A FEW HINTS ON DAHLIA CULTURE

Soil—not too rich, or plants will all go to foliage.

Planting—Always plant tubers flat, 4 inches deep, having ground well dug and loosened about 15 inches deep (or more). Plant 3 or 4 feet apart, in an open sunny place. Do not stand tubers on end, the size of which makes no difference, as long as it has one strong eye, or sprout.

Watering—Plants must be liberally watered during dry weather after buds have formed.

Cultivating—Keep ground loose and free from weeds, and nip off the first buds, as they are usually imperfect. Do not allow the soil to crust.

Fertilizing—Use well rotted barnyard manure, well mixed in each hill, (also leaves, grass clippings, etc.)

MY GARDEN

A garden is a lovesome thing, God wot!

Rose plot,

Fringed pool,

Ferned grot —

The veriest school of peace! and yet the fool

Contentends that God is not —

Not God! in gardens! when the eve is cool!

Nay, but I have a sign!

'Tis very sure God walks in mine.
