THE CATAWBA GRAPE

FOR THE SOUTH

THE CATAWBA GRAPE is one of the very best to grow in the South, both for home use and market. It is about the best in quality, being sweet, spicy and highly flavored. A strong grower and great bearer. Its season of ripening, (about four weeks after the Concord) so objectionable in the North, is an advantage in the South, where it is plenty early enough. It extends the grape season and ships and keeps well. Its size of cluster and berries is about the same as Concord, but red in color. However, its berries do not crack or rattle off the stem as those of the Concord sometimes do. True, it is somewhat subject to rot and mildew, but so are all other varieties of high quality, as Delaware, Brighton and all Rogers Hybrids. In some places all grapes mildew and have to be sprayed to secure a crop. One may as well spray Catawbas, as varieties of poorer quality. Where the best grapes can be grown, there the Catawba is most popular. The Catawba, together with the Niagara and Concord, make an excellent trio of grapes—red, white and blue.

This season, superior vines of the Catawba can be bought for but a trifle over that of the cheapest variety. If interested, send to us for a free spray calendar.
