WOOD'S CROP SPECIAL

Giving Timely Information and Prices of Seasonable Seeds

PUBLISHED BY T.W. WOOD & SONS SEEDSMEN RICHMOND VA.

VOL. XVIII.

SEPTEMBER EDITION

1923

Our "Wood's Crop Special" is issued monthly during planting seasons. There is no subscription price, but is mailed free upon request. If any of our customers do not receive Wood's Crop Special regularly, and desire to do so, advise us and we will place your name on our regular mailing list.

SEASONABLE NOTES

The South is now in a sounder financial condition than for the past four or five years. Practically all crops harvested this year have netted the farmer good average prices and his buying power is greatly increased. With this condition prevailing in practically every section of the country, the demand for agricultural seeds is naturally better, and consequently prices are beginning to move to higher values. The crop reports of practically all grasses and clovers have been somewhat disappointing, and as a result there has been quite an advance in the past few weeks. **Red Clover, Alfalfa and Timothy** have all proven to be in short supply and with indications for still higher values. Good quality seed **Oats** and **Abruzzi Rye** are in heavy demand, with a possibility of shortage for fall planting.

We cannot see any advantage in delaying purchases of your fall requirements, as we feel confident that prices on practically all farm seeds have reached the low level for this fall planting.

WOOD'S CROP SPECIAL is sent free to all of our regular customers, endeavoring to give them the latest information regarding seasonable plantings and other helpful information. Full and complete information about the preparation of soil, seeding, etc., is given in our **NEW FALL CATALOG**, which has been mailed to our customers. If you have not received your copy, advise us at once and it will be sent to you by return mail.

We wish to call attention of our customers to our **PARCEL POST SERVICE**. Prices quoted on the fourth page of this issue in the last three columns, give you the exact cost of various seeds up to 25 pounds, which includes postage, bags and insurance. For small quantities this method of delivery is the quickest as well as the most economical. For larger quantities freight or express are cheaper. Consult these prices and remember they are for only the very best quality seeds.

SOW ALFALFA DURING SEPTEMBER

For one of the best permanent hay crops; for continually improving the soil, and for pasture. September is the best time for seeding **Alfalfa**, which gives the young plants sufficient time to become well rooted before freezing weather. **Alfalfa** is a deep rooting plant, and after it is once well established withstands drought and hot summer weather better than any other crop. A good seed bed is necessary for a satisfactory crop. See our **Fall Catalog** for full information regarding the preparation of the soil, etc.

CHANGING YOUR SEED WHEAT THIS YEAR IS THE BEST INSURANCE FOR A SUCCESSFUL WHEAT CROP NEXT HARVEST

The expense necessitated by the planting of new Seed Wheat is so slight that it is hardly worth considering.

An increased yield of only one bushel per acre will more than pay the difference in cost of changing your seed, and every bushel after that is where the profit comes in growing wheat. You cannot afford to raise wheat and only produce from twelve to fifteen bushels per acre, and yet so many farmers continue this practice of just using their own seed that is not of a vigorous and prolific variety necessary to the production of abundant wheat crops.

Every bushel of **WOOD'S SEED WHEAT** is drawn from heavy producing crops in the limestone section, and every lot kept entirely separate, so that there is no possibility of mixing.

Our **LEAP'S PROLIFIC WHEAT**, a variety which has given uniform satisfactory results wherever used, produced this season an average of 35 1/3 bushels per acre on 86 acres, and on one thirty acre field yielded as high as 40 2/5 bushels per acre. To use our grower's own words, "This is the best crop I have ever raised in the 36 years that I have been farming." In selecting seed to plant this crop the sheaves were cut open, spread out thinly on tables and all the bearded heads, as well as cockle, etc., were picked out. Also during the growing season careful picking for weeds were made when the wheat was just in head. In addition to this careful preparation the wheat was put through our cleaning machines and all light or shrivelled grains taken out. We confidently believe our **LEAP'S PROLIFIC WHEAT** is the best seed stock that can be obtained, and a variety that we can highly recommend.

Our **FULCASTER** and **STONER** varieties are of the best bearded varieties and are highly recommended as heavy yielders. See our **Fall Catalog** for full information.

I have been buying seed from you for more than thirty years either directly or through my local merchant, for use on my farms in Tennessee and Georgia and in Charlotte County, Virginia, and have never had any bad seed from you. No complaints to make. In fact **Wood's Seeds** are the best.—W. J. HOGAN, Charlotte County, Va., April 13, 1923.

WHAT TO PLANT DURING SEPTEMBER FOR PROFIT

The outstanding crop for this month is **CRIMSON CLOVER**. Every opportunity should be used to sow this valuable legume on all vacant lands, or fields that are not paying their way. There is no other crop that can be put in during September that will do more towards increasing the productivity of the soil than **Crimson Clover**, and a crop that will furnish excellent winter and spring grazing, as well as one of the best hay crops.

ABRUZZI RYE planted in September is a crop that we cannot recommend too highly. It gives continuous grazing throughout the winter at a time when it is most needed on the farm. Sown during this month, **Abruzzi Rye** is of sufficient growth to be grazed in December, and from then on through March and April. The grazing does not affect the crop in any way; if it is to be saved for seed, it being only necessary to take the stock off by the middle of March or 1st of April. As a grain crop **Abruzzi Rye** has been a far superior money crop to wheat, and with the increased demand through the Southern States there can be no mistake in putting out a large acreage of this valuable rye. Be sure and obtain the genuine strain of **Abruzzi Rye**, as there is a large quantity of Southern Rye that is being sold as **Abruzzi**, due to the big premium being paid. Our stock of **Abruzzi Rye** was grown from genuine seed and can be relied upon to give the very best grazing and grain crops. Write for samples and see the difference.

FULGHUM OATS, for the Atlantic Coastal States, is one of the most profitable grain crops that can be planted. This variety is particularly valuable for lighter soils, and will produce remarkably large crops of grain. Yields of 60 to 70 bushels are not unusual, and on account of the premium paid for the **Fulghum Oat**, makes it a valuable money crop for the coastal sections. Due to the enormous demand for **Fulghum Oats** this year, the actual prices paid the farmer have been almost double the price of ordinary feed oats. **Fulghum Oats**, like **Abruzzi Rye**, are rapidly gaining in popularity, and there is hardly a season that the supply has equaled the demand. **Fulghum Oats** are fully two weeks earlier than the other Rust Proof varieties, and with an average season are ready to cut by the 1st of June, in plenty of time to follow with Cow Peas, Soja Beans or other summer crops.

A large number of our customers plant **Fulghum Oats** for hay, cutting the oats when in the milk or dough state. Owing to their vigorous growth and large leaves it supplies a large quantity of hay and makes excellent roughage for dairy cows and horses. There is no crop that can be grown with such economy of labor in growing and handling as oats, and fits in well between corn and wheat or corn and grass, utilizing the land and some labor that might otherwise be unproductive.

The **APPLER OAT** is similar in growth and habits to the **Fulghum** variety, but not quite as early.

For the Piedmont and higher altitude districts the **VIRGINIA GRAY WINTER OATS** are recommended, being hardier and more resistant to the severe cold winters.

WHAT EVERY FARMER SHOULD KNOW

The reputation and good will of a seed house is built upon two important points. First, the facilities for furnishing the highest quality seeds—both as to purity and vitality. Second, the experience in knowing from just what localities seed stocks can be drawn that are adapted to our soil and growing conditions. These two points require years of careful study and observation, and this information can only be had through actual experiences in the advancement of agriculture. When we offer **WOOD'S TRADE MARK BRAND SEEDS**, they can always be depended upon to be just what you expect of them—seeds of good color, purity, germination and adaptability. Our facilities for the storing and cleaning of seeds are not surpassed in this country. Every lot of seed wheat, oats, rye or other grains are put through three separate cleaning machines, which take out practically all impurities, as well as light, shrivelled grains, that will not make strong producing plants. We feel that we are safe in saying that if every farmer in the South could visit our seed cleaning plant and see just what is taken out of the wheat, rye and oats, that there would never be another bushel of uncleaned grain put on our Southern farms. The little extra cost of securing new seed of strong vitality and that is free from weed seeds, will be more than doubly offset by the increased yields obtained. We always invite comparison of **WOOD'S SEEDS**. Write us for samples and analysis, and then you be the judge.

A CONDENSED TABLE OF SUGGESTED PLANTINGS

FOR SOIL IMPROVEMENT:

Crimson Clover during September.
Hairy Vetch.

FOR WINTER AND EARLY SPRING GRAZING:

Abruzzi Rye, sow as early as possible.
Wood's Grain Pasture Mixture, during September and October.
Dwarf Essex Rape.

FOR SPRING HAY CROP:

White Blooming Crimson Clover with **Va. Gray Winter Oats**
Hairy Vetch with **Fulghum Oats**.

FOR PERMANENT PASTURE:

Wood's Special Grass and Clover Mixtures, Nos. 1 to 5.

FOR PERMANENT HAY CROP:

Wood's Special Grass and Clover Mixtures, Nos. 6 to 9.

FOR CASH CROPS:

Wood's Seed Wheat.
Fulghum Oats.
Abruzzi Rye.

FOR PERMANENT INVESTMENT:

Alfalfa, specify **Wood's Trade Mark Brand**.

FOR ECONOMY AND HEALTH:

Keep your garden busy.

SOW WOOD'S EVERGREEN LAWN GRASS DURING SEPTEMBER AND EARLY OCTOBER

This is decidedly the best time of the year to sow **Lawn Grass Seed**. Sown at this season the young plants get well rooted and are more resistant to the hot weather next summer, as well as the weeds which are so prevalent at spring planting.

WOOD'S EVERGREEN LAWN GRASS is composed of the finest grasses that are adapted to lawn making, and do not contain any coarse or tufted grasses that mar the effect of a fine lawn. Full information regarding our **Lawn Grass Mixtures**, as well as directions for seeding, etc., are given in our **New Fall Catalog**.

HAIRY VETCH (Vicia Villosa)

HAIRY VETCH is rapidly becoming one of the outstanding crops for the South, due to its reliability and large yielding qualities. It is very rare to hear of a failure with **Hairy Vetch**, even on any type of soil, which accounts for its increasing popularity. **Hairy Vetch** sown with rye or oats produces a crop that is hard to equal, both in quantity and quality of feed produced, as well as being one of our best nitrogen gatherers. **Hairy Vetch** and **Abruzzi Rye** are being used more throughout the orchard districts as a cover crop in place of **Crimson Clover**, and although this combination is slightly more expensive, we believe the results obtained will more than offset the extra cost. It is advisable to sow **Vetch** with grain, as the grain gives support and the crop is easier handled. Sow at the rate of 25 to 30 pounds of **Vetch** with $\frac{3}{4}$ bushel of oats or rye per acre.

PASTURE FOR POULTRY

In our poultry yards we have had the best results in the way of pasturage from breaking the land each fall and sowing either **crimson clover** with rye at the rate of ten pounds of clover with a bushel of rye to the acre, or **vetch** with oats in the proportions of thirty pounds of vetch and a bushel of oats to the acre. Either mixture will provide green food in the winter and early spring at a time when not much green stuff is available.

Even though this calls for the labor of breaking the ground each fall, we think it will be found much more satisfactory than attempting to have a permanent pasturage, especially as it would always be subjected to more scratching than most grasses and clovers can stand.

The **crimson clover** and rye may be sown up to the last of September; and the **vetch** and oats to the last of October.

No. 7 GRASS MIXTURE.

It gives me much pleasure to say that I have used your **No. 7 Grass Mixture** for a number of years, and have about thirty acres in it already. It is the best mixture I have ever used, and I have never failed to have a fine hay crop.—G. B. RIVES, Albemarle County, Va., June 14, 1921.

WOOD'S CROP SPECIAL.

While we exercise great care to have all seeds pure and reliable, we give no warranty, express or implied, as to description, quality, productiveness, or any other matter connected with the goods we send out, and will not be in any way responsible for the crop. Every order for articles named in this price-list will be executed on these conditions only.

NEW CROP CRIMSON CLOVER

A WONDERFUL SOIL IMPROVER!

Also Makes Excellent Winter and Spring Grazing, the Best of Early Green Food or a Good Hay Crop.

CRIMSON CLOVER—Wood's Trade Mark Brand (Recleaned) (2½-bus. cotton bags, 45c. each extra), 100-lb. lots, 11¼c. lb. (per bus., \$6.75); 50-lb. lots, 11½c. lb.; 10-lb. lots, 13c. lb.

WHITE BLOOMING CRIMSON CLOVER, 100-lb. lots, 17c. lb.; 50-lb. lots, 17½c. lb.; 10-lb. lots, 19c. lb.

POSTPAID PRICES SEE BELOW

WOOD'S GRAIN PASTURE MIXTURE, per bus. (50 lbs.) \$1.50; 10-bus. lots and over, \$1.45.

CYCLONE SEED SOWERS, \$2.40 each. Postpaid, \$2.60.

CAHOON SEED SOWERS, \$4.75 each. Postpaid, \$5.10.

ONION SETS FOR FALL PLANTING

Prices Included Containers.	Per Quart.	Per Peck.	Per bus. 36 lbs.
Yellow Danvers	\$.20	\$1.00	\$2.50
Red Wethersfield	.20	1.00	2.50
Silver Skin	.20	1.10	2.75
White Bermuda	.20	1.10	3.50
Extra Early White Pearl.....	.25	1.40	5.00
White Multiplier	.25	1.40	5.00

For postpaid prices add 10c. per quart; 25c. per peck; 80c. per bushel.

We have limited supplies of **White Pearl** and **White Multiplier** Onion Sets that we can supply for prompt shipment. All other prices quoted for shipment latter part of September.

The very wet weather at producing sections has delayed harvesting of Onion Sets this season.

TURNIP AND RUTABAGA SEED

If you have not already planted Turnips and Rutabaga, put them in as quickly as possible.

Sow either broadcast or in drills two feet apart, thinning out to four inches, and roll the ground after sowing.

One ounce sows 100 feet of drill; 1½ pounds sows one acre in drills; 2 pounds one acre broadcast; sow salad varieties three pounds to an acre.

WOOD'S HIGH-GRADE SHEEP MANURE. 25-lb. bag, 85c.; 50-lb. bag, \$1.50; 100-lb. bag, \$2.65; ton, \$45.00.

WOOD'S STANDARD BONE MEAL. For top dressing in the fall and ensuring good and lasting results upon grass, clover and other fall sown crops, nothing is better than **Wood's Standard Bone Meal**. Used upon old lawns all through the fall months and early winter it conserves fertility throughout the dormant period because of its slowness in dissolving, and starts the grass off well with the advent of warm weather in the spring.

USE FARMOGERM FOR BIGGER CROPS

The use of **FARMOGERM** offers the quickest and cheapest way to bring up worn-out land and of maintaining the fertility of good soils. It will make your following crops bigger and better by supplying your legume crops with billions of bacteria that will be busy gathering free nitrogen from the air and storing it in your soil.

We can supply **FARMOGERM** for the following crops: **VETCH, ALFALFA** and all varieties of **CLOVER**. Always state crop for which **FARMOGERM** is wanted.

Prices: 12-acre size, \$9.00; 3-acre size, \$2.50; 1-acre size, \$1.00; ¼-acre size, 50 cents.

NOTICE ABOUT BAGS

Prices quoted Post-paid include sacks and all delivery charges are paid. Prices quoted at the 10-pound f. o. b. Richmond price include sacks; 50-pound and 100-pound prices sacks are extra, except where sacks are stated free. We charge for bags as follows: ½-bushel size, 14c.; 1-bushel size, 20c.; 2½-bushel size, 45c.

WOOD'S SEEDS

WOOD'S TRADE MARK BRAND REPRESENTS THE CREAM OF QUALITY SEEDS

SEED WHEAT

Recleaned Seed Wheat drawn from heavy-producing crops in the limestone section and thoroughly recleaned over our special seed clearing machinery is far superior for sowing to ordinary strains of local wheats. We unhesitatingly advise against sowing uncleaned wheats, as, besides getting poor yields, so many pests are carried from farm to farm in this manner. The increased yield of from five to ten bushels per acre will certainly offset the small extra cost of obtaining our superior quality recleaned Seed Wheats. Write for samples. Orders booked now at the following prices for October and November shipment.
