soluble Potash, actual, 3 to 4%.

For sweet corn, fodder corn, Hungarian grass, millet, late turnips, late cabbage, and seeding to grass.

Directions for Use.—On heavy or average good land, particularly when stable manure is used broadcast, use 200 or 400 lbs. per acre, scattering well in and over hills and drills; on light lands, use broadcast 600 pounds per acre.

The best plan for securing good growth throughout the

entire season and raising a large yield, is to broadcast the fertilizer evenly over the whole field after plowing, harrowing in. A portion of the fertilizer, say 200 to 400 pounds per acre, can be used in the hills, scattering well a small handful to each hill.

Application at any hoeing or disturbance of the soil has always worked well.

Price, 3.25 per 100 lbs. bag; 200 lb. bag, 6.00; per ton, 100 lb. bags, 58.00.

BRECK'S IMPROVED LEANING CORN
Grown on the H. G. Lapham Estate, Brookline, Mass.
Richard Barkhouse, Supt.

THE MAPES GRAIN

BRAND—Guaranteed Analysis: Ammonia, 2%; total Phosphoric Acid, 10%; available Phosphoric Acid, 8%; Soluble Potash, actual, 2%.

For wheat, rye, corn, oats, buckwheat, and all farm crops, particularly where farm manures are used.

Specially adapted for use in hill or drill. May be used on all crops.

The Phosphoric Acid and Organic Nitrogen are derived exclusively from animal bone, animal and organic matter. No Rock or Acid Phosphates used.

The Soluble Nitrogen and Ammonia are in form of high-grade Salts of Ammonia and Nitrogen.

Directions for Use.—

Use 200 to 600 pounds per acre broadcast.

Price, 3.00 per 100 lb. bag; 200 lb. bag, 5.50; per ton, 100 lb. bags, 52.00.

THE MAPES GENERAL TRUCK MANURE

—General Analysis: Ammonia, 5 to 6%; total Phosphoric Acid, 8 to 10%; available, 6 to 8%; Soluble Potash, actual, 5 to 6%.

For Vegetables, truck, etc.

Directions for Use per Acre

For Potatoes, Irish or sweet.....	600 to 1,000 lbs.
Onion, truck.....	1,000 to 2,000 "
Asparagus, new beds.....	1,000 to 1,600 "
Asparagus, old beds.....	600 to 1,000 "
Sweet corn.....	400 to 800 "
For Orchards.....	400 to 600 "
Grass top dressing.....	400 to 600 "
Oats.....	200 to 400 "
Seeding to grass.....	600 to 800 "
Strawberries and small fruits.....	600 to 800 "

Also for cranberries, tomatoes, melons, early turnips, millet, all summer crops, etc.

May also be applied to all hoe crops at any hoeing, strewing between the rows.

There is no loss in strength in this manure from exposure on the surface of the ground.

Price, 4.00 per 100 lb. bag; 200 lb. bag, 7.50; per ton, 100 lb. bags, 68.00.

PRIMULINUS HYBRID GLADIOLI

This new and beautiful race of Gladiolus has been produced by using the fine yellow species "Primulinus", or "Maid of the Mist", in crossing with the older existing strains. The hybrids resulting are distinguished mainly for their fine and varying shades of yellow, graceful slender stems, and airily poised and hooded flowers.

Every variety we offer is the product of the master hybridizer, Kunderd. Every variety is an Exhibition variety; not a disappointing flower in the lot.

KUNDERD'S HYBRID PRIMULINUS

	Each	Per Doz.	Per 100
Albion. Very large salmon rose pink. Beautiful throat.....	.20	2.00	10.00
Alice Tiplady. Primulinus species X yellow Kunderdi. A grand, large Primulinus of most beautiful orange saffron color.....	.25	2.50	18.00
Altair. Extra tall, of finest salmon saffron. A grand color.....	.25	2.50	18.00
Anamosa. Extra tall. Finest orange salmon. Many open. Golden throat. Very large and beautifully marked.....	.20	2.00	15.00
Angola. A fine salmon pink.....	.15	1.50	20.00
Anita. An extra tall, richest canary yellow. Deeper throat. Many open. Very good.....	.20	2.00	15.00
Antares. Tall spike with 12 blooms, 4 or 5 open at once. Flowers pale salmon orange, deeper salmon toward edges of petals. Pale yellow throat. Buds bright salmon.....	.20	2.00	15.00
Argo. Grand, tall, large. The Primulinus Myrtle. Extra.....	.25	2.50	18.00
Aurega. Tall spike with 10 or 12 blooms. Bright rose pink, pale in throat. Edges of petals slightly ruffled.....	.25	2.50	18.00
Butterfly. Kunderi Glory X species Primulinus. Very strong and vigorous. Large, pale, salmon yellow, ruffled flowers.....	.15	1.60	10.00
Canopus. Large, rich, solid yellow, fine shade of deeper yellow throat. Extra.....	.25	2.50	18.00
Capella. Tall, very bright, fiery orange red. Very large and choice.....	.25	2.50	18.00
Dorothy Wheeler. Beautiful rose pink with lighter throat, slightly ruffled, tall, many flowers open at once.....	.25	2.50	18.00
Elberton. Tall, finest creamy yellow. Lower petals much deeper. Large. Very pure, rich color.....	.15	1.50	10.00
Golden Gate. Tall, vigorous. Large, showy yellow, finely ruffled.....	.25	2.50	18.00
Iola. Tall, graceful. Many medium-sized blooms open at a time. Deep yellow. Very fine.....	.25	2.50	18.00
Mintaka. Tall spike with 14 or 15 blooms, 6 or 8 open at once. Color soft pink, much brighter at edges of petals. Soft canary yellow throat.....	.20	2.00	15.00
North Star. Good size; very rich, deep yellow. Throat very beautiful deeper yellow. Extra.....	.15	1.50	12.00
Perseus. Tall spike with 12 to 14 blooms. Large flowers, about 5 inch diameter, bright salmon with pale yellow throat. Scarlet buds.....	.20	2.00	15.00
Regulus. Tall. Large flowered, richest orange salmon with delicate yellow. Extra grand.....	.20	2.00	15.00
Rigel. Tall, softest salmon blush on delicate yellow. Extra fine.....	.20	2.00	15.00
Roanoke. A vigorous and large, rich, yellow Prim. XK. Glory. Very fine.....	.20	2.00	15.00
Salmon Beauty. Very large flowered Primulinus. Deep salmon, rich salmon, yellow throat.....	.25	2.50	18.00
Sedan. A fine ruffled Primulinus hybrid. Rich yellow with crimson bar on lower petals.....	.25	2.50	18.00
Seneca. Almost transparent, faintest wine-pink, on a delicate yellow ground. Distinct.....	.25	2.50	18.00
Sirius. Large, dark salmon, rich throat. Fine ruffled Primulinus hybrid.....	.15	1.50	10.00
Spica. A richly colored and finely ruffled Primulinus hybrid.....	.15	2.50	10.00
Sweet Orra. Tall, fine pale sulphur. Rich pink line in throat.....	.15	1.50	10.00
Vega. A very fine all-yellow, similar to "Canopus." Not quite so large a bloom, but more open at a time.....	.20	2.00	15.00

	15 Mintaka	

Collection E. 100 Bulbs for \$5.00. 100 Mixed Primulinus Seedlings.

For full list of standard varieties Gladioli see Nursery Catalogue

DAHLIAS

These old-fashioned flowers have always been in favor on account of their bright colors, and their freedom of bloom under unfavorable conditions. Late developments have added such beauty and gracefulness that they are more than worthy of the increasing interest in their cultivation which is now apparent. Their extreme variation in form and color has resulted in an almost endless assortment of named Dahlias; but careful selection reduces to a comparatively small number the sorts that are of recognized value for garden cultivation, and it is of such sorts that our collection is comprised. Type of flower is indicated after name of each.

Not less than six of one variety at the dozen rate.

Balmoral—Collarette

	Each	Doz.
Achievement. (Collarette.) Clear, rich, velvety maroon; collar waxy snow white overlaid with pinkish crimson.	.35	3.50
A. D. Livoni. (Show.) A beautiful pink.	.25	2.50

Zeppelin. (Decorative.) Violet-mauve with silvery suffusion.....	.25	2.50

Queen Wilhelmina—Peony-flowered

DAHLIA DOZENS

No. 1. **Cactus Dahlias.** An assortment of 12 named varieties, all different, each one labeled, for \$2.00.

No. 2. **Decorative and Peony-Flowered.** 12 Named varieties, our selection, for \$2.50.

No. 3. **Single and Collarette Dahlias.** Two each of six named varieties, our selection, for \$2.00.

No. 4. **Pompon and Show Dahlias.** One dozen named varieties, each root labeled, our selection, for \$1.75.

Popular Mixture. Every season mixtures occur in handling our stock of Dahlias. All are high-class varieties, frequently worth 50 cents per root. This mixture we offer, packed one dozen in a box, at the low price of \$1.50 per box.

Field of Cannas at Lexington, 1921

FLOWERING CANNAS

Our collection, the most complete in New England, comprises many of Wintzer's greatest creations in giant orchid-flowered Cannas, all of which have won the highest awards at the world's most notable exhibitions. These new and improved forms of Cannas must be seen to be appreciated. Their brilliancy of color, perfect flower-spikes, and free blooming qualities combine to make them the most popular of flowering plants for lawn decoration. Our Canna fields, when in bloom, always attract much favorable comment.

Cannas thrive in any good garden soil, made rich with well-rotted stable dressing. Best results are obtained by starting the roots in-doors in pots during March or April, the plants being set out after the weather is settled and the ground warm, usually in May or June. For bedding, the plants are usually set 18 inches apart. We do not furnish dormant roots after April 1st, but have a full stock of growing plants in pots ready for setting as soon as weather conditions are favorable. By setting these pot-grown plants, one secures a much longer flowering period than when dormant roots are planted. Cannas continue to bloom freely until the frost cuts them down in the late autumn, after which the roots should be lifted and stored in a dry place free from frost.

DESCRIPTIVE LIST

Beauty. 4 ft. Red flowers, spotted and margined with yellow.	Doz. 100
City of Portland. 3½ ft. Glowing salmon-pink	2.50 18.00

Yellow King Humbert. (New). 4 ft. Yellow dotted with red.	3.50

Yellow King Humbert

Canna Rosea Gigantea

PLANTING SUGGESTIONS

CANNAS may be used in small groups in the flower or shrub border; but the usual arrangement is in the form of round or oval beds, massing the plants, one or more colors symmetrically arranged, with a border of Coleus, Salvia, Variegated Geranium, or some similar plant. In very large beds, a central group of Caladium (Elephant's Ear) or Castor Bean is frequently made use of. It is also advisable, when the bed is large enough to warrant, to select a tall-growing variety of Canna for the center, surrounding this with a lower-growing sort of some harmonizing color.

The Cannas should be spaced 15 to 18 inches apart, while the border plants, being smaller, should be spaced 12 inches apart. It is well to mound up the soil in the bed so that the center is higher than the edges. The soil should be rich and well pulverized; the plants should be given plentiful watering after planting, and at frequent intervals during dry periods.

Quantities of Cannas for Round Beds

Diameter	Cannas	Border Plants
4 ft.	6	11
5 ft.	10	15
6 ft.	14	17
8 ft.	24	22
10 ft.	30	30
12 ft.	40	36
15 ft.	60	45
18 ft.	80	54
20 ft.	104	62
25 ft.	130	72

VISIT OUR NURSERIES

During midsummer and early autumn, many interesting and attractive features in and about our grounds may be found at their best. The Cannas, Dahlias and Gladioli, as well as the Roses and perennial flowers, provide a continuous profusion of bloom until heavy frosts destroy them.

SUMMER BEDDING PLANTS

Pot-grown, for planting about May 1st.

Branching Aster

FRUIT TREES AND SMALL FRUITS

Grown in New England; well rooted, clean and thrifty

APPLES

The following list of apples embraces varieties which have been tested, and can be recommended as the very best for general cultivation. All apples are furnished in standard sizes unless dwarf trees are specified.

Prices: 2-year, 5 to 7 ft., \$1.50 each; \$15.00 per doz. except as otherwise noted. Extra size, 3 and 4-year trees, \$2.00 to \$3.00 each.

Dwarf Trees on Paradise stock, 2 to 3 ft., \$1.25 each; \$12 per doz. These are useful for small gardens, and usually bear the third year after planting. Offered in the following varieties: Baldwin, Duchess, Ea. Williams, Gravenstein, Hubbardston, McIntosh, Red Astrachan, Wealthy, Yellow Transparent.

Summer

- ✓ **Early Harvest.** Pale yellow, excellent, early.
- ✓ **Golden Sweet.** Large, pale yellow, sweet.
- ✓ **Red Astrachan.** Large, crimson, very early.
- ✓ **Williams.** Dark red, mild flavor.

Autumn

- ✓ **Alexander.** Very large, red striped.
- ✓ **Duchess of Oldenburg.** Yellow, streaked with red, juicy and good.
- ✓ **Fameuse (Snow Apple).** Crimson, flesh white, excellent.
- ✓ **Gravenstein.** Large yellow, striped red.
- ✓ **Maiden's Blush.** Sept.; large, yellow and red; good.
- ✓ **Pippin.** Fall, yellowish green, very fine.
- ✓ **Porter.** Medium, bright yellow; good.
- ✓ **Pound Sweet.** Nov.; very large, yellowish, sweet and rich.

Winter

- ✓ **Baldwin.** Large, dark red, productive, medium.
- ✓ **Delicious.** All that its name implies. Striped with red.
- ✓ **Gano.** Bright red.
- ✓ **Golden Russet.** Late yellow, good flavor.
- ✓ **Hubbardston.** Large yellow, splashed red; early.
- ✓ **Jonathan.** Yellow, striped red.
- ✓ **Hendrick's Sweet.** Red, splashed crimson.
- ✓ **King.** Large red.
- ✓ **McIntosh Red.** Vigorous growth; handsome, hardy. Ripening November to February. 2-year, \$2.00 each, \$20.00 per doz.
- ✓ **Northern Spy.** Large, striped red, good keeper.
- ✓ **Opalescent.** Dark crimson.
- ✓ **Rhode Island Greening.** Large, yellowish green, medium.
- ✓ **Roxbury Russet.** Extra quality. Largest of russets.
- ✓ **Spitzenburg.** Brilliant red.
- ✓ **Tolman's Sweet.** Medium, light yellow, excellent.
- ✓ **Wagner.** Red, early bearer.
- ✓ **Wealthy.** Dec. to Feb.; dark red, juicy, good, very hardy.
- ✓ **Winter Banana.** Large. Pale yellow with pinkish bloom.

CRAB APPLES

Price: \$1.50 each; \$15 per doz.

- ✓ **Hyslop.** October to January; deep crimson.
- ✓ **Martha.** Fruit glossy yellow, shaded with light red.
- ✓ **Transcendant.** September, October; useful alike for preserving, pies, sauces and cider.
- ✓ **Whitney.** Very large red; good bearer.

PEARS

Standard Pears. 5 to 7 ft., \$1.50 each; \$15.00 per doz.; except where noted.

Dwarf Pears. Budded on quince stocks, in the following varieties; 3 to 4 ft., \$1.00 each; \$10.00 per doz. **Bartlett,** **Beurre d'Anjou,** **Clapp's Favorite,** **Duchess d'Angouleme,** **Howell,** **Lawrence,** **Seckel,** **Wilder's Early.**

Summer Pears

- ✓ **Bartlett.** Vigorous growth; large; yellow and red; juicy. Ripening September.
- ✓ **Clapp's Favorite.** Vigorous growth, very large and handsome; yellow and crimson. Ripening August.
- ✓ **Wilder.** Ripens in August and is a liberal cropper. Skin bright yellow; flesh rich creamy color and virtually coreless.

Autumn Pears

- ✓ **Buerre Bosc.** Moderate growth; large russety; buttery, rich. Ripening September and October. \$2.00 each.
- ✓ **Flemish Beauty.** Vigorous growth; large; yellow and russet; juicy, melting, sweet; good; very hardy. Ripening September and October.
- ✓ **Louise Bonne of Jersey.** Vigorous growth; large; yellow and red; melting, buttery, rich; Sept. and October.
- ✓ **Seckel.** Moderate growth; medium; brown; juicy, melting and buttery; of the highest flavor. Sept. and Oct.
- ✓ **Sheldon.** Vigorous growth; large; russet and red; melting, rich, delicious, very good. Ripening October.
- ✓ **Vermont Beauty.** Brilliant-colored skin. Matures a little later than the Seckel and is valuable as a shipping pear.

Winter Pears

- ✓ **Buerre d'Anjou.** Vigorous growth; very large; greenish yellow; melting, buttery, juicy, sprightly, vinous; keeps into mid-winter. Ripen, November and December.
- ✓ **Lawrence.** Moderate growth; medium to large; golden yellow; melting, aromatic, very good. November and December.

Fitzgerald Peach

CHERRIES

Price: 6 to 7 ft., \$1.75 each.

- ✓ **Black Tartarian.** June; large, purplish black; sweet.
- ✓ **Early Richmond.** June; best early, sour.
- ✓ **English Morello.** July; large dark red, sour.
- ✓ **Montmorency.** July; large, tender, rich; sour.
- ✓ **Napoleon.** July; pale yellow and red; sweet.
- ✓ **Rockport.** July; amber and red; sweet.
- ✓ **Schmidt's Bigarreau.** July; large, deep mahogany; sweet.
- ✓ **Yellow Spanish.** Late June; pale yellow, red cheek.

PLUMS

Price: 5 to 7 ft., \$1.75 each. Extra size \$2.00 each.

European Type

- ✓ **Bradshaw.** August; large, purple, sweet.
- ✓ **Damson.** September; dark purple, very productive.
- ✓ **Lombard.** September; medium, violet, red, juicy.
- ✓ **Reine Claude.** Sept.; large, greenish yellow, very fine.
- ✓ **Yellow Egg.** August; large, yellow.

Japanese Type

- ✓ **Abundance.** Early, fruit amber turning to cherry, flesh yellow, juicy, tender and sweet. Bears heavily.
- ✓ **Burbank.** Sept.; bright red, flesh yellow and sweet.
- ✓ **October Purple.** September; large, dark purple; yellow flesh.
- ✓ **Red June.** September first; medium, purplish red.
- ✓ **Satsuma.** September; purplish-red, flesh dark red, juicy.
- ✓ **Wickson.** Late, large, carmine, delicious, small stone.

PEACHES

Prices: 5 to 6 ft., \$1.00 each; \$10.00 per doz.

- ✓ **Carman.** August. Pale yellow skin and red cheek.
- ✓ **Champion.** Aug.; new, creamy white; large; superior.
- ✓ **Crawford's Early.** September; large, yellow, freestone.
- ✓ **Crawford's Late.** Very large, juicy, good, freestone.
- ✓ **Crosby (Ironclad).** September; medium, sweet, firm.
- ✓ **Elberta.** August first; flesh yellow. Very juicy.
- ✓ **Fitzgerald.** September; large, Crawford type; hardy.
- ✓ **Foster.** September; similar to early Crawford; better.
- ✓ **Greensboro.** Large, white flesh; freestone; August 1st.
- ✓ **J. H. Hale.** New; large yellow; September.
- ✓ **Mountain Rose.** September; large white and red, melting.
- ✓ **Niagara.** New; pale yellow; late August.
- ✓ **Old Mixon.** September; large, white and red, juicy and rich.

QUINCES

4 to 5 ft., \$1.50 each.

- ✓ **Apple or Orange.** Large, roundish, bright golden yellow; very productive.
- ✓ **Champion.** Vigorous and productive; very late.
- ✓ **Meeches Prolific.** Large; early and of high quality.
- ✓ **Rea's Mammoth.** A seedling of orange, but larger.

HARDY NATIVE GRAPES

Strong 2-year vines, 60c. each; \$6 per doz.; \$40 per 100.

Blue-Black

- ✓ **Concord.** Bunch and berries large, round, black.
- ✓ **Moore's Early.** Early black grape.
- ✓ **Worden.** Berries large, sweet. Ten days earlier than Concord.

Red and Reddish Purple

- ✓ **Agawam (Roger's No. 15).** Large, tender, juicy, vinous.
- ✓ **Brighton.** Large, of the best quality, and ripens early.
- ✓ **Delaware.** Medium or small, highly esteemed.
- ✓ **Salem (Roger's No. 53).** One of the best and most popular.

White

- ✓ **Moore's Diamond.** Berry about the size of Concord; color greenish white with yellow tinge; juicy.
- ✓ **Niagara.** Berry large, slightly pulpy, tender, sweet, ripens with Concord.

RASPBERRIES

\$1.25 per doz.; \$6.00 per 100, except as noted.

- ✓ **Columbian.** Very large, purple. Rich flavor.
- ✓ **Cumberland.** One of the finest black, large and productive.
- ✓ **Cuthbert.** Red, firm and superior quality.
- ✓ **Erskine Park.** This new "Everbearing" red raspberry originated on a private estate at Lee, Mass., and is described by the U. S. Dept. of Agriculture as surpassing all other late-bearing sorts. The plants are very hardy; fruit large and firm. \$1.50 per doz.; \$10 per 100; \$80 per 1000.
- ✓ **Golden Queen.** Productive and of superior quality. Golden yellow.
- ✓ **Gregg.** Good black, productive and hardy.
- ✓ **June.** Red; two weeks earlier than Cuthbert. \$1.50 per doz.; \$8 per 100.
- ✓ **La France.** A superior new giant ever-bearing variety. Large juicy red fruit. Heavy bearer, very hardy. \$6 per dozen.
- ✓ **Marlboro.** Large, red, very productive.
- ✓ **Plum Farmer.** Large, black; vigorous grower.
- ✓ **St. Regis.** The everbearing red, good quality. \$1.50 per doz.; \$8 per 100.

Moore's Early Grape

Cherry Currant

CURRENTS

25c. each; \$2.50 per doz.; \$20 per 100, except as noted.

Cherry. Large, red, juicy.

Fay's Prolific. The most popular red variety for home use, bears heavily.

Perfection. The largest red currant in existence; a prize winner. 35c. each; \$3.50 per doz.

BLACKBERRIES

\$1.25 per doz.; \$6 per 100

Agawam. The earliest; flavor like the wild berry.

Eldorado. Hardy, good size and quality, unusually productive.

Erie. Large and early; excellent quality.

Rathbun. Extra large, productive, new.

Snyder. Best quality, very sweet, medium size.

Wachusett Thornless. Fruit medium, hardy and very productive, almost free from thorns.

GOOSEBERRIES

50c. each; \$5 per doz.

Red Jacket. The best red, free from mildew.

Pearl. The most prolific, free from mildew, green.

Downing. Whitish Green.

DEWBERRIES

Lucretia. The creeping blackberry, with large, black luscious fruit. \$1.50 per doz.

Agawam Blackberry

STRAWBERRIES

For best growth, Strawberries require light fibrous or sandy loam, well enriched, with plentiful moisture during the bearing season. The plants should be set 12 to 15 inches apart, in rows 2½ to 3 feet apart. They should be kept free from weeds, and mulched with straw or litter in winter. Fruit is borne the year after planting.

Varieties here listed are Perfect Flowered, except **Sample**, which must have a P. F. variety planted near it for fertilization. **Layer Plants.** For spring planting. 50c. per doz.; \$2 per 100; \$18 per 1000; except **Marshall**.

Pot Grown Plants. For July, August and September planting. \$1 per doz.; \$5 per 100; \$45 per 1000.

Abington. Large fruit, solid, and excellent flavor. P. F. **Big Joe.** Brings highest price of any berry on the New York market. Large, productive, midseason. P. F.

Breck's Abundance. Large, excellent berry; very heavy cropper; flavor tart; medium early. Highly recommended. P. F.

Brandywine. Hardy, good quality. Medium. P. F.

Early Ozark. P. F. Extra early; large, dark red, delicious fruit.

Gandy. Large berries; late and an excellent cropper. Splendid keeper. P. F.

Glen Mary. Large, crimson berry; good quality, very productive; late. P. F.

Klondike. Size, medium to large, firm and a good shipper. Medium early. P. F.

Marshall. Requires no recommendation; is medium late. The fruit is very large, deep crimson color, and extra quality. P. F. \$3 per 100; \$25 per 1000.

Parson's Beauty. P. F. Mid-season; very heavy yielder, marketing well.

Sample. Medium late. An extra good commercial variety. Imp. **Success.** All that its name implies. Large, early. P. F.

Uncle Jim. Large, regular in form, medium late. P. F.

William Belt. Fruit large and somewhat irregular; of high quality and a good bearer. Late. P. F.

Fall or Everbearing Strawberries

Runner plants, for spring planting, 50c. per doz.; \$4 per 100. **Potted Plants,** for mid summer planting, \$1 per doz.; \$6 per 100.

Progressive. This variety makes a vigorous growth, and produces immense quantities of berries. Blossoms should be kept picked off until about the middle of July. If this is done, a heavy crop is insured from about the first of August until heavy frost. The berries are of medium size and excellent quality.

Superb. The berries of this excellent variety are a little later than those of **Progressive**. The plants are about equal in vigor of growth, but do not produce so many berries per plant as **Progressive**.

Gandy Strawberry

We give no warranty expressed or implied as to description, quality, productiveness or any other matter of any Nursery Stock, Seeds, Bulbs or Plants we sell.

GARDEN IMPLEMENTS AND SUNDRIES

IDEAL POWER LAWN MOWERS

HOW LARGE LAWNS ARE KEPT IN FINE CONDITION

Ideal Power Lawn Mowers are designed and built for keeping large lawns in fine condition. That they are great savers of time and money is evidenced by the thousands in use on large estates, municipal parks, cemeteries, golf courses, college grounds, school grounds, ball parks, etc. Wherever the Ideal is used labor troubles vanish and smooth, velvety lawns are maintained at minimum expense.

IDEAL 30" POWER LAWN MOWER

The Ideal, as shown above, is a combined power mower and roller. The 30" cutting unit is easily raised or lowered by a conveniently placed lever.

This machine will mow from four to five acres of grass per day, at an operating expense of about 50 cents for fuel and oil. It will do more and better work than five men with hand mowers.

Quickly converted into a riding mower with the riding trailer which is furnished at a slight additional cost.

When used for golf course work, an interchangeable cutting unit can be furnished for use on putting greens.

30 inch with one Cutting Mower, each.....	\$340.00
30 inch Riding Attachment.....	25.00
30 inch Cutting Mower only, each.....	50.00
22 inch Putting Green Mower, each.....	55.00

THE IDEAL JUNIOR POWER MOWER

This little power mower is built to meet the needs of those who have lawns that are too large to conveniently care for by hand, yet are hardly large enough to warrant the purchase of the larger power mowers.

In general design the Junior Mower is the same as the larger Ideal. Every feature that had made the larger machine such a universal success will be found in this smaller mower.

The cutting unit is 22 inches wide.

The Ideal Junior will nicely care for 2 to 3 acres of grass and will prove a paying investment in caring for lawns as small as 150 to 200 feet square. It is a machine especially well adapted to the work in cemeteries.

Special literature furnished on request.

22 inch with one Cutting Mower, each.....	\$220.00
22 inch Cutting Mower only, each.....	35.00
18 inch Putting Green Mower, each.....	45.00

IDEAL 84" POWER TRIPLEX MOWER

THE IDEAL POWER TRIPLEX MOWER

This machine is designed essentially to care for large areas of grass. It cuts a swath 86 inches wide. The powerful 4 cylinder, 15 H. P. motor operates the machine at speeds varying from 2½ to 7 miles per hour.

The control is very simple, being placed in two levers, one on each side of the operator. No shifting of gears or brake rods. Machine will turn in its own radius.

The outfit will mow up and over steep inclines and over irregular ground.

Just the machine for golf courses, extra large public parks, polo grounds, etc. Special literature and price on request.

84 inch Triplex with three Cutting Mowers, each..	\$1150.00
30 inch Cutting Mower only, each.....	60.00

PLANET JR. FARM AND GARDEN TOOLS

Why worry along with slow out-of-date implements and meagre results? Planet Jr. tools are far more economical—they do 3 to 6 times the work, get bigger, better crops, and outlast several ordinary implements. Fully guaranteed. You are actually losing money whenever you cultivate without them.

Send for special Planet Jr. Catalog

No. 3 Planet Jr. Hill and Drill Seeder

Holds 3 quarts of seed. A favorite among onion growers, market gardeners and seedsmen. Sows accurately in a narrow line making wheel-hoe cultivation easy.

Each..... \$18.50

No. 4 Planet Jr. Combined Hill and Drill Seeder, Wheel Hoe, Cultivator and Plow

No. 4 D (as a seeder only)..... Each, 15.50

Soon pays for itself in the family garden as well as in the larger acreage. Sows all garden seeds (in drills or in hills), plows, opens furrows and covers them, hoes and cultivates quickly and easily.

Each, complete..... \$19.50

PLANET JR. POTATO DIGGER

The Planet Jr. Potato Digger is carefully made of the best material. It is universally liked in the field and we guarantee it to give satisfaction. It is indispensable to all potato growers, because it digs clean, does not cut or bruise the potatoes and leaves them easy to gather. It works perfectly in green vines and among weeds, leaving the field nearly level. The draft is light; it is quickly adjusted, easily managed and will last a lifetime.

Planet Jr. Potato Digger..... Each, \$42.50

PLANET JR. FARM AND GARDEN TOOLS

WATER OR SAND BALLAST ROLLERS

The "Water Ballast Lawn and Garden Roller" idea is a brand new one and by the introduction of this type of tool, the old style, clumsy, iron and steel weighted machines are relegated to oblivion. The "Any weight" system is one particularly pleasing to the user, as but a moment's time is required to obtain any weight from 115 pounds to ½ ton, suitable to condition of ground or strength of operator. To weight the machine, turn on end, remove pipe plug by unscrewing, insert garden hose or,

if necessary, use pail and funnel, fill the drum to any desired weight, screw in the threaded plug and your machine is ready for business.

Furnished complete with wrought iron handles and counterweights.

No.	Width of Drum	Weight of Tool, empty	Weight filled with Water	Weight filled with Sand	Each

Special type plunger rod and leather. Pump tube 16 inches long, 1¾ inches in diameter. Capacity, full gallon.

No. 123. Galvanized Business Sprayer Each, \$3.25

SPRAY PUMPS **Utility Compressed Air Sprayer**

This type of sprayer is the most popular for all general work requiring a sprayer. It is adapted for spraying, white-washing, disinfecting, for the application of glue sizing, etc. The No. 10 tank is made of galvanized steel, the No. 15 of brass. Size, 7¼ x 20 inches; capacity, 3½ gallons.

No. 10. Galvanized Sprayer, (10)	Each, \$6.50
No. 15. Brass Sprayer, (10)	" 10.00

Utility One Gallon Sprayer

Most convenient size compressed air type sprayer ever put on the market. Especially adapted for sanitary work, disinfecting, etc. Tank, 6¼ inches in diameter by 8½ inches high. Same in design as the No. 10 tank.

No. 185. Galvanized Sprayer, (5) Each, \$5.00

Utility Two Wheel Portable Sprayer

When tank is mounted, as shown, it is easily moved about by one hand, which leaves the other free for directing the spray. The steel frame is but 18 inches wide, permitting its use in greenhouses and other places where the passageways are narrow.

The air pressure tank, which is securely mounted on the spider pump casting, is so constructed that a sufficient pressure may be attained and considerable spraying done with one pumping. Tank is supplied with pressure gauge and drain plug.

These outfits are not only adapted for spraying, but for heavy disinfectants, whitewash, cold water paints, kalsomine and other mixtures of similar nature.

No. 85A. Two Wheel Sprayer, (110) Each, \$50.00

BRECK'S COMBINATION SPRINKLER

Fig. 1.

Fig. 2.

Fig. 3.

This sprinkler is made of solid brass, and is superior to any other. The sprinkler is three inches in diameter, with holes of the right size to throw a copious and gentle stream on the plants or lawn. The washing up of the soil, is avoided by using the "Breck." The face being flat and the holes bored straight, the spray is thrown without spreading, making it invaluable for hot-house work.

OUT-U-KUM WEED PULLER

The OUT-U-KUM Weed Puller is a triumph of mechanical genius, reaching what inventors have sought for years, a simple, yet practical device. The accompanying illustration will convince anyone of the simplicity and certainty of removing the root along with the weed, thus putting an end to it.

IT DOES THE TRICK

A slight Push and Pull removes not only the weed, but the entire root, without leaving any indication of a hole in the ground.

Especially recommended for dandelions and other weeds having long tough roots.

NESCO PERFECT OIL COOK STOVES

These stoves are noted for their burning qualities. A very hot, blue flame is produced by a combination in a combustion chamber of the flame from the oil with oxygen from the air into a gas; and thus, too, actual consumption of oil is made smaller.

The Rockweave Wick is asbestos spun around brass wires, consequently it does not break off or burn out.

POULTRY SUPPLIES, REMEDIES AND STOCK FEED

PRAIRIE STATE INCUBATORS AND BROODERS

Prairie State Incubators are the standard of hatching efficiency among present-day devices of their kind. Invented in 1881, fully patented, and marketed first in 1889, they at once took their position as the criterion of construction in hot-air type incubator development. Conceived first after the principle of the hen's nest stolen upon the ground, they have been steadily developed and improved in detail, adhering always to first essential principles, — Down-Draft Ventilation, Top Radiant Heat, and Applied Moisture.

No. 0.	100 eggs, 135 lbs. crated.....	Each,	\$30.00

Nos. 0 and 1 right hand only, 1 egg tray. Nos. 2 and 3 right or left, 2 egg trays. Equipped completely with egg trays, nursery mats, sand trays, egg tester and thermometers.			

PRAIRIE STATE UNIVERSAL HOVERS

The Prairie State Universal Hover, first in the market and more extensively imitated than any other brooder, has a universal sphere of usefulness. It is adaptable to any form of permanent outdoor brooder, or any colony house, and may be moved from one house to another as flocks pass the brooding stage. It is the only hover ventilated by actual outside fresh air.

PRAIRIE STATE "JUNIOR" PORTABLE HOVER

The "Junior" Portable incorporates in its plan, manufacture and adaptability all those elements of efficiency which have made Prairie State Products the criterion of excellence and refinement in Incubator and Brooder design. At the same time it is offered at a price so low as to make it a truly surprising purchase.

Adaptable alike to beginners or to experts desiring to rear in small flocks for foundation stock, where conservation of vitality and development of vigor are essential, the "Junior" is one of the remarkable offerings of the day.

Prairie State Junior Portable Hover.....	Each,	\$10.00
--	-------	---------

PRAIRIE STATE COMBINATION COLONY BROODER

Prairie State Colony Brooders, first of their type on the market, met with instant approval. They remain today a standard for those operating on a small scale, for the back-lot flock, or for the flock which has access to free range.

Each brooder is equipped with Universal type hover, lamp and thermometer. Doors are snug fitting, with double glass. They are weather-proof and rat-proof, with floor six inches from the ground.

Outdoor, weight, crated, 208 lbs.....	Each,	\$35.00
Heat Regulator attached to the above brooder,		\$2.00 extra.

INCUBATOR HYGROMETER

The Incubator Hygrometer is an instrument devised to determine the percentage of moisture in the air of an incubator. By its use the operator will be able to determine the exact amount of moisture required to bring out a successful hatch. Our net price..... Each, \$2.00

PRAIRIE STATE "JUNIOR" STOVE BROODERS

The Prairie State Stove Brooder is the successful solution to the question of economical brooding of chickens through the use of large flocks. It is the accepted brooder of the large poultry farm, and, like the Prairie State Incubator, it is the standard equipment of the agricultural colleges and experimental stations of both the United States and Canada.

No. 0 Junior Stove Brooder, capacity 200 to 700 or more, weight 80 lbs., crated..... " 20.00

THE HOME HOVER

An Ideal Hover for any number of chicks up to fifty. The Home Hover was designed to meet the requirements of the raiser of a small flock of poultry around the home or around the farm. It is substantially built and of fireproof construction throughout. With the exception of the legs the entire hover, including the lamp, is made of heavy galvanized iron, no wood whatever being used. This insures a long period of usefulness, as there is nothing to wear out.

It is so inexpensive and yet so serviceable that no raiser of a small flock can afford to be without one. Buyers of baby chicks everywhere should arrange for a Home Hover when they arrange for their chicks. Home Hover without Regulator or Thermometer. Each, \$5.50 Complete Descriptive Catalog of Prairie State Incubators and Brooders mailed on application.

THERMOMETERS

It is quite important in the successful operation of incubators and the securing of good hatches that a thermometer of known accuracy be used. The thermometers here listed are manufactured especially for us. They are thoroughly seasoned before being mounted. Each and every thermometer is guaranteed by the manufacturer to be accurate within one-fourth of a degree.

BRECK'S HYGIENIC BRAND CHICK FOOD

A scientifically proportioned mixture which will meet every demand of the growing chick, and supply, without excess of fat, the food necessary to produce and sustain vigorous health. It contains the bone-forming properties that prevent leg weakness. It is high in protein, the flesh and muscle-forming elements. There is sufficient mineral material to supply the needs of the bone structure of the rapidly growing chicks, while it is low in carbohydrates, the fat-forming element, which, where in excess, causes sickness and loss.

FEED DRY. 50 lb. bags, \$1.75, 100 lb. bags, \$3.00.

BRECK'S MASH EGG FOOD

Is a properly balanced meat and cereal preparation, and is one of the best egg-producing foods we know of for poultry that do not have large runs; it is just what is wanted to keep them in good vigorous condition. Can be fed wet or dry. Price 50 lb. bags, \$1.50, 100 lb. bags, \$2.75.

BRECK'S COMPLETE POULTRY FEED

We have frequently been asked by many of our patrons to put up in a convenient form a complete Poultry Feed. In response to the above requests, after a great many experiments, we offer in **Breck's Complete Poultry Feed** what we believe is the best food for poultry that is on the market today.

Great care has been exercised in the selection and balancing of the materials of which it is composed. **Feed dry.** 50 lb. bags, \$1.50, 100 lb. bags, \$2.75.

BRECK'S ALFALFA MEAL

Our brand of best pea green California Alfalfa, grown on irrigated land, rich in protein; one of the best green feeds during the winter for poultry.

Directions for Feeding: Pour on boiling hot water, cover, let steam an hour, then mix with the usual morning mash at the rate of one-third clover to two-thirds the regular ground grains. Shipped in 100 lb. bags only, \$2.50 per c.

BRECK'S BANNER BRAND CUT CLOVER

Made from the best New York grown Red Clover, ground medium fine, all from Red Clover hay.

Directions for Feeding: Pour on boiling water, cover, let steam an hour, then mix with the usual morning mash at the rate of one-third clover to two-thirds the regular ground grains. Per 50 lb. bags, \$1.75.

BRECK'S POULTRY AND SWINE MEAL. A concentrated powder, a palatable animal meal for poultry and swine. Full directions for feeding with each package. Price per 100 lbs., \$5.00, 50 lb. bags, \$2.75, 25 lb. bags, \$1.50.

BLATCHFORD'S CALF MEAL. A valuable feed for pigs, colts, lambs and poultry. Blatchford's Calf Meal is not a stock food; it contains no drugs, medicine or stimulants; it is purely and simply a baby food for young animals. A 100 lb. bag makes 100 gallons of rich, nutritious gruel, thoroughly cooked and prepared for digestion. Price per 100 lbs., \$5.00, 50 lbs., \$2.75, 25 lbs., \$1.50, f. o. b. Boston.

RED COMB SCRATCH FEED FOR POULTRY

Every handful is uniform, free from dust, always fresh, absolutely clean and perfectly mixed.

An ounce of Red Comb Scratch, twice a day, fed in litter, plus Red Comb Mash Feed with Dried Buttermilk, fed from a hopper, furnishes the necessary nutrients to give results.

This feed is made from Wheat, Cracked Corn, Kaffir Corn, Barley Oats, Sunflower Seed, and Buckwheat.

Guaranteed Analysis

Protein	10%	Carbohydrates	60%
Fat	2 1/2%	Fibre	5%

In 100 lb. bags \$3.00, each.

RED COMB MASH FEED WITH DRIED BUTTERMILK (FOR HEAVY EGG PRODUCTION)

Red Comb Mash Feed is made from Dried Buttermilk, Linseed Oil Meal, Corn Feed Meal, Meat Scraps, Wheat Middlings, Wheat Bran, Ground Oats, Alfalfa Meal, and not over 5 per cent. shell. These ingredients are all highly digestible, and you can always rely on Red Comb to produce natural, steady layers.

Animal Protein from the Meat Scraps.

Leaf Protein from the Alfalfa Meal.

Cereal Protein from the Other Ingredients.

Milk Protein from the Dried Buttermilk.

In 100 lb. bags, \$3.25 each.

RED COMB CHICK MASH

Red Comb Chick Mash with Dried Buttermilk entirely wipes out the scourge of white diarrhea.

This splendid ration is made from Corn Meal Feed, Old Process Oil Meal, Barley Flour, Dried Buttermilk, Alfalfa Meal, Oat Flour, Wheat Middlings, Bone, Calcium Carbonate and Salt.

Guaranteed Analysis

Protein	16%	Fibre	9%
Fat	4%	Carbohydrates	50%

In 100 lb. bags, \$3.25 each.

POUND SQUAB PIGEON FEED

Is made from Wheat, Corn, Kaffir Corn, Hemp, Peas, Buckwheat, Millet, and not over 6% Grit. It is probably the best known exclusive Pigeon Feed in the world today, and used extensively by experts everywhere.

Pound Squab has been keeping pace with this rapidly increasing industry and can be fed plentifully without fear. It has produced thousands of extra large, fat, plump, healthy squabs weighing one pound and more at four weeks of age.

In 100 lb. bags, \$5.00 each.

All Prices Subject to Change Without Notice

PRATT'S POULTRY REGULATOR
(Formerly called Pratt's Poultry Food)

This is the original Poultry Regulator, in use by the most successful poultry raisers everywhere. It is entirely different from Pratt's Animal Regulator. It is composed of valuable imported roots, herbs and barks so blended as to make a perfect regulator tonic and stimulant, suited to the constitution of the poultry.

Pratt's Poultry Regulator overcomes the difficulties met by every poultryman by regulating the blood, bowels and digestive organs of all fowl. Thus it keeps the birds in robust health, produces good, rich blood, healthy fat, sturdy muscles, strong bones, red combs and wattles, brilliant feathers and fertile eggs. It stands unrivalled as an egg producer, and when regularly used, the hens lay throughout the year.

Pratt's Poultry Regulator costs but a few cents a week for a big flock, and it

pays its cost many times over in the results it produces. Results are immediate and permanent.

CREONOID

Lice destroyer and cow spray. Creonoid is prepared especially for this purpose. An up-to-date antiseptic preparation made from coal tar. Creonoid stands for animal comfort. Follow directions on can carefully. Stock tormented with flies cannot make flesh or milk. Keeping the flies off may mean the difference between profit and loss. Cows sprayed with Creonoid just before milking are quiet and give better yields of milk, because the flies are kept away. Try it and see the results for yourself.

Clark Wagon Heater 3.00
Clark Coal, 1 doz. bricks in box, weight 7½ lbs..... 1.25
Case of 100 bricks..... 10.00

DISINFECTING GERM-KILLING WHITE PAINT

The Disinfectant that paints. Use it instead of white-wash. Put on with a brush or sprayer. A snow white cold water paint that will not blister, flake or peel off, combined with a germicide 20 times stronger than carbolic acid but neither caustic nor poisonous. Particularly good for use in stables, cow barns, chicken coops, dairies, hog pens, creameries, cellars, factories and outbuildings.

The necessity of absolute cleanliness and complete sanitation in barns, pens and stables where poultry and livestock are kept if they are to thrive and produce as profitably as they should, has been pointed out by the Department of Agriculture, by Experiment Stations and by farm and poultry papers too often to be repeated here. Failure to keep their living quarters clean and sanitary is the surest means of introducing into flocks and herds the lice and other vermin that sap their vitality, and so reduce their production, as well as the contagious diseases that prove so costly if they once gain a foothold. Carbola can be applied to wood, brick, stone, cement or sand finished walls; to plaster board, tar paper, or over whitewash or old oil paint that is hard and firm, but not glossy. It will not blister, flake or peel off, no matter how many coats are put on, and as the mineral pigment used has a greater fire resistance than asbestos it is apparent that several coatings of Carbola will act as an efficient fire retardant.

Trial package 30 cts. Delivered by parcel post for 35c. (Paints and disinfectants 250 sq. ft.)

MALOX

Kills every mite it touches, and it touches them all if properly used. Before applying Malox, the interior of the poultry house should be thoroughly cleaned out and all the litter burned. Every part of the interior should be sprayed, including roof and floor — paying particular attention to cracks, crevices, and the under side of roosts.

Per package..... \$1.50

BABY CHICKS

BABY CHICKS can be transported several thousand miles safely, which makes it possible for anyone to secure good stock of known egg-producing strains at a price in keeping with the cost and time it would take him to produce fowls himself.

Build up a pure bred farm stock of good layers all in one season by purchasing pure bred Baby Chicks. Our Baby Chicks are hatched from eggs produced by the best of stock for which our Hatcher supplies the cockerels from high egg-producing strains. These flocks are subject to frequent and rigid inspection before the eggs reach the Incubators.

We are in a position to supply Chicks of all the popular breeds in any quantity for delivery commencing March first and extending through the season. Safe delivery by parcel post is guaranteed.

Prices subject to change without Notice. Prices are as follows:

R. I. Reds.....	\$3.50 per dozen	\$25.00 per 100	Silver Wyandottes.....	\$3.75 per dozen	\$30.00 per 100
Barred Rocks.....	3.50 " "	25.00 " "	Anconas.....	3.50 " "	27.50 " "

Cook's White Orpington.....	4.50 " "	35.00 " "
C. S. Pape's Big Type Black Minorcas.....	4.50 " "	35.00 " "

U. S. Poultry Fence.

As you unroll U. S. Poultry Fence you will be surprised how very flat and even it lies---just like a roll of carpet or building paper.

Then, when you set it up on edge, you will again be surprised at the straight, stiff and trim manner in which it stands.

As you see through the magnifying glass, on on the following page, U. S. Poultry Fence is built much like a farm fence, with parallel wires on hinge joints. These splendid features make it stiff and rigid, and enable you to stretch it to the posts straight, even and nice, without buckling, bagging or sagging.

Then, too, you can not only put up your fences straight and true, but the stiffness of U. S. Poultry Fence allows you to entirely do away with the necessity of a top rail or baseboard. Also fewer posts are required than when putting up the old style netting.

U. S. Poultry Fence is not merely a substitute for the old style netting. It is something much better and costs no more. Why not buy the best when the out-lay is no greater? It is the strongest, cheapest, most sightly and by far the best fence for the purpose yet invented.

Do not purchase poultry netting until you have seen U. S. Poultry Fence. A trial order will convince you of its superiority. It will be a surprise and revelation to you.

If you are interested in a good netting you should buy U. S. Poultry Fence for it is the acme of all poultry fences and is guaranteed to be stronger and to give better satisfaction under all conditions than the old style netting or any other netting.

Just note the number of line wires that carry all the strain and take all the straight away pull leaving the mesh wires where they belong. U. S. Poultry Fence has proven itself sufficiently superior in every respect to be in a class by itself. It is the **ONE BEST NETTING** and is guaranteed to **SATISFY YOU**.

The buying of U. S. Poultry Fence is not an expenditure but an investment, and your dividends are years of service and absolute satisfaction. Let us have the opportunity to prove that U. S. Netting is all and more than we claim.

Read Next Page.

U. S. POULTRY FENCE

Something Entirely Different
in the Way of a Poultry Fence

Showing Style and Actual Size 1-inch Mesh.

U. S. Poultry Fence is different in the line of poultry fence or netting. Half of the wires are straight line wires, which are intertwined with the mesh wires at their point of intersection with right and left twists. The cable margin wires are also connected with the mesh wires with right and left twists. In the process of weaving all wires are under tension, producing a fabric with all line wires the same length, and all the meshes or openings of the same size.

In stretching, the tension is on the line wires only, thus preventing any narrowing of the fabric between the posts, even though placed twenty or thirty feet apart.

The intertwisting of the line and mesh wires makes the fence, when erected, very stiff and rigid. It does not have that loose, baggy appearance so common in the old style poultry netting.

U. S. Poultry Fence is strictly a

NO-SAG

Poultry Fence, as the combination of line and mesh wires, closely woven, prevents any lengthening or narrowing between posts. In erecting U. S. Poultry Fence the line wires permit of being stretched to a high tension, which compels the fence to remain rigid and upright without anchoring it to a baseboard or top rail. These features place it a long stride beyond the Hex mesh netting, which never fails to narrow and lengthen if you attempt to stretch it to a tension required to prevent sagging. There is no netting on the market that compares with U. S. Poultry Fence for strength, beauty and durability, and we invite comparison with other makes, feeling confident all our claims of superiority will be substantiated.

Tells How to Save Your Garden from Bugs and Worms

Get It!

Don't give up your fruits and vegetables to insect pests. *Prevent* their ravages just as the commercial orchardist or gardener does.

Get the worms and bugs *first* — before they start their destruction. This is the only way to make sure of saving your garden products and fruit for yourself and family.

This book tells how to do it, easily and simply — on a small scale. It's the first publication of the kind *adapted to the needs of the small grower*. Get it. Tells all about

“Corona Dry”

The Universal Insecticide

—most efficient bug killer known to science.

Applied in dust form — does away with sloppy spraying mixtures and expensive equipment.
