Lilium Myriophyllum

(REGALE)

(Measurements refer to diameter)

	Each	Per Doz.	Per 100
No. 1 2 inch and up	\$1.00	\$10.00	\$75.00
No. 2 1½ to 2 inch	.75	7.50	55.00
No. 3 1 to 1½ inch	.50	5.00	40.00

6 Bulbs at dozen rate, 25 Bulbs at hundred rate.

Ask for Special prices on larger quantities.

Bulbs ready for delivery October 15th.

A complete line of Dutch Bulbs consisting of Hyacinths, Tulips, Daffodils, Narcissus, etc. will be carried this season for fall planting. Kindly ask for price list. Cash must accompany all orders from those not having an established credit with us.

Description of *Lilium Myriophyllum*

A most beautiful creamy white bloom, with bright, golden throat, outside of flower white tinted yellow at the base, with delicate purple midribs, having three wide and three narrow petals; beautiful, rich green foliage, very wiry stem, growing from eighteen inches to three feet tall, producing some times as many as eight or ten blooms to the bulb. A rival to the Jasmine in fragrance. The blooms will last for days after being cut, having wonderful substance, perfectly hardy and will thrive and do well in any good, rich garden loam, either partly shady or all sun, but it is essential that soil be well drained. This Lily will not thrive in a location where water occasionally stands or in a tight mucky soil.

CULTURE FOR FORCING

Regale Lilies can be easily forced if properly handled. Any good greenhouse soil, the same as used for the Gig Lilies is desirable. Immediately upon planting place them upon top of bench, as it is necessary that the tops and root action start together, keeping them well watered and in a temperature of from fifty-two to fifty-eight degrees, feeding from time to time is permissible, using any good bone meal or liquid manure. As this Lily is a natural hybrid better results will be obtained if only one bulb is planted to each pot. If planted in December they will easily come in bloom for Easter, if properly handled.

We have had success with above culture, but can not guarantee results.

Regale Lily from Seed

SEED CULTURE:-Sow in Greenhouse or Hot Beds, in January, in well pulverized, light sandy soil. Care must be exercised in watering as young seedlings have a tendency to damp off. Dusting with grape dust from time to time will prevent damping. About the same culture as given tomato seed will get good results with Regale Seed. Seedlings should be lined out of doors in beds as soon as weather permits, in good garden loam well drained. Plant about one inch deep and keep well cultivated during the summer season. Either dig in the fall and transplant back in three or four weeks, or if your soil is strong enough, you may leave out the seedlings for two years, mulching after the leaves die down, with about two or three inches of well prepared compost.
