CULTURE.—The Onion thrives best in a rather deep, rich, loamy soil, and unlike most vegetables, succeeds well when cultivated on the same ground for successive years. The best culture requires that the ground should be deeply

trenched and manured the previous autumn, and laid up in ridges during the winter to pulverize.

Prices in quantity on application.

PEAS.

German, Erbsen. Piscello. Grouch.
Two pounds for 100 feet of drill.
100 pounds in drills for an acre.

CULTURE.—Peas come earliest to maturity in light, rich soil. For general crop, a deep loam or a soil strongly inclining to clay is best. For early crops, decomposed leaves or leaf-mold should be used; or, if the soil is very poor, strong manure may be used. For general crops a good dressing should be applied, and for the dwarf-growing kinds the soil can hardly be too rich. When grown as a market crop, Peas are never staked; for private use they are generally sown in double rows and the tall varieties staked up by brush. For an early crop, sow as soon as the ground can be worked, and make repeated sowings every two weeks for succession. After the first of June sowing should be discontinued until the middle of August when a good crop may sometimes be secured by sowing an extra-early sort of fall use.

RAPE, DWARF ESSEX.

(For Sowing.)

A more general use of this seed would prove of great advantage to farmers, for it not only makes excellent pasture, but there is no plant that will give as large a yield of foliage at so small an expense as this.

SALSIFY, or OYSTER PLANT.

German, Bobskart, Sassafracu, Jarzynowa.

One ounce will sow 50 feet of drill.

Mammoth Sandwich Island.—We consider this the largest and most profitable Salsify in cultivation; roots are two or three times the size of the ordinary Salsify, and of more agreeable flavor. It is pure white in color and invaluable to market gardeners. Oz., 20c.; ¼ lb., 70c.; 1 lb., \$2.50.

SUNFLOWERS.

Persons wishing to purchase in quantity will please write for special prices.

Mammoth Russian.—The standard large-growing variety, which is used largely for feeding poultry.

SPINACH.

German, Spinat, Espinard, Espinaci. One ounce for 100 feet of drill; 10 to 12 pounds in drills for an acre.

ELCOMSDALE SAVOY SPINACH.

Satterthwaite's For Better Seeds.

CULTURE.—This is a very important crop in our market gardens, and is one of the most easily managed of all vegetables, requiring but little culture, and may be had fit for use the entire season. The main crop is sown in September. For summer use it may be sown at intervals of two or three weeks from April to August.

New Zealand.—Entirely different from the true spinach in type in that it thrives during the hot weather in any soil, rich or poor. Pkt., 5c.; oz., 15c.; $\frac{1}{4}$ lb., 25c.; 1 lb., 75c.

Bloomdale Savoy-leaved.—A heavy cropper, of fine quality and very hardy; succulent leaves, curled and crinkled like a Savoy cabbage; hardiest and most productive sort. 1 oz., 5c.; $\frac{1}{4}$ lb., 15c.; 1 lb., 40c.; 10 lbs., 25c.

Prickly, or Winter.—Very vigorous and hardy. 1 oz., 10c.; $\frac{1}{4}$ lb., 20c.; 1 lb., 50c.

TOBACCO SEED.

One ounce will sow 25 feet square, and produce plants for one acre.

Fine Havana.—Finest strain of imported seed.

SQUASH.

German, Kurbisz, Zucca, Mlekuzr.

One ounce Early will plant 50 hills; one ounce Marrow, 25 hills.

CULTURE.—The plants are very tender and sensitive to cold, and planting must be delayed until settled, warm weather. The general principles of culture are the same as those given for cucumbers and melons, but the plants are less particular as to soil. The summer varieties should be planted 4 feet apart each way and the winter sorts 5 feet. Three plants are sufficient for a hill. Care should be taken not to break the stems from the Squashes intended for winter use, as the slightest injury will increase the liability to decay.

MAMMOTH WHITE BUSH SQUASH.

Mammoth White Bush Scalloped.—Similar to Early White Bush, except that it is much larger. 1 oz., 15c.; $\frac{1}{4}$ lb., 35c.; 1 lb., \$1.00.

Giant Summer Crookneck.—Double the size of the ordinary Crookneck and very warty, but similar in other respects. Their handsome ap-

pearance commands an extra price in the market. 1 oz., 15c.; $\frac{1}{4}$ lb., 40c.; 1 lb., \$1.25.

Improved Hubbards.—The well-known and standard late variety; our strain is excellent. 1 oz., 20c.; $\frac{1}{4}$ lb., 50c.; 1 lb., \$1.50.

Mammoth Yellow Bush Scalloped.—Same as White Bush except in color. 1 oz., 15c.; $\frac{1}{4}$ lb., 35c.; 1 lb., \$1.00.

Fordhook.—Skin bright yellow; flesh color; is very dry and sweet, one of the handsomest and best keeping winter varieties. 1 oz., 15c.; $\frac{1}{4}$ lb., 35c.; 1 lb., \$1.00.

Boston Marrow.—Fine fall variety; oval, bright orange; flesh yellow and firm; best for pies, and also for canning. 1 oz., 10c.; $\frac{1}{4}$ lb., 25c.; 1 lb., 75c.

TOMATOES.

German, Mepsafel, Pomo d'Ora, Pomodoro.

One ounce will produce 1,500 plants.

CULTURE.—The Tomato is raised from seed, which should be sown in the hotbed about February 20, and continuous sowings made until April 1, according as the plants are wanted for use. When the plants are about 2 inches high, transplant to 4 inches apart, and after three or four weeks transplant from the hotbed into a cold-frame, settling the plants 8 inches apart each way. (A cold-frame is simply a low wooden frame covered with glass used to protect such plants as are not sufficiently hardy to withstand our winters.) Keep the plants cool, so as to make them stocky. Set out in the open ground about June 1, in well-enriched soil, settling the plants 5 feet apart each way.

Greater Baltimore.—An excellent main-crop sort. Pkt., 10c.; 1 oz., 25c.; $\frac{1}{4}$ lb., 75c.; 1 lb., \$2.75.

EARLIANA TOMATO.

Dwarf Champion.—Distinction in foliage and habit of growth, being compact and upright. 1 oz., 30c.; $\frac{1}{4}$ lb., 85c.; 1 lb., \$3.50.

Earliana.—New. Claimed to be the earliest; large, smooth, red; very prolific. 1 oz., 25c.; $\frac{1}{4}$ lb., 85c.; 1 lb., \$2.00.

Gonny Best.—One of the best and most prolific of early tomatoes. The size is not so large, but it is very solid and evenly bright red. 1 oz., 25c.; $\frac{1}{4}$ lb., 85c.; 1 lb., \$2.00.

June Pink.—New. Very early; of medium size, round, smooth and very solid. Color pink. Pkt., 10c.; 1 oz., 30c.; $\frac{1}{4}$ lb., 90c.; 1 lb., \$2.00.

New Stone.—A great favorite with canners; the heaviest and most solid-fruited of the large Tomatoes of good quality. Our stock is distinctly superior to most of that offered under this name, being more uniform, better colored and larger. Fruit round, apple-shaped, very large, deep red, and astonishingly heavy. 1 oz., 25c.; $\frac{1}{4}$ lb., 75c.; 1 lb., \$2.75.

EARLIANA TOMATO.

Ponderosa.—Pkt., 10c.; 1 oz., 35c.; $\frac{1}{4}$ lb., \$1.25.

Matchless.—One of the best main-crop sorts. Fruits very large, smooth, exceedingly solid and of a good red color. It is quite prolific and matures a little later than Stone. Pkt., 10c.; 1 oz., 25c.; $\frac{1}{4}$ lb., 75c.; 1 lb., \$2.75.

Yellow Plum.—Oz., 40c.; $\frac{1}{4}$ lb., \$1.25.

Large Yellow Tomato.—A good eating tomato. Oz., 40c.; $\frac{1}{4}$ lb., \$1.20.

JUNE PINK.

TURNIPS.

Three ounces of seed will sow 100 yards of row. Four pounds to the acre. Matures for table in from 60 to 90 days, according to variety and season.

Turnip seed may be sown when the Peach is in bloom, or among the first seeds in early spring; indeed, the only hope of a successful spring crop is in an early start, as otherwise the period of maturity extends into hot weather, when the bulb becomes fibrous and pungent.

Satterthwaite's For Better Seeds.

Midsummer and early autumn are the seasons for successful Turnip drilling, though frequently the conditions of the soil then are not favorable to satisfactory vegetation.

The seed of Cattle Turnips is always drilled in rows, while the early maturing and surface-rooted table Turnip is generally sown broadcast. We advise the sowing, either in drills or broadcast, of not less than three pounds to the acre to insure a satisfactory stand.

The Bloomsdale Swede, like other Ruta-Bagas, is slower in growth than the rough-leaved turnips, but produce roots more solid and more nutritious—less laxative and more fattening. The Ruta-Baga is a gross feeder and will do best with 20 to 25 tons of stable manure to the acre; when it cannot be obtained apply 500 pounds of superphosphate.

Early Flat Red or Purple Top (Strap-leaved), 60 days.—The oldest standard red. 1 oz., 10c.; ¼ lb., 20c.; 1 lb., 60c.

Bloomsdale Swede or Yellow Ruta-Baga (maturing in 90 days).—The Bloomsdale is quite wonderful in its fine breeding. In nothing that we offer are the effects in selection and in careful breeding so apparent as in this Ruta-Baga. Oz. 10c.; ¼ lb., 20c.; 1 lb., 60c.

Golden Ball.—1 oz., 10c.; ¼ lb., 20c.; 1 lb., 60c.

Yellow Globe.—A splendid sort for general crop; grows large, a good keeper, with bright yellow flesh. 1 oz., 10c.; ¼ lb., 20c.; 1 lb., 60c.

White Summer Turnip.—1 oz., 10c.; ¼ lb., 20c.; 1 lb., 60c.

Amber Globe, Green Crowned, 75 Days.—1 oz., 10c.; ¼ lb., 20c.; 1 lb., 60c.

Large Early Red Top Globe, 65 Days.—Large size, rapid growth, unusually attractive and admired by all. A very much heavier producer than either of the preceding. We confidently recommend it. 1 oz., 10c.; ¼ lb., 20c.; 1 lb., 60c.

Satterthwaite's Evergreen Lawn Seed.

Preparing for Planting

The first thing is to see that there is a good top soil of at least six inches. This should be graded and drained, if necessary. The ground should be thoroughly mellowed by digging. Then it should be raked and rolled. All stones and roots should be removed. Now the seed may be sown. It should be lightly raked in and then rolled. If the seed is sown in April and May it will make a good lawn by August.

The seeds in this mixture are the best tested seeds obtainable. They are full of vitality and will secure a lawn quicker than any other seed. Sow five bushels to an acre. Sow one quart to every two hundred square feet.

Flowers must be picked before pods form, otherwise vines will not long continue to blossom.

KEEN KUTTER
TOOLS and CUTLERY

Keen Kutter lawn mowers embrace every known improvement. They are ball-bearing throughout, running easier and lighter than any other mower made. Their wheels are high and prevent the many bumps and depressions in the ground from affecting their even cutting. Keen Kutter lawn mowers have five blades of crucible steel of perfect quality and carefully tempered. Their castings are strong. The handles of all

KEEN KUTTER Lawn Mowers

are made of fine white maple. Their blades may be regulated to cut as close as you please—as well near fence or building as in the open. Their light weight and speed make them more desirable than the ponderous, hard-running machines.

Every tool bearing the Keen Kutter trademark is guaranteed without fault or flaw, or money refunded.

Why We Sell Buckeye Wood Pumps

In many localities the water contains certain chemicals which are not necessarily injurious and cannot always be detected, but which in coming in contact with metal form rust. This soon discolors and renders the water unfit for use.

Many a fine water well has been abandoned owing to the fact that the owner did not know that the water in his well could be entirely restored to its original purity by installing a Wood Pump and Tubing.

This fact is becoming more and more generally known.

Why We Sell Buckeye Ladders

They are made of good clear Spruce, Hickory Rungs, which are dipped in Creosote before they are driven into the rails, making a water-tight joint. **LIGHT, STRONG AND DURABLE.**

WE SELL AND RECOMMEND CONKEY'S

The Original Buttermilk Starting Feed Raises Husky Chicks

A Ready Prepared Mash for baby chicks and all self-feeding young fowls. This remarkable feed—originated by Conkey and prepared through processes controlled and used exclusively by Conkey is a complete ration—containing all the elements needed for safely starting baby chicks, ducklings, goslings, poults, guineas, pheasants, etc.

This superior chick mash was the first commercial poultry feed containing buttermilk—that is why we call it the ORIGINAL.

Conkey's is a scientifically-balanced feed as clean and wholesome and as conscientiously-prepared as "infant food." Selected,

plump grains, ground to proper fineness, are combined with other ingredients so as to make the feed readily digestible, palatable and nutritious. **TASTE it, SMELL it,** that's the way to judge a chick feed.

FEED IT FIRST EIGHT WEEKS

Conkey's is all the chicks need the first eight weeks except greens, charcoal, grit, clean water and some fine scratch grains in the litter for exercise. Give grit and water from the start. During the second week add green stuff and in the fourth week finely cracked grains, like Conkey's Chick Grains. \$5.25 per 100 lbs.

They've saved many a valuable bird.

STIM-O-PLANT

PLANT STIMULANT TABLET

Concentrated

Easy to Apply

THE MAGIC FERTILIZER IN TABLET FORM

STIM-U-PLANT is the only complete plant-food in tablet form. The three mineral nutrients most heavily drawn from the soil by growing plants (flower and vegetable) are nitrogen, phosphoric acid, and potash. Because of this fact, STIM-U-PLANT tablets are made up of these three in a balanced ration of 11 per cent. Nitrogen, 12 per cent. Phosphoric Acid, 15 per cent. Potash—all of which elements are water-soluble and immediately available to the feeding root-hairs of the plant.

Tablet Form Fertilizer Unique and Valuable

1. Gives an EXACT FEEDING UNIT—no guesswork.
2. Provides for ABSOLUTE CONTROL of feeding, eliminating the danger of overfeeding.
3. No MESSY MIXING.
4. No unpleasant ODOR.
5. Is EASIEST to APPLY.
6. Insures MAXIMUM EFFICIENCY because the plant gets all the food-value—none being lost through scattering where not available to the plant, leaching, and run-off of surface soil-water.
7. Makes REPOTTING of house plants UNNECESSARY, as it replaces the food withdrawn by the growing plant.

"Because of its ready solubility, STIM-U-PLANT can easily be used as a liquid manure, by dissolving the tablets in water at the rate of four to the gallon.

YOU can save all the time, cost and drudgery of tamping. Use *American Steel Fence Posts*. No tamping—no back-breaking post hole digging. You can drive steel posts in ordinary soil. Steel posts protect your live stock from lightning. Every steel post is a lightning rod. It carries electricity from the air. Allows you to burn your fence rows, destroying bugs and weeds that damage crops. Eliminates repairs. Requires no staples. Makes land more valuable.
