Peonies

In our list of carefully selected Peonies, you will find the newer and finest varieties of Double Herbaceous Peonies. We have so simplified our "PEONY LIST" that it is very easy for anyone to make a choice selection, according to color, time of blooming or price. We are and have been studying hundreds of varieties and find our "PEONY LIST" covers the requirements of most Peony lovers.

The fact that we grow Peonies for the cut-flower market for so many years, has made us lay great stress on free-blooming sorts. We guarantee our Peonies to be true to name and will replace any blooming untrue to description.

Time to Plant

Peonies are best planted during the Fall season. September and October are ideal months for planting Peonies, but they may be moved any-time until the ground freezes.

How to Plant

Plant Peony roots in a good, medium rich, well drained black soil. Never permit fresh manure to come in contact with your Peony plants. Always use rotted manure sparingly.

Never plant your Peonies too deep. Too deep planting sometimes causes shy blooming. Plant so that about two inches of soil covers the eyes on the roots.

Cultivation

Peonies will respond to extra care. For best results they should be watered during their blooming period and again towards the end of summer. Cultivating and hoeing should continue throughout summer.

Descriptions

The figures preceding the name of varieties denote the rating given by the American Peony Society in 1921. The valuation was on a scale of ten, which represented perfection.

The originator's name and the date when introduced are given in each description. The inches designate the height of the flower.

The American Peony Society has divided the types of bloom in the following classes:

Single—A single row of broad guard petals with the center filled with a mass of stamens.

Japanese—Same as the singles but the stamens and anthers are greatly enlarged into thick but narrow petaloids.

Semi-Double—Having several rows of wide petals with center loosely intermixed with stamens and petals.

Crown—Having wide petals in the center of the flower which form a high crown, encircled by narrow short petals.

Bomb—This type has all center petals of uniform width, forming a globe enclosed in a row of large guard petals.

Semi-rose—All petals are uniformly wide, interspersed with a few pollen-bearing stamens.

Rose—A perfect full rose shape, showing no stamens.
