AT A TOUCH

THE NEW SOWRITE SEED SOWER

THE professional gardener and even more so the amateur has long felt the need of an instrument to enable him to sow the finest seeds—with the same precision and assurance of success as the larger ones.

The new Sowrite Seed-Sower does this! It appeals to the flower-lover first, perhaps, because of its surprisingly low cost, but once tried, its ease and precision of operation, saving of time, seeds and plants make it indispensable, for it drops the seeds with such accuracy that perfect development of each plant is assured and the trouble of transplanting is minimized.

Here is a *perfect* device—created for you by one of the most eminent gardeners and florists in the country at heavy expense and years of patient experiments—ready to do for you what has never been possible before.

Its value to you is tremendous—The result of your sowing is increased to 100% returns.

Let us emphasize once more its truly *marvelous simplicity!* There are no gears or delicate mechanism to wear and get out of order; it operates at a touch; is made of practically unbreakable material, and is small enough to carry around in your coat pocket. A careful elimination of unnecessary manufacturing costs and production based on quantity makes possible this remarkable value.

Just a suggestion—when ordering one for your own use, why not one or more as welcome gifts—to your friends.

THE NEW SOWRITE SEED SOWER

How it operates!

A small pear-shaped opening at the bottom of the seed-holder is regulated by a spring, exposing the point of opening only for the finest seeds. This opening can be correspondingly enlarged according to the size of the seeds to be sown.

The seed-sower is held in the left hand with the feeder-tube extend-

ing over the back of the hand. A light tapping with the second finger of the right hand on the end of the second finger of the left gently impells the seed through the tube in regular order. (See illustration.)

N. B.—In operating the spring slide take care to see that it moves with the curve of the bowl. If it seems stiff at first a few moments' practice will enable it to slide in the groove easily and efficiently.

One Week Later—Here the plants are coming up. Each Separate—No waste of seed—no waste of time or plants.
