BULBS FOR FALL PLANTING

These Flower Bulbs produce remarkably beautiful flowers; many of them are delightfully fragrant and flower equally well under garden or house culture. Among other merits these bulbs are the certainty and perfection with which they bloom and their ease of culture.

We Import Direct

We have now in transit a carload of Dutch and French Bulbs and expect to make delivery about September 15.

MAIL US YOUR ORDERS NOW

Free Delivery By Mail

All Bulbs offered in this list will be delivered to your doorstep anywhere in the United States by parcel post prepaid, at prices mentioned in this catalog.

OUTDOOR FALL BULB CULTURE

Time To Plant—Remember that the "fall" is the time to plant all spring flowering bulbs. They may be put in almost anytime from September 15th until the ground freezes; in fact, we have succeeded with even later planting, but earlier planting brings the best success.

How To Plant—The soil should be well spaded, and the surface of the beds slightly raised at the center, so that no water will stand, but soak bed good with water when first put in and then later if it dries out. Also water well in the spring about time bulbs start, but don't let them stand in water. The soil will be better if enriched with pulverized sheep guano or bone dust fertilizer.

How and When to Order

The best time to order is just as soon as you receive this catalog. We can always give your orders more of our personal attention if they come in before the rush of the fall trade.

Prices given in this catalog are for early orders. Later in the season, when our own importations are exhausted, we may not be able to always supply at these low prices, but will always send FULL VALUE for the money you send us.

After Treatment—All bulbs like a sunny exposure, and if protected from the north, will bloom earlier. Before severe weather comes, cover the bed with several inches of leaves, straw or coarse manure, removing it early in the spring. The bulbs do well for a number of years without lifting or replanting. When through flowering, the beds may be planted with shallow rooted annuals, as nasturtiums, petunias, verbenas, etc. If necessary, the bulbs may be taken up when the leaves begin to ripen, to be again replanted the coming fall.

DIAGRAM SHOWING DEPTH TO PLANT OUTDOORS

Bulbs indoors do not require such deep planting as indicated in the diagram, there being no danger from freezing and thawing to guard against.

GIANT PAPER WHITE NARCISSUS—Ready NOW

An embargo by the Federal Horticultural Board against the importation of narcissus bulbs, limits us this year to American grown narcissi of all types, including the tender Paper Whites, used so extensively for forcing in gravel and water.

The stock of American grown Paper Whites is very limited, and the greatest care is necessary to insure good quality. The increase in prices is due to the small supply.

This beautiful Polyanthus Narcissus is not hardy and can only be used for house culture. We especially recommend to grow these bulbs in pebbles and water; their flowers are pure white and very fragrant.

Price, 10c Each; 3 for 25c

\$1.00 Per Doz.—Postpaid

LILIES OF THE VALLEY

These beautiful, fragrant flowers may be brought to flower in 18 to 21 days, if pips from cold storage are used. They are easily forced in a bowl, if planted in sphagnum moss and kept well watered. Their dainty fragrance is preferred by many to the large Paper White narcissi, and they are much quicker to flower. Do not order more than you intend to use at once as the cold storage pips will not keep. Plant about 25 pips in a 7-inch pot or pan, place in a warm temperature,

65 degrees Fahrenheit, and shade from light until leaves and spikes are well developed, then admit light gradually. Increase temperature to 75 degrees or 80 degrees if possible. An inverted pot over each pan answers admirably to shade them. This is the treatment for cold storage pips only.

Cold Storage Pips, ready November 1. Per doz., \$1.00; 25 for \$1.75; 100 for \$6.00, postpaid.

Sphagnum Moss, sufficient for 25 pips, 15c, postpaid.

HYACINTHS—Ready About Sept. 15

HYACINTHS—All Hyacinths are well adapted to pot culture, open beds or borders.

Pot Culture in the window or greenhouse—A 4-inch pot is the best size for the successful growth of the bulbs. It delights in a light, rich, sandy soli; when placed in the pot the upper surface of the bulb should show above the soil.

After potting, water thoroughly and place in a dark, cool cellar, or out of doors, well covered up with ashes, sand or such like material, there to remain until well rooted, when they should be taken in a few at a time, to keep up a succession of bloom, and set in a warm and light place in the house or greenhouse, to bring them into flower.

Outdoor Culture—Plant in October or November in soil deeply cultivated and rich. Set the bulbs about six inches apart and about 5 inches deep. Cover the surface of the bed with light, short manure as a protection to the bulbs during the severe months of winter. Remove this covering as soon as the severe frost is gone in spring.

TULIPS—Ready About Sept. 15th to 25th.

The culture of Tulips is the same as that of Hyacinths, except that the bulbs should be planted about four inches deep and four to six inches apart. Tulips are perfectly hardy, so only a slight protection is required from extreme cold and sharp winds. All of the single varieties force readily.

NAMED SINGLE TULIPS

	Doz.
Artus, scarlet, excellent bedder.....	2 for 15c \$.60
Crimson King, crimson scarlet, easily forced	2 for 15c .60
Cram Brilliant, glowing scarlet, a grand variety, May flowering..	2 for 15c .60
Chrysolora, large, pure golden yellow, excellent for bedding.....	2 for 15c .60
Coulour de Cardinal, very dark red, fine for forcing and bedding.....	Each 10c .75
Cottage Maid, deep pink, shading into white, splendid for bedding..	2 for 15c .60
Duchess De Parma, orange yellow..	2 for 15c .75
Gesneriana Spathulata, scarlet blue center, sweet scented; one of the best May flowering	2 for 15c .75
Keizerkroon, extra large flower, deep red with blood yellow margin	2 for 15c .75
LaReine, well-known white, rose shaded tulip, excellent forcer and bedder	Each 5c .50
White Hawk (Albion) (White Falcon), pure white	2 for 15c .75
White Swan, white, pointed petals	Each 10c .75
Eary Single Mixed	Each 5c .40

NAMED DOUBLE TULIPS

Couronne d'Or (Crown of Gold)—Large bold flower of rich golden yellow, shaded copper. Excellent for bedding and winter forcing, 2 for 15c; 70c doz.

Boule de Neige—Beautiful, large full flower of glistening white; greatly resembling a peony in form. Excellent for bedding or forcing, 2 for 15c; 75c doz.

La Citadelle—Red and yellow, 2 for 15c; 75c doz.

Matador—Glowing scarlet, the purple bloom on the outside of the petals and the perfect egg-shaped flowers make it one of the handsomest of the Red Double Tulips, 2 for 15c, 75c doz.

Muriilo—Delicate rose pink, flushed white. Fine for bedding and excellent for forcing, 2 for 15c; 70c doz.

Eary Double—Mixed, 5c each; 40c doz.

Tulips—All Colors—Double and Single Mixed, 3 for 10c; 35c Dozen

GIANT DARWIN TULIPS—May Flowering Ready About Sept. 25th

For the herbaceous border, massed in clumps along the edge of shrubbery or as cut flowers for vases, these are conceded to be the superior of all the Tulips. The enthusiasm of the Darwin Tulip is not due to fad or popular fancy, but rather to an awakened sense of appreciation of their majestic beauty. The rich, bright colors of the blooms, their sombre tones, their many pale and more lovely colors, produced on strong gigantic stems from 2 to 3 feet, all vie with one another and capture even the casual observer of spring flowering bulbs.

They range in color from the daintiest pink, rose, salmon, red, etc., to deep, rich crimson; from lavender through mauve and light blue to violet-purple, and the so-called "Black Tulip."

CULTURE—Bulbs should be planted 5 to 66 inches deep and not less than that apart. Sand to the depth of $\frac{1}{2}$ inch at the base of the bulbs will amply repay the trouble for the provision for drainage during wet weather.

Bartigon—fiery red, immense size, long stems—the best red Darwin Tulip grown, 2 for 15c; 75c doz.

Clara Butt—Salmon-rose, 2 for 15c; 60c doz.

Edmee (Beauty)—A beautiful shade of cherry rose with a lighter border, 2 for 15c; 75c doz.

Farncombe Sanders—A bright shade of scarlet, with a clear white base, contrasting well when the flower is fully open. A broad-petaled flower of large size. Fine for forcing or the border. Height 25 in., 2 for 15c; 75c doz.

Rev. H. Ewbank—Height 20 in., deep lilac, toning at the edges to pale lavender. White base. Distinct flat open flower. Lasts well. Most popular of this shade. 2 for 15c; 75c doz.

Grand Mixture of Darwin Tulips, 50c dozen.

Pride of Haarlem — Magnificently formed flower of immense size, brilliant, deep rose, shaded scarlet, with light blue base. This variety, perhaps the most widely known for its stately habit and glorious color, is unsurpassed for border planting. Height 36 inches. 2 for 15c; 60c doz.

Sieraad Van Flora — Bright red, large and early, 2 for 15c; 75c doz.

William Copeland—Uniform lilac-rose. May be forced as early and as easily as the early Tulips. The color, when grown indoors, becomes a most beautiful lavender. Height 24 inches. 2 for 15c; 75c doz.

Inglescombe Yellow—Height 18 in., a fine flower, color full rich yellow; sometimes called the Yellow Darwin. 2 for 15c; 75c doz.

OLD DUTCH OR BREEDER TULIPS

A fine May-flowering type, very similar to the Darwins, but having an entirely different range of colors, comprising bronze, terra-cotta, orange, brown and other artistic tones. Can be flowered under glass by early April.

	Doz.
Bronze Queen —Soft buff suffused bronzy apricot.....	2 for 15c \$.75
Dom Pedro —Rich coffee-brown shaded moraan	2 for 15c .75
Feu Ardent —Brick red, shaded mahogany	2 for 15c .75
Godet Parfait —Rich deep plum-violet	2 for 15c .75
Panorama (Fairy) —Deep orange red shaded mahogany, Very large	2 for 15c .75
Yellow Perfection —Bronze yellow, shaded golden at edge of petals	2 for 15s .75
Choice Mixed —Containing a great many colors	.60

PARROT OR DRAGON TULIPS

The following are the showiest and most distinct of this beautiful class:

	Doz.
Crimson Brilliant —Brilliant carmine	2 for 15c \$.60
Lutea —Clear yellow, feathered red and green	2 for 15c .60
Perfecta —Striped yellow and red	2 for 15c .60
Finest Mixed Parrot Tulips —All flowering bulbs	.50

NARCISSUS OR DAFFODILS—Ready About Sept. 25th

Sir Watkin—A well known daffodil, excellent for large plantings, or growing in pots. Full perianth of pure yellow with large rich golden trumpet. Large size. Each 10c; dozen, \$1.00

Orange Phoenix (Bacon and Eggs)—Creamy white with orange, 10c ea.; \$1.00 per dozen.

Emperor—Perianth deep primrose-yellow, trumpet rich yellow; a very large flower of wonderful substance. Height 18 inches; 10c each; \$1.00 doz.

Daffodils and other Narcissi were barred from import to the United States Jan. 1, 1926, by quarantine order of the Federal Horticultural Board. We are therefore limited to the sale of American grown bulbs, and have been compelled to reduce our list of varieties materially. We can assure our customers that the bulbs which we can supply are of excellent quality. Prices are higher than those formerly asked for imported bulbs, but the increase is not as great as had been feared.

But no garden would be complete without the Narcissus or Daffodil. No class of bulbs are more satisfactorily and none so easily taken care of as the Daffodils. They appear just after the snow and ice of winter, and enliven our gardens and lawns. If once planted they are good for an unlimited number of seasons, if they are planted out in a spot where they can be allowed to mature their foliage. They are perfectly hardy and withstand the winter without protection.

Big Victoria—Creamy white perianth, rich yellow trumpet; 10c ea., \$1.00 dozen.

Poeticus Ornatus—Pure white, yellow cup, margin deep scarlet. This variety is nearly a month earlier than Poeticus out of doors and is also considered a splendid forcer. It is not sweetly perfumed as the Poeticus but is larger, showier and earlier; each 5c; 50c per doz.

JONQUILS

A species of Narcissus easily grown in any garden. They are very popular as cut flowers and can be successfully grown by everyone. Culture same as given for Narcissus.

LILIES

No flower is more expressive of the idea of queenly beauty and faultless purity than the Lily. Nearly every variety we offer will, with a little care, endure the severity of our winters, and some are among the most hardy of our garden flowers. Most lilies last a long time after cutting and are admirably suited for decorative purposes.

LILIUM CANDIDUM (Annunciation or Madonna Lily) Ready Now.

A hardy garden and forcing sort that has long been one of the most popular of all lilies. It is still one of the finest single clear white flowers in cultivation and its rich perfume is very attractive. It should be planted in the fall and usually blooms in June. Outdoors it thrives best where it can remain undisturbed for several years. Height outdoors in the open usually three to four feet. First size Bulbs, 20c each; \$2.00 doz. Second size Bulbs, 15c each; \$1.50 doz.

LILIUM LONGIFLORUM (Multiflorum)—Ready in October

Similar in form to Liliium Harissi and preferred by some to that variety. It does not come into bloom as early, but the flowers are of better substance. Extensively used by florists for cut flowers. When grown in the open ground it blooms in June and July. Height outdoors in the open usually two to three feet. The bulbs can be planted the following spring if received too late to plant in the fall. Japan grown bulbs, 7 to 9 inches, 30c each; \$3.00 per dozen; postpaid.

SPECIOSUM RUBRUM—Ready Now

The white or pink petals are thickly dotted with rose or crimson spots. This hardy, strong growing sort is sometimes called "Crimson Banded" and is considered by many the most satisfactory for garden cultivation. 30c each; \$3.00 per doz.; postpaid.

CALIFORNIA WHITE CALLAS

Aethiopian (White Calla Lily)—We have arranged for a supply of particularly nice, clean stock of good flowering roots and offer extra large roots. 40c each, 2 for 75c.

AMARYLLIS

Of all bulbs which the amateur can grow successfully indoors, the Amaryllis is at once the largest, most beautiful, surest to flower and most easily handled. From a single stem spring from one to three lily-like flowers, 6 to 8 inches in diameter. They thrive best in a compost of two-thirds good garden loam with one-third leaf mold, to which should be added a little sand. They require temperature of 50 to 55 degrees, and if forced it should be raised ten degrees.

A six-inch or seven-inch pot will accommodate the bulb. Place one bulb in a pot, covering it as far as the neck or upper narrow part. Water sparingly at first until the flower shoots begin to appear. Some growers keep them in the dark until the flower stems are four or five inches long, and then bring them to the light. After flowering they should be placed in a warm window, or set outside in sand or cinders and watered every day (sometimes twice a day), until the end of August when water should be gradually withheld and the bulbs allowed to go to rest.

Belladonna Major—Fall bloomer, very free and fragrant. Flowers which are a lovely shell-pink color, are borne on stems 2 to 2½ feet high. Large bulbs, each 25c; per dozen., \$2.75; **EQUESTRE**, orange scarlet, each 25c; doz., \$2.75.

Johnsoni—Has immense trumpet-shaped flowers, which measure 6 to 8 inches across, are borne on strong fleshy spikes, and are rich, deep velvety crimson, each petal having a broad white stripe contrasting beautifully with the deep red color. Each, 50c; doz., \$5.00.

Giant Hybrids—One of the finest strains of Amaryllis. Flowers are immense, borne mostly two and three to a stem, in an amazing and beautiful range of colors, blended, splashed, and striped in a manner not seen in other strains. Each, 50c.

ANEMONE (WILDFLOWER)

The variety offered below are charming hardy flowers. Both double and single are equally desirable. They are suitable for pot or border culture, and when planted in masses are most effective. They succeed best in a light, rich, well-drained loam. Plant in the autumn. Cover with leaves, straw or long manure on the approach of winter.

Coronaria Mixed—Each, 10c; dozen, \$1.00.

St. Brigid—A grand strain of Poppy Anemones whose flowers range in color from the deepest crimson to the purest white, embracing such delicate shades as cobalt, scarlet, rose, salmon pink, and heliotrope. Most are semi-double. Each, 10c; dozen, \$1.00.

FREESIA

Improved Purity—A perfectly pure white of large size and good substance. Our own stock and the finest Fressia now on the market. Selected bulbs, 5c each; 40c dozen.

CROCUS

Among the earliest to blossom in the Spring is this beautiful little flower, lifting its head almost before the snow has disappeared. A desirable effect is produced by setting bulbs here and there over the lawn. Lift the turf and insert the bulbs about two inches. They will care for themselves and when once planted will remain uninjured in the ground and bloom for years.

For decorative purposes in the house, in winter and spring, the splendor of coloring renders the Crocus invaluable. Six or eight bulbs should be planted in a 5-inch pot.

CHOICE MIXED CROCUS

	Doz.	100		Doz.	100
Large yellow	\$.30	\$2.00	Striped	\$.30	\$2.00
White	.30	2.00	All colors	.30	2.00
Purple and Blue	.30	2.00			

OXALIS

Most of these Oxalis flower from October until Christmas, and later. Easily grown, requiring only a good, somewhat peaty soil, with considerable light, for their successful growth.

Grand Duchess—Lavender, doz., 60c; Pink, doz., 60c; Yellow, doz., 60c.

Bermuda Buttercup—Per doz., 60c.

In the autumn there is no seeding, no drouth, no excessive heat. Seed sown in September germinates in time for a long stretch of favorable weather in which to become established before winter sets in. The winter ordeal is not so severe as the summer; and after it comes a long, cool spring, for further growth before midsummer and seeding time arrives. Fall, therefore, is the best time to sow.

GLADIOLUS—Ready for Delivery After January 1st.
Plant in Early Spring.
(See Culture Directions on Page 13)

Price, 50c per box—Postpaid.

DIRECTIONS FOR PLANTING THE RAINBOW MIXTURE OF
GLADIOLI BULBS

Gladioli as a summer Cut Flower has double value for the brave field show of bloom as well as its generous supply of Cut Flowers. Gladioli Flowers last longer when cut than most any other, and develop in water when cut to even greater perfection, and in the "Good Hot Old Summer Time" when other Cut Flowers wilt quickly. Any good rich garden soil will grow Gladioli. Bulbs may be planted any time from March 1st on until June 1st, but plantings in rotation of from two to three weeks apart will insure a more even succession of bloom. Set bulbs about 3 inches deep and two inches apart in a row, and rows from 12 to 18 inches apart. If planted in beds plant 4 to 5 inches apart each way. When cutting flowers always cut about 6 inches above ground, thus the bulbs will keep on growing to maturity, and when tops have served their purpose the bulbs may be dug and stored in a frost-proof place and again be ready for planting next season. We suggest planting Rainbow Collection three weeks apart from March 1st until June 1st (four collections in all.) Price \$2.00, and you will be delighted with the beautiful collection of Gladioli Flowers you will have in succession from about June 15th to September 15th.

EVERY GARDEN CAN GROW PEONIES!

PEONIES—Ready Now.

Peonies should be planted in the fall.

Peonies thrive in almost any soil but are best in a deep rich loam, moist but well drained. If good and rich, use manure as mulch only. If poor, thoroughly mix in about one-third of well rotted manure or a little ground bone, adding a little river sand or fine gravel if inclined to be sticky or heavy. Fresh manure **MUST NOT** be mixed in the soil. Dig 1½ to 2 feet deep; plant 2½ to 3 feet apart, 2 feet in rows for hedges. Cover the eyes or buds three inches but do not pack the soil hard. Mulch the first winter with coarse strawy manure after the ground begins freezing, to prevent the frost lifting the plants out. Each winter scatter a half bushel of ordinary manure or much less of concentrated fertilizer around each plant for a distance of 2½ feet square for fertility. After hard freezing is over remove the coarse parts and stir the finer in, taking care not to disturb the buds just beginning to appear. Cut off and burn the tops each November. Cultivate well especially the first two seasons. When a clump gets too large, shown by smaller and fewer flowers, dig up, divide and replant in a new place in the fall. Here Peonies do best in full sun, although they do fairly well if not shaded more than half a day.

Each

Couronne D'Or—Large, late, white yellow reflex; blooms freely.....	50c
Duchesse De Nemours—Fine mid-season, ivory white; blooms freely.....	40c
Duchesse D'Orleans—Soft pink shaded salmon; blooms freely.....	30c
Duke Wellington—White, sulphur center, late, tall, fine.....	50c
Edulis Superba—A very large, very free blooming, deep rose pink; extra good commercial variety	40c
Felix Crousse—Large, rich, even, dazzling ruby red, mid-season.....	75c
Festiva Maxima—A very large, pure white flecked	50c
Queen Emma—A very large, very full, bright pink rose type flower, fragrant plant, erect, compact, growth strong, blooms freely, mid-season to late, the best shipper and best keeper we have grown.....	\$1.00
Queen Victoria—Opens bluish, becoming white, medium early.....	40c
Zoe Calot—Very large, enchantress pink, heavy stem, mid-season.....	40c
Peonies to Color—White, double, 35c each, \$3.50 dozen; Red, double, 35c each, \$3.50 dozen; Pink, double, 30c each, \$3.00 dozen.	

FERTILIZERS—For the Physical Improvement of Soils For Lawns, Garden and House Plants

Pulverized Sheep Manure—This is a pure, natural manure, and its effect is immediate; it is excellent for mixing with the soil for greenhouse plans—one part manure and six parts soil. Strewn over and dug into the vegetable garden or placed directly in drills or hills, it promotes a rapid, steady growth until maturity. It makes the richest, safest and quickest liquid manure. For use in liquid form, one pound to five gallons of water will make a liquid which can be used with safety daily if necessary. As a top dressing for lawns there is nothing better. Promotes a steady and rapid growth in the vegetable garden. Price: 1 lb., 10c; 3 lbs. for 25c, postpaid; 50 lbs., \$1.50; 100 lbs., \$2.50, by express or freight at purchaser's expense.

Hydrated Lime—Hydrated Lime used for top dressing on lawns and mixing soil for potting plants. 50 lbs. to cover 1,000 square feet. Price: 10-lb. bag, 30c; 50-lb. bag, 70c; not prepaid.

Sulphate of Ammonia—Used for its Nitrogen. A very desirable fertilizer for all plants in which a large leaf development or rapid growth is desired. Use 1 lb. to 50 square feet of ground or bench, or a tablespoonful to a bushel of soil, or 3 gallons of water. Price: 1 lb., 15c; 10 lbs. for \$1.00.

Nitrate of Soda or Chili Saltpeter—Nitrate of Soda is not a substitute for other manures, but we recommend it as the cheapest and best form in which to apply Nitrogen to plants. Gardeners who are using farm manure should continue to use it, but use Nitrate of Soda in addition to other fertilizers. If your object is to grow maximum crops you must furnish the plant with Nitrogen.

How to Use Nitrate of Soda

Remove the lumps before using and break them up, which can be done by pounding. Use as a top-dressing at the rate of 100 lbs. per acre on the following vegetables, when plants are well established: Beets, Cabbage, Cauliflower, Cucumber, Celery, Egg Plant, Lettuce, Spinach, Onions.

For Asparagus, a top-dressing of 250 lbs. per acre just as soon as the first shoots make their appearance. For Strawberries, a top-dressing of about 100 lbs. per acre after the upplants have blossomed.

For the Home Garden apply as a solution one ounce to two gallons of water. Price: (subject to market changes) lb., 15c; 10 lbs. for \$1.00.

Write for prices on larger quantities.

Acid Phosphate—Sixteen per cent available. Bone phosphate the most available form. Used on grain crops and others requiring an excessive amount of phosphoric acid. Price: lb., 15c; 12 lbs. for \$1.00.

SUPERIOR LAWN SEED

This is a mixture of celebrated Kentucky Blue Grass and other soft-bladed grasses and White Dutch Clover, that will withstand the heat and dry weather of our summers and our most severe winters, and insure a permanent lawn.

Too much care cannot be taken in preparing the yard for a good lawn. The essentials for a fine lawn are: First, good drainage; second, prepare the soil to a good grade and work it up to a fine and smooth condition; use fertilizer and water regularly, if there is not sufficient rainfall. Lawns made up and sowed with our SUPERIOR LAWN SEED produce a fine, velvety lawn which is a beautiful dark green and stays green the year around. We recommend our special Sheep Guano Lawn Fertilizer (see page 15) and "Vigoro" (see page 17) for this purpose.

1 lb. sows.....	350 square feet	10 lbs. sows.....	3,500 square feet
3 lbs. sows.....	1,050 square feet	15 lbs. sows.....	4,250 square feet
5 lbs. sows.....	1,750 square feet		

Use about one-half as much for renovating old lawns.

The Value of Tested Seed

Our lawn mixtures are cleaned and re-cleaned. Then our seeds are tested for germination to insure that they have in them the power to grow. Our blends for various purposes are composed of several grasses, each of which has a purpose; some to make a quick show, some to make a quick turf.

OUR "SUPERIOR" LAWN SEED—1 lb., 40c; 10 lbs., 35c per lb., not prepaid.

KENTUCKY BLUE GRASS (*Poa Pratensis*)—Fancy, clean, Kentucky Blue Grass is the most nutritious, hardy and valuable of all northern grasses. Sown with White Clover it forms a splendid lawn; for this purpose use not less than fifty-four pounds of Blue Grass and six pounds of White Clover per acre. If sown by itself for meadow or pasturage use about twenty-eight pounds per acre. 1b., 40c. For larger lots, inquire for prices.

CREPING BENT GRASS (*Agrostis stolonifera*)—This is particularly valuable for lawns that are to be used for croquet grounds or for tennis courts, because it is benefitted more than hurt by tramping and by its bright color adds to the beauty of the lawn. 1b., \$1.50.

SHADY NOOK LAWN GRASS MIXTURE—A mixture of grasses that will thrive in a shady situation, under trees or close to walls where there is little sun. 1b., 50c; 10 lbs., \$4.50; not prepaid.

BERMUDA GRASS—Per lb., 50c; 5 lbs., \$2.25; not prepaid.

WHITE DUTCH CLOVER—Per lb., 50c.

To save the lawn, exterminate the mole. Kill them with "Cyanogas" by placing it in their runs. They don't have to eat it; it's the gas that kills them.

1b., 75c. P. S.—Cannot be sent by mail.

For Lawns, Gardens, Flowers, Shrubbery, Trees

THE APPLICATION OF VIGORO

VIGORO may be applied to advantage at any time during the spring, summer, or fall season. Ordinarily the heavy application should be made in the spring and light applications along during the summer and fall. By heavy application is meant 2 to 4 pounds, and by light application 1 to 2 pounds per 100 square feet.

The following table has been prepared to help the user determine the amount of Vigoro necessary to apply to any given plot of ground.

VIGORO supplies just what is needed to produce a beautiful lawn, flowers, shrubbery and trees. It is a highly concentrated plant food, and must be applied according to instructions. Excessive application, or too much applied in one spot, is not only wasteful but will "burn" the plants.

VIGORO must be broadcast evenly so that each plant will get its share of the plantfood.

Do not apply VIGORO immediately after a rain or when the plant is damp or wet.

Immediately after applying VIGORO the ground should be wet down thoroughly. This should be done at all times.

In making application if it is impossible to avoid getting some VIGORO on the leaves or stalks of the plant, see that the plants are sprinkled promptly, so that all VIGORO may be washed off, and thereby eliminate any possible damage through burning the plants.

Dealers—Please ask for prices. We are distributors for Vigoro.

Dimensions of Ground	Rate of Appli- cation per 100 Square Feet	Amt. Necessary for One Application
20x 50 ft.	2 lbs. (equal 1 qt.)	25 lbs.
25x 50 ft.	4 lbs. (equal 2 qts.)	50 lbs.
50x100 ft.	2 lbs. (equal 1 qt.)	100 lbs.
50x100 ft.	4 lbs. (equal 2 qts.)	200 lbs.

After making the necessary preparation, Vigoro may be spread over the ground in one of the following ways:

1. By hand application: Scatter as evenly as possible in about the same manner as grain or grass seed is sown by hand. Vigoro contains no harmful or objectionable ingredients and lends itself to this method with the same facility as grass seed.

2. By using a pan sieve: Put the right amount of VIGORO in the pan and scatter as evenly as possible over the area to be covered. If dry dirt is obtainable, a good method is to mix half Vigoro and half dirt and apply this mixture through the sieve.

In applying Vigoro to young grass, use only one-half of the usual application; that is, in stead of putting on from 2 to 4 pounds per 100 square feet, apply but 1 to 2 pounds, and then follow a little later with a similar amount.

Do not allow Vigoro to come in direct contact with the seed.

ORCHARD SPRAY MATERIAL

INSECT DESTROYERS

Unmailable—Insecticides containing Poison CANNOT be
Sent by Mail.

Black Leaf 40 is a solution of Nicotine Sulphate. It is highly recommended by Experiment Stations throughout the United States as a spray for soft bodied sucking insects. For spraying only. Directions must be followed carefully: 1 oz. bottle, 35c; ½ lb. can, \$1.25, makes 40 to 100 gallons; 2-lb. can, \$3.50, makes 200 to 500 gallons; 10-lb. can, \$13.50, makes 840 to 2100 gallons.

Lime Sulphur (Solution)—The best remedy for San Jose scale. One gallon makes twelve. Also one of the best summer sprays, as it is an excellent fungicide. When used in summer dilute with 20 to 30 parts water. Write for prices in barrel lots; also car lots.

Dry Lime Sulphur—For dormant spray use 12 to 15 lbs. to each 50 gallons of water. For summer spray, 3 to 4 lbs. to each 50 gals. of water. Lb., 35c; 5 lbs., \$1.50.

Bordeaux Mixture (Dry)—The best fungicide for curing and preventing black rot, mildew, blight, leaf curl, scab or other fungoid diseases on fruits and plants. 1 lb. will make 5 gallons liquid. Lb., 50c; 4 lbs. for \$1.00.

Fish-Oil Soap—Standard wash for trees and plants where insects and eggs affect the bark. Lb., 30c; 5 lbs., \$1.25.

Flowers of Sulphur—Lb., 10c; 10 lbs., 75c; 50 lbs., \$2.00; 100 lbs., \$4.00.

Nico-Fume Liquid—For fumigating or spraying; contains 40 per cent nicotine. ¼ lb., 65c; 1 lb., \$2.25; 4 lbs., \$8.00; 8 lbs., \$14.50.

"Nico-Fume"—A Tobacco Paper for Fumigating—Strips of paper strongly saturated with Nicotine. These, when suspended and lighted, make one of the best and simplest methods of fumigating greenhouses. Use 4 to 6 sheets for ordinary house 100 feet long by 20 feet wide. Price, 24 sheets, \$1.25; 144 sheets, \$5.50; 288 sheets, \$10.00.

Hall's Nicotine Fumigator—Lights quickly, burns evenly and will not go out. No waste; every particle is consumed. It retains its strength indefinitely. 2½-lb. tin, \$2.50; 10-lb. tin, \$8.50.

Arsenate of Lead (Dry)—For dusting and spraying. Solves the problem of controlling practically all leaf-eating insects in an efficient manner. 1 lb., 50c; 4 lbs., \$1.25.

Pyrox—Kills all leaf-eating insects, destroys fungus growth, blight and rot. Mixes easily in cold water, sprays without clogging and sticks to foliage. Price, lb., 50c; 5 lbs., \$1.50.

Hall's Free Nokiteen—40 per cent. grade. For spraying and fumigating. ¼ lb., 65c; 1 lb., \$2.25; 4 lbs., \$8.00; 8 lbs., \$14.50.

Paris Green—A poisonous insecticide in powder form, for insects which chew. When applied as a powder, use one part Paris Green to 100 parts plaster or flour. As a liquid, one lb. of Paris Green in 150 to 300 gallons water; if used on fruit trees add one pound quick-lime. Changes with market. ¼ lb., 20c; ½ lb., 35c; per lb., 55c.

Slug Shot, Hammond's—Guaranteed to destroy potato bugs, and those on tomato and egg plants, currant worms, cabbage lice and worms. Price, 1 lb., 20c; 5 lb. package, 75c.

Tobacco Dust (Regular Grade)—5 lbs., 30c; 10 lbs., 55c; 100 lbs., \$5.00.

Tree Tanglefoot—Perfect safeguard for trees. Lb., 60c; 5 lbs., \$2.75.

Reed's Kalosecta—80 per cent. of all the destructive insects have a life cycle that passes thru the soil. Reed's Kalosecta is a preparation that destroys this insect life in the soil before it reaches the foliage.

Save the Roots and You Save the Life

Preparation No. 1 for trees, 1 lb. 30c.

Preparation No. 2 for plants, 1-lb. 30c.

AUTO SPRAY NO. 5

A high pressure yet light and durable sprayer made entirely of brass. It is **DOUBLE ACTING**, producing a continuous spray, and will generate a pressure of 180 pounds per square inch. It operates with half the effort and must not be confused with sprayers of similar design which are single acting.

PRICE, \$5.00 EACH
 Add 15c for Postage

AUTO SPRAY
 The Standard for 20 Years
 500,000 in Use

THE FAVORITE WITH THE FLORISTS
 Diameter, 7 inches
 Height 2 feet
 Capacity, 3½ Gallons

AUTO SPRAY—No. 26C, Continuous Atomizer—All Brass.

The Auto-Spray No. 26 is so designed that the pressure generated on the down stroke of the plunger allows this sprayer to produce a continuous mist-like spray. This is a decided advantage over ordinary atomizers, which are intermittent, in that spraying can be done more rapidly and with less exertion. This sprayer has a number of advantages which other Atomizers lack. Note the two nozzle caps yoked together to prevent loss, one straight and one angular.

The container can be detached for refilling and cleaning by simply unscrewing from the pump cylinder.

The ball valve which prevents this stored up compressed air from returning into the pump cylinder, is conveniently located in a brass valve seat, fastened stationary in the end of the pump cylinder, and readily cleaned or replaced. By removing the tank from this sprayer, the syphon tube can be easily and quickly cleaned. Each, \$1.50. Add 10c for postage.
