Alcluyd Dahlias 1924

Grace G. Ryder

ALCLUYD DAHLIAS

The growing of dahlias and watching their development is an intensely interesting study. From the single or quilled dahlia of forty years ago we now have eight distinct types of blossoms. Each of these types comes in the most gorgeous crimsons to almost black, to the softest blending of glowing amber, pink and gold to pure gold. All of them with petals like the richest satin and velvet and sometimes an indescribably beautiful iridescent sheen is seen over the blossom. There is no other variety of flower to compare with it. After growing some of these aristocrats of the dahlia family one has the additional pleasure of growing their own seedlings from seed collected from these flowers. Plant the seed in flats in March or in a cold-frame early in April, transplant to open ground when all danger from frost is over.

Cultivate often and keep free from weeds. In a surprisingly short time, usually by July, these plants will begin to blossom and continue giving you new surprises until cut down by frost. You will have a good many single blooms, some of peony formation and now and then a real treasure, a dahlia of largest size, fine formation and fascinating color. The uncertainty of what beauty nature may have in store in these seedlings intrigues one greatly. There is the blue dahlia yet to be produced, and who knows what other colors and formations may yet develop.

Each year we have been growing the best and newest introductions with some varieties we imported from Holland a few years ago, added to which are a few of our own production. Many varieties not scheduled will be supplied at current rates.

All tubers are guaranteed true to name and in growing condition. Any that fail to send up sprouts will be replaced or money refunded. Information cheerfully given.

You are cordially invited to visit our dahlia fields during the blooming season, situated on the corner of Waterloo Avenue and Sugartown Road, one-half mile south of Berwyn off the Lincoln Highway, eighteen miles from Philadelphia.

Sunset. A delightful orange	.35

Reductions made when six or more tubers are purchased.

OUR OWN INTRODUCTION

The five varieties listed below are of our own introduction:

	Tubers
Crimson Dyed (D.) This mammoth dahlia is an improvement over both Mephistopheles and Toreadore, of which it is a seedling. The color is a deep, rich crimson, with full dark centre. The beautiful blossoms are held proudly aloft from a low growing bush upon long, stiff stems. It was greatly admired by visitors to our trial grounds last season. Won first prize in its class at the Penna. State Hor. Society show last year. No orders taken until fall.	
Clara Jack (D.) Bright clear crimson of largest size, on long, stiff stems	1.00
Alcluyd Coral (P.) This large blossom of a soft coral pink growing on stiff, strong stems is a great favorite of ours. The petals have a heavy velvety texture with many peteloids which curl and twist and almost cover the centre. Splendid cut flower variety. Stock limited	1.00
Alcluyd Anemone. This charming little blossom is waxy white, tinted lemon. Extremely free flowering the flower is held aloft on very long stiff stems. Resembles the Anemone in formation, hence the name.	.50
Alcluyd Buttercup (P.) This very large, heavy blossom is a clear buttercup yellow. Free flowering ..	.50
We have other peony dahlias (not named) in beautiful crimson, pale yellow, splashed with red, at 25c each.
