BULB DEPARTMENT

DAHLIAS

Location: Any good garden soil will grow dahlias and they will do equally well on high or low land. A sunny, airy location is best.

Planting and Cultivation: Good stable manure ploughed in in the fall and turned again the following spring makes the ground light. In this locality plant from May 15 to June 15. Dig a hole six inches deep. Lay the bulb flat and cover four inches. Two feet apart in the rows and each row three feet apart is best for proper growth, but if space is limited they can be planted closer.

Blooms for Display: In order to get the largest flowers it is quite necessary that you disbud severely. Pinch out all small side branches and buds, letting only the largest mature. Unlike the Gladiolus the Dahlia is a continuous bloomer until frost kills the tops.

GLADIOLI

Planting and Culture. Plant the bulbs from May 1 to June 15, four inches deep in heavy soil and six inches deep in light soil with full exposure to the sun. It is better if the ground has been prepared the fall before with fresh stable manure well forked in and turned again the following spring.

The gladiolus is a great drinker. Don't give it merely a sip. Give it plenty of water while you are doing it, even if you do not water more than once a week. After sundown is best. Larger flowers will repay you for the extra care. Stir the soil the next day after rain or after sprinkling. Never allow the soil to crust.

Blooming. For best results, cut the spikes when the first flower opens and let them bloom in the house. Each morning remove the wilted blossoms, cut off a little of the stem and give fresh water.

ALICE TIPLADY. Orange-salmon. Very choice and beautiful. 25c

AMERICA. The favorite lavender-pink; undoubtedly the most popular of all varieties. Large and early. 15c.

ANAMOSA. Finest orange-salmon. Extra tall, very large, many open. 20c.
