Their drying qualities I am not acquainted with, but I am of the opinion that if the drying qualities are satisfactory, the size alone should make it a most desirable prune. TALENT, Oregon—In brief our results have proved that under our local conditions the Coates' 1418 is fully twice as large in size and weight as the standard Petite Prune. The stone or pit is also twice as large. The Coates 1418, when picked from the tree, is not as sweet to the taste as the old French Prune. However, when kiln-dried and then stewed it is just as sweet to the taste as the old French Prune. With us this variety has been very productive, and I believe that it is a valuable addition to our list of prunes. Prof. F. C. Reimer, Oregon Agricultural College Experiment Station.
