THIS IS A BOOK OF REFERENCE

WE BELIEVE you will find this Book an honest, trustworthy salesman, always ready to give you accurate and complete information about the goods we offer.

This shows the arrangement of Bulk Seeds
in our Garden Department.

SEEDS---TREES---PLANTS---SHRUBS *and* BULBS

SPRAYING is the most important operation on the farm, and it is only by spraying with suitable materials that most of the troublesome insect pests and fungus diseases of fruit trees and garden crops can be controlled. Spraying, likewise, with the right materials, will protect the health of live stock, by controlling pests which infest their skin and by maintaining their quarters in a sanitary condition.

There is no one spray that will cure everything. Use the spray that will best fit your case. Spray thoroughly. Direct your atten-

tion to the parts that are hardest to reach, for it is in such places that the pests are most liable to exist in greatest numbers. Cover every surface, and drive the spray into cracks and crevices. When spraying fruit trees get the spray into the buds and into the calyx cup of apples and pears. Wet the upper and lower surfaces of the leaves.

Spraying is much more of a preventative than a cure, especially in the control of diseases. Plants that are sprayed before the diseases, such as scab, rots of various kinds and mildews, will be protected from damage by the organisms causing the diseases. But after the diseases are at work, damage already has been done and no kind of spraying will cure it.

Spraying Program

APPLE

The usual number of spray applications for the apple and pear are five, but under some conditions it is advisable to make one or two additional sprays, particularly during wet seasons. The following applications when correctly made, constitute a complete spraying program and should control all the common enemies of the apple and pear.

1. **Dormant Spray.** Applied before the buds burst in the spring. Materials: Oil Emulsion, Scalecide (1 to 15), or Lime-Sulphur (1 to 8). Controls San Jose Scale and Blister Mite. (If Lime-Sulphur is used), the addition of "Kayso" is very valuable, used at the rate of 2 lbs. to 200 gals. of spray mixture.

2. **Delayed-dormant Spray** (Green tip). Often substituted for dormant spray, and when used, the dormant application is unnecessary. Materials: same as above except addition of Black Leaf 40, 1 pt. to 100 gals., when Lime-Sulphur is used, for the control of aphids.

3. **Pre-pink Spray** (cluster bud). Sometimes omitted unless season is rather rainy, in which case it becomes one of the most valuable sprays for controlling Scab. Materials: Lime-Sulphur 1 to 40, Arsenate of Lead, 2 lbs. to 100 gals., Black Leaf 40, 1 pt. to 100 gals. Controls Scab, Aphids, Bud Moth and other minor insects.

4. **Pink Spray.** This spray should never be omitted as it controls a large number of disease and insect pests. Materials: same as above in pre-pink spray. "Kayso" is usually added at the rate of 1 lb. to 100 gals., as it makes a better covering.

5. **Calyx Spray.** This is the most important application as it controls Codling Moth, Apple Scab, etc. Materials: same as in pink spray, except that Black Leaf 40 is usually omitted from this and later sprays. This spray mixture should be applied to the trees very thoroughly with the highest pressure available so that the misty spray will enter all of up-turned blossom ends of young fruit.

6. **First Summer Spray.** This application comes about ten days or two weeks after the calyx spray. When Curculio is serious, however, this spray should be applied one week after the calyx spray. Materials: same as in calyx spray.

7. **Second Summer Spray.** Sometimes called second Codling Moth or first

Bitter Rot spray. Comes about eight or nine weeks after calyx spray. Materials: same as in calyx spray. On certain yellow varieties of apples, which practically never scab, Lime-Sulphur can be omitted from this as well as other summer applications, using only arsenate of lead and some lime with "Kayso." If Bitter Rot or Apple Blotch is present, Bordeaux Mixture (3-6-50) should be substituted for the Lime-Sulphur.

Bordeaux often causes russetting of yellow sorts, therefore omit Bordeaux if Bitter Rot and Blotch are not troublesome.

8. **Second Bitter Rot Spray.** An additional spray for Bitter Rot is sometimes advisable in wet seasons, applied two or three weeks after the first Bitter Rot spray. Materials: Bordeaux Mixture (3-6-50) and Arsenate of Lead (2 lbs. to 100 gals.).

Explanation of Terms: The various stages in development, at which the various sprays are applied may be explained as follows: (1) Dormant: Before the buds burst in the spring. Dormant sprays may also be applied in the fall but some advantage is gained by delaying until the buds begin to swell. (2) Delayed - dormant: sometimes called "green tip" stage. When the leaves of the blossom buds are out $\frac{1}{4}$ inch, but are still tightly curled and in a compact mass. (3) Pre-pink: often called "cluster bud" stage. When the cluster of blossom buds have appeared but before they have separated. (4) Pink: (Blossom pink). When blossom buds have separated and show pink of petals, but have not opened. (5) Calyx: After at least five-sixths of the petals have fallen and before the calyx lobes of central blossom of cluster closes.

PEAR

Practically the same as for apple, except that only the five regular sprays are made as a rule: i. e., Nos. 1 (or 2), 4, 5, 6 and 7 as shown under Apple Spray Program. Bordeaux Mixture is also omitted, since Bitter Rot is not a factor. For the summer sprays, the Lime-Sulphur should be 1 to 50 instead of 1 to 40.

PLUM

Same Spray Program as for the peach. An extra spray, however, is sometimes made for Curculio just after the blossoms fall, consisting of Arsenate of Lead,

2 lbs., and Lime, 6 lbs., to 100 gals. of water. Plums (except Japanese type) can also be sprayed with dilute Bordeaux Mixture (2-4-50), but self-boiled Lime-Sulphur is preferable.

PEACH

1. **Dormant Spray.** During the dormant season, preferably on mild days of late fall or spring, before the buds begin to swell. Materials: Lime-Sulphur (1 to 8). Controls San Jose Scale and Peach Leaf Curl.

2. **Second Spray.** When the blossom shucks (calyces) have dropped from the young fruit. Materials: self-boiled Lime-Sulphur (8-8-50) or dry-mix Sulphur-Lime; and Arsenate of Lead (2 lbs. to 100 gals.). Controls Brown Rot, Curculio, etc.

3. **Third Spray.** Two weeks after second spray, using same materials.

4. **Fourth Spray.** About one month before fruit ripens. Materials: self-boiled Lime-Sulphur or dry-mix Sulphur-Lime. Controls Brown Rot.

CHERRY

1. **Dormant Spray.** Should be applied before the leaf buds swell. Materials: Oil Emulsion, Scalecide, or Lime-Sulphur (1-8). Controls San Jose Scale.

2. **Second Spray.** When the shucks (calyces) have fallen from the young fruit. Materials: Bordeaux Mixture (3-5-50), self-boiled Lime-Sulphur, or dry-mix Sulphur-Lime; and to one of these add Arsenate of Lead (2½ lbs. to 100 gals.). Commercial Lime-Sulphur (1 to 40) may be used on the sour cherry, but the foliage of the sweet cherry is too tender for this material unless used at weaker strengths.

3. **Third Spray.** About two weeks after second spray, using same materials.

Controls Brown Rot, Slug, Shot-hole Fungus, etc.

4. **Fourth Spray.** After the fruit is picked. Materials: Bordeaux Mixture (3-5-50 strength). Controls shot-hole fungus (leaf-spot), and where the disease is serious, this application is very important.

GRAPE

1. **First Spray.** When third leaf is forming on the new shoots. Materials: Bordeaux Mixture (3-5-50 strength) and Arsenate of Lead (2½ lbs. to 100 gals.).

2. **Second Spray.** Just before blooms open. Materials: same as in first spray.

3. **Third Spray.** Just after petals fall. Materials: same as above.

4. **Fourth Spray.** Two weeks after third spray. Materials: same as above.

5. **Fifth Spray.** Two weeks after fourth spray. Materials: Bordeaux Mixture (3-5-50) alone.

Later Sprays. In wet seasons, later spray applications may be necessary. In such a case, however, Ammoniacal Copper Carbonate is substituted for Bordeaux Mixture in order not to stain the maturing fruit.

RASPBERRY

Anthracnose. This disease attacks both red and black raspberries, producing circular or oval spots on the leaves and young shoots, at first purplish and later grayish in color. Dwarfing of the canes results, followed by premature ripening and drying up of the fruit.

Control. Spray with Lime-Sulphur (1 to 10) just as the buds are opening and again with Lime-Sulphur (1 to 50) one week before the first blossoms open. "Kayso" should be added in both cases. After picking season, cut out and burn all old and diseased canes.

HOW TO ESTIMATE THE AMOUNT OF SPRAY MATERIAL NEEDED

The following estimates are made on the basis of the average 15 to 20 year old apple tree where the complete season's spray program is followed out:

1. **Lime-Sulphur.** About one-half as many gallons of the commercial concentrated solution will be required as there are trees to be sprayed, figuring on the basis of the four summer applications only. If dry lime-sulphur is used, twice as many pounds will be required as the number of trees.

2. **Arsenate of Lead (Powder).** One-half as many pounds as there are trees to be sprayed, based on use in four applications.

3. **Black Leaf 40.** One pint for each 15 trees to be sprayed, assuming that it is included in two applications.

4. **Bordeaux Mixture.** One pound Copper Sulphate and one pound Stone Lime for each tree sprayed, based on three applications.

WHITEWASHING SOLUTION (U. S. Government Formula)

Slack $\frac{1}{2}$ bushel of quick lime with boiling water (keeping it covered during the process), strain and add a peck of salt dissolved in warm water, 3 pounds of ground rice which has been boiled to a thin paste, $\frac{1}{2}$ pound of Spanish whiting and 1 pound of clear glue dissolved in warm water. Mix these materials well together and let stand for several days. Dilute with sufficient water to flow freely, straining the wash through a piece of cheese cloth into the sprayer tank. A small quantity of laundry bluing will add to the whiteness of the surface.

Notice to Home Gardeners

In order to assist the small fruit grower and gardener the following schedule is presented which will give in level tablespoons the proper quantity of insecticide or fungicide to use in one gallon of water.

M-S Dry Arsenate of Lead

Seed Fruits and Truck Crops:

4 to 6 tablespoons in one gallon of water.

Stone Fruits:

4 tablespoons in one gallon of water.

Potatoes:

6 to 8 tablespoons in one gallon of water.

M-S Dry Lime-Sulfur

Dormant Spray:

16 to 22 tablespoons in one gallon of water.

Summer Spray—Seed Fruits:

4 to 5 tablespoons in one gallon of water.

Summer Spray—Stone Fruits (except Peaches):

2 tablespoons and 6 tablespoons of hydrated lime.

M-S Arsenate of Calcium

Seed Fruits and Truck Crops:

4 to 6 tablespoons in one gallon of water.

Potatoes:

6 to 8 tablespoons in one gallon of water.

M-S Paris Green

Potatoes:

1 to 3 teaspoons in one gallon of water, and 6 tablespoons of hydrated lime.

M-S Bordo Arsenate

General Truck Crops and Seed Fruits:

12 to 15 tablespoons in one gallon of water.

Stone Fruits (except Peaches):

10 tablespoons in one gallon of water.

Fly Sprays**COW EASE and KNOX OUT****FOR COWS, HORSES, SWINE AND POULTRY**

Keeps flies off; gives cows a chance to feed in peace, therefore increases flow of milk.

Repellent to lice on cows and horses.

Prevents barn and cattle itch.

Does not gum the hair. Will not stain the cows' or men's clothing.

Does not irritate eyes or hands of men.

Does not taint milk when used as directed.

Quart, 60c. $\frac{1}{2}$ Gallon, 90c. Gallon, \$1.50. 5 Gallons \$6.50.

We Highly Recommend the Martin-Senour Line of Insecticides and Fungicides

DRY LIME SULFUR

The use and success of Lime-Sulfur Solution is known to practically every fruit grower in the country, and every grower is also familiar with the inconveniences and unpleasantness in connection with the handling of Liquid Lime-Sulfur. The barrels are very heavy to handle—they contain over 50 per cent water, which means heavy freight charge. Liquid Lime-Sulfur freezes in cold weather and leaks from the barrel in summer, and all in all is very unpleasant to handle. Martin-Senour Dry Lime-Sulfur is standard Lime-Sulfur Solution in dry powdered form—the first and only one of its kind on the market. It has all the advantages of the liquid material, and eliminates the disadvantages. Its effectiveness has been proven by thousands of orchardists and Experiment Stations.

Protected by U. S. Patent No. 1,254,908.

Price—Market

DRY POWDERED ARSENATE OF LEAD

Because of its unusual lightness, stays thoroughly in suspension during spraying operations, thus giving the spray uniform strength. It contains from 30 to 33 per cent arsenic oxide thoroughly in combination with lead and less than one per cent water soluble arsenic. This means that it has maximum killing power, speedy action and unquestionable effectiveness in controlling leaf-eating and chewing insects, and, due to its low percentage of water soluble arsenic, there is no danger of burning the foliage. Its unusual adhesiveness is another point in its favor.

Price—Market

DRY BORDO

Martin-Senour Dry Bordo is a true Bordeaux Mixture in dry powdered form, requiring only to be mixed with cold water to give a standard Bordeaux Mixture spray. The convenience and value of having Bordeaux Mixture in dry powdered form will be instantly recognized by all fruit growers.

Price—Market

SUPERFINE SULFUR

Many growers will prefer to make up their own dusting combination, and we are in position to supply such growers with Martin-Senour Superfine Dusting Sulfur and Martin-Senour Dry Powdered Arsenate of Lead for this work. Martin-Senour Superfine Dusting Sulfur is so finely divided that over 95 per cent will pass through a 200-mesh screen. Fineness is an important factor in successful dusting and the wise fruit grower will be careful to use a Sulfur and Arsenate of Lead that is very finely divided.

Price—Market

PARIS GREEN

Martin-Senour Paris Green has by years of use proven its quality. It has become the standard Paris Green in many localities. It is light and fluffy, insuring good suspension in the spray tank and thorough covering of the foliage; contains approximately 56 per cent arsenious oxide and less water soluble arsenic than is allowed by law. It is one of the safest and most effective Paris Greens on the market today.

Pyrox

REG. U.S. PAT. OFF.
TRADE MARK REGISTERED

the triple-duty spray

Much easier to use—

For 27 years Pyrox has been known as the handiest and most efficient spray material on the market. There is nothing else like it! And this year, due to advanced manufacturing methods, Pyrox is even better than ever. Smoother; always ready to use; always soft and plastic.

Within 5 minutes you're spraying—

No fuss or mess with Pyrox. No guesswork. No weighing out and mixing different ingredients. No hard lumps to break up. Simply dip this creamy-smooth paste out of the jar or can; add cold water according to directions; stir, and in a few moments the paste is in complete suspension. You have a perfect mixture that sprays, mist-like, through the finest nozzles and lays a thin film over the whole plant.

Pyrox is very economical: because it is so handy to use, it saves your time. Because it can be sprayed so thinly, it goes far. Because it sticks like paint, frequent sprayings are unnecessary.

Much more effective—

You need only one spray when you use Pyrox. For Pyrox contains both a **deadly poison** and a **powerful blight preventive**—extra high in Copper. Thirdly, Pyrox improves foliage—lengthens the growing period, thus increasing the yield and improving the quality. Pyrox does three things at one application.

Insects and other plant pests simply cannot live or stay where Pyrox is applied. Blights and rusts can make no progress.

Use Pyrox for all garden vegetables, small fruits, shrubs and rose bushes.

Kills Scale

and

Many Other Pests

For twenty years Scalecide has proven to be not only the most efficient but also the most economical dormant spray.

The economy of Scalecide is shown by the fact that a fifteen gallon drum contains enough Scalecide to spray as many trees, until they drip, as a fifty gallon barrel of lime-sulfur. And, since a tankful of dilute Scalecide sprays as many trees as two tankfuls of dilute lime-sulfur, it can be applied in half the time.

Spring spraying with Scalecide controls scale, aphids, red mite, leaf roller, bud moth, pear thrips, leaf miner and case borer. It kills the hold-over cankers from which are spread fire blight, collar rot and root rot. Year after year use of Scalecide invigorates the trees.

Scalecide is pleasant to use. Directions are simple—dilute one gallon in fifteen gallons of water and spray. To find out how much you need for your trees, determine from the table below the number of gallons of dilute solution required and divide by fifteen. Or if you have been using lime-sulfur figure that one gallon of Scalecide will go as far as three and a half gallons of concentrated lime-sulfur.

Average Amount of Dilute Scalecide Needed	
2 to 5-year-old trees.... $\frac{1}{8}$ to $\frac{1}{4}$ gal.	50 gal bbls.....\$38.00

SCALECIDE

THE COMPLETE DORMANT SPRAY

SCALECIDE

"Makes a Tree Outgrow Its Troubles"

Spray Vegetables With **“Black Leaf 40”** To Destroy Aphis

Among the most common pests are the small green, pink, or grayish plant lice (“aphis”) which attack the leaves, tender tips, and other parts of plants. These insects are small, but easily seen. On such plants as **cabbages, turnips, spinach and melons** they gather in “colonies” on the under surface of the leaves. On such plants as **potatoes, tomatoes, peas and beans**, they may be found covering the tips of the stems and also on the under side of the leaves.

They multiply very rapidly, and though early in the season only a few may be noticed on the plants, under favorable conditions they very often become epidemic.

The aphis is not of the **chewing** class of insects, like the beetles, etc. (which must be killed by stomach poisons, such as Paris Green and Arsenate of Lead), but is of that other class of insects called the “sucking” kind (like the mosquito); for with its sharp, slender beak it punctures the leaves and other parts of the plant and **sucks** the juice from **within** the plant. It must, therefore, be destroyed by a substance which will kill by mere **contact** with its body. In other words, by a so-called “contact insecticide,” such as “Black Leaf 40,” which has been demonstrated by State and Government experts, to be an effective spray for aphis and entirely safe to the plants when used as directed.

THE INJURY

The aphis sucks the juices that ought to supply food to the plant. A few of them on a plant may not seem dangerous. But from these few, thousands can develop very rapidly, and the amount of food they consume is sufficient to rob the plants of their nourishment.

The presence of aphis on vegetables may first be indicated by a yellowing and curling of the leaves, or by withering and browning of the stems; that is, of course, if the insects themselves are not discovered first. **Aphis attacks nearly always reduce the yield and lower the quality of crops; if, indeed, the plants themselves are not destroyed.**

HOW TO CONTROL THE PEST

A grower after planting and cultivating his crops should not leave them to be injured or destroyed by aphis. Spray as soon as the insects appear. If treatment is delayed until the leaves are curled and the aphids are numerous, it is not only difficult to reach them all, but the plants will have been damaged in the meantime.

THE FORMULA: Use $\frac{3}{4}$ of a pint “Black Leaf 40” to every 100 gallons of water. On a smaller scale this is equivalent to one heaping teaspoonful of “Black Leaf 40” to one gallon of water.

COMBINED SPRAYS: It is possible to combine “Black Leaf 40” with other spray materials, thereby saving time and labor.

When using Arsenate of Lead for the cabbage worm and similar leaf-eating caterpillars, or for the potato beetle and other leaf-eating beetles, “Black Leaf 40” may be added to the Arsenate of Lead mixture at the same rate as stated above in “The Formula.”

When spraying with Bordeaux Mixture, Ammoniacal Copper Carbonate, Sulphur, and similar materials, for the control of plant diseases, “Black Leaf 40” may likewise be added.

SOAP: The addition of a little plain laundry soap will soften the water and increase the **spreading** and wetting properties of the spray. The soap should be cut into thin slices and boiled in a small amount of water until dissolved. It may be used at the rate of 3 to 5 pounds of soap to every 100 gallons of water; or, on a smaller scale, $\frac{1}{2}$ ounce soap to every gallon of water. **DO NOT** add soap when mixing “Black Leaf 40” with Arsenate of Lead or Bordeaux.

TREE TANGLEFOOT

A perfect safeguard against Gypsy Moth, Brown Tail and Tussock Moth, Caterpillars, Canker Worms, Cut Worms, Ants and other creeping insects. For tree surgery—nothing better on the market. It is unequalled for the treatment of trees after trimming or pruning.

1 lb. Can 60c 5 lb. Can \$2.75

TANGLEFOOT ROACH AND ANT POWDER

Is more certain to rid premises of Roaches and Ants than any irritating powder or liquid.

2 oz. Pkg. 10c ½ lb. Pkg. 25c
1 lb. Pkg. 50c

TANGLEFOOT FLY SPRAY

Quick Acting and Sure

Tanglefoot Fly Spray does its work swiftly and completely without causing extra work, worry or fuss. It leaves no dust to remove from furniture, or poison to endanger children.

There is no half-way measure about it. Its action is as swift as fate and as sure as death. When it is used one wastes no time or energy vainly swatting flies—only to soil the walls and surrender in despair. Just close the windows and doors for a few minutes, fill the air with Tanglefoot Fly Spray, and flies and other insects are killed in a wholesale way.

Above all things, Tanglefoot Fly Spray is safe. It is non-poisonous and non-irritating to human beings and animals, and it is not injurious to rugs, draperies or furniture.

½ Pints 50c; Pints 90c; Quarts \$1.50

GRAFTING WAX

For grafting of every kind. To be spread on the cut or around the graft when trimming fruit or other trees, or shrubbery. It is much better to cover the cut with grafting wax.

Price, per 5-oz. Bar, 25c

DUSTING SULPHUR

Dusting Sulphur can be used to advantage in combating mildew wherever found and often can be substituted for Bordeaux mixture, when the latter is recommended. It is best applied when the foliage is moist and in the morning of a sunny day. Roses of the crimson rambler type, which are greatly subject to mildew, are especially benefitted by the use of the sulphur, which should be dusted on as soon as the leaves are out and several times thereafter. Shrubs and trees which are likely to show mildew include lilacs, cherries, plums and hawthorns.

In the fruit garden Dusting Sulphur is of value in preventing mildew on the grape, also in preventing this trouble on the currant and gooseberry, although the European gooseberries are hard to keep clean.

In the vegetable garden onion smut can be largely controlled by dusting the sulphur on the plants and soil. Both anthracnose and mildew on spinach may be held in check by dusting the plants and ground with the sulphur. Melons and other garden crops often develop mildew and the remedy is the same.

½-lb. Pkg. 15c; 1-lb. Pkg. 20c; 5-lb. Pkg. 90c

TOBACCO DUST

For use in the garden the Tobacco Dust should be used in the form of a fine powder. When dusted over young plants it is very efficient in repelling many kinds of bugs and in keeping the foliage free from aphids or lice. Some specific uses follow:

Cabbage maggots, which work at the root, are subdued by Tobacco Dust sifted on the ground around the plants when they are set out and once a week for three weeks thereafter.

Cucumbers—Striped beetles are kept away by dusting with Tobacco Dust as soon as the leaves appear. Prompt action is necessary, as the beetles attack the leaves as soon as they show and are exceedingly voracious. A small handful of dust worked into the soil around each plant will prevent the laying of eggs by the beetles, as well as destroying the young beetles.

Melons—Apparent wilting of the vines is often caused by the grub of the striped beetle, which eats the surface of the roots. Spread Tobacco Dust on the ground as close as possible to the plants. Also dust the leaves as in protecting cucumbers.

Onions—Work Tobacco Dust liberally into the earth to keep maggots away.

Radishes—As for onions to prevent maggot injury.

Lettuce—For lice dust the leaves freely.

Asters—Beetles are kept away by using Tobacco Dust freely at the base of the plants. Work it into the soil at planting time.

Peony—Use Tobacco Dust on the leaves to drive away both ants and aphids.

In general Tobacco Dust can be used with good results wherever there are lice, green flies or black flies. To some extent it will free plants from red spider, and if used early enough will give immunity from rose bugs. There need be no fear of using too much, because it does no harm, but is considered a valuable fertilizer.

½-lb. Pkg. 15c; 1-lb. Pkg. 20c; 5-lb. Pkg. 90c

Myers Spray Pumps and Accessories

So many good things come out of spraying that we cannot help but be enthusiastic about it.

When we see an orchard in full bloom early in the spring of fruit trees scattered about some home lot awakening into a mass of scented flowers, we wonder just what the harvest will be.

How many apples will this or that tree have on it when the time comes to pick them?

Or will the pear, plum, cherry or other trees now holding out such wonderful prospects for a bountiful harvest have paying crops and thus help out with the food problem during the months to follow when canned fruits must take the place of fresh ones?

But the day is past when we can stand idly by and let nature alone transform these blossoms into perfect fruit for us.

We ourselves must be up and doing if we are to have fruit for the market and for winter storage, or for canning and preserving.

Trees, blossoms, young fruit and even the fruit after it is matured must be guarded and protected from numerous enemies such as scale, fungus diseases, rot, insects and other forces which tend to retard their development and ultimately destroy them entirely.

Protection of this kind can be given in two ways, both of which are essential—pruning is important—spraying is necessary. Trim your trees occasionally but spray them regularly, and the results will pay you for your time and trouble.

So complete is the **MYERS LINE OF SPRAY PUMPS AND NOZZLES** that few indeed are the requirements that cannot be met from it.

Besides, most styles of Myers Pumps are adapted for spraying cold water paints, whitewashing and applying disinfectants, sprinkling, washing windows, fighting fires and innumerable other uses, making them doubly valuable and very handy to have about.

MYERS PORTABLE With Cog Gear Spray Pump and Dasher Agitator

The pump is fitted with cog gear handle and dasher agitator. It is securely attached to the tank by means of a clamp connected direct to the channel iron that surrounds the top of the tank, held in position by means of one thumb screw. The handle can be located at any point desired. Suitable for greenhouse work, spraying trees, whitewashing, painting, spraying cattle and hogs; recommended for outside work.

No. R336B—Capacity 12½ Gallons,
Extra Heavy Galvanized Iron, 15 ft.
½ in. 5-Ply Discharge Hose, 8 ft. Ex-
tension and Vermorel Nozzle. \$30.00

LITTLE GIANT

No. 327½—26½ in. High, 2 Brass Cylinders, 1½ in. Diameter, Brass Ball Valves, Patent Agitator, Cast Brass Base, Malleable Iron Foot Rest, 3 ft. Rubber Hose, Complete with Imperial Combination Fine, Coarse Spray and Solid Stream Nozzle.....\$5.00

Will throw a solid stream of 50 feet. For washing windows and buggies, extinguishing fires, sprinkling lawns, flowers, etc.

MYERS COG GEAR

For Pail or Bucket

The Large Cylinder in combination with the Cog Gear Handle makes this an exceptionally easy working pump of more than ordinary capacity.

No. 327½

No. R324—33 in. High, Brass Cylinder 1½ in. Diameter, 6 in. Long, with Solid Brass Plunger, Brass Ball Valves, Air Chamber and Discharge Hose, Malleable Iron Foot Rest, Head and Cog Gear Handle, Patent Jet Agitator, Complete with Detachable Hose and Graduating Vermorel Fine, Sprinkling and Solid Stream Nozzle\$7.75

MYERS COG GEAR

For Barrel

The construction is such that the entire pump sets inside the barrel containing the liquid, being bolted fast at its upper end to the head of the barrel.

By this the working parts are entirely submerged in the liquid that is to be sprayed, thereby avoiding all possibility of losing priming, doing away with the necessity of a suction pipe, placing the agitator in the bottom of the liquid in a simple form and also doing away with a great number of complicated parts. Base fits 8x8 in. hole.

No. R318B—42 in. High, Brass Cylinder, Brass Plunger with Hemp Packing, Bronze Ball Valves, Valve Seats and Discharge Pipe, Malleable Iron Base, 32 in. Air Chamber Enabling the Pump to Throw a Uniform, Constant and Elastic Spray, with Both Jet and Mechanical Agitator, Will Handle Hot, Cold or Any Caustic Mixture, Complete with 15 ft. ½ in. 5-Ply Discharge Hose and Graduating Vermorel Nozzle\$18.00

No. R324

PAT JET-AGITATOR

No. R318B

MYERS WHITE WASH, COLD WATER PAINTING MACHINE AND GENERAL PURPOSE SPRAYER

With easy operating Cog Gear Pump, Fitted with Patent Double Agitator. Tank is made of heavy galvanized iron with wide bottom so as to set steady in operation. Cover is removable and is held securely in place by two thumb nuts. Pump used is No. R324, described above, fitted with Bordeaux Nozzle, Brass Ball Valves and has both Jet and Dasher Agitators.

No. R329—Pump Has 1½ in. Cylinder, Complete.....\$15.00

No. R329

STANDARD

Not a double acting pump, as it sprays on the down stroke only. By making the return stroke quickly, however, practically a continuous flow of spray will be the result.

No. 45—27½ in. Long Over All, Heavy Gauge Brass Cylinder, 18 Diameter, Two Solid Brass Ball Valves, no Leather Suckers to Dry Out and Rot, Complete with 3½ ft. Hose and Three

in. Long, 1½ in. Diameter, Heavy Brass Plunger ¾ in. Diameter, Two Solid Brass Ball Valves, no Leather Suckers to Dry Out and Rot, Complete with 3½ ft. Hose and Three

Sprayers

FAULTLESS ATOMIZER

Adapted for the destroying of insects, applying disinfectants to buildings, bushes, etc., also for applying fly chasers to animals and applying light floor oil. The tapering point to the air chamber gives great force to the spray.

- No. 1—Capacity 1 Quart, 1¼x14½ in. Barrel, Tapering at Point, Spring Wire Piston Rod, Cup Leather Plunger, Throws a Spray as Fine as Mist, All Tin...\$0.50
No. 2—All Brass, otherwise same as above..... 1.40
No. 4—Galvanized Can, Tin Tube, same as above..... .60

MIDGET

A small, compact, well made Sprayer, especially adapted for use in and about the home. Nose of Pump passes through Top of Tank, keeping Air Nozzle and Spray Tube always in line.

- No. 202—Capacity ¾ Pint, Heavy Tin, 1¼x10 in. Pump, 3x3 in. Tank, Lock Seamed and Thoroughly Leak Proof, Length Over All 14 in.\$0.35

CONTINUOUS

Delivers a fine even spray continuously. Construction permits it to operate in any position. Syphon Tube and Check Valve are removable.

- No. 424—Heavy Tin, Capacity 1 Quart, 1¼x14 in. Pump, 4x4½ in. Tank, Double Seamed and Thoroughly Soldered, Complete with 1 Straight and 1 Angle Nozzle Cap\$0.75
No. 424G—Galvanized, otherwise same as No. 424..... .85

POWDER

Built to drive the powder down into the cracks and crevices thoroughly. Fitted with a long pointed tube and also a fish tail spreader. Pump is securely soldered to tank and reinforced by a heavy metal strap.

- No. 653—Heavy Tin, Capacity 1 Pint, 1¼x10 in. Pump, 3x4 in. Tank with Special Filler Cap in End, Lock Seamed and Thoroughly Leakproof.....\$0.45

BOTTLE

Easy to operate and is provided with cork which fits any ordinary quart bottle. Excellent for spraying disinfectants in homes, schools and hospitals and for plants and flowers.

- No. 65—Nickel Plated, Made of Two Brass Tubes, 1 Telescoping the Other, Brass Valves, Brass Nozzle is Adjustable for Fine Mist or Coarse Spray.....\$1.25

DUSTERS

FEENY MODEL B

FEENY MODEL B

The slightest movement forward of the piston produces a dust cloud of the highest type. This is due to the perfect compression which is accomplished in no other dusting device. Can be regulated from the thinnest "haze" to a large cloud depending on force of stroke.

No other duster has the patented piston packing features of the Model B Duster which causes it to move such an equal volume of air.

The dust cloud covers every surface of the thing to be dusted, top, side, underside and all. It is better than a sprayer for killing bugs and insects in the garden as it is cleaner, easier and more convenient.

Besides applying all sorts of insecticides and fungicides to gardens, flowers, trees and shrubs it is ideal for killing flies, roaches, lice, etc.

Model B—Length 11 in.....\$1.25

INSECT POWDER GUNS WHIRLWIND

No. 1007—Gold Lacquered Tin, Capacity 4 oz. Powder, 4 in. in Diameter, 2½ in. Deep, Opening for Powder 1½ in. in Diameter.....\$0.50

Trellises

Adjustable, Sectional, Fans Arches and Pergolas

THE MOST HUMBLE DWELLING CAN
BE MADE ATTRACTIVE BY THE USE
OF TRELLISES FOR YOUR VINES.

No. 4

No. 4—Sectional

This is an exceptionally fine Trellis. Is made for those who want something better than the ordinary. Well painted; each section is 17½ in. wide and 8 ft. tall. You can build your trellis as narrow or as wide as you want by using 1, 2 or 3 or as many sections as you desire.

\$1.80 per Section

No. 5

No. 5—Sectional

Same dimensions as No. 4; well painted. Can be used in various ways, same as No. 4, although not so elaborate. No use using baggy, saggy, rusty poultry netting for your vines when you can buy a real ornament at these prices.

90c per Section

No. 14—Sectional

As will be readily seen this trellis is very similar to our No. 4 trellis, only it is 35 in. wide instead of 17½, thus giving just double the amount of trellis in size for one-third additional cost. Uprights in this trellis are set in edgewise, thus making it more rigid.

\$2.70 per Section

No. 14

No. 11—Round Top Pergola

Here is one of the most beautiful lawn pieces imaginable. This piece is suitable for a single rose bush or vine of any kind, while the arches are more adapted to taking care of two plants, on either side of a walk, gate or door. 7 ft. high, span across top 5 ft., width 32 in.

Price \$4.95 Each

No. 11

Fan Trellis

Ornamental Fan Trellis

A very neat lawn ornament; well painted. Shipped straight, an easy matter to spread out and attach cross pieces.

No. 6—6 ft. tall,

spread 45 in., \$1.35

No. 7—8 ft. tall,

spread 60 in., \$1.65

No. 8—5 ft. 75c

No. 9

No. 9—Round Top Arch

Uprights 6 ft. 2 in., 7 ft. high at center, spread 4½ ft. wide, 32 in. deep. Bows across top are made of ¾-in. galvanized tubing and firmly bolted to uprights.

Price, without seats, \$8.40

Price, with seats, \$9.90

No. 12—Pergola De Luxe

Good enough for the millionaire and cheap enough for the ordinary fellow. Uprights 2x2, cross pieces 2x4, well painted.

7 ft. high,
8 ft. across top, \$12.90

7 ft. high,
10 ft. across top, \$13.80

No. 12 DeLuxe

No. 10—Straight Top Arch

Adjustable in width from 4 ft. 2 in. to 6 ft. by simply boring four holes nearer the end.

Height, width and prices same as No. 9.

No. 10

CLARINDA LAWN MOWERS

Two Perfect Devices That Simplify and Improve Clarinda Mowers

Blade Adjustment—This illustration shows how the adjustment is made. A simple turn up or down on one bolt, the bolt head is easily reached with the ordinary small wrench. You can watch the adjustment and see the movement of the cutter bar.

The two threaded surfaces work together, the small bolt inside of larger getting the very finest adjustment. Before making adjustments make certain that the reel shaft bearings are tight.

Bearing Adjustment—The illustration here shows the simple principle of bearing adjustment as perfected in the Clarinda shops.

The bearing presents a broad wearing self-aligned surface. This distributes the friction over a wide surface, doing away with excessive wear at any one point.

Blade Adjustment

Bearing Adjustment

Particularly adapted for heavy hand usage, such as park, cemetery, large lawn and club ground work. The 12 in high wheels give the reel a very high speed.

12 in. Diameter Driving Wheels, 6 in. Diameter Reel, Compulsory Operating Ratchet, Hardened Steel Pawl, Four Crucible Steel Oil Tempered Reel Blades, Raised Edge Self-Sharpening Screwed on Bottom Knife of Oil Tempered Crucible Steel, Silver with Gold Trimmings, Blue Wheels.

Plain Bearing

Width of Cut, Inches.	16	18	20
Each, Plain Bearing...	\$17.25	18.00	18.75

HAWKEYE

Powerful, yet light in weight and easy running. Similar to the Hawkeye, but lighter in weight—for use on ordinary sized lawns.

11 in. Driving Wheels, 6 in. Diameter Reel, Compulsory Operating Ratchets, Hardened Steel Pawl, Four Crucible Steel Reel Blades, Self-Sharpening Raised Edge Bottom Knife of Oil Tempered Crucible Steel, Bright Red Wheels, Gold Trimmings.

Plain Bearing

Width of Cut, Inches.	16	18	20
Each	\$15.75	16.50	17.25

Ball Bearing

Width of Cut, Inches.	16	18
Each	\$17.25	18.00

CARDINAL

Clarinda Lawn Mowers

BLUE BELL

Designed to be used on terrace and lawns alike, and cuts the lawn smooth.

10 in. Diameter Driving Wheels, 6 in. Diameter Reel, Compulsory Operating Ratchet, Hardened Steel Pawl, Four Crucible Steel Oil Tempered Reel Blades, Raised Edge Self-Sharpening Screwed on Bottom Knife of Oil Tempered Crucible Steel, Blue Finish with Gold Trimmings.

Plain Bearing:

Width of Cut, Inches.	14	16	18
Each	\$12.00	\$12.75	\$13.50

Ball Bearing:

Width of Cut, Inches....	16	18
Each	\$14.25	\$15.00

VICTORY

Has same easy adjustment, same self-sharpening bed knife as the rest of the line, but is lighter in construction and with only three cutting blades.

Plain Bearing.

8½ in. Diameter Driving Wheels, Compulsory Operating Ratchets, Hardened Steel Pawl, Three Hardened Steel Reel Blades, Diameter of Reel 6 in., Extra Tie Bar, Raised Edge Self-Sharpening Bottom Knife, Screwed On, Geared on Both Sides, Green Wheels, Gold Body.

Width of Cut, Inches.....	14	16
Each	\$9.75	\$10.50

ECLIPSE

The Eclipse Mower is built for use on large lawns, parks, cemeteries, golf links, etc. High wheels, built strong—made of the very best lawn mower materials known. All adjustments easily made—both ends of cutting bar are adjusted alike and at the same time by the turning of a simple thumb nut.

16 in., \$19.00. 18 in \$20.00. 20 in., \$21.00

GRASS CATCHERS

Perfection—16 in. deep

Extra Heavy white duck, heavy galvanized non-skid iron bottom, heavy galvanized wire frame, adjustable steel hooks, will fit any make of mower and always in position to receive catcher.

No. 301—Adjustable for 12 to 16 in.
Mowers, price\$1.75

No. 306—Adjustable for 16 to 20 in.
Mowers, price 2.00

No. 205—13 in. deep, made of fine quality white canvass, heavily galvanized wire frame, adjustable steel hooks, will fit any mower made. Adjustable for mowers 16 to 20 in..... 1.25

Garden Hose

ELECTRIC CORRUGATED

Two Braid, Dark

The original and best braided and moulded Rubber Hose, made from new East Indian Plantation Rubber, no shoddy rubber used.

5/8 in. Less than 50 ft., Price per ft...22c
50 ft. and more, Price per ft...21c

BLACKBIRD CORRUGATED

Two Braid, Dark, Fine Corrugations

Represents very good quality and exceptional lasting ability.

BLACKRIB CORRUGATED

One Braid, Dark Coarse Corrugations

Single braid fabric of heavy cotton cord, good quality rubber cover.

Less than 50 ft.	5/8 in.	3/4 in.
Price per ft.	13c	15c
50 ft. and more		
Price per ft.	12c	14c

To determine the relative efficiency of different sizes of Garden Hose, the following test was made, from which it will be seen that, for all practical purposes, 5/8 inch is fully equal to 3/4 inch hose.

Experiments Made May 25, 1922, to determine relative capacity of 1/2, 5/8 and 3/4 inch Garden Hose under like conditions:

Size of Hose	1/2"	5/8"	3/4"
Water Pressure on Main	50 to 54 lbs.	50 to 54 lbs.	50 to 54 lbs.
Average Time to Fill 50 Gallon Tank with Nozzle on Hose	8 1/4 min.	7 3/4 min.	7 1/2 min.
Without Nozzle	6 1/4 min.	5 2-3 min.	5 1/2 min.

HOSE WASHERS—Good Luck Rubber

Tough, live, springy rubber that stays soft and holds firmly in place. For 1/2 in., 5/8 in. and 3/4 in. hose. 12 in a box.....10c

Keep Your Hens Laying With *Conkey's* Poultry Tonic

This great egg producer supplies a tonic and regulator that a hen needs in order to be a real big egg producer.

Gets eggs by cleaning blood, toning up system, stimulating natural processes, helps prevent disease by keeping hens vigorous.

Nothing harmful—just good medicine.

25c and 50c packages. Buy it by the pail—cheaper that way.

ASK FOR CONKEY'S POULTRY BOOK—IT IS FREE

Hose Reels

TUBULAR, ALL METAL

Reeling or unreeling is very easy. The frame can be tilted down to the ground and forms a stand in which the reel revolves. Large rims forming wheels make them easy to carry about.

No. 20—Height 20 in., 50 to 100 ft. Capacity, Steel Spokes and Reel Head, Corrugated Galvanized Sheet Drum\$4.50

VICTOR, ALL METAL

Equipped with a Ring on side of frame to prevent reel from unwinding and with holder at top of frame for holding nozzle when spraying.

Green Enameled Frame, Wheels and Reel Black.

No. 10—Channel Steel Frame, Strong Cast Iron Wheels, Solid Steel Reel Arm, 9 in. Heavy Corrugated Steel Drum, Capacity 50 to 75 ft. $\frac{3}{4}$ in. Rubber Hose.....\$2.75

Hose Menders

PERFECT CLINCHING

Only a hammer is needed to bend down the clamps. Whether the hose be old or new, thick or thin, it adjusts itself to it and makes a mend that will not leak and cannot pull apart.

Brass Tube and Galvanized Steel Clamps

Hose Nozzles

DIAMOND

Wrought Brass, Polished

Lighter in weight, stronger and more durable than a cast nozzle and is absolutely free from sand holes. Can be adjusted to a spray, straight stream or shut off.

$\frac{3}{4}$ in. Size, Hose Thread, Constructed with Pilot to Guide the Spray Point and Keep it in the Center, Heavy Knurl65c

Lawn Sprinklers

ARMSTRONG ORIGINAL FOUNTAIN

Sprinkles a full circle with mist-like spray. No moving parts, simple and efficient.

Brass—8 in. Diameter.....\$1.00

ARMSTRONG HALF-FOUNTAIN

Sprinkles a half circle only. Can be picked up without shutting off the water.

Brass—5x $\frac{3}{4}$ in.\$0.85

Lawn Sprinklers

RAIN KING

Turning hand wheel releases sprinkler for revolving spray or locks it for stationary use. Nozzles turn in any direction. Their weight and balance on ends of sprinkler arms give the same principle of operation and advantage of an engine fly-wheel.

Solid Brass nozzles, bushings and hand wheel. Base and sprinkler arm heavy castings. Painted Green.
Size of Base 6x5 $\frac{3}{4}$ in., Height 5 $\frac{1}{2}$ in.\$3.50

THOMPSON SIMPLEX

Brass Lined
A lawn sprinkler conforming in many respects to the general type, but with improved construction and better finish.

Particularly efficient with low water pressure.

No. 96—Zinc Body with Polished Brass Head Threaded for $\frac{3}{4}$ in. Standard Hose Couplings.....45c

THOMPSON "FAN"

An improved form of the Fan sprinkler with a brass nozzle moulded into the zinc body.

A dense uniform spray is delivered over a semi-circular area
With Spike

No. 165--Threaded for $\frac{3}{4}$ inch Standard Hose Coupling ... 35c

THOMPSON "JUNIOR" REVOLVING

With 50 pounds pressure it will cover a circle about 30 feet in diameter. Revolving type.

No. 130—Sprinkler Head Mounted Directly Upon a Zinc Base with Wire Extensions, Threaded for $\frac{3}{4}$ in. Standard Hose Couplings..\$1.00

THOMPSON SHOWER Brass Lined.

No. 100—Body of Zinc, Die Cast, Perforated Head of Sheet Brass, Water is Delivered Uniformly Over a Large Area, Threaded for $\frac{1}{4}$ in. Standard Hose Coupling

50c

THOMPSON TWIN

Brass Lined
This unique type operates perfectly under either high or low water pressure. The water is delivered in a fine-

ly divided spray over a large area.

No. 70—Made of Zinc, Die Cast, Threaded for $\frac{3}{4}$ in. Standard Hose Couplings

40c

THOMPSON ROSE

Attractive in appearance, efficient in operation and of rugged construction. Meets every requirement of a thoroughly satisfactory article.

Body of Zinc, Die Cast

No. 105—Heavy Polished Brass Perforated Hood, Diameter 2 in., Threaded for $\frac{3}{4}$ in. Standard Hose Couplings

40c

Buckeye Incubators

STANDARD

Case—California redwood is used exclusively in the outside case, which will withstand all kinds of atmospheric changes without danger of wearing, splitting or pulling apart. This lumber is absolutely free from knots or defects of any kind. The inside walls are constructed of seasoned yellow poplar which will also withstand atmospheric changes. The sides and top of each incubator consist of two walls of this lumber, which is one inch thick, and a quarter inch thickness of fibre insulation between the two thicknesses of lumber, which produces a case $2\frac{1}{4}$ inches thick. Each case is carefully dressed and sanded, after which it receives three coats of stain and varnish. The doors are made of two thicknesses of one inch lumber and matched to the case by expert cabinet makers to insure a perfect fit. The center of each door is equipped with a small window protected by two panes of glass with a dead air space between and a wooden door on the outside. This construction permits an easy reading of the thermometer which is placed directly inside of door. Fitted with brass hinges and French spring catches.

Heating System—The Buckeye circulating hot water system consists of a tank suspended above the eggs, a boiler outside the case and two tubes connecting the boiler with the tank. The body of the tank is made of double lock-seamed copper tubing throughout with specially constructed corner pieces which are guaranteed against leakage and breakage. The boiler and connecting tubes are also constructed of pure heavy copper with soldered seams. Each incubator is provided with a boiler six inches deep so that the proper temperature in the egg chamber is easily maintained under all conditions.

Thermostat—The perfect regulation of temperature is made possible by a combination of metals which are so fastened together that the temperature of the egg chamber can be controlled to a fraction of a degree. When the temperature rises even a fraction of a degree the metals expand, and being connected with the damper suspended over the boiler the surplus heat is allowed to escape from the lamp, thereby preventing the temperature from rising beyond the point at which the regulator has been set. Should the temperature fall a fraction of a degree below the required point, the metals contract and allow the damper to drop.

Oil Lamp and Support—The support provides a jacket around the boiler which protects the boiler from outside atmosphere. The lamp bowl is made of galvanized seamless pressed steel and holds nearly two quarts of oil. The chimney is made of galvanized steel with a large isinglass window in front.

With Egg Tester and Egg Tray.

Buckeye "Colony" Coal-Burning Brooder

The simplest and most economical brooder ever invented. Saves time, space and labor.

Equipped with an automatic regulator that absolutely controls the temperature every minute of the day and night. Burns either hard or soft coal and eliminates all labor and worry of the older type lamp heated brooders. The only attention necessary is the removal of ashes and filling with coal once or twice a day.

Can be operated in any room—any temperature—with the same uniformly satisfactory results.

Will care for chicks from the time they leave the incubator until they are ready for the laying house.

Stove is of Heavy Cast Iron, equipped with Rocker Grate—Self-cleaning and Anti-clog—and Portable Ash Pan. Equipment includes Rope and Pulleys for Galvanized Steel Canopy.

Hood is constructed so as to throw the heat from the stove evenly over the backs of the chicks, which are warmed by radiated heat exclusively.

MOES STAR FOUNTAIN

No Solder, Seams or Loose Parts

Made of a single piece of heavy metal and is suitable for feed as well as water. Little chicks cannot fall in water and drown.

No. 32—Non-Rusting, Will Fit Any Size Mason Fruit Jar, Provides Greater Drinking Surface. Price —Without Jar10c

MOES BOTTOM FILL

Made in two pieces; easily filled and cleaned. Round taper shape prevents bursting from freezing.

Galvanized Iron

Nos.	19	20	24
Capacity, Quarts ...	1	2	4
Height, Inches	6	8	9 1/2
Price	\$0.35	\$0.45	\$0.60

MOES WALL FOUNTAIN

Can be hung on wall, up out of litter.

Made with removable bottom, so that all parts may be easily cleaned and kept in a sanitary condition.

Heavy Galvanized Iron

No. 26—Capacity 1 Gallon75c

MOES WALL FOUNTAIN

A large capacity fountain and a style that appeals to many breeders, as it is strong and substantial. Excellently adapted for watering pigeons. Easily filled and nothing to get out of order.

Heavy Galvanized Iron.

No. 74—Capacity 5 Gallons, Height 13 in., Diameter 11 in.....\$1.95

LITTLE PUTNAM STOVE

Holds three pints of oil and burns a month without attention. A wonderful little heater for the home-made warm water drinking fount, home-made oat sprouter, and home-made brooder.

Price, \$2.50

EGG TESTERS

MOES

To test the fertility of eggs during the period of incubation. Will illuminate the interior of the egg and show if the chick is alive, also shows size of air cell in the egg.

No. 48—Used in a Dark Room with an ordinary Lamp, No. 2 Burner, \$0.30

LAMP BOWLS

MOES

For incubators, brooders and fountain heaters. No give or spring to the bottom which is a common fault with ordinary bowls.

Nos. 101 and 102 are strongly braced and reinforced on the inside—adding rigidity.

Galvanized Iron.

Nos.	100	101	102

Fits Burner, Size...	1	2	3
Each	\$0.30	\$0.30	\$0.30
Chimneys—for Buckeye Incubators, 50c			
Lamp Burner No. 35 for Buckeye Incubators, Nos. 1, 2, 14 and 16...			\$0.75
Nos. 3, 4, 5 and 17.....			1.00

BUCKEYE EGG TESTER

The Buckeye Egg Tester is a simple device that anyone can use intelligently and, being made of heavy steel, it cannot wear out or get out of order.

By placing the egg at the small end of this tester, and looking through the large end toward the sun or any artificial light, the contents can clearly be seen, and the progress of incubation easily followed. Price 50c.

DRY MASH HOPPERS

MOES MAMMOTH

Will accommodate a full 100 lb. bag of mash, doing away with the annoyance and waste of having a partly empty bag of mash on the premises. The feed is within easy reach of the chickens, and is protected from the weather and from the ravages of rats and mice.

The taper shape and interior construction provides a uniform automatic feed, and the wire grid and cross wires prevents any waste.

The stand is of heavy angle iron, painted, and has wooden bars for the poultry to rest on when feeding.

A large capacity hopper, built on correct principles and is strong and substantial in every detail.

Heavy Galvanized Iron Hopper

No. 3—Capacity 100 Lbs., Length of Hopper 35 in., Width 21 in., Height 18½ in., Height of Stand 15½ in., Total Height 34½ in. \$12.00

DRY MASH HOPPERS

MOES

All parts of this hopper are accurately stamped with dies. The curved bottom keeps feed in easy reach of the birds, and the taper shape of the hopper—large at the bottom—prevents feed from clogging.

Wire grid and wires running from the flange through the wire grid prevent fowls from throwing out or wasting the feed. Sloping top prevents them from roosting on the hopper.

Rat, mouse and weather proof.

Heavy Galvanized Iron

Width, Inches	8½	12	24
Price	\$1.50	\$2.00	\$2.40

GRIT AND SHELL BOXES

MOES

The feeding of grit, ground shells, and charcoal is now recognized as an essential part of the diet, to keep fowls in healthy, prime condition. There is no more economical method of supplying grit, etc., than with these practical, inexpensive compartment boxes. No solder used in their construction.

Can also be used as feed hoppers for little chicks.

The No. 45 for baby chicks has a square bottom, the other sizes have round bottoms.

INCUBATOR THERMOMETERS

BUCKEYE

Fits All Makes of Incubators

Self-contained and complete within itself. There are no holders, stands or other devices required to hold it in position, and as a consequence the correct position of the thermometer will always be assured in every case.

This not only applies to Buckeye Incubators but also every other brand on the market.

Price, \$1.00

SCRAPERS AND CLEANERS

MOES

Just the thing for cleaning out brood coops, nests and dropping boards.

Gets into the corners which are often overlooked.

Heavy Galvanized Iron

No. 47—Length 10 in.....20c

LIME NEST EGGS

OLD FAITHFUL

About an exact duplicate of a real hen's egg. Strong, durable and odorless and will neither break or disintegrate.

Do not absorb and hold the cold, a characteristic making them most acceptable in cold weather.

No. 0F—Made from Pure Sterilized Sulphate of Lime, which has been used by Poultry Raisers for many years to Keep the Nests in a Clean and Healthy Condition.....Per Dozen, 50c

BROOD COOPS

MOES SQUARE

Provides a perfect shelter for both hen and chicks. Bottom is removable so the coop can be easily cleaned and kept in a sanitary condition.

Combination door can be adjusted to:
1—Keep hen in and permit the chicks their liberty. 2—Keep both hen and brood in, with perfect protection against weather, rats, cats and other animals, and yet allow ample ventilation. 3—Give both hen and chicks their liberty. Collapsible, but easily set up.

Made of Heavy, Best Quality,
Galvanized Iron

No. 49—16 in. Wide, 23 in. Long, 16 in. High.....\$2.50

OAT SPROUTER

Made entirely of metal. Strong and rigid.

Provides the very necessary green feed at all seasons. Healthy chickens and more eggs.

The frame is of steel, well braced and neatly painted. Has six heavy galvanized iron pans. Five of the pans have perforated bottoms to secure proper drainage, and the bottom pan is solid to hold the drippings. Pans are interchangeable. Sectional frame can be quickly taken apart and stored in a small space.

Total height of frame 3 ft. Size of pans 16 in. by 18 in.

No. 110—Moes Oat Sprouter, each.....\$6.00

POULTRY PUNCHES

No. 38 Punch

A popular and practical punch for marking Baby Chicks.

Punches a clean hole in the web between the toes, and will not bruise the foot.

Guaranteed to work perfectly.

No. 38 Punch—
25c each

Showing Different
Toe Marks

POULTRY PUNCHES

No. 39 Ideal Punch

A new improved Punch, scissors type. Works easily, cuts clean and does not pinch the foot.

Convenient to carry in vest pocket, and the lower end is an excellent cigar cutter.

Nickel plated finish. Length
3½ in.

No. 39 Ideal Punch—
50c each

KEY RING COLORED LEG BANDS

Colored Leg Bands are made of celluloid, in fast colors. They are of a proper temper, keep their shape, light in weight and very durable.

Will not fade, and are weather proof. Quickly put on or removed, and make it easy to keep an accurate register of your birds.

Made in **Six** sizes as shown, and in **Ten** colors, as follows: White, Black, Red, Garnet, Pink, Green, Dark Blue, Light Blue, Purple, Yellow.

Put up regularly 50 bands of a size and color in a bundle.

The First 8 Weeks! Mean Life or Death

That's when your big chick losses occur—during the first eight weeks—that's when you must have

Conkey's

TRADE MARK
THE ORIGINAL

Buttermilk Starting Feed

Prevents the big losses due to weakness and disease and gives your chicks the quick snappy getaway that produces early broilers and layers. The lactic acid in the buttermilk puts an edge to the appetite; strengthens and tones up the sensitive digestive organs of the little chicks, and helps to sweep away germs that cause White Diarrhea.

Semi-Solid Buttermilk Only

Is used in making Conkey's Buttermilk Starting Feed—never Dried Buttermilk. Semi-Solid Buttermilk incorporates thoroughly with the grain. Conkey's is the only Buttermilk Feed for chicks made according to the Original and successful Conkey process.

How to Feed Baby Chicks

You Can't Get Satisfactory Results Feeding Growing Chicks a Starting Feed

After 8
Weeks
You Must
Change
the Feed

Growing fowls—after 8 weeks—need a different feed. They must have more protein than the little chicks can stand. The same feed cannot serve for both purposes—for little chicks and for growing fowls—if you expect to get the best results.

That's why Conkey makes

Conkey's

The Original

Buttermilk Growing Mash

PRICE LIST

Conkey's Growing Mash

10 lb. Sack	65c
25 lb. Sack	\$1.55
50 lb. Sack	\$2.95
100 lb. Sack	\$5.75

This is the great developing feed that most successful poultrymen use to bring their fowls quickly to early maturity—that insures early broilers and layers. Just right in protein and low in fibre. It is a wonderful bone and flesh builder. Feed it for rapid and certain results.

Conkey's

The Original Buttermilk Laying Mash

The third link in the Conkey Chain is balanced for a full egg basket. Low in fibre, just right in protein for layers.

This mash was placed on the market in response to an insistent demand for an honestly prepared, egg-producing ration that could always be depended upon to be clean and uniform. This demand arose through loss of egg production which is likely to follow a change of "balance" in feed—too many egg mashes unfortunately are varia-

ble in quality and therefore unreliable and costly if not positively dangerous.

To produce eggs in abundance, the flock must have a balanced ration consisting of a dry mash and a good scratch grain mixture, also a regular supply of green stuff. Grains alone are not a sufficient ration

**Have a Conkey
Corner in Your
Poultry House**

PRICE LIST

for laying hens. Conkey's Buttermilk Laying Mash is made by Conkey's ORIGINAL process. Fresh, Semi-Solid buttermilk and other ingredients are blended so as to tempt the hen's appetite, thus increasing consumption of dry mash so essential to large egg production.

Insist on Conkey's mashes—you can always depend on them. Conkey feeds are always clean, wholesome and uniform.

Raising poultry is pleasant and profitable when "good luck" is with you. Good luck, however, is not merely a matter of chance, but of BEING PREPARED. For more than twenty-five years Conkey has been THE POULTRY DOCTOR. Take his advice. Install a Conkey Corner of remedies in your poultry house as insurance against disease, trouble, loss and disappointment.

We sell Conkey's Poultry and Stock Remedies because we know they are reliable and we can guarantee them as follows:

Conkey's Poultry Tonic

Every bird from chick to maturity will be more productive, healthier and more profitable if given a good tonic and regulator. Conkey's Poultry Tonic helps birds to get more out of their feed; they produce more eggs and better flesh on LESS FEED, by better digestion and assimilation.

Conkey's Tonic is all medicine—free from filler, red pepper, and "hot stuff" to overstimulate the birds and break down their health. Conkey's builds on a natural, healthy basis, inducing steady persistent laying. Keeps the young chicks growing, makes molting easy, strengthens the bird for bad weather and generally maintains a high health average.

Buy it by the pail. Packages, 25c, 50c, \$1.00; Pails, 12-lb. \$1.60; 25-lb. \$3.00; Bags, 50-lb. \$5.00; 100-lb. \$9.50.

An 80-page Handy Book of Reference on Poultry Raising—No Charge.

FERTILITY! VITALITY!

NATURE'S SECRET IS OUT AT LAST!

Poultry experts now marvel at the miraculous results when yeast or cod liver oil is added to the feed. However, neither yeast nor oil displaces the other. Both are necessary to supply needed vitamins.

But yeast may not always be uniform and good oil is scarce. Likewise the potency of cod liver oil rapidly diminishes when mixed with any other ingredients, especially as an ingredient in a mixed feed.

Conkey now has solved the whole problem by blending the highest quality of yeast and richest cod liver oil by a secret process which preserves the potency of the oil.

NEVER BEFORE SUCH WONDERFUL VITALITY!

Peppy cockerels, strutting and fighting—pullets, singing and scratching with red, healthy combs flapping in the air—chicks that are so full of life and vigor you can fairly see them grow. These are seen in the poultry yard when Conkey's Y-O is added to the ration. No tired, devitalized male birds, no hens loafing on the roost, no chicks huddled and drooping.

NEVER BEFORE SUCH EGG PRODUCTION!

We expect a great deal of the hen—up to 250 eggs per year—in fact, too much for the help she is given. Hens everywhere are breaking down under intensive laying, unable to keep up the swift pace. Conkey's Y-O keeps steadily restoring to the hen's vital reservoir the energizing vitamins as they are used up.

NEVER BEFORE SUCH FERTILITY!

Conkey's Y-O, by supplying vitamins lacking in the ordinary feed, pours back into the fowl the exhausted life streams drained away by "forcing" egg-production methods or of "crowding" growing stock. This makes Conkey's Y-O a wonderful help for hatcherymen who lose so much from poor fertility.

NEVER BEFORE SUCH MARVELOUS GROWTH!

In our own pens we have demonstrated very remarkable results. A hatch was divided into two pens. One pen was fed Conkey's Y-O, the other exactly the same ration but without Conkey's Y-O. In only three weeks the chickens fed Conkey's Y-O were fully twice as large and developed as the other pen. Try this experiment yourself. You will be astonished.

Conkey's Y-O

YEAST WITH COD LIVER OIL

We guarantee to—

1. Make hens lay more and larger eggs.
2. Stimulate growth of pullets and cause them to lay earlier.
3. Increase fertility of eggs.
4. Improve health and stamina.
5. Build up resistance to disease.

VERY LOW IN COST

Considering the remarkable results it accomplishes Conkey's Y-O is very cheap.

One pound will feed approximately 30 fowls 30 days. To feed 50 breeding or laying hens or pullets costs about 9 cents per day; 50 growing birds 4 to 12 weeks old, 6 cents per day; 50 chicks up to four weeks old only 3 cents per day.

Conkey's Y-O comes in the form of a rich chocolate-brown powder and it is fed loose, mixed in small quantities with the mash.

Conkey's Y-O is easy to feed and there is no waste—no liquids—no paste and no fermenting of large quantities of wet mash with all the difficulties which this entails.

Prices are as follows: 1 lb. pkg., \$1.50; 2 lb. pkg., \$2.75; 5 lb. pkg., \$6.25, or mailed postpaid for \$1.60, \$2.90, \$6.45. The following larger sizes parcel post charges extra. Will be sent collect, if express or freight: 25 lb. drum, \$23.75; 50 lb. drum, \$45.00; 100 lb. drum, \$85.00.

ROUP

Roup Is the Most Dreaded of All Poultry Diseases

Symptoms — First stage: — Chickens catching cold, eyes and nostrils become watery. The fowls will wheeze when breathing and will frequently sneeze and shake their heads to throw off the mucous.

Second stage:—One or both eyes will become inflamed. Bird will rub its head across its back as the nostrils become closed.

Third stage:—Swelling and hard lump of mucous under one or both eyes. Canker developed in mouth and on tongue. There is a catarrhal odor.

Roup is very contagious and the entire flock will soon become infected, after canker develops, for this is the last stage and unless drastic action is taken to prevent the windpipe from closing with canker, death is very sudden.

The Reason "SMOKE EM" Will Produce An Absolute Cure

The beginning of roup is caused by a cold. The mucous cannot escape from the nostrils after they become clogged. This mucous is carried to the eye and forms a lump causing considerable inflammation. Very often both eyes contain an accumulation of this mucous. There is a small channel connected with the eye and nostrils known as the tear socket. After the chicken contracts a cold the eyes start to water, and gradually the nostrils fill up with mucous until they are entirely clogged, then the tear socket becomes infected and when the mucous cannot find its way out it gradually discharges back through the nostrils to the inside of the mouth and windpipe, forming patches of canker.

It is an established fact that chickens must breathe as well as human beings. Therefore, the first thing to correct the condition of roup is to force the nostrils open so that the chicken can breathe. This is done by the chicken inhaling "SMOKE EM," which is so powerful it forces its way right through the nostrils of the chicken and dissolves the mucous in the nostrils and mouth, causing a free discharge of this diseased matter and thereby depositing the medicinal properties of "SMOKE EM," directly on the diseased parts of the bird, right up inside the nostrils and in the eyes and windpipe, etc.

"SMOKE EM" leaves a thick layer of black deposit covering the diseased parts, and after killing the disease germs will heal these affected parts and produce an absolute cure.

Teeth and Tonic for Poultry

PEARL GRIT

The Double Purpose Grit

Scientists tell us that there is no known substance that aids a fowl's digestion as does good, clean, sharp grit. It enables the gizzard to prepare the food for digestion. It is a fowl's false teeth. When grit becomes worn out it is expelled. If new, sharp grit cannot be secured, the food must remain unground in the gizzard until it is softened and falls to pieces. This makes slow, imperfect digestion. It robs the hen of strength and robs you of eggs.

Grit of any kind is good for poultry because it enables the gizzard to prepare the food for digestion, but there is a **best** grade of grit just as there is a **best** grade of blooded stock, of corn, oats, hay, oil, coal—of everything.

Pearl Grit is more than a food grinder. Besides being the cleanest, whitest and sharpest grit that money can buy, Pearl Grit contains a generous supply of those minerals that the laying hen needs so badly in the production of eggs. Both Teeth and Tonic, it is a **double purpose** grit. When you scatter Pearl Grit you scatter all that the hen needs for its digestion as well as for egg making.

Sulphur and Carbohydrates, essentials in making eggs, are both contained in Pearl Grit. By mixing this double purpose grit with your feed, you are giving your hens a perfectly "balanced ration," and thus assuring yourself of a maximum amount of eggs.

Furthermore, the eggs will be of a better quality, as Pearl Grit is rich in calcium carbonate (lime), a substance that helps hens produce large, white, and hard-shelled eggs. Fowls fed on Pearl Grit never lay eggs with soft shells. This reduces your loss through breakage.

Pearl Grit is clean, white and nutritious. It imparts strength and vigor to young chicks and is most excellent for laying hens. It gives them exactly what they need to make them healthy, heavy layers. Its whiteness enables hens to find it easily and quickly.

In every sack of Pearl Grit that you buy, you receive double value because Pearl Grit is a double purpose grit. No shell-making materials such as lime, magnesium, or oyster shells are needed. When you buy Pearl Grit you get all of these. Saves you time and labor and produces more eggs than are possible when ordinary grit is fed.

It is an economy to use Pearl Grit. When you use an inferior grit, you rob your hens of strength and rob yourself of eggs. Pearl Grit mixes with the feed, grinds the contents of the gizzard, stimulates the digestion, and increases the size, quality, and number of your eggs. Its cost is trifling, and your profits are large.

Price, per lb. 2c. Per 100 lbs. \$1.50

KILLS CHICKEN MITES IN POULTRY HOUSES

Applied ONCE a YEAR—See Guarantee

CHICKEN MITES

There are a number of insect parasites infesting poultry houses, etc., but very little is known about them and their habits, and they are generally called Lice. A distinction, however, should be made between that kind living on the body of fowls all the time, the "Body Lice," and those that bother the fowls, etc., during the night only and crawl away in the morning to spend the day in the cracks and crevices of the infested building. These are called "Hen-Lice" or "Mites."

These mites are pests and genuine blood suckers and vampires and while the chickens can get rid of the body lice and keep them within limits by an occasional dust or sand bath, they are absolutely at the mercy of and helpless against the Mites, which suck their blood and gradually kill them.

It is therefore of vital interest to help the chickens, and the quicker the mites are cleaned out, the better it is. Results will quickly show in the shape of healthy Chickens and plenty of eggs.

There are quite a few remedies, however all of them are efficient only a short time, as they will quickly evaporate, and therefore must be applied almost continually. One single, annual application of Arrow Carbolineum will do the work. It will not only kill all the vermin by direct contact, but if sprayed or brushed, it will penetrate all cracks and crevices and reach the mites at close quarters and effectually stop their propagation.

KILLS CHICKEN MITES IN POULTRY HOUSES

Apply once a year.

GUARANTEE

We guarantee that one thorough application of **ARROW CARBOLINEUM** either by brush or sprayer, to the interior walls, dropping boards, roosts, etc., to such buildings, after a previous cleaning and no matter whether they are of wood, tar paper or plaster, will exterminate mites in same **FOR A WHOLE YEAR.**

PRESERVES WOOD EVERYWHERE

Nut Brown Color:

Preserves wood everywhere against rot and decay and adds at least 100 per cent to the life of fence posts, poles, sills, floors, bridge timbers, porches and to wood imbedded in concrete.

Arrow Carbolineum will double or even treble the natural life of fence posts, etc., regardless of grade or specie of wood used, or the prevailing climatic conditions. Its use enables the use of inferior grades, even such as willow and cottonwood.

COVERING CAPACITY on average size posts:

- 40 posts per gallon for dipping butt.
- 60 posts per gallon for butt, brush use.
- 100 square feet rough lumber per gallon with two brush applications.

Price \$1.75 gallon. Quantity Price on Request.

Carbola is a white paint in powder form combined with a disinfectant many times stronger than pure carboic acid. It is non-poisonous and non-caustic. It kills lice, mites, fly eggs, etc., and helps prevent the start and spread of contagious diseases that affect man, beast and fowl. Carbola is two things in one—a paint that disinfects or a disinfectant that paints. It dries a clear snow white. It saves labor, time and money. It paints and disinfects at one operation in the same time and with the same labor required to paint or disinfect only.

Carbola is recommended for use instead of whitewash in every place where whitewash ordinarily is used.

Garages	Cellars
Factories	Outbuildings
Warehouses	Tree Trunks

It is recommended for use instead of whitewash and disinfectants in

Stables	Barns
Kennels	Creameries
Poultry Houses	Hog Pens
Rabbit Hutches	Dairy Buildings

Carbola is superior to whitewash because it not only increases the light and improves the appearances, but destroys bad odors and mustiness. It guards against the start and spread of contagious disease germs, and deprives flies, spiders and other insects of their breeding haunts. Carbola in its dry state is recommended for sprinkling into closets, garbage pails and privy vaults.

In the Poultry House

There is nothing that contributes more to success in poultry raising than absolute cleanliness and sanitation in the poultry house. Clean living quarters mean as much as proper feeding. The best strain of poultry in the world, fed by best rations will not produce their best if the poultry house is not kept clean. Much of the decreased egg production and much of the sickness, low vitality and frequent mortality is due to unclean conditions. Without regular care the yards and ranges where the birds have been running on them constantly, become polluted and filthy—an ideal place for the breeding of disease. The houses soon become filled with red mites, which when present in any number are a great drain on the health and vigor of the flock. Every time you bury a chick you lose some profits. If the growth or production is retarded you lose other profits.

CEL-O-GLASS

*Instead of
Fragile Glass
use Unbreakable
CEL-O-GLASS*

CEL-O-GLASS is a high grade, low-priced substitute for glass. It is unaffected by rain, hail, snow, sun or wind; it can be bent or cut to any desired shape and is practically indestructible. It is made by treating coarse mesh wire cloth in such manner that the open spaces between the strands are filled with a clear, transparent tough but flexible substance which will not rub or peel off, dry up or become brittle.

It is radically different from ordinary glass, yet in practical use answers all demands and offers very decided advantages to the market gardener, as well as the poultryman, dairyman and farmer.

CEL-O-GLASS is good-looking, as well as durable—use it for your garage and you needn't worry over the excessive cost of replacing the glass every time the wind blows the door shut.

The various outbuildings on the farm can be fitted with CEL-O-GLASS to great advantage—granaries, wagon sheds, sheep and cattle barns, hog houses, tool and carpenter shops, etc.

Ideal for coldframes and hotbed sash, either for flowers or vegetables. If you have hesitated at the cost of the heavily built hotbed sash, in which the breakage each season is so great, build simple frames and cover with CEL-O-GLASS.

FOR LAYING HOUSES, BROODERS AND SMALLER BUILDINGS

CEL-O-GLASS lends itself particularly well to the construction of laying houses, or to the rebuilding of fronts, if originally built on lines that modern practice has discarded.

A large number of poultrymen use a combination of glass and muslin on the fronts of laying and breeding houses. The glass or CEL-O-GLASS windows are usually closed in cold weather and at night, while the muslin-covered window space is open on clear days and closed at night, the muslin allowing air circulation—a ventilation free from dangerous draughts.

RAT ANNIHILATOR

RATS

according to competent authorities, destroyed over one billion dollars worth of food stuffs in the United States last year.

A single pair of rats if left unmolested will propagate 2,500,000 rats in one year.

The total loss will soon become incalculable; it is this, as well as its disease carrying qualities that makes it a dangerous physical enemy.

The rat originally was a beast of the field, that has chosen to invade human towns and dwellings, as the enemy of mankind and to get its living by theft and crime, rather than by pursuing its natural career in the open.

WE HAVE SOLD AND RECOMMENDED

Rat Annihilator

SINCE 1911

and we know from experience that it will destroy rats to a certainty and if every home owner in this country would procure a sufficient quantity of **RAT ANNIHILATOR** to permit of a thorough distribution on their premises (usually one dozen small packages) using same as directed, the

**RATS WILL BE DESTROYED,
WITHOUT LEAVING RESULTANT ODOR,
OTHERWISE THE
PURCHASE PRICE WILL BE REFUNDED**

by the manufacturers, G. P. McDermott and Company, Inc., Indianapolis, Indiana. The manufacturers are thoroughly responsible and stand back of **RAT ANNIHILATOR**, with a positive guarantee as above.

We are pleased to say that the price of this wonderful product is not prohibitive (\$3.00 per doz.) Make your premises a safe, healthful and profitable place to live.

OUR POLICY—"WE NEVER RECOMMEND UNTIL WE KNOW"

LAWN and GARDEN Fertilizers

ARMOUR'S SPECIAL LAWN AND GARDEN 3-12-4

Make first application in spring, soon after frost leaves the ground. Apply 25 lbs. per thousand square feet. Follow with same application every sixty days. When seeding new lawns, use 50 lbs. per thousand square feet. Rake thoroughly into ground and then seed. For garden use, apply at the rate of 600 lbs. per acre. Mix thoroughly with the soil before seeding or transplanting.

Price—25 lb. sack, \$1.25. 50 lb. sack, \$2.00. 100 lb. sack, \$3.75.

BIG CROP RAW BONE MEAL 4½-22

Made from an accumulation of slaughter house bones, steamed enough to soften and make action more rapid. Best annual fertilizer manufactured. Excellent for rose beds and plants, vines, shrubs and trees—fruit or shade. Also good for bulbs, indoors or outside. For roses and plants 50 lbs. per cubic yard; 25 lbs. each for grown trees; shrubs and vines use at the rate of 500 lbs. per acre.

Price—5 lb. pkg. 40c; 10 lb. pkg. 70c; 25 lb. sack \$1.25;
50 lb. sack \$2.00; 100 lb. sack \$3.50.

WIZARD SHEEP MANURE

Makes Beautiful Lawns and Gardens

If you want a more beautiful lawn and garden plan to do most of your garden work in Fall instead of Spring. Fall planting in a rich fertile soil is, according to successful gardeners, the real secret of success. So plant everything you can in Fall—and let your first thought be the preparation of a rich fertile soil to develop the full possibilities of your garden.

The Best Lawns Are Made in the Fall

Fall is nature's time to sow grass seed and experts claim that the only way to secure a thick turf of the finer and more desirable grasses is to make your lawn in Fall as these grasses develop best during the cool Fall months. Many failures in lawn making are due to the hot dry summer weather following close upon late Spring sowing. Make the changes that you have planned and plant perennials and shrubs in their permanent location. All fall work insures an established planting ready to start off rugged and strong with the first breath of Spring, fully a month or more before you can begin any planting in Spring.

A Fertile Soil Insures Success

Whatever you do, don't forget the needs of your plants because you cannot get results on a poor wornout soil. Wizard Sheep Manure improves the soil and gives it just what it needs to make plants grow to perfection. Wizard is economical, convenient and absolutely weedless. One bag will prove as effective as a WHOLE WAGON LOAD OF STABLE MANURE. Use Wizard in the Fall and you will have a better lawn and garden the next Spring.

Beware of the inferior substitutes now on the market, which are being sold as Sheep Manure. If you want results and the best Sheep Manure on the market—insist on Wizard Brand. Wizard is genuine Sheep Manure and you can depend upon it for results.

Price—2 lb. pkg. 20c; 5 lb. pkg. 35c; 10 lb. pkg. 65c; 100 lb sack \$3.25.

but Smaller\$0.50

GARDEN PLOWS

HUDSON

A favorite with the truck farmer or gardener who
has sufficient work to justify separate machines for
seeding and cultivating.

The Plow and Double Pointed Shovel are made
of regular plow steel. Surfaces polished, lacquered and
cutting edges sharpened. Rake is malleable iron.

Adjustable Steel Frame, Seasoned Hardwood
Handles, Adjustable in Height

No. 240—24 in. Diameter Wheel, $1\frac{1}{4}$ in. Tire, Steel
Strap Reinforcement at Handle Tips Prevents
Splitting\$3.75

SEEDER AND CULTIVATOR

HUDSON HILL AND DRILL SEEDER AND SINGLE OR DOUBLE WHEEL CULTIVATOR

Will Sow Any Seed from
Beans down to the Smallest
Garden Variety, and is a practi-
cal combination which can be
changed in a moment from
sowing in continuous rows to
dropping in hills spaced from 4
to 24 inches apart. The seed
regulator is now made entirely
of brass with openings die cut
instead of being cast or mould-
ed. As a result it can be regu-
lated perfectly.

Brush force feed of selected
bristles will not injure the most
delicate seeds. Seed flow in
plain sight. Furrow opening
shoe and furrow covers adjusta-
ble for depth up to 2 inches.

As a seeder it opens a furrow, drops the seed, closes the furrow, packs the earth

and marks the next row in one operation. Seeding parts can be detached by removing two bolts, and the machine then becomes a single or double wheel cultivator, rake, plow or hoe, as desired.

Malleable Iron Frame with Angle Steel Arch

No. 201—Hoes, Shovels and Plows of High Grade Steel with Malleable Iron Shanks, 16 in. Diameter Wheel with 1¼ in. Tire, Selected Plow Handle Grip Handles, Adjustable to Suit Operator.....\$16.75

When Seeding Parts Are Detached you have a Double Wheel Hoe, Plow, or Cultivator, astride the row during early cultivation, and as a Single Wheel Cultivator between the rows later. The Angle Steel Arch is high enough to permit straddling until the plants are well grown Price, Less the Seeding Parts.....\$11.65

WEED PULLERS

The "OUT-U-KUM" WEED PULLER
An Entirely New Principle
A slight Push and Pull thoroughly loosens the surrounding soil and removes not only the weed, but the ENTIRE ROOT.

SCYTHES

Be Ve Be Scythes

BE VE BE

Be Ve Be (Best-Very Best) Scythes have a patented rib or stiffening device at the junction of the set and web. Severe tests have proved this combination to make the stiffest scythe blades on the market. **Best Crucible Steel** used.

LITTLE GIANT

The Genuine "Little Giant" Scythes bearing the label shown herewith are made of the **best**

crucible steel—the same grade used years ago, which, combined with better facilities of manufacturing, makes them even better than the old-time Scythes.

The rib that runs from end to end increases its strength to half the amount of the back without adding any weight, which overcomes that trembling which is felt in mowing heavy grass with cheap and plain scythes.

No. 5—GRASS—Dutch Shape—Best Quality Crucible Steel, Charcoal Tempered, Natural Finish, Cutting Edge Polished and Sharpened Ready for Use, 28 to 32 in. **\$2.00**

PRUNING AND PRUNING SAWS

No. 3 TABLE PRUNER

The blade is made of Silver Steel and, therefore, has unusual edge holding qualities. In 20 inch length, the blade is 2 $\frac{5}{8}$ inches at the handle and 1 inch at the point. Handle of fine hardwood, thoroughly seasoned. Varnished edge and fastened to blade by two brass screws.

No. 3—18 inch, \$1.40. 20 inch, \$1.50

No. 40 DUPLEX PRUNER

Made of Silver Steel, specially hardened and tempered. Will require very little refiling. Toothed on one edge with tittle shaped teeth for extra heavy coarse work and with fine tooth on the opposite edge for fine cutting. The handle is of thoroughly seasoned, air-dried applewood, finely finished, varnished edge, Easy Grip Pattern, fastened to the blade by three brass screws.

No. 40—18 inch, \$1.15. 20 inch, \$1.25

No. 25 TAPERED

The frame is made of extra high quality spring steel, $\frac{5}{8}$ inch wide and $\frac{1}{4}$ inch thick. The blade is of our finest pruning saw steel, blued, 8 points to the inch. The handle is made of beech, thoroughly seasoned, highly finished and polished on edges, fastened to the frame by two brass screws. Blade adjustable, will cut at any angle.

No. 25—14 inch, \$2.25

POINTERS ON PRUNING

Fruit bearing trees pass through two distinct periods of growth. The first, which we may call the "Growing-Up" Period, covers that time during which the energies of the tree are devoted to "wood growth." The second, which we will conveniently designate as the Fruit-Bearing Period, is devoted chiefly to the production of fruit.

During the "Growing-Up" Period, pruning is to a great extent, **mechanical** in effect.

That is, it serves to **build a framework** that combines great strength and bearing capacity with a form well adapted to all orchard operations. This mechanical part of pruning is often called "training" and is usually confined to the first three, four or five years of a tree's life.

Following this period, pruning, of course, has for its chief purpose the **increasing of fruit production**. It is wise, however, to keep in mind the fact that the final net profit from the orchard depends upon factors other than the mere quantity of fruit grown.

For that reason, judicious pruning should be done, not only for the purpose of increasing production, but also to maintain a suitable tree environment so that the fruit which is being grown may attain its full development in color, size and quality, for these things, even more than quantity, will be found to determine the dollars-and-cents value of the harvest.

Besides increasing the quantity and raising the standard of color, size and quality, careful pruning will do much toward reducing the expense of care and harvesting. A mass of tangled branches will invariably make the work of spraying and harvesting difficult as well as unduly expensive and it, therefore, behooves the careful fruit-grower to see that these limbs are cut out and the tree trimmed for **handling** as well as for **fruitage**.

WHAT IS THE BEST TIME OF THE YEAR?

It is not wise to lay down any hard-and-fast rules for the best time of the year to do pruning. This varies with the tree, the orchard, the soil and the climate.

As a usual result, however, it will be found that winter pruning induces wood growth and produces an invigorating effect upon the growth of the tree, while summer pruning checks wood growth and stimulates fruitfulness.

SIMPLICITY TRIMMER

For First Year Growth
Only

SIMPLICITY PRUNER AND TRIMMER

For Pruning Old
Growth and Trimming
New

The Simplicity Trimmer is designed for trimming only and for that purpose it has no equal.

It is a time and labor saver and meets a universal demand in making easy the trimming of fresh growth on hedges and shrubbery.

The Simplicity Trimmer has a twelve inch blade, weighs but two pounds and cuts cleanly both in opening and closing.

Price, \$5.00

The Simplicity Pruner and Trimmer is almost a necessity wherever there is a hedge or shrubbery. Its keen fluted teeth cut cleanly through the old growth and the new, making the old-style pruner or lopping shears seem primitive in comparison.

It has a sixteen inch blade, weighs three pounds, and cuts both in opening and closing.

Price, \$7.50

Exact Size

Garden Barrows

GLOBE

The Globe Barrow has been on the market for many years, and is well and favorably known.

Bottoms are matched and glued. Nicely painted and striped. Steel wheel.

No. 2—Length of Box 30 in., Width at Wheel End 19 in., Width at Handle End 24 in., Depth 12 in., Diameter of Wheel 20 in.....\$7.50

Mounted Grindstones

Tubular steel frame, slightly flexible, permitting same to adjust itself to uneven floors or surfaces. Frame is narrow at top, making it convenient to apply power. Spread at base, giving greater rigidity. Bi-Treadle, with power, properly applied. Stone movable horizontally on frame to suit convenience of operator.

Ball bearing journals and crank attachments fitted with detachable steel axle.

Seat made of steel, adjustable vertically 4 to 5 inches. Made in one size and furnished with one stone, guaranteed best quality Berea Grit, for general grinding. 20 to 22 inches in diameter, $1\frac{3}{4}$ to $2\frac{1}{4}$ inches thick...Price \$10.00.

RU-BER-OLD ROOFING

There are many Ruberoid Roofs still in splendid condition, which were laid thirty years ago. An uncounted number of Ruberoid roofs have withstood fifteen, twenty and twenty-five years of service, without indicating the limit of endurance. Ruberoid is the best prepared roofing that the Ruberoid Co. can make, and they have had longer experience in the manufacture of prepared roofings than any other concern in the United States.

Price per Square Ruberoid—Medium \$3.00. Heavy \$3.50. Extra Heavy \$4.00.

Price per Square Starex—Light \$1.45. Medium \$1.75. Heavy \$2.15.

Starex is made of cheaper materials, and put out to meet the demand for a medium priced roofing. It is a good piece of roofing for the price.

Our slate surfaced, green and red roofing can't be better for the price—\$2.50 per square. It is put up in strip shingles for \$6.25 per square.

The MARTIN-SENOUR Co.
100% Pure Paint
MONARCH

Monarch Paint is Composed Absolutely
of PURE WHITE LEAD
PURE OXIDE OF ZINC
PURE LINSEED OIL
AND COLOR

Which Are the Best Known Ingredients
for Paints

Monarch Paint is guaranteed absolutely pure, is sold subject to chemical analysis and being made of pure materials it covers 25 per cent more surface, wears longer, and is therefore more economical than adulterated paint or lead and oil.

Monarch Paint has given entire satisfaction for over 40 years.

SENOUR'S FLOOR PAINT

Is a varnish paint and made to dry very hard with a high lustre and sufficient hardness and elasticity to withstand the wear and tear to which floor paints are subjected.

NEU-TONE

A washable flat wall paint for interior decoration. It dries with a soft restful and beautiful finish, showing neither gloss nor lustre, and the colors are permanent under all conditions.

**WOOD-VAR
COLORED VARNISH**

A beautiful and durable permanent finish for every class of interior woodwork, furniture, bric-a-brac or floors, and equal results are obtained on either old or new work.

Wood-Var is a combination of permanent stains, unsurpassed for clearness and richness of tone, combined with the highest grade of varnish possessing remarkable wearing elasticity and weather-resisting qualities.

Wood-Var is easy to apply, as it flows out well under the brush and dries without showing brush marks. It is prepared so that it brings out the beautiful grain of the wood and gives a richness of tone that will not fade or rub off.

By the use of Wood-Var, the less expensive woods can be made to closely resemble the more costly ones, such as Oak, Mahogany, Walnut, etc., while unsightly pine floors may be made to resemble the most beautiful hardwood floors.

RED SCHOOL HOUSE PAINT

Is made of selected English red oxide, machine mixed and ground in linseed oil. Covers more surface, lasts longer than the coarse hand-mixed materials.

Made in popular colors, including white.

For barns, fences, roofs, out-buildings and grain elevators.

WAGON and TRACTOR PAINT

For finishing and refinishing wagons, tractors, sleighs, farm implements and all surfaces for which durability is essential and where appearance should be considered.

SCREEN ENAMEL

For protecting both the frame and the wire and is made expressly for this purpose. Black, green and white.

Screens should be gone over every year, and it will be found they will stand the weather better and last longer if given two coats.

**PORCH AND
LAWN FURNITURE ENAMEL**

Is made from materials especially selected for the purpose. Ground in varnish, that, through many trying tests, has proved its ability to resist wear and maintain its gloss under the hardest exposure.

**AUTO FLAT
AND VARNISH FINISHES**

Refinish Your Car the Same Way the
Automobile Painter Would Do It.

Martin-Senour Co. have developed materials that are perfect in every respect—that have been made so that the most inexperienced can get fine results.

Many automobile owners are skeptical and hesitate to attempt repainting their own car.

—BUT—

By using Martin-Senour Auto Flat and Auto Varnish Finish you can get as fine a finish as though done by a professional.

LONG LIFE

**Doubles the Life of Your Brush and
Keeps It Like New Until Worn
Too Short for Use**

"LONG LIFE" is a preservative in which both new and used brushes should be kept submerged while not in use. The new brushes will be kept soft and pliable and will be prevented from ever becoming "Lousy." The bristles will retain their animal life and will always be ready for service. Old brushes will be softened and renewed and made to work smoothly until worn too short for use.

MARTIN VARNISH

100% PURE

MARTIN VARNISHES

Are made from pure varnish gums, pure varnish oils, pure turpentine, and labeled on every can.

100% Pure

Martin Varnishes absolutely contain no benzine, rosin or water, or any other adulterant.

MARTIN'S 100% PURE INTERIOR FINISH

Is an unusually durable and efficient interior varnish. It produces a rich gloss; may be rubbed and will not mar. It is not affected by moisture.

MARTIN'S 100% PURE FLOOR VARNISH

Is not affected by hot or cold water; will not mar or scratch white. Intended for all surfaces subjected to unusual wear.

MARTIN'S 100% PURE VELOUR FLAT FINISH

Gives a perfect imitation of a rubbed finish—either flat or semi-gloss—and saves the expense of such an operation. Can be applied over either old or new varnished surfaces; produces a soft satin finish.

MARTIN'S AMBER-LYTE FLOOR OIL

A wonderful finish for maple floors. Penetrates deeply into the pores of the wood, which acts both as a filler and surfacer. Dirt and grease spots cannot adhere to a surface finished with Amber-Lyte and scrubbing is reduced to a minimum.

Kyanize

KY-AN-IZE

Kyanize FLOOR FINISH

Excellent for both Floors and Furniture.

Kyanize Floor Finish is a colored varnish made expressly to resist scuff and hard wear. It is also very satisfactory for standing woodwork, doors and wainscoting.

Kyanize WHITE ENAMEL

The outstanding characteristics of Kyanize Enamel are its extraordinary durability, its smoothness in working under the brush, its elasticity, making it impervious to cracking, checking, peeling or softening; its ability to retain its marked whiteness and porcelain-like surface for a prolonged period.

The Kyanize New Tints carry the same unvarying qualities which have distinguished Kyanize White Enamel from all inferior products.

Kyanize WASHABLE CELOID FINISH

A semi-gloss or celoid enamel finish for all walls, woodwork and furniture. A finish that dries over night with a satin-like lustre. A very satisfactory finish for kitchen walls that require frequent cleaning. Made in white and delicately tinted shades. Very durable.

Kyanize BABY CAB ENAMELS

Whatever else may be desired in a baby carriage, an attractive trim appearance is above all. Our Kyanize Baby Cab Brown, Gray, Ivory and Blue are especially suited to transform the old stained carriage into a bright, lustrous and water-proof vehicle.

RIPOLIN—The Original Holland Enamel Paint

Ripolin is known the world over for its wonderful working and wearing qualities. Long in oil, long in service, and beautiful in effect, it is used on many of the most representative public and private buildings, both in Europe and America.

Gladioli

THE INTEREST DEVELOPED IN THE GLADIOLUS DURING THE PAST FEW YEARS HAS BEEN TREMENDOUS, AND THOUSANDS OF BULBS ARE NOW PLANTED ANNUALLY WHERE DOZENS WERE USED IN THE PAST. THEIR PRESENT POPULARITY IS SURE TO CONTINUE AND INCREASE, AS THEY ARE WITHOUT DOUBT THE MOST ATTRACTIVE AND USEFUL OF ALL SUMMER-FLOWERING BULBS, AND AS A CUT FLOWER THROUGH THE SUMMER AND AUTUMN HOLD A PLACE THAT CANNOT BE TAKEN BY ANY OTHER FLOWER. EVERY GARDEN, NO MATTER HOW SMALL, SHOULD CONTAIN SOME GLADIOLI. NOTHING ELSE OF ITS CLASS COSTS SO LITTLE AND BLOOMS SO READILY FOR EVERYONE IN ANY SOIL OR CLIMATE.

IN BUYING BULBS, SIZE IS NO CRITERION, AS MANY CHOICE SORTS DO NOT PRODUCE LARGE BULBS. THE ESSENTIALS ARE THAT THE BULBS BE WELL DEVELOPED, FIRM, HEALTHY, AND OF BLOOMING AGE.

WE LIST MAINLY PROVEN VARIETIES:

ROSE ASH—A decidedly new color which has attracted the attention of everyone who has seen it; color, ashes of roses..... Each 15c; doz. \$1.50

SENTINEL—Tall strong plant, large, pure rose pink, with white penciled Iris-like throat, late variety..... Each 10c; doz. \$1.00

HOLLYWOOD Each 75c

WHITE—Very fine mixed		35c Doz.
STRIPED—Very fine mixed		35c Doz.
YELLOW—Very fine mixed		35c Doz.

Breeder Tulips

The Breeders are the true "Blue Bloods" of the Tulips. They trace their ancestry directly back to the 16th century, to the Tulips that caused the famous Tulip craze in Holland when people traded and sold all their possessions for rare varieties of these bulbs. They are a late, tall growing race, closely related to the Darwins, and resemble these noble Tulips in size, shape and length of stem.

Breeders are distinguished for their rich rare blends of color, many of which are found in no other in existence. Nature's happiest and rarest color combinations of rich purple and bronze, gray and lilac, gold and mahogany, brown and orange, are revealed in this group.

	Each	Doz.
MEDEA—Novelty salmon, carmine, a color that keeps well, one of the largest Tulips known		\$0.10 \$1.00
BRONZE KING—Dull golden brown, with olive base, very handsome		.10 1.00

CAFE BRUN—Rich brown	.10	1.00
CRAMOISIE BRILLIANT—Deep crimson with large black star-shaped center; the finest and best of all Parrot Tulips.....	.15	1.50

Giant Flowering Darwin Tulips

THE MONARCH OF ALL TULIPS

The Darwins are truly the acme of perfection in Tulips with their mammoth superbly formed blooms of riotous colors borne on tall, strong, graceful stems. The flowers of the Darwins are usually gracefully egg-shaped with very little or no flare at the top. They have a wonderful range of color, white blush, pink, lilac, heliotrope, rose, crimson, maroon, purple, black and all the intermediate shades. They start blooming the middle of May and continue for a long period at a time when many early spring flowers have gone and before summer flowers begin to bloom. As this Queen of all the Tulips is becoming better known it is growing in popularity by leaps and bounds. If you want a bed of Tulips that will be the admiration of your neighborhood, do not fail to plant Darwins.

	Each	Doz.
BARONNE DE LA TONNAYE—Rose shaded blush.....	\$0.07	\$0.70
