The Austin Nursery

F. T. RAMSEY & SON
Austin, Texas

**NURSERYMEN AND LANDSCAPE
DESIGNERS**

Established 1875

325 Acres

A planting of flowering shrubs and evergreens, like the above adds that finished appearance to a home that lace adds to a garment or pictures and furniture to the inside of a home. It indicates culture within.

An eight hundred dollar parcel post shipment to Utah. We can deliver to your door.

A PERSONAL GREETING—THE FIFTY

The trees and plants we send you are living, breathing, growing things. They are not inanimate, manufactured products that begin to wear out as soon as used, but are the products of many processes in growing and handling that attach to them a personal interest that does not go with any other article of sale.

We hope you will take the best continual care of them. They deserve it and will repay you.

Our sincere gratitude must be expressed to our thousands of customers during the past fifty years, whom we have tried to serve with one hundred percent of satisfaction. Sometimes mistakes have been made, but we have never failed to correct them, when called to our attention.

Our Senior's father, A. M. Ramsey, established our Nursery in Burnet County, fifty miles from Austin, in 1875. We moved to Austin in 1894. During all these years we have constantly tried to find better varieties, employ better methods, and render better service. Our efforts have not failed altogether.

Co-operation between customers and ourselves will be mutually beneficial.

1. Take good care of your trees.
2. Keep in a memorandum book a record of the varieties planted. When they bear, you will know which you like best.
3. If any trees arrive in bad condition, report at once. We are anxious to make corrections.
4. Write us freely at any time for information, which we will always gladly give as far as we can.

We are personally acquainted with conditions in all parts of Texas and most parts of the South and Southwest.

We live in a wonderful part of the United States. We have not the wealth of the North and East, but we have in the South the natural resources that will bring the wealth. These are just in the beginning of development.

Plan to Plant Another Tree is a slogan adopted by civic organizations nationwide. Yes, plan to plant dozens or hundreds of trees that will yield for you and your posterity large returns in money and satisfaction. We hope to have your order and to serve you in any way we can.

Most Sincerely,

F. T. RAMSEY & SON.

OUR GUARANTEE—Our Responsibility Does Not End with Delivery to Transportation Company. Customers Should Call at Express Office for Shipments Before Receipt of Notice of Arrival.

You will see that we guarantee safe arrival. You make complaint to us and not to the transportation company, and we make adjustment immediately. We pay express or parcel post on \$5.00 orders in Texas and \$10.00 in the United

Busi. Austin, Tex.
Read Before Making Order

1. **Shipping Season** extends from about November 15 to April 15.
2. **Guarantee.** We guarantee safe arrival, in good condition, of our stock, and beg to be notified if it is otherwise. Complaint, to receive attention, must be made on receipt of goods.
3. **True to Name.** Every tree and plant sent out we guarantee to be healthy and true to name. If any should prove not to be, we will return amount paid us for them, or furnish other trees. But it is agreed we shall not be liable to purchaser for any further claim or damages.
4. **Certificate of Inspection** with every shipment.
5. **We pay Express in Texas on Orders for \$5.00 or over, and in the United States for \$10.00 or over.** Customers thus will know exactly what their trees will cost, delivered. **Delivery to Your Express Office or Door** is our motto.
6. **Parcel Post.** Particular attention given to parcel post orders, for convenience of customers who can not receive express easily. Fairly large orders can be sent this way, and often cheaper than by express. On orders under \$5.00, to be mailed, please add 5 cents postage for each dollar's worth.
7. **Our Shipping Facilities** are unexcelled. We have a large frost-proof packing house, 120x180 feet. Leading railroad and express companies.
8. **Explicit Directions** for marking and shipping orders should always be given. Give express and postoffice also.
9. **Terms Cash, or C. O. D.,** unless otherwise agreed beforehand. We accept checks in payment.
10. **We Replace Trees that Die First Year at Half Price,** if customer has taken reasonable care of them. This does not mean half the trees free.
11. **Selection of Varieties.** Unless particular varieties are wanted, it is a good idea to leave the selection to us, as we know the needs of all different sections, but state whether fruit is wanted for home or market, what months of ripening, class of soil, etc. If we are out of a particular variety ordered, we will substitute another as good or better, unless requested not to do so.
12. **Ripening Dates** are given for the locality of Austin. The same varieties will vary in time of ripening from a few days to two weeks or more, according to section of country and the season.

States. We believe sufficiently in our trees to replace at half price any that die the first year, if customer has taken reasonable care of them.

We have followed these policies for over fifty years. Do they mean anything to you?

UPPER PICTURE: Six mules hauling a load of our trees, seventy miles across the deep sand of the Plains from Midland to Gaines County, within ten miles of the New Mexico line. March, 1914.

LOWER PICTURE: The same trees in a profitable 60-acre orchard in 1923. We traded the trees for 160 acres of adjoining land. It was a good trade for our customer and ourselves. The trees bore at two years. Letters from Mr. Hoover, the planter, about the fruit are great testimonials. We selected our new Sure-bearing varieties. The firm, white and yellow sweet clings would ship without ice to England and be better peaches on arrival than England ever saw.

HOW TO SELL FRUIT

The time has come when it is hardly necessary to carry fruit to market. In almost any community the fruit from several orchards of five to twenty acres can be sold at the orchard. People are glad to come as far as twenty miles to get fresh fruit, and will pay as much for the fruit at the orchard, as they would for it delivered in town.

They will even pick the fruit and will pay in addition 10 cents per person for the privilege of going into the orchard and eating all they want and gathering the fruit, which they pay for as they go out.

In fact it is difficult to get to market with fruit now for the reason that more people as a rule come to the orchard for fruit than can be supplied.

This is not a theory that has not been tested out. It is a fact that has been demonstrated in all parts of the country, except the large peach orchards of East Texas.

See statement under description of Haupt Blackberry of production of 500 gallons from one-fourth acre in Bosque County.

WE TRADE TREES FOR LAND

Sometimes we have a surplus of fine peach, plum and apricot trees, which we will trade for land. We prefer land suitable for orchards. Scarcely a tree has been planted for market of late years.

There are those who have land that is not paying interest. Trade some of it for a commercial orchard. Remember, never again will fruit be hauled to market. The towns are full of autos and the autos full of people who will drive twenty miles, pick the fruit themselves, and pay as much or more for it than they would if you took it to them.

Write us if you want us to look at part of your land.

TO BE SURE OF ARRIVAL IN GOOD CONDITION, WE SHIP BY EXPRESS OR PARCEL POST, AND PREPAY CHARGES ON \$5.00 ORDERS IN TEXAS, AND \$10.00 ORDERS IN THE UNITED STATES.

Read: WHAT IS A MONEY CROP? Page 47.

Ideal Selection for Home Orchard

If you are in doubt as to just what to plant, this suggested list may help you. You may choose the varieties or leave that to us, and we will assure you of careful attention on our part.

For One-fourth Acre.

10 Peach	1 Mulberry
2 Apple	6 Grape
1 Native Persimmon	1 Apricot
5 Plum	2 Japan Persimmon
2 Fig	25 Dewberry and
1 Jujube	Blackberry
2 Pear	

You can omit any fruit that you do not desire or that is not adapted in your section, and add any other.

PECANS should be included in almost every order. Cherries, Prunes, and Nectarines are desirable in some sections.

This is about the right proportion, and planting of any size may be estimated from the list. In ordering, if selection of varieties is left to us, be sure to indicate the size or grade of trees wanted, how many Special and how many Standard varieties of Peach, Plum, and Apple, and months of ripening preferred.

12 to 48 trees will take dozen rates.

49 to 100 trees will take 100 rates.

STANDARD AND SPECIAL FRUITS

PEACH, PLUM, AND APPLE

Customers will notice these two classes. Our standard varieties are those of oldest standing, and embrace only such as have proven themselves worthy of propagation. Our list is selected from many hundreds of varieties which we have tested. Such names as Elberta, Mamie Ross, Alexander, Stinson, etc., are familiar to every one and indicate what are our Standard varieties.

Our **SPECIAL** varieties are of more recent introduction, and are, we can safely say, the choice of all varieties in the world. We have either secured these after long years and great expense of testing or have secured the right to them by purchase from other experimentors and propagators or we pay a royalty on every tree sold. All have been thoroughly tested and proven. We charge slightly more because they are better, and to pay us for the hundreds we test and discard.

We have letters from Alabama to Arizona saying no other peaches, pears, apricots or apples ever grown in their neighborhoods would compare with the special varieties sold by us.

We selected them out of a thousand choice ones.

It is the pleasure and pride of our lives to be able to offer our Specials, which excel in all points desirable for fruits. Every orchard should contain them.

REMEMBER: WE PAY EXPRESS
on \$5.00 orders in Texas, and on \$10.00 orders in the United States.

Read Testimonials, Various Pages

We like to have reports as to success with our trees. We will appreciate it if you will write us just how our trees and plants have done for you. If they have done well, the knowledge will please and encourage us to give still better service. If anything has been wrong, we certainly want to know that also.

One Dollar Collections

Cheap but good things to plant sent by prepaid parcel post. Any six collections for price of five. All varieties of our selection, best for your particular locality. Be sure to order by number of collection, and not by names of the plants.

4 to 6 feet.....	1.00	10.00	75.00

SPECIAL PEACHES—MAY

EARLY WHEELER. C. May. Fine early peach, specially for North and Northwest Texas. Large, with clear meat, overspread with red.

BESTMAY. F. May 20. Most prolific, extra early large peach. Best shipper, as fruit is bright red all over ten days before ripe. For central and south Texas it is unequalled, and no doubt it will be good farther north. Originated in Fayette County and has been thoroughly tested. Those who plant this variety now will receive big profits in the years ahead.

LEONA

Just like the best Elberta but 5 days earlier, ten times as prolific

A Texas seedling

The tree is a healthy beauty

A better bargain to buy one Leona than to accept two Elberta trees as a gift.

Subject to trade-mark

Ours exclusively

The beginning of a new peach era

BEST JUNE. F. June 28. Light color, red cheek. Fruit large, most delicious. Regular and prolific bearer. A prize for Central and South Texas. Some orchardists below San Antonio in Bexar and Atascosa Counties after watching this variety for several years wanted it in preference to all others. It originated from seed in Fayette County.

DR. BURTON. F. June 30. Fine peach, like Best June, but best for Central and North Texas.

SPECIAL PEACHES—JULY

LEONA. F. July 8. Like Elberta in color and size, and better quality. Large, yellow with red cheek. Ripens earlier, and is immensely more prolific and regular in bearing. As this peach becomes known, it will entirely supplant Elberta. We have tested it twenty years.

WHAT A LEADING HORTICULTURIST AND NURSERYMAN OF THE UNITED STATES SAYS ABOUT LEONA

McKinney, Texas, Aug. 6, 1915.

Friend Ramsey:

The Leona has made me a believer. I find it a great improvement over Elberta. It is better flavored, more beautiful color, finer texture, truer to type, and more uniform . . . a superior peach in every way. You can greatly oblige me by giving me some historical notes about this peach. . . .

Accept perpetual blessings,

E. W. KIRKPATRICK.

Basket of Annabel Peaches, 10 to 12 Inches Around

TAYLOR. F. July 10 to 25. Origin from Elberta seed in Austin. Like Elberta in size and color, but has not failed to bear in years. Slightly later. It will be planted by thousands when it becomes known.

ANNABEL. F. July 10 to 20. One of the largest peaches we have ever seen. The color is most gorgeous red and yellow. Mr. Capps of Blanco County sent us buds several years ago from a seedling in his yard. It is the queen of peach queens, a surprise in any orchard.

CHILOW. C. July 10 to 20. Pure yellow. Large. One of most regular bearers of all varieties. Flavor is always very high. Few if any peaches surpass Chilow in quality and quantity of crops. Best canned fruit we ever tasted on the market were Chilows sliced in one-eighths. Origin Williamson County.

MINNIE STANFORD. C. July 15. Large, white and yellow cling. Firm and delicious. Regular bearer. We recommend it as one of the best.

SMITH. F. July 10. Surest bearer we know. Has record in Lampasas County, where it originated, for 28 years without a failure of crop. We have had it in our orchard twelve years, and it has borne full every year, when all other varieties have failed or varied one or more seasons. Introduced by Mr. Fernando Miller, who says: "For regular and abundant bearing and for deliciously sweet fruit, I know nothing which equals it." Fruit is medium size, white, with pink cheek.

Governor Lanham Peach, July 15, 11 Inches in Circumference

GOV. LANHAM. C. July 15. One of most beautiful and largest. Yellow, with bright red shadings. Firm, best of shippers. Origin Travis County.

GOV. CAMPBELL. C. July 20. Large, white, productive.

SMITH INDIAN. F. July 15. Surest bearer we know, red-flesh, juicy Indian, that will reach good size. Has borne in bad fruit years, and proven worthy of being in every orchard. Has made its own strong demand from the plains of Texas and New Mexico down to the very coast.

SPECIAL PEACHES—AUGUST

AUGBERT. F. Aug. 1. Yellow, resembling Elberta, ripening later. More prolific, and fruit is of highest quality. Has been a most

prolific peach on sandy or black soil. Trade marked. Sometimes called Late Elberta.

AUGUSTA. F. Aug. 15. Extra sure bearer, past mid-season. Large yellow, finest quality. Like best Elberta, but a month later.

SPECIAL PEACHES—SEPTEMBER

WILLIAMS. C. Sept. 1. A yellow, prolific, sure-bearing cling that originated in the yard of H. M. Williams of Austin. It is probably the best bearer of all the large, late yellow clings. Fine for market, canning, or sweet pickles.

RAMSEY'S LATE. C. Sept. 10. White, very productive. As good and bright as a June peach. One of the very best ripening after Elberta. Originated in Montague County.

SPECIAL PEACHES—OCTOBER

OCTOBERTA. F. Oct. 1. Like a fine Elberta, but one of latest peaches. Has created sensation where tried. Some grown in Dallas were the talk of the town.

STANDARD PEACH

	Each	Dozen	100
2 to 3 feet	\$.35	\$ 3.75	\$ 30.00
3 to 4 feet	.50	5.00	40.00
4 to 6 feet	.75	8.00	60.00

MAY PEACHES

ALEXANDER. F. May 20. Large, white with red cheek. Reliable.

JAPAN DWARF. F. May 24. Dwarfish tree. Meat partly red. Sure bearer.

MAYFLOWER. F. May 25. Newest and one of the best extra early peaches.

GREENSBORO. F. May 27. Large, white, oblong, prolific.

JUNE PEACHES

TRIUMPH. F. June 2. Medium size, yellow and red. Heavy bearer.

HONEY. F. June 15. Medium size, white, sweetest. For the South.

SLAPPY. F. June 15. Originated in Georgia. A yellow freestone. Our customers in the Western part of the State praise its full crops and high quality without limit.

ARP. F. June 20. Yellow and red like Elberta, but earlier.

ROGERS. S. C. June 23. Medium, light color. Fine quality, sure bearer.

JULY PEACHES

PALLAS. F. July 1. Medium, white deliciously sweet. Regular bearer. Honey type.

HOBSON. S. C. July 1. An improved Mamie Ross, ripening earlier. Firm.

MAMIE ROSS. S. C. July 4. Large, white and red, prolific.

CARMAN. F. July 5. Cross of Elberta and Mamie Ross. Large, white, red cheek.

FAMILY FAVORITE. F. July 5. Medium. white and red. Needed in every orchard.

CARPENTER. C. July 8. Medium, light color. Regular, heavy bearer.

ELBERTA. F. July 10. Large, yellow flesh, red cheek. Fine shipper.

LEE. C. July 10. Large, cream color. Sure bearer.

MIXON CLING. C. July 28. Large, firm, white with blush. Reliable.

AUGUST PEACHES

INDIAN CLING. C. Aug. 1. Medium, red meat. Old fashioned Indian.

SNOW CLING. C. Aug. 10. White, firm, very profitable variety.

HEATH. C. Aug. 25. Medium, white, fine old variety.

SEPTEMBER PEACHES

In west and northwest Texas and corresponding sections, the best peaches ripen mostly after the first of August. In other sections, the late varieties require watering for satisfactory results.

SALWAY. F. Sept. 1. Yellow. Ripens in August in South part of Texas.

EQUINOX. F. Sept. 22. Large, yellow. Like finest Elberta.

OCTOBER PEACHES

STINSON. C. Oct. 10. White, red cheek. Regular, one of the best all-around late peaches.

The **RAMSEY FIG** trees, by being some of them in tree form for early fruit, and some cut to the ground in the spring for late fruit, have given us sweet ripe figs every day for over five months. Come by any day from June to November, and see for yourself. See page 12.

Newspaper clipping. Midland, Texas, 1924.

By winning second prize at the State Fair with peaches, S. H. Gwynn has attracted wide attention as a fruit grower, and has won much publicity for Midland. The peaches were larger than those which won first prize, but were not quite as uniform. No better peaches are grown anywhere. The trees from which these peaches came were raised in the Ramsey Nursery at Austin; V. C. Ray being the local representative for that nursery.

SEEDLING PEACHES

PRICES OF SEEDLING PEACH

	Each	Dozen	100
2 to 3 feet.....	\$.25	\$ 2.50	\$ 18.00
3 to 4 feet.....	.35	3.75	28.00
4 to 6 feet.....	.50	5.00	35.00

These trees are grown from seed of good native trees, many of them Elbertas. If you have plenty of land, plant some. Do not order certain varieties.

FACTS ABOUT SEEDLING PEACHES

We bud and graft to be sure of having trees that will bear certain varieties wanted, as one never knows what kind a seedling will bear. Budding or grafting does not improve any fruit, nor does it make a tree that will not live as long as a seedling of the same variety.

Trees that bear small peaches of ordinary or sour quality, as a class, will live longer than trees that bear larger peaches of better quality, whether seedling trees or budded or grafted. You may take your choice.

In crossing certain varieties (Thurber with Rupley), we had trees grown from seed of a large white freestone bear small yellow clings.

LIST OF BEST PEACHES FOR SOUTH AND SOUTHWEST TEXAS

Augusta, Bestjune, Bestmay, Carpenter, Dr. Burton, Gov. Campbell, Greensboro, Hobson, Honey, Japan Dwarf, Mamie Ross, Mixon Cling, Pallas, Rogers, Smith, Smith Indian.

LIST OF BEST PEACHES FOR TERRITORY BELOW FOOT OF PLAINS AND FOR NORTH AND CENTRAL TEXAS

Alexander, Annabel, Augbert, Arp Beauty, Augusta, Bestjune, Bestmay, Carman, Carpenter, Chilow, Dr. Burton, Early Wheeler, Elberta, Family Favorite, Gov. Campbell, Gov. Lanham, Greensboro, Hobson, Indian Cling, Lee, Leona, Mamie Ross, Mayflower, Mixon Cling, Minnie Stanford, Octoberta, Ramsey's Late, Rogers, Salway, Slappy, Smith, Smith Indian, Snow Cling, Stinson, Triumph, Taylor.

LIST OF BEST PEACHES FOR THE PLAINS

Alexander, Annabel, Augbert, Bestmay, Carpenter, Chilow, Early Wheeler, Elberta, Family Favorite, Gov. Lanham, Heath, Leona, Mamie Ross, Mayflower, Minnie Stanford, Octoberta, Ramsey's Late, Salway, Slappy, Smith Indian, Snow Cling, Stinson, Taylor, Triumph.

From H. W. L. Winters, Texas, Feb. 20, 1925.

Under separate cover I am mailing to you photographs of a limb which broke from one of my Mamie Ross trees, which limb had fifty-two good sized peaches on it. It broke just as the peaches were beginning to turn. The limb was two and a half feet long. The tree was six or seven years old, and had about ten bushels of perfect peaches on it last season.

PLUM

Of all the fruits that grow in this country we consider plums one of the most successful. A few years ago all the varieties that were worthy of planting ripened within a period of six weeks. Now the season is extended to five months—from May 1 to October 1.

Then the only good variety was the Wild Goose. Now there are dozens that are of more value. We offer the best out of the 350 varieties that we have tested.

NOTE: The best one-year trees of Golden Beauty and several Chickasaw varieties are often less than four feet high. We charge the 4 to 6 foot price for the best of them.

BRUCE PLUM. Tree three years after planting. Early, large, fine quality.

Special Plum

PRICES OF SPECIAL PLUM

	Each.	Dozen.	100
2 to 3 feet	\$.50	\$ 5.00	\$ 40.00
3 to 4 feet	.75	8.00	60.00
4 to 6 feet	1.00	10.00	75.00

ADVANCE. May 10. Very large, firm, bright red. Tree robust. A Texas seedling that eclipses all early plums. Our man who was selling Advance Plums said they sold so fast we should change the name to Goquick. Biggest early plum. Earliest big plum. We have just received an order for 900 plums, 500 of them Advance. Our customer has some that have borne every year.

BILONA. June 25. Seems to be a cross between the old firm Japanese plum, Chabot, and our big native wild plum, combining a little of the flavor of both and yet superior to either. A combination plum, good for eating, preserving, jam, and jelly. But its strongest point is in the fact that it has been loaded right along these recent years, when all others have varied some on their crops. Every orchard needs Bilona.

BRUCE. June 5. Large red, productive. A hybrid. One of the best plums. Originated with Mr. A. L. Bruce of Donley County.

FUNK. May 10. An extra early; extra good plum of Grayson County origin. Red. It makes its own demand.

GOLD. July. Large, firm, glowing yellow, with some red. Has a wide range, sure bearer, and a money maker.

GONZALES. July. 1. Introduced by us in 1898. Color brilliant red, with pleasant

sweetness and juiciness of a good Wild Goose and firmness and flavor of a Japanese plum. Has made a reputation over many states for quick and certain returns. Is a fine keeper and shipper. Took first premium at World's Fair in St. Louis, leading by many points all other kinds.

HAPPINESS. June 20. Trees, handsome, leaves very large. Sun cannot burn plums. Fruit large, often six inches around; color glowing red, quality very fine. Bears full, but does not over-bear, so has no off-years. Philosophers say happiness cannot be bought; it is not so now.

Happiness Plum

MAY QUEEN. A new plum of North Texas origin, resembling Funk's Early, but still better and earlier.

METHLEY. May 10. From South Africa, and introduced by the United States Department of Agriculture. A large plum, four to four and one-half inches in circumference, with greenish red skin and brilliant red flesh of a peculiar delightful sweetness. The best flavored of all early plums.

SANTA ROSA. June. Magnificent, large, rich color of dark red. Has not failed.

SULTAN. July 1. Large, purplish red; meat red, high quality. Young bearer.

SIX WEEKS. Same as Advance.

Standard Plums

PRICES OF STANDARD PLUM

	Each	Dozen	100
2 to 3 feet.....	\$.50	\$ 5.00	\$ 40.00
3 to 4 feet.....	.65	7.00	50.00
4 to 6 feet.....	.90	9.00	70.00

ABUNDANCE. June 10. Vigorous tree. Fruit large, round, red, very sweet.

AMERICA. July 1. Enormously productive. Medium to large. Sure bearer, yellow and red.

BARTLETT. June 15. Fruit red, with yellow spots. Flesh salmon-colored. Quality fine, tastes like Bartlett pear. Long-lived tree. Thrives on any poor soil.

BOTAN. June 10. Same as Abundance.

BURBANK. June 15. Fruit large, firm, red. Youngest bearer, and very prolific.

EAGLE. July 1. Red, medium. Heaviest bearer. Fine for jelly.

EXCELSIOR. July 1. Purplish red, large. Succeeds far south. Annual bearer everywhere.

GOLDEN BEAUTY. Aug. and Sept. Medium yellow. Finest of late plums.

HALE. July 1. Large, round, yellow. Healthy growing tree, which we shall propagate in place of Shiro. Extra quality.

NONA. July 10. Large, bright red. Flesh yellow, juicy; high quality. Big crops.

OMAHA. July. Large red plum, handsome. Flesh rich yellow, firm. Tree hardy.

POOL'S PRIDE. July 5. Red, medium, oblong, very prolific.

SATSUMA. July 10. Large, smoky red, flesh red, superb flavor.

SHIRO. July. Large, yellow. Fine keeper. Tree vigorous. An unexcelled variety on sandy land.

WICKSON. July. Tree upright. Fruit large, heart-shape. Red, flesh yellow, delicious.

One branch of a Bartlett plum tree we sold our neighbor, H. C. Wright. This is the nineteenth successive crop. It is on poor sandy land. It seems to live "forever." Mr. Burbank, who produced Bartlett, wrote us that the old mother seedling tree is still living.

"THICKET" PLUMS. Our plum trees are all grown on peach and Mariana plum stocks, neither of which sucker. We are also growing for sale some different colored varieties on their own suckering roots, that make thickets where one tree is planted. Good to plant in odd corners like the big back yards of farm homes.

A LIST OF BEST PLUMS FOR SOUTH AND SOUTHWEST TEXAS

Advance, America, Bartlett, Bilona, Bruce, Burbank, Excelsior, Golden Beauty, Hale, Gonzales, Happiness, Methley, Nona, Shiro, Santa Rosa, Satsuma, Six Weeks, Thicket, Wickson.

LIST OF BEST PLUMS FOR TERRITORY BELOW FOOT OF PLAINS AND FOR NORTH AND CENTRAL TEXAS

Advance, Abundance, America, Bartlett, Bilona, Botan, Burbank, Bruce, Funk, Gold, Golden Beauty, Gonzales, Hale, Happiness, Methley, May Queen, Nona, Omaha, Poole's Pride, Satsuma, Santa Rosa, Shiro, Six Weeks, Sultan, Thicket, Wickson.

LIST OF BEST PLUMS FOR THE PLAINS

Advance, America, Bilona, Bruce, Burbank, Funk, Golden Beauty, Gold, May Queen, Omaha, Poole's Pride, Santa Rosa, Six Weeks, Shiro, Thicket.

PLUM-CHERRY HYBRIDS

Crosses between Cherry and Plum, originated by Prof. Hansen of the South Dakota Experiment Station. They partake of the flavor and characteristics of both cherry and plum, and are hardy into the far North. To our surprise, they have fruited excellently at Austin, and we recommend them in territory from Austin north, and as worth a trial farther south. Young and heavy bearers. Ripen June 20.

Prices:	Each.	Dozen.	100
2 to 3 feet_____	\$.50	\$ 5.00	\$ 40.00
3 to 4 feet_____	.75	8.00	60.00
4 to 6 feet_____	1.00	10.00	80.00

OPATA. (Sioux Indian word meaning "Bouquet.") Fruit medium large, dark, purplish-red skin and flesh.

SAPA. (Sioux Indian word meaning "Black.") Fruit excellent flavor, dark purplish-red skin, with flesh varying from greenish-red to purple.

PEAR

Plant from 16 to 24 feet each way. Kieffer, Garber, and Le Conte should be cut back for two or three years to make the tree spread.

Kieffer has proven commercially profitable in nearly every section of the State and is almost immune against blight.

PRICES OF PEAR

	Each.	Dozen.	100
2 to 3 feet_____	\$.60	\$ 6.50	\$ 50.00
3 to 4 feet_____	.80	8.50	65.00
4 to 6 feet_____	1.00	10.00	80.00

JAPAN RUSSETT. August. Tree vigorous, upright, ornamental; large leaves; bears very young. Fruit apple-shaped, large, russety-yellow.

BARTLETT. July. Well known old pear of fine quality. Does best in northern and western parts of the state.

GARBER. August. Tree most vigorous grower; fruit large, firm.

KIEFFER. September. The universal pear for America. Robust, handsome tree; fruit large and of good quality when fully ripe; one of the sure bearers; beautiful yellow color. The fruit, when pulled and wrapped in paper, will soon become mellow and delicious.

LE CONTE. July and August. Robust tree; luxuriant foliage; fruit large attractive. For far south.

APRICOTS

Apricots do specially well when planted in back yards, or where they are cultivated only with hoe or spading fork for first few years. A tree planted in some odd corner will often produce several times as much as another planted in a well kept orchard. They like a hillside or sloping ground.

PRICES OF APRICOT

	Each	Dozen	100
2 to 3 feet_____	\$.60	\$ 6.50	\$ 50.00
3 to 4 feet_____	.80	8.50	65.00
4 to 6 feet_____	1.00	10.00	80.00

CLUSTER. June 20. Originated in our orchard, from Russian seed. Of beautiful symmetrical growth. Very vigorous and hardy; an enormous bearer. Fruit medium sized, yellow, with occasional fleck of red and of excellent quality. Blooms late; has passed through six freezes in one season after blooming and still produced a heavy crop of fruit.

EARLY GOLDEN. July 1. Large, beautiful, yellow, delicious.

MOORPARK. June. Large; orange, with red cheek; productive.

APRICOTS—Continued on Page 10.

It is gratifying to have pleased customers send us fruit like this from our trees. Kieffer Pear, 1½ pounds; Apple, 1 pound.

ROYAL. June. Early, large, fine color and flavor. We received one order from California for twenty thousand trees.

RUSSIAN seedlings. From these have come the best of our apricots.

APPLE

Texas is rapidly pushing to the front as an apple state. On the plains and in New Mexico, is some of the best apple territory in the world.

Fortunes are being made in this fruit, for which there is always a market, and which possesses the best of keeping qualities.

While other parts of the state are not specially adapted to apples, we have a few native Texas varieties of our own introduction that are well worth planting.

SUMMER APPLE

Astrachan, Becker, Helm, Fogle.

FALL AND WINTER APPLE

Arkansas Black, Ben Davis, Delicious Jonathan, Mammoth Black Twig, Missouri Pippin, Rutledge, Winesap.

Helm Apple

HERE IS A REPORT FROM ONE OF OUR SALESMEN

Konohassett, Glasscock County, Texas.

Weather fine. I am selling a good lot of trees, especially the Helm Apples. It certainly is best in state. Six-year-old trees are producing five bushels.

W. S. TRIPP.

Cluster Apricots grown at Lampasas on 3-year-old tree sold by the Austin Nursery

BECKER. Summer. Originated in Colorado County. One of the hardiest, most prolific, and surest bearers. Fruit attractive, light red, with white flecks. Excellent quality.

FOGLE. Originated in Austin. Extra healthy growing tree. Fruit large, flat, yellow. Summer.

RUTLEDGE. Fall. From Williamson County. Light red, striped. Has fruited for forty years. Best apples we saw in 1913 were Rutledge grown in Williamson County and near Alpine, Brewster County. A great favorite there.

HELM. July-Aug.-Sept. The best apple we have yet found. Twenty-five years ago one of our salesmen called our attention to an old seedling tree in Lee County. It had already made a local reputation. Sprouts jerked off around the collar of the tree by the neighbors were bearing. We at once got grafts for a start of it.

It nearly always bears the second year after planting and never misses.

The fruit is large, of typical apple shape, red with white specks, and the quality is not surpassed; flesh cream color. The late C. Falkner, when he saw and tasted the fruit on our trees, ordered a thousand trees (more than we could supply). Clear across Northwest Texas and New Mexico and Arizona have come complimentary letters about Helm.

Even the Government Department wrote for its history, saying it was the one big surprising wonder in its test orchard in California and asking permission to introduce it in apple sections where it was not known.

Standard Apple

PRICES OF STANDARD APPLE

	Each	Dozen	100
2 to 3 feet.....	\$.40	\$ 4.25	\$ 32.00
3 to 4 feet.....	.60	6.50	50.00
4 to 6 feet.....	.80	8.50	65.00

ARKANSAS BLACK. Tree vigorous; fruit large, dark red—almost black. Winter.

ASTRACHAN. Summer. Large, bright red, crisp; tree healthy.

BEN DAVIS. Sept. 15. Large, beautiful red. While the quality is hardly up to that of some other apples, it is a money-maker.

DELICIOUS. Fall. Fruit large, conical in shape, beautiful, blushed and striped with red. Flavor extra fine. Tree strong grower.

JONATHAN. Winter. Bright red, prolific, popular market variety.

MAMMOTH BLACK TWIG. Fall and Winter. Similar to Winesap, but larger.

MISSOURI PIPPIN. Fall. Resembles Ben Davis, but slightly smaller and of better quality. It often bears full at two years old. For quick returns and certain money every year, we consider it has no superior over all the plains and Panhandle.

WINESAP. Fall. Medium size, solid red, highest quality; always in demand.

Crab Apple

Price: Same as Standard Apples.

TRANSCENDANT. (Siberian). July. An attractive yellow color, splashed and striped with red; bears very young. We value it highly for preserves. Buds and blossoms exquisitely beautiful.

OUR EXPERIENCE OF NEARLY FIFTY YEARS GROWING TREES AND TEN YEARS IN MODERN LANDSCAPE WORK IS OFFERED YOU FREELY. WRITE US OR VISIT OUR NURSERY AT ANY TIME.

YOU MAY KNOW WHAT YOUR TREES WILL COST DELIVERED. WE PAY EXPRESS ON \$5.00 ORDERS IN TEXAS.

From H. L. M. Houston, Texas, Dec. 17, 1924.

I have more than lived up to your reputation as being the squarest nurseryman doing business in Texas and I want to heartily assure you that I appreciate what you have done.

From S. B. Waco, Texas, Jan. 25, 1925.

I am writing you to let you know I received my order from you, and had it set out in five days from the time I ordered. It was in perfect condition and I thank you so much for your punctuality and also for the extra flowering bush. Hoping to order again in the near future, I remain your pleased customer.

Magnolia Figs

FIGS

	Each	Dozen	100
Ramsey Fig.....	\$ 1.00	\$10.00	
Other varieties.....	.50	5.00	\$ 35.00

Figs should be planted more extensively. Do not let the sprouts or suckers grow, but prune the trees so as to have clean bodies at least two feet high. Cut tops back to six or twelve inches above ground when planting. Such trees will bear full and will stand much colder weather than if the sprouts are allowed to grow. However, Ramsey and Magnolia Figs, especially in Central Texas, may be allowed to grow with several sprouts or suckers, which will fruit every year, even when frozen back in the winter. The best varieties for North Texas are Ramsey and Magnolia.

BROWN TURKEY. October. Large brown. Latest fig.

BRUNSWICK. July, August and September. Very large, reddish purple.

CELESTIAL. July. The common little blue fig. None is sweeter; very hardy.

LEMON. Large, yellow, sweet.

MAGNOLIA. July, August and September. Large, pale green or white; shape varies from ordinary fig shape to very short or flat; always bears at one year old, and if frozen, will bear on the young wood the first year. In some sections it is called Neverfail.

From Mrs. T. F. H.

Clairmont, Texas, January 23, 1922.

The past week I superintended the checking and heeling out of nursery stock purchased of you for the Hunter Farm. Never have I received better stock or stock in better condition than this shipment.

THE RAMSEY FIG. \$1.00 each, \$10.00 per dozen. A seedling grown from one of our Lemon fig trees, probably crossed with Magnolia. Resembles Magnolia, but does not crack open. Three to four times as prolific as any other fig. Ripens from August to frost. One-year trees always bear full, and each limb will bear 20 to 40 delicious figs. Bears first year. Fruit medium to large. This variety is good in North Texas. Color, brownish yellow.

Mr. Gould, of the United States Department of Agriculture, visited us and enthusiastically declared he had never seen such a row of figs. The hundreds on a small tree and the delicious quality were unheard of, unthought of, and wholly unequalled.

Figs should be preserved with skin and stems on them. It is less trouble than any other way, but nothing is better. They can be boiled in syrup and candied, or crystallized by drying in the sun.

There is a little fortune in a few hundred of these trees in either town or country.

PRUNING FIGS

In the colder sections, where figs often freeze to the ground, the tops should be cut off, allowing new growth to come from below the ground. Where such freezing does not occur every year, it is best to prune or train the trees to one stem or body about two feet high before branches begin. This enables them to endure colder weather. Ramsey and Magnolia will bear on the new growth every year, but other varieties require two years' growth.

Ramsey Fig Tree, Six Months Old

NECTARINE

Will flourish on any land adapted to the peach, and with the same cultivation, etc.

Nectarines are like peaches, except for having smooth skin like plums.

PRICES OF NECTARINE

	Each	Dozen	100
2 to 3 feet_____	\$.50	\$ 5.00	\$ 40.00
3 to 4 feet_____	.75	8.00	55.00
4 to 6 feet_____	1.00	10.00	75.00

BRECK. Originated from peach seed in the yard of Mrs. Breck of Austin. We are the sole introducers. A duplicate of Honey Peach in size, shape, and delicious quality, but a perfect nectarine. Sure.

DIXIE. In a lot of trees grown from Nectarine seed, one we call Dixie is superior on every point. It has the sweetness and bearing quality of its grand parent, the Smith Peach. It does not rot. Ripe July and August.

WILKINSON. Mr. Wilkinson, on the coast just above Corpus Christi, sent us sample fruit a few years ago and we eagerly got some buds. The trees have borne full at one year old and every year since. It is another step forward. It is of the Honey or Pallas strain, and is very valuable at least this far north. It surely extends the range of nectarine to the far south.

DAVIS NECTARINE. A new seedling in Austin that seems to be of the same strain as Pallas Peach. It has not missed a full crop since it was two years old. When not overloaded it almost reaches the size of a large Elberta Peach. Its sweetness resembles a Honey Peach.

From H. B. E., Conroe, Texas, Sept. 22, 1922.

In December 1920 I set a small orchard of selected peaches and plums that you sent me and this season, 19 and 20 months after setting the trees, we ate fruit off of every tree you sent us except one. I never saw finer fruit. The plums were the largest I ever saw grow, and some of them fruited so heavily that I had to thin it out to prevent the limbs from breaking. In December, 1921, I set out some Ramsey Figs you sent me, and in less than eight months we were eating figs off these trees, and at this date the fruit is still ripening while the trees are continuing to grow and put on new figs. The Ramsey, all things considered, beats any fig I ever saw, and am enclosing with this letter an order for more of them, all that I can find room for.

QUINCE

Price: 75 cents each, \$8.00 per dozen.

CHAMPION, MEECH, ORANGE

PRUNES

Commencing west of Fort Worth, prunes are valuable on most locations all the way west to Pecos City and north through the Panhandle.

PRICES OF PRUNE

	Each.	Dozen.	100
2 to 3 feet.....	\$.60	\$ 6.50	\$ 50.00
3 to 4 feet.....	.80	8.50	65.00
4 to 6 feet.....	1.00	10.00	80.00

GERMAN. Flesh firm, greenish, very sweet.

ITALIAN. Suited to the South. Very popular.

TRAGEDY. Grows far south; rich, sweet; almost a freestone.

CHERRY

Not generally valuable in Central and South Texas, but popular toward the Panhandle.

Price: \$1.00 each, \$10.00 per dozen.

EARLY RICHMOND. Early, bright red, acid. Tree strong grower.

ENGLISH MORELLO. Dark red, nearly black, very acid. Tree dwarfish.

MONTMORENCY. Large, red, acid. Rather late in ripening.

COMPASS CHERRY-PLUM. A cross between a plum and cherry. Succeeding in parts of country not adapted to other cherries.

From Amasa Clark.

Bandera, Texas.

I want to say for the benefit of all who are interested in fruit raising, that I am near 90 years of age, was raised in the State of New York, which is a great fruit country, and have been in the orchard and nursery business the greater part of my life. I visited your patch of Haupt Berries a short time ago, and can truthfully say they beat anything I have ever seen. Mr. Ramsey says in his circular something about 40 quarts being raised from one vine. After looking at the heaps of berries on your vine, I believe every word of it.

From the Francitas Bee.

Francitas, Jackson County, Texas

(Clipping from an article giving advice to new settlers.)

As to berries, tie tightly to these; they have proven themselves the very best. Strawberries . . . Klondike, Excelsior, and Lady Thompson, in order named. Dewberries . . . Haupt, especially, Austin-Mayes, and Dallas Blackberry. These are sure winners. You will not plant too many Haupt. Plants may be secured through the Ramsey Nursery, Austin, Texas. This firm is very reliable; . . . send for catalog.

From J. R. Goodwin.

Winchester, Fayette County, Texas.

Please send me your book on berry culture. I have some of your Haupt Berries. They are wonderful producers, and the finest berry I ever saw for this section.

Japan Persimmons Grow on any Land,
Especially on Sand

JAPAN PERSIMMON

Some of these should be planted by every family. The fruit often measures ten inches in circumference. They ripen in August, September and October. The trees bear young, and are very ornamental.

Price: 75 cents each, \$8.00 per dozen, \$60.00 per 100.

HACHIYA. Very large, oblong, pointed; flesh yellow; skin red.

HYAKUME. Large, round; skin orange red; flesh brown or dark; very sweet.

OKAME. Large, oblate, carmine skin; clear yellow flesh; few seed.

TANE NASHI. Large, oblong; orange red; yellow flesh; generally seedless.

YEMON. Large, flat, tomato shape; red skin.

LONE STAR. A large pointed black fleshed persimmon introduced by the late C. Falkner of Waco, to whose estate we pay a royalty on every tree we sell. It is a most regular bearer and sweet and edible long before it is soft. It promises to be a fortune maker. No fruit is more healthful. Price \$1.00 each, \$10.00 per dozen, \$75.00 per 100.

NATIVE PERSIMMON

Price: \$1.00 each, \$10.00 per dozen.

FORD. A variety from Kentucky, delicious, prolific. Ripens from August 25 to November 10, giving ripe fruit every day.

LEONA. Origin, Texas. Very fine. Ripens September and October. Nearly seedless.

OUR BEST EFFORTS ARE ALWAYS MADE TO PLEASE OUR CUSTOMERS. IF AT ANY TIME OUR STOCK IS NOT SATISFACTORY, WE WISH TO BE NOTIFIED.

OUR FATHER AND GRANDFATHER PLANTED HIS FIRST TEXAS ORCHARD IN BURNET COUNTY IN 1858.

MULBERRY

Every farm should have mulberry trees about the back yard and where the chickens run. They make a quick, long-lived shade. They commence to ripen before peaches or plums and continue six to eight weeks.

Carman Grape Vine

GRAPE

Price: \$.40 each, \$4.25 a dozen, \$30.00 a 100.

AMERICAN GRAPES

The American varieties are those native to our country, including their hybrids, and crosses. Generally speaking, they are best adapted to those sections of the South not mentioned under the heading of Vinifera. See Directions for Pruning, under Planting and Pruning in back of this catalog.

BLACK SPANISH. July. Medium to small, black berry; bunch large. Hardy.

CARMAN. Dark red, fine quality. For hardiness and regular crops, we consider this the equal of Herbemont and Black Spanish, and it is larger.

CONCORD. July. Large blue or blue-black.

WISCONSINA. A hardy, white, delicious grape containing Malaga, Muscat and Armlong blood. A wonder over the Southwest. Highest quality.

ELLEN SCOTT. A cross between Armlong and Herbemont. At least for the Southwest it promises to be the best for home and market. Violet, delightful flavor.

HERBEMONT. July. Medium size, round, black; not good when first it turns black, but delicious when thoroughly ripe; vine robust and long-lived.

MOORE'S EARLY. June. Vigorous vine, fruit large, black; very early.

ENGLISH. (Black). April and May. Luxuriant. Bears at two years old; berry large.

HICKS. The old standard, everbearing variety. Tree very hardy. Never freezes.

MUSTANG. Native wild grape. Makes an everlasting arbor. Good for jelly.

NIAGARA (White Concord). July 1. Large, amber-white berry; good quality.

VINIFERA GRAPES

In recent years they have been planted in the southwestern and western portions of Texas, in New Mexico, Arizona and Mexico. The Vinifera Grapes are not successful in Central and Northern Texas. See Directions for Pruning, under Planting and Pruning in back of this catalog.

CORNICHON, BLACK. Berries large, oblong, dark. Good for shipping.

HAMBURG BLACK. Bunches and berries large. Black, sugary, and rich.

MALAGA. Very large bunch and berry; white or pink-white.

MUSCAT OF ALEXANDRIA. One of the best known of the white varieties.

SULTANA (Seedless). A delicious table grape. Long branches, amber-colored.

THOMPSON'S SEEDLESS. Vines we sold in Arizona and New Mexico are proving of great value. Fruit larger than Sultana, and greenish yellow.

TOKAY FLAME. Bunches large and compact. Berries large, light red.

BERRIES

No farm or city garden should be without a patch of black or dewberries. These are the surest crops that can be grown. They pay more per acre than almost anything else, while the expense of working and marketing is very low. They ripen in the spring while the weather is

cool and pleasant for preserving and making jams and jellies.

All varieties of Blackberries and Dewberries do well on loam or sandy soil. Haupt and McDonald are the best adapted for black land. Heavy soil with loose rock is good berry land. See Distances for Planting in back of catalog.

BLACKBERRIES

As a rule, Blackberries should be replanted every four years. See Planting Directions (refer to index).

DALLAS. Price: \$1.00 per dozen, \$5.00 per 100, \$35.00 per 1000. Combines all good points; large, fine quality. Early to mid-season.

MCDONALD. Price: \$1.00 per dozen, \$5.00 per 100, \$35.00 per 1000. Cross between dewberry and blackberry. Early, good shipper. A fine bearer, but sometimes needs

other berries planted near to pollinize it, as Haupt or Monroe. A patch of alternate rows of Haupt and McDonald makes the best combination we know. Ripens May 1.

HIMALAYA BLACKBERRY. Price: 25 cents each, \$2.50 per dozen, \$15.00 per 100. A rank growing variety that requires a trellis. In order to fruit successfully, it should be pruned back severely every winter and given abundance of water in the spring and summer. Ripens after other varieties.

THE HAUPT BERRY

Price: 20 cents each, \$1.25 per dozen, \$6.00 per 100, \$45.00 per 1000.

PLANTING AND PRUNING HAUPT

Berry plants should be planted about the same as potato or tomato plants, except that berries should have tops cut off even with ground, or nearly so, and then be covered with dirt. In a large planting, wide beds should be thrown up and then opened with a turning plow, making a deep furrow.

It always pays to water at time of planting.

Any time after berries are picked in May or June, until August 15, when plants are two or three years old, if it is dry enough to stop growth of plants, all tops should be cut off at ground with hoe or mowing machine, and the rows plowed with a sweep. This should be done every two years, or every year if plants make a vigorous growth. It is an easy way to keep the ground clean, and the fruit will be larger next spring. When cut, the tops can lie to dry a few days and then be raked and burned.

Do not cut them if they are growing all the season.

An irrigation for the plants after tops are cut is valuable, but not necessary.

In the spring, many strong young shoots will come up. Let these grow if they do not seriously interfere with the picking, as they produce the fruit next season. In a large patch, it may be necessary to cut these back half or more, and then cut all tops off later as directed above.

These directions apply to Haupt and McDonald especially. These two varieties should be planted 3½ by 5 feet, making 2430 per acre, or 4 by 6 feet, making 1815 per acre, on strong land, and in alternate rows.

All berries produce fruit the second spring after planting.

A HAUPT BERRY VINE

The same every year. Never plant McDonald Berries without planting a row of Haupt beside them. It will pollinize them and make them bear.

It is difficult to conceive of anything the equal of this berry. It never fails to bear full of large, sweet luscious berries. A cross between a dewberry and blackberry apparently; discovered by the late Colonel Haupt of Hays County. Originated in Wharton County.

We bought full rights and all stock of the Haupt about fifteen years ago, and have never been able fully to satisfy the demand.

Reports from the coast, across Texas, into New Mexico and Arizona pronounce it the finest ever seen.

There are four slightly different strains mixed, and we always try to put some of each in every order, to help pollination.

When planted in alternate rows with McDonald, Haupt will pollinize McDonald and make it

bear heavily. No other variety is needed to pollinize Haupt.

Ripens in Austin May 1 to June 1.

Produced \$1,760.00 Per Acre

From John Keller. Fort Valley, Ga.

Yours to hand, and in reply to your question as to how the Haupt berries did that I got from you and planted in 1912, will say that they yielded at the rate of \$1,760.00 per acre in 1914. They sold here in Fort Valley, Georgia, at 20c per quart, and were all gone before any others were on the market.

Record of Production of Haupt in Our Nursery

One-half acre returns were as follows:

1249 plants produced 5448 pint boxes. These were sold at an average of 10½c per pint box, making returns of \$572.04.

The expenses were as follows:

Material for boxes.....	\$ 35.00
Picking berries at 2½c per box.....	136.20
Miscellaneous labor.....	35.00
Total	\$206.20
Production	\$572.04
Expenses	206.20

Net receipts.....\$365.84

This is equivalent to net returns of \$731.68 per acre.

Read What Satisfied Customers Say About Our Haupt Berry

Every home in the Southwest should have from 12 to 100 plants each. Every town of 500 people will justify the planting of several thousand for market, and large cities will consume larger quantities in proportion.

We are the introducers of Haupt, and guarantee our plants genuine.

From J. L. Brown.

Meridian, Bosque County, Texas.

I had one-fourth acre of the Haupt Berries from which I gathered five hundred gallons in 1923. They were grown on light up-land.

I think it ought to have been named the Wonder Berry, as it is the most wonderful berry I have ever seen.

From W. W. Walling. San Augustine, Texas.

The Haupt Berries I bought of you a few years ago are truly a Wonder over here. I gathered 40 gallons from 12 vines the second year from purchase. Will report on the Leona Peach just as soon as it comes in bearing.

From H. D. Fletcher. Beaumont, Texas.

I wish you would send me one of your catalogs, and if you have any special instructions on fertilizing, pruning and care of the Haupt Dewberry, please let me have that. I got ten plants from you last year, planted them in my garden here, in gumbo soil, in 18-inch hills; have gotten about 25 gallons of fine berries, and can gather a few for possibly 4 or 5 days yet.

From Isaac Cronk

McAllen, Hidalgo County, Texas.

I would like to have your price on hundred of Haupt Berries. . . Our neighbor has some and they are grand.

DEWBERRY

Dewberries grow better on loam or sandy soil. Haupt and McDonald Blackberries are best for black or heavy soil. All varieties succeed in sandy land.

Prices for Dewberries: \$1.00 per dozen, \$5.00 per 100, \$35.00 per 1000.

AUSTIN-MAYS. May and June. Robust. Fruit very large, prolific. Sure bearer. Slightly better on sandy soil or sandy loam.

ROGERS. April. Earliest, and fairly prolific.

THORNLESS DEWBERRY. \$1.50 per dozen; \$7.50 per 100; \$50.00 per 1000. A new variety from North Texas, claimed to be as good as Austin-Mayes, but without thorns.

How to Prune Blackberries and Dewberries

See directions preceding for pruning Haupt and McDonald Blackberries.

Dallas Blackberry and the Dewberries should have the old wood of the preceding year's growth cut out as soon as the fruit has been gathered. Extra long canes or shoots at the same time should be cut back part way. It is the new growth that produces fruit the following spring.

Trellising Berry Vines.

The question is often asked whether this is a good idea. In a large commercial planting we hardly think it would pay, but for a small number of vines, where the space is limited, it will be very satisfactory. Posts set in ground about eight feet apart, with cross arms eighteen and thirty inches above ground, and wires running from ends of cross arms to cross arms on next post, will provide a good trellis.

STRAWBERRY

Long summer drouths are hard on strawberries. Frequent cultivation and careful mulching summer and winter are necessary. They do best on new land. If planted October 15 to December 15, they will fruit in early spring. (See Page 44.)

	Dozen	100	1000
Everbearing and Texas			
Everbearing	\$.50	\$2.50	\$20.00
Other varieties.....	.25	1.50	10.00

EVERBEARING. Has long bearing season. Favorable reports from many sections.

TEXAS EVERBEARING. Endures summer heat and drouth. Mid-season. Most desirable. Large, delicious. This is the most nearly everbearing variety for Central and Southern Texas.

EXCELSIOR. Very early; has proven profitable over a wide range of territory.

KLONDYKE. From Alvin to Illinois praised by all growers. The standard commercial variety. Ten days later than Excelsior.

LADY THOMPSON. A great favorite with all growers. Mid-season.

CURRANT

Best varieties: 35 cents each, \$3.75 per doz.

GOOSEBERRY

Recommended for northern part of Texas. Price: 35 cents each, \$3.75 per dozen.

RASPBERRY

RASPBERRY, KANSAS and CARDINAL. These are fine, large raspberries.

Price: \$1.25 per dozen, \$7.50 per 100.

SOUTHERN RASPBERRY. A new red raspberry from Central China that is bearing right down to the Coast. It promises to

revolutionize berry growing over the whole South up to the Middle States. Ask for special circular; price: 4 plants \$1.00, 10 plants \$2.00, 50 plants \$7.00, 100 plants \$12.00, 500 plants \$55.00, 1000 plants \$100.00.

ASPARAGUS

Roots 75 cents a dozen, \$5.00 a 100. An asparagus bed is made as follows: Dig trench two or three feet wide and twenty-one inches deep. Put in six inches of rich barnyard fertilizer, then six inches of good black or loamy soil. On top of this, set the plants, and fill

in or cover with six inches of loose soil, preferably leaf mold. This will leave a depression of three inches so that a little extra soil may be added yearly, and long tender growth be made under ground. Such a bed will last for three years.

CHINESE JUJUBE

(Zizyphus)

Prices of Jujubes. Seedling or Sucker Plants:

	Each	Dozen
1½ to 2 feet.....	\$.50	\$ 5.00
2 to 3 feet.....	.75	8.00
3 to 4 feet.....	1.00	10.00

Improved budded varieties, \$2.50 each.

A fruit from the high interior of China, to which the United States Department of Agriculture has given much attention in recent years. We have tried it carefully, and are sure it will prove to be one of the most valuable of fruits for our country. It is adapted to a wide range of territory and all kinds of soils.

Tree is very hardy, slightly resembling Prickly Ash. Fruit is chocolate colored, some varieties round, some olive-shaped, and some pear shaped, of the texture of an apple. Size: one to two inches long. Fruit can be eaten fresh, preserved, or cured like dates. For preserves, add lemon or orange juice. Ripens July to November.

Every home should have a few trees. We recommend the Jujube most heartily. It likes a clean back yard, where it is not cultivated, but will grow anywhere.

TO MAKE DATES OUT OF JUJUBES

Gather the fruit when it is first colored all over or nearly so. It should be firm. Score the skin with knife six or eight times or, better, make a hackle by driving three-penny nails half an inch apart through a half-inch board or paddle; spread the fruit on a table or in a box and hackle the skins full of nail holes.

Then put them in sugar syrup or honey and boil twenty to thirty minutes and set off over

Chinese Jujube Fruit

night. Boil ten minutes and let cool, then strain out and drip them and they are ready to pack down or for immediate use.

ALMONDS

Price: \$1.00 each, \$10.00 per dozen, \$75.00 per 100.

SULTANA ALMOND. A standard commercial variety.

MEDINA ALMOND. A seedling in Medina County. As fine as any imported soft-shelled almond.

DIVERSIFY WITH FRUIT TREES

PECANS

About Pecans

DEMAND AND PRICES

Wholesale prices for nuts of the improved budded and grafted varieties are from 40 cents to 65 cents per pound in any quantity up to a carload. Retail prices 50 cents to \$1.00 per pound. (The nuts from native seedling trees only bring from 8 to 25 cents per pound.) The demand at present for the larger nuts is only partially supplied. It will be increased many fold, as the supply increases, when the foreign market can be entered. There will be the increasing demand by candy manufacturers and for making oil. There is no prospect of meeting the demand for a hundred years.

BEARING AGE

Seedling trees hardly ever begin to bear under eight years and they do not become profitable under fifteen years. Budded or grafted trees begin to bear in from three to six years after being planted, and yield a large profit in from eight to ten years. Seedling trees should be top-worked.

VALUE PER ACRE

Groves eleven years old have paid \$500.00 an acre per year. Ten-acre groves of this age have sold for \$1000.00 an acre, and many owners have refused larger prices. Trees fifteen to twenty years old produce from 100 to 500 pounds of nuts, worth 50 cents a pound. Twenty-seven trees per acre, producing at least \$50.00 a tree, will pay \$1350.00. And the expense of gathering the nuts will be paid largely by crops that can be grown between rows.

PLANTING

Proper distance is 40 to 60 feet. Pecans may be planted to advantage between peach and plum trees, in every other row, making them 32 to 40 feet apart. Following are trees per acre: 40x40 feet, 27 trees; 50x50, 17 trees; 60x60 feet, 12 trees.

We recommend 30x60 feet, making 24 trees per acre. After fifteen or twenty years half of the trees should be cut out, leaving the remainder 60x60 feet, about the best distance apart. Meanwhile, the trees to be removed would have fruited several years and paid a hundred fold their cost, without requiring any additional ground or cultivation.

We usually dig holes with post hole digger, but it would pay perhaps to dig them larger, say 24 to 30 inches across and three feet or more deep. See Planting Directions for further information. We dig trees with roots two to four and a half feet long according to size of tree. Trees should be watered first year during very dry spells.

CROPS BETWEEN ROWS

Almost full crops can be grown between the wide rows until trees reach profitable bearing age, and even longer. Corn, cotton, vegetables and fruit trees, such as peach, plum, fig, and orange, and berry plants, are well adapted. Cover, or hay crops should not be grown until

A cluster of ten Pecans on a young grafted tree. We have sixty varieties bearing in our test orchard. If you plant Pecans you do not need life insurance.

trees are several years old. After that time, they can be grown without hurting trees. Pecans do not need cultivation after a few years. Their roots go down.

SOIL

Texas has three-fourths of the native pecan trees of the United States, and the most and best pecan land in the world. We know the soil is suitable for the pecan, where native trees are flourishing. But there are thousands of acres of soil just as good, where there are no trees now, because the seeds have not been washed there. The pecan likes rich soil, with plenty of sunshine and moisture. Shallow water 20 to 30 feet deep, without solid rock between it and the surface of ground, will solve the water problem. However, trees are doing well on black upland and on top of solid limestone ridges. They should be planted for home use in such places, but not in large orchards.

The pecan is largely confined to the cotton-belt of the South and to northern Mexico. Some varieties are proving successful as far north as Indiana and Illinois. New Mexico, Arizona and California are making plantings of considerable size.

CHOICE OF VARIETIES

Two classes of pecans are Eastern and Western. Eastern are those originating in the eastern Southern States. They are adapted to all of the pecan belt, East and West. The Western are those varieties originating mostly in Texas, which should be planted only west of a line from Dallas to Austin. Perhaps the Western are as a class more profitable for the West, though we could not give up some of the Eastern kinds there also.

A few varieties have proven specially adapted to upland, as follows:

Western Varieties: Halbert, Texas Prolific, Burkett, Oliver.

Eastern Varieties: Moneymaker, Stuart, Success, Delmas.

ENEMIES OF THE PECAN.

There are some insects that injure the crops, but not every year. The National and State Governments are working on this problem and we expect to see it solved. But Texas is much more nearly free from these pests than the East. There is no more reason to fear them now than any disease or insect that might injure peaches, pears, cotton, or other crops.

THE GREATEST INVESTMENT

There is no other investment we know of that offers as large and sure returns as the pecan. In ten years a grove is worth a fortune. No wonder Luther Burbank said if he were a young man, he would come to Texas and grow pecans! They are the best investment, the safest life insurance, the greatest legacy.

HOW TO PLANT

See directions under "PLANTING AND PRUNING" in back of catalog.

Seedling Pecans for Shade and Fruit

Best of all common seedlings, carefully selected.

Prices of Seedling Pecans:

	Each	Dozen	100
1 year, small.....	\$.15	\$ 1.50	\$ 10.00
2 to 5 years, 3 to 4 feet.....	.75	8.00	60.00
4 to 6 feet.....	1.25	14.00	100.00
6 to 8 feet.....	2.00	22.00	150.00

Budded and Grafted Pecans

In planting budded or grafted trees, one knows they will bear the kind of nuts desired.

Prices of Budded and Grafted Pecans:

	Each	Dozen	100
1 to 2 feet.....	\$ 1.25	\$14.00	\$100.00
2 to 3 feet.....	1.75	18.00	135.00
3 to 4 feet.....	2.00	22.00	160.00
4 to 6 feet.....	2.50	26.00	180.00

This picture shows Mr. F. T. Ramsey holding his hand behind a cluster of Pecans on the tree planted at Governor Hogg's grave at Austin. It bore at two years old.

THE WORDS OF EX-GOVERNOR HOGG

Ex-Governor Hogg, just before he died, made this request:

"I want no monument of stone, but let my children plant at the head of my grave a Pecan tree, and at the foot of my grave a Walnut tree, and when these trees shall bear, let the Pecans and Walnuts be given out among the plain people of Texas, so that they may plant them and make Texas a land of trees."

From Mr. W. G. S.

Houston, Texas, April 12, 1922.

Figs received today in O. K. condition and I want to say Ramsey & Son are the squarest nurserymen that ever grew a tree, and I want to thank you for the way you have treated me.

From A. H. K. Jim Wells County, July 1, 1922.

Blackberries in our orchard have again been a grand success and the Haupt produced by far the most. We always look forward with much delight to the berry season like to the watermelon time.

A stately Pecan tree, three feet in diameter, in one of our fields.

We sold a big one year old grafted Stuart Pecan tree in December. At time of taking the above picture it was seven years old and had borne four crops.

OLIVER PECANS. 31 to the pound. The mother tree in Kimble County has not failed to bear a crop in thirty-five years.

EASTERN VARIETIES OF PECANS

See heading, "Choice of Varieties," under "About Pecans," preceding.

DELMAS. Mississippi. Large, slightly elongated. Scores very high on all points of a good pecan.

MONEYMAKER. Louisiana. Medium size, roundish. Well filled kernel. Good bearer, one of the best varieties.

SCHLEY. Mississippi. Somewhat elongated, above medium size. Considered by many to be best flavored pecan. Shell thin, kernel plump.

STUART. Mississippi. Perhaps the best known. Large, elongated, medium shell. Good quality, fairly productive.

SUCCESS. Mississippi. Large, extra quality. Very desirable.

VAN DEMAN. Louisiana. Large, long medium shell. Quality fine. Fairly prolific.

TEXAS OR WESTERN VARIETIES OF PECANS

See heading, "Choice of Varieties," under "About Pecans," preceding.

BURKETT. Callahan County. Large, almost round, shell thin. Flavor excellent. One of the best. Bears young and every year, fine.

BURKHARDT. Karnes County. Long, large, extra well filled kernel. Originated farther east South of all varieties. Sure cropper.

HALBERT. Coleman County. Almost round, medium size. Flavor highest. Perhaps the youngest bearer known. Prolific. An all-around pecan. Very thin shell.

OLIVER. Kimble County. Extra large. Shell medium, quality fine. Old tree has produced eighteen bushels in one crop, and is a constant bearer. We own sole right to this variety.

TEXAS PROLIFIC. San Saba County. Large, rather long. Thin shell, fine kernel. Bears young. Heavy and sure bearer.

ENGLISH WALNUTS (Budded)

Although the English Walnut has been grown and produced nuts in different parts of Texas, it has never done sufficiently well to justify large plantings. However, we have a variety from Oregon that gives more promise than any other we have tried, and is worthy of trial everywhere at least in a small way.

Prices (budded on native walnut):

	Each	Doz.	100
1 to 2 feet.....	\$1.75	\$19.00	\$150.00
2 to 3 feet.....	2.50	27.00	200.00
3 to 4 feet.....	3.00	32.00	250.00

From R. B. Jackson, S. C., July 9, 1922.

The Haupt Blackberries I got from you last year were a wonder this year. They bore all the vines could hold, fine berries.

From G. W. M.

East Raymond, Wash., February 14, 1922.
The berry vines came through all right and in good condition.

From J. W. J. Conway, Ark., May 31, 1922.

The parties to whom I sold some of your Haupt berry plants are gathering a fat crop this season and have been after me time and again for information as to cultivation, pruning, etc., also asking for prices on plants, hence I am writing you for information as above.

From Mr. M. M. D.

College Station, Texas, March 11, 1922.

I received the trees and shrubs that you sent me in good order, and I must say that I have never seen better or more healthy trees in all of my experience.

Mrs. B. J. McK.

Casa Grande, Arizona, February 2, 1922.

It is about five years since I have had any correspondence with you, but you helped me make the ranch near Willcox a garden spot and now I am going to ask your assistance with this one, which we are starting. We sold the former five years ago, and now it is a beautiful place—everything grew.

From W. T. K.

Pasadena, California.

I have a Ramsey Fig that is quite a wonder to all who see it. It is a small tree yet, but beats anything to bear. I am getting it photographed for a printing plate.

From Mrs. E. N. Itasca, Texas, June 17, 1922.

You should see how nicely the trees have grown and some of the finest fruit you ever saw for black land orchards. My orchard is the talk of this part of the country. . . . Please send me your catalog for this year. I am so well pleased with your trees and vines that I shall buy from you hereafter all that I need. My Haupt berries have never failed. Have had a full crop every year.

We pay express and guarantee arrival of trees in good condition. If not in good condition, report promptly after arrival.

Scarcely a market orchard has been planted in ten years. There was never a time to plant so promising as now.

The towns are full of autos and the autos full of people anxious for a pleasant place to go. They will go twenty miles to future orchards, pick the fruit, and pay you as much, or more for fruit than if you took it to them. A woman

or child can sit by the gate and hold a big purse. Charge a price per head for what visitors eat in the orchard.

If you have not money to buy trees, trade us part of your land. We will plant orchards, and show you how.

The Bestjune peach, in the territory south of Austin, takes the blue ribbon over all of the Mamie Ross family, and the Dr. Burton, north of a line running east and west through Austin, is entitled to the same honor.

FRUIT TREES AND COTTON

Cotton will always be our staple crop, but it must not be our only crop.

Five acres of fruit will pay as much as fifty acres of cotton, year after year, with less work and trouble.

No home can afford to be without fruit for home use, or for sale, where land is available for planting a large number of trees.

Then homes in the cities and towns can raise enough or almost enough fruit for their own use. It is remarkable the amount that can be

grown in a small back or side yard, when the right varieties are used. We will help you select the best kinds.

FRUIT CAN BE SOLD, EATEN FRESH, PRESERVED, OR DRIED—BUT COTTON CAN ONLY BE SOLD, AND AT A PRICE WHICH THE OTHER FELLOW MAKES.

IF YOU PLANT PECAN AND FRUIT TREES, THEY DO THE WORK; IF YOU PLANT COTTON, YOU DO THE WORK.

A BEAUTIFUL BORDER FOR A LAWN

For real pleasure, nothing surpasses a stroll around one's own side yard, or back yard, or front yard, when it is bordered with bright colored hardy shrubs and flowers.

ORNAMENTAL DEPARTMENT

MORE BEAUTIFUL HOME GROUNDS

The world is awakening to the fact that beauty and satisfaction have real value.

No matter who the reader may be, he remembers with fondness certain trees that grew around his childhood home. The very remembrance gives pleasure of a kind that can not be obtained with money.

Are you willing that your children shall have similar memories in future years?

Have your boys trees to climb now, and a miniature jungle to penetrate?

Have your girls a secluded corner in which to train up their dolls, and play keeping house?

The most experienced landscape men of these days have found out that back and side yards need more trees, evergreens, and shrubs than do the front yards.

If you were to see one with a grove of shades—a grove, mind you, not a straight row—and some shrubs, real masses just like wild thickets, you would never be satisfied with any other kind.

Nature does not plant in straight rows.

But after you were convinced as to the style of planting, you could not make a list that

would be as beautiful and as much at home in your climate, as we could.

It is exactly our business (and our pleasure) to study the plans and arrangements that are the most beautiful, and then get acquainted with the plants and trees that will best develop or show the plan, using only plants adapted to the climate.

We study every day in the year the various combinations in colors, particularly as Nature makes them. The most frequent and beautiful, perhaps, are the white and pink, and white and yellow flowers together, and red flowers against a background of green, and the trees that have the gorgeous yellow and red shades in autumn in a group by themselves.

If shrubs and trees are properly planted, you cannot name another way in which you can spend money that will add so much beauty, comfort, and value to your home.

Happiness has a value.

Plant something.

We specially solicit the designing of parks and large grounds.

TERMS

Our advice as to the best kinds of ornamentals for any planting and a general idea as to grouping them, is free. Do not hesitate to call on us for information or assistance that you need.

If you wish a plan in detail, we shall have to make a nominal charge, to cover the actual time necessary in making it, the amount depending largely on the size of the grounds. In some instances, part or all of this charge may be applied on the cost of the trees and plants, depending on the amount of stock used.

If you send us a rough sketch of your grounds, showing all dimensions, we can prepare a planting plan which any one can follow, and which will give the best effect possible, in harmony with modern landscape art.

HOW TO MAKE DIAGRAM

Full directions will be sent whereby you can easily make diagram.

GARDEN CLUBS

Garden Clubs in towns and cities can create greater interest in civic improvement than individuals, especially nurserymen, who may be financially interested in selling plants.

While planting trees and shrubs interests the nurseryman, the benefit to him is small as compared with the benefit in pleasure, satisfaction, and property value to the community and individual home owners.

We are always glad to co-operate with such

clubs or other civic organizations in fostering plans for City Beautiful Campaigns.

PERSONAL VISIT

In case of larger grounds or parks, or whenever desired, we can make a personal visit before preparing the plan. This will always be more satisfactory, and the expense will be the least possible.

We are also prepared to take charge of the planting, as heretofore.

A flower decked secluded corner in a side yard of our planting. The shrubs are covered with red, white and blue flowers; only the white show. The hardy shrubs and evergreens will be there blooming after the children have homes of their own.

NOT MANY PEOPLE SEE THE WALL PAPER AND FURNITURE IN YOUR HOUSE. THOSE WHO PASS BY JUDGE YOU LARGELY BY THE APPEARANCE OF THE GROUNDS AROUND YOUR HOUSE. WHY NOT HAVE THEM BEAUTIFUL?

An Austin Residence—Before Planting.

Eighteen Months After Planting.

BULBS, LILIES, ETC.

These are so easily grown and produce such a gorgeous lot of colors that no home should be without them. They can generally be safely left in the ground over winter, or they may be taken up and left to dry until early spring. They should be transplanted at least every two years for best results.

All bulbs can be planted to advantage November to April, except the Winter and Early Spring Blooming Bulbs which should be planted in November, December and January.

AMARYLLIS JOHNSONII. 50 cents each, \$5.00 a dozen. Gorgeous red lily; earliest.

Cannas

20 cents each, \$2.00 a dozen, \$14.00 a 100, except where noted. Scarcely anything else can give the beauty afforded by the best cannas. Here is the best assortment to be had, at lowest prices.

If the old flowers are cut off before seed are

formed and the plants are given plenty of water, Cannas will give a luxuriance of blooms through the entire season, from early summer until frost.

CANNAS—RED FLOWERS

FLAMINGO. Medium grower, hardy. One of best dark red, constant bloomer.

KING HUMBERT. Orange red, streaked with gold. Luxuriant bronze foliage.

PRESIDENT. 35 cents, \$3.00 a dozen. Tall grower. Color rich glowing scarlet. Very large flowers.

CANNAS—ORANGE FLOWERS

WYOMING. Foliage dark bronze. Large orchid flowers. Luxuriant.

CANNAS—ORANGE AND RED FLOWERS

ALLEMANIA. Large orchid flowers. Orange-scarlet spotted with golden yellow.

CANNAS—PINK FLOWERS

SHENANDOAH. 35 cents each, \$3.00 a dozen. Bronze foliage. Pink flowers.

MRS. A. F. CONARD. 35 cents each, \$3.00 a dozen. Exquisite pale pink with darker pink in throat. Grows three to four feet.

MDLE. BERAT. 35 cents, \$3.00 a dozen. Tall grower. Deep pink.

CITY OF PORTLAND. 35 cents, \$3.00 a dozen. Medium height, glowing pink; profuse bloomer.

CANNAS—YELLOW FLOWERS

AUSTRIA. Tall. Canary yellow, with spots of red in throat.

BURBANK. Tall. Canary yellow, with throat mottled crimson.

FOLIAGE CANNAS

SHENANDOAH. 35 cents each, \$3.00 a dozen. Bronze. Pink flowers.

KING HUMBERT. Dark bronze leaves, luxuriant. Large orange red flowers.

WYOMING. Bronze. Large orange flowers.

Other Hardy Bulbs and Plants.

CALADIUM esculentum (Elephant's Ear). Medium size bulbs 25c, large bulbs 50c. Large leaves. Caladiums produce a tropical effect. Need abundance of water.

DAHLIA. 25 cents each, \$2.50 a dozen. Assorted colors.

GLADIOLUS. Mixed, all colors, 75 cents a dozen, \$5.00 a 100. Separate colors, pink, red, salmon, white, and yellow, \$1.00 a dozen, \$6.00 a 100.

HABRANTHUS. 10 cents each, \$1.00 a dozen, \$7.00 a 100. Beautiful red lilies from Chile, with dwarf stalks eight inches high. Profuse bloomer in fall. Green all winter.

IRIS, WHITE, AND PURPLE. 15 cents each, \$1.25 a dozen. Old fashioned flags. Great profusion of flowers in early spring.

LIATRIS Punctata. 25 cents. Perennial, 2 to 3 feet high, with spikes of purplish-blue flowers that retain their color all winter when cut and dried. Blooms late summer and fall. A hardy, desirable native.

Angel Lilies

ANGEL LILY. (*Crinum Fimbriatum*). 25 cents each, \$2.50 a dozen. Cluster of five to nine large white lilies, with faint wine-colored shadings. Profuse, fragrant.

RAIN LILY. (*Cooperia Pedunculata*). 50 cents a dozen, \$3.00 a 100. Native White Fairy Lily. Springs up and blooms in three days after rain.

YELLOW DAY LILY. (*Hemerocallis Fulva*). 20 cents each, \$2.00 a dozen. Hardiest, last forever. Rich gold color, striped inside.

DOUBLE DAY LILY. 25 cents each, \$2.50 a dozen. Rare, beautiful, double, orange and gold.

Hardy Rain Lilies. They bloom after rains from early spring until frost.

MEXICAN TUBEROSE. 50 cents a dozen, \$4.00 a 100. Introduced by us from high, cool interior of Mexico. Single, prettiest, most fragrant tuberose known. Tall, stiff stems. Blooms constantly from June till frost. Cut flowers keep a week. Very profitable near any town or city.

Winter and Early Spring Blooming Bulbs

Plant in October, November, December and January.

	Each	12
Hyacinths, separate colors.....	\$.35	\$3.50
(Colors—light blue, dark blue, rose, light pink, red, white.)		
Tulips, best Darwin, assorted colors	.10	1.00
Narcissus, white	.12	1.25
Yellow	.25	2.50

PLANTING DIRECTIONS.

HYACINTHS. Plant outdoors as directed for Tulips. If planted in pots, use one bulb in five inch pot, or four in six inch pot. Use light rich soil (not manure), leaving tops of bulbs half an inch under soil, an inch below rim of pot. Water well and cover with sand, set away in cool place for six weeks, and bring to light as required.

TULIPS. Plant in well drained soil. Cover bulbs two or three inches deep. Do not apply rich fertilizer, unless bone meal, but use good soil, preferably somewhat sandy. Bulbs may remain in ground two or three years without being moved, and may also be grown in pots.

NARCISSUS. Plant same as Tulips, but in moist shady place. Bulbs may remain in ground several years, and may be grown in pots.

ROSES

	Each	Dozen
Largest, 2 years old, field grown.....	\$.75	\$8.00
Smaller, 2 years old, field grown.....	.60	6.00

We have some roses on their own roots, grown from cuttings in the greenhouse, and others which do best budded on other, hardier stocks. In the case of budded or grafted roses, it is necessary not to allow the rose to grow from below the bud. The bud is usually indicated by a slight offset or elbow about where the branches of the bush begin, or somewhat lower.

All are robust plants that have already bloomed in the field.

Roses are the most beautiful flowers while in bloom, but at other times the bushes are not attractive. Therefore, they give best effect when planted in the back or side yard, or with grouping of other plants whereby they are not conspicuous when not in bloom.

Light Pink, Bush Roses

J. L. MOCK. Clear imperial pink, with petals rosy pink underneath. Flowers extra large with long stems.

LA FRANCE. Full; fragrant; universally popular.

LOS ANGELES. Vigorous grower, with long pointed buds, and long stems. Color, light pink, tinged with coral and gold.

PINK MALMAISON. Extremely double; fragrant; stiff stems.

MADAM C. TESTIOUT. Soft pink. Beautiful buds. Profuse.

Dark Pink, Bush Roses

HELEN GOULD (Red Kaiserina). A dark, rich pink; long stem; beautiful buds; most persistent bloomer.

KILLARNEY. Brilliant color. Beautiful, very large buds.

MAMON COCHET. Pink. Beautiful buds.

PAUL NEYRON. Rich pink; extra large; full, fragrant; tall grower. Spring and fall.

PINK RADIANCE. Brilliant, rose pink. Large full flowers, very fragrant. An excellent rose.

White, Bush Roses

WHITE AMERICAN BEAUTY (Frau Karl Druschki). Snowy white blooms, with very large petals. Hardy everywhere.

KAISERINA. Long, pointed buds, full when open; flowers last well; long stems. For an outdoor white rose it has no rival.

Red, Bush Roses

AMERICAN BEAUTY. Large fragrant.

BABY RAMBLER. Dwarf. Brilliant crimson clusters of 15 to 30 roses.

ETOILE DE FRANCE. Clear, red-crimson velvet. Large flowers, long stems. Extremely vigorous and free blooming.

MADAM MASSON. Very large and double; intense red; uniform in size and color; extra long stems. For a red rose we plant it first.

RED RADIANCE. One of the best, hardiest red roses. Flowers in bud and full blown are perfect. Bright, rich red color.

Yellow, Bush Roses

FRANCES KRUEGER. Large flowers, deep copper yellow, tinged with pink. Very hardy and constant bloomer.

LADY HILINGDON. Deep yellow to orange. Fine buds. One of hardiest yellow roses.

LUXEMBURG. Golden yellow. Thrifty grower.

MRS. AARON WARD. A wonderful combination of colors, copper, golden-yellow, shading to lemon-cream. Profuse bloomer.

SUNBURST. Golden yellow to golden orange, intense shades; long stems.

Pink, Climbing Roses

AMERICAN PILLAR. Magnificent climber, dark foliage. Flowers large, single, rich rosy pink, with glint of white at center.

CLIMBING HELEN GOULD. One of the finest pink climbers.

DOROTHY PERKINS. Gorgeous pink; spring bloomer. An evergreen and most excellent for arbors or screens.

SEVEN SISTERS. Very light to dark pink; great clusters of flowers in spring, hardy.

Red, Climbing Roses

CLIMBING AMERICAN BEAUTY. Like American Beauty, but strong climber.

CRIMSON RAMBLER. Brilliant red in great clusters, early in spring; beautiful foliage.

CLIMBING METEOR. Flower similar to Meteor; vine rugged climber.

REINE MARIE HENRIETTA. Fine red climber; successful on all soils.

White, Climbing Roses

CLIMBING KAISERINA. Elegant, pure-white, robust vine.

Yellow, Climbing Roses

MARECHAL NEIL. Most popular of all climbers; rich deep yellow; fine plants on own roots, and budded on hardy stock at common price.

NEW BUSH ROSES OF SPECIAL MERIT

Price, \$1.00 each, \$10.00 per dozen.

MDM. BUTTERFLY. Harmony of bright pink, apricot and gold.

COLUMBIA. Large flowers, glowing pink.

OPHELIA. Salmon-flesh, shaded with rose.

PREMIER. Deep pink, fragrant, thornless.

CLAUDIUS PERNET. Rich, bright yellow.

FRANCIS SCOTT KEY. Large, red, shading to cerise.

HOW TO PLANT ROSES

"A" indicates ground line in nursery. Set the plant about one inch deeper at "B." Cut top off three or four inches higher at "C." Then mound soil up on stems two or three inches, almost to "C."

CLIMBING VINES

Prices:

25c plants	\$2.50 a dozen	\$20.00 per 100
35c plants	\$3.75 a dozen	\$30.00 per 100
50c plants	\$5.00 a dozen	\$40.00 per 100
75c plants	\$8.00 a dozen	\$60.00 per 100

ANTIGONON LEPTOPUS. 50 cents. (Rose of the Mountain, or Queen's Wreath.) A perennial vine with sprays of glowing pink flowers all summer. The bulb should be covered with two inches of extra soil, if left in the ground all winter.

BIGNONIA GRANDIFLORA. \$1.00. Gorgeous, orange or reddish-tinted orange flowers, twenty to forty in cluster. Each flower shorter but about twice as broad as the old Trumpet Creeper. Tall climber, or it may be planted as a half climber, or even as a shrub. It shows for half a mile. A really valuable addition to any list or yard.

RED TRUMPET CREEPER. 35 cents. The old-fashioned sort. Good for covering back fences or dead trees.

YELLOW TRUMPET CREEPER. 75 cents. New, rare. Like the above except the color is a gleaming yellow.

TEXAS VIRGINIA CREEPER. (Ampelopsis quinquefolia Texana). 50 cents. Native, in leaf earlier than the Virginia, with smaller, but much brighter green leaves all summer. Creeps on wood or stone more closely than any vine we know. Will grow on west side of building, in the hot sun.

CLEMATIS COCCINEA. 50 cents. Red, coral-like, bell-shaped flowers; all spring and summer. Hardy. Very dainty for trellising.

CLEMATIS CRISPA. 50 cents. Like the above, but flowers are blue.

CLEMATIS PANICULATA. 75 cents. Strong growing vine, with white, star-shaped flowers all summer and fall. Very fragrant. Evergreen.

HONEYSUCKLE, Evergreen. 35 cents. Fragrant, white and yellow flowers; dense, rank foliage; the best for shade or screens.

HONEYSUCKLE, Red Coral. 50 cents. Coral-red flowers; commences to bloom early.

ENGLISH IVY. (Hedera Helix). 50 cents. Clings to stone, brick or wood. Hardy with thick dark green leaves.

Texas Virginia Creeper in Austin. It will cling to walls too smooth for other creepers. See description of Texas Virginia Creeper.

LAWN IVY. 50 cents. Leaves dark evergreen like English Ivy, but smaller. Grows close to ground in shade or sun. Most excellent for covering bare spaces.

JAPAN OR BOSTON IVY (Ampelopsis Veitchii). 50 cents. Hardy wall creeper. Foliage shows rich shades of red and yellow in the fall.

KUDZU VINE. 35 cents. Rankest growing vine known. Grows 75 feet. Large dark green leaves. Also used for forage.

SMILAX. 50 cents. The native evergreen vine so much used for decoration.

VINCA, minor. 15 cents, \$1.50 a dozen. Most desirable for trailing on ground in shady or sunny places. Bright leaves, evergreen. Blue flowers all summer.

VINCA, variegated. 15 cents, \$1.50 a dozen. Like above, but with variegated foliage, green and white.

WISTARIA, purple. 75 cents. Hardy woody vine that soon runs 50 feet; fragrant flowers in early spring, in long sprays.

BEST PLANTS FOR SHADED PLACES.

Following are the best shrubs and evergreens to plant in locations that do not receive average amount of direct sunlight: Agarita, Malvaviscus, Pavonia, Bird Pepper, Japan Quince, Red-bud, Salvia, Styxax, Baby Sumach, Evergreen Sumach, Yaupon, Euonymous. Refer to Index for descriptions.

PERENNIALS AND SMALL PLANTS

Perennials are plants that remain in the ground from year to year, their tops usually dying in the winter, with growth coming from the roots again in the spring. They should as a rule be divided and transplanted every two or three years.

Perennials that have lived in one spot for a long time, dying and living again year by year, make a special appeal to the lover of plants and old memories.

LIKE THE FLOWERS IN GRANDMOTHER'S GARDEN

"Mother set that out upward of fifty years ago," an elderly man said the other day, pointing to a flowering almond bush covered with a profusion of small buttonlike pinkish blossoms. "I can just remember it. Aunt Ruth Sherwin brought her the root wrapped up in an old blue-checked gingham apron. There's never been much done to the bush. It just stands there where it was put and flowers every year when the right time comes."—Youth's Companion.

NOTE. Varieties in **HEAVY TYPE** are natives of Texas.

Quantity prices:	Dozen	100
25c plants.....	\$2.50	\$20.00
50c plants.....	5.00	40.00
75c plants.....	8.00	60.00

BIRD PEPPER. 75 cents. (Chilecatine). Grows one to two feet. A shower of beautiful scarlet berries in fall and winter. They are extremely pungent. Good in the edge of masses and in urns. If the top freezes, they grow again from the root.

CHRYSANTHEMUM. 20 cents each, \$2.00 a dozen. Yellow and white. Best for outdoor planting. Hardy. Flowers medium size. Produces masses of blooms in fall.

SHASTA DAISY. 50 cents a dozen, \$4.00 a 100. Largest flowers, most constant bloomer. Wonderfully hardy.

DUSTY MILLER. (*Centaurea gymnocarpa*). 25 cents. Very light colored, ashen-gray foliage, growing 2 to 3 feet.

GOLDEN ROD. 15 cents, \$1.00 a dozen. Tall spikes of yellow flowers in fall. Best strain of Goldenrod we have seen.

HELIANTHUS Maximilianii. 25 cents. Large yellow flowers, with yellow centers, stems 5 to 7 feet. Blooms in fall. Most effective in all plantings.

Border of Malvaviscus

Hibiscus. Perennial. 75 cents. One of the best old-fashioned favorites. Blooms freely after second year.

HOLLYHOCK. Assorted colors. 25 cents each, \$2.50 a dozen.

Mallow Marvels. 50 cents. Improved, hardy Hibiscus. Large flowers, white, pink, crimson and scarlet, mixed.

MALVAVISCUS. Drummondii. 50 cents. Heavy green leaves, scarlet flowers all summer. Thrifty everywhere. Excellent for low borders and backgrounds. Perennial.

MALVAVISCUS grandiflorus. 75 cents. A larger growing variety than Drummondii, making six or seven feet height, with large scarlet flowers. Excellent for indoor or outdoor growing. A most desirable plant.

BUSH MORNING GLORY. 50 cents. Has large pink flowers like Morning Glory vine, but is a bush or shrub growing four to six feet high. Blooms all summer. Effective in mass planting.

SANTOLINA. 20 cents, \$2.00 per dozen. Evergreen, ashen-gray foliage. Grows twelve inches tall. Excellent for low border.

From Mrs. W. A. E. Taylor, Texas, Mar. 19, 1925.
I wrote you that out of the forty shrubs from you last year only one died. That one is "putting out," so I have not lost one. Considering the drouth, I think that speaks well of your stock.

From C. R. A. Runge, Texas, March 22, 1925.
I beg to acknowledge receipt of roses yesterday, which received my immediate attention for planting. They seemed to be in excellent condition, and were certainly a well selected assortment. I sincerely thank you for the extreme liberality you have exhibited in this transaction. Hoping that some day my yard will prove a silent though successful advertisement for your nursery, I am

From Mrs. R. V. Roswell, N. M., May 13, 1925.
Thank you very much for your very prompt and generous shipment of my recent order.

A planting of ours six months old around the Scottish Rite Dormitory, Austin. Below, one year later!: We solicit orders for planning and planting Home Grounds and Parks.

FLOWERING SHRUBS

DECIDUOUS AND EVERGREEN. STANDARD AND NATIVE

Note. The Native varieties are indicated by the heaviest type.

Our list contains fully ninety per cent of all the shrubs known to be good for the Southwest. They have been chosen for their beauty and hardiness. All are best adapted for outdoor planting.

Our beautiful climate proof natives are not surpassed in all the world. They are indifferent to drouth or disease, and produce the grandest effects possible. We would choose them over the same number of any other plants, except perhaps roses.

Most of our Native flowering Shrubs, as well as others, should be cut back almost to the ground at time of planting. Agarita, Pithecolobium, and Tamarix in particular should be cut back to the collar, leaving only about one to two inches of growth above roots. Then mound soil entirely over the stems.

If the flowers are cut off as soon as they are past their best, and seed are not allowed to form, most shrubs will continue to bloom freely for a longer season than they would otherwise.

Prices:	Dozen	100
25c plants	\$ 2.50	\$20.00

Proper Arrangement of Border for Large Lawn

Abelia. 1 to 2 feet, 75 cents; 2 to 3 feet, \$1.25. A beautiful evergreen shrub, with white flowers all summer, very hardy.

AGARITA. 50 cents. (Berberis Trifoliata. Commonly called Algerita or Chaparral.) Evergreen shrub, 3 to 5 feet. Leaves ash green. Bright red berries make a striking appearance in spring, are acid, good tasting, and used for jelly.

AGARITA SWASEY'S (*Berberis Swaseyi*).
In style and color somewhat resembling the silver colored, three-leaved Agarita, *Berberis trifoliata*.

In our rambles in West Texas on arid slopes untrodden by those who have gone before, we found plants with five to fifteen leaflets.

ALTHEA (Rose of Sharon)

50 cents each, \$5.00 per dozen.

See Hedge Price, under "Hedges."

The Althea is one of the hardiest and most widely adapted of all flowering shrubs. It lives and blooms freely with little water or rainfall, but with abundance of water it gives a profusion of flowers in many colors all summer. Our plants have all bloomed in the field, and will bloom the first summer after planting.

The Althea may be grown in bush or tree form and kept from five to eight feet tall, by pruning.

Colors: Double Pink, Single Purple, Double Purple, Double Red, Double Variegated, Single White, Double White, Double White with Pink Center, Single White with Pink Center.

CHOICEST NAMED VARIETIES OF ALTHEAS

Totus Alba Althea. Single, snowy white flowers, persistent bloomer.

Burkhardt Althea. Double, variegated, pink and white.

Amplissima Althea. Double, rosy red, early bloomer.

Duchess de Brabant Althea. Double, dark red, free bloomer.

Joan of Arc Althea. Pure white, very double, petals crimped and look like tissue paper. They keep a long time when cut. They are exquisitely beautiful and are admired as some new rare flowers. A constant bloomer.

Lady Stanley Althea. White shaded rose; semi-double.

The brilliant red berries make a Christmas tree for six weeks in April May and June.

The edges of the leaves would make a dainty lace pattern for the fairies.

Price: Ordinary run of plants, \$1.00 each. Specimens, \$2.00 each.

Row of Totus Alba Althea in Front of Tamarix
(See Page 33) in Our Nursery

ALMOND. 75 cents. Double flowering, dwarf, pink and white. A shower of color in early spring. Perfectly hardy.

ANISACANTHUS Wrightii. 50 cents. Another valuable, hardy native Texas flowering shrub. Grows three to five feet tall, covered with orange-red flowers all summer and fall. In the extreme drouth of 1925, it grew and bloomed luxuriantly in the field without irrigation. Should be cut back to six inches in February or March.

Buddleia variabilis magnifica. 75 cents. Of fast growth, from 4 to 8 feet, with dense foliage and profusion of fragrant purple and violet flowers, in large panicles. Called Butterfly Bush, because of attraction for butterflies. Blooms from spring until frost.

CALLICARPA. 50 cents. Attractive foliage. Has clumps or balls of reddish-purple berries for months in the fall.

Cape Jasmine. 2 feet, \$1.00; smaller 75 cents. The well known evergreen with beautiful white fragrant flowers. Austin and southward.

DWARF CHESTNUT. (*Aesculus octanara*). 75 cents. Another climate-proof native, 3 to 5 feet. Gorgeous trusses, ten inches long, of glowing pinkish red flowers in spring and summer, but well worth growing for foliage alone.

CORALBERRY. 75 cents. New, scarlet. Hardy, pretty foliage, with coral red berries all winter. Will grow in shade. A very superior variety.

Altheas Make a Beautiful Hedge

Crape Myrtle. Well known old favorite A glow of color. Light Pink, Watermelon Pink, Purple, Red, Scarlet. 1 to 2 feet, 50 cents; 2 to 3 feet, 75 cents; 3 to 4 feet, \$1.00 White, 2 to 3 feet, 75 cents. It is to the South what Lilac and Snow Ball are to the North. Plant a Crape Myrtle hedge. Nothing more attractive. Abundance of water all summer will give profusion of flowers every day. Crape Myrtle may be grown in bush or tree form and kept from five to eight feet tall, by pruning. Special prices on large quantities.

ELDERRERRY. 25 cents. Trusses of white flowers in summer. Desirable.

EUPATORIUM. 75 cents. Shrub 2 to 3 feet, with wonderful fragrant white flowers in fall. It is covered with butterflies on fair days.

DWARF RED HAW. \$1.00. A shower of blazing red berries all winter.

Honeysuckle, Bush. 75 cents. Grows 4 to 6 feet. A hardy shrub, blooming profusely early in spring, before leaves come out. Fragrant. Colors: Red, white and pink.

HUISACHE. (Pronounced wee-satch). *Acacia farnesiana*. \$1.00. Medium sized tree, beautiful fern-like foliage. Gorgeous display yellow flowers all spring.

Hypericum, moserianum. \$1.00. Grows two feet, with heavy foliage on graceful drooping branches. Flowers large, bright yellow.

Jasmine nudiflorum. 75 cents Beautiful shrub, with bright green leaves and stems. Fragrant yellow flowers. Hardy, desirable.

A Cheerful Planting Around a Factory Building
Adds Many Times Its Cost to Value
of Property

Crape Myrtle

LANTANA. (*L. Camara*). Orange 50 cents. Low bush, dark green foliage, handsome orange colored flowers. Very hardy. Stands drouth. Extremely attractive; blooms all summer.

LANTANA. Pink. 75 cents

LEUCOPHYLLUM. *Texanum*. \$1.00. Evergreen, ashen colored foliage, pale lilac flowers through summer. Excellent for contrast effects.

Plants B. and B. (Balled and Burlapped—taken up with ball of earth), \$3.50 each.

Lilac. Purple. Fragrant, early bloomer, evergreen. Old favorite. 75 cents.

Mock Orange. (*Philadelphus*). 75 cents Makes small tree. Beautiful white, fragrant flowers.

Oleander. Pink and white, 75 cents. Red \$1.00.

PARKINSONIA aculeata. (*Retama*). Reaches 15 feet. Foliage like Mesquite. Glow of yellow flowers all summer. 3 to 4 feet, 50 cents; 7 to 8 feet, \$1.00.

Plumbago Capensis. 75 cents. Low shrub with masses of beautiful fluffy soft blue flowers all summer and fall.

Poinciana. Royal Dwarf. 50 cents. Very hardy, 5 to 6 feet. Covered with panicles of yellow and red flowers. Very striking.

Pomegranate, flowering. Double. Pink, red and white, 50 cents.

Pomegranate, fruiting. 75 cents. Best constant bloomer. Fine fruit. Best for landscape effects. Flowers bright red. Fruit showy on trees.

PAVONIA. 50 cents. Two feet, hardy, covered from spring until winter with bright rosy-pink flowers. A fine thing.

Peach, flowering. 75 cents. Pink, red and white.

PITHECOLOBIUM. 75 cents. On one of our tramps beyond Devil's River we found this which may become the most popular of all the native shrubs we have ever introduced. It was luxuriant in the barren desert gravel and more so when set in our black land and cultivated. It grows two to four feet, and the leaves are of the style of a sensitive plant, but look like ferns. If cut to the ground every year, the robust growth is beautiful beyond description. A few may be planted against the west foundation of a house, or on any hard, dry location, and no bed of ferns will ever surpass it in beauty or luxuriance.

Quince, Japan. (*Pyrus Japonica*). \$1.00 Scarlet flowers, very early in spring. Fire-bush.

REDBUD. 50 cents. Grows to be ten feet tall. Covered with purplish-red flowers early in spring, before leaves come out.

SALVIA. Greggii. 50 cents. Native of West Texas. Almost evergreen; 2 to 3 feet. Covered with dark crimson flowers from spring to frost. Of compact growth that is improved by pruning. Hardy everywhere, and suitable for many purposes, especially for low borders and for massing.

Spirea. 75 cents. Bridal Wreath. Single and double. A bank of white flowers in spring.

Eight or Ten Spirea (Bridal Wreath) in a Group Make a Great Show in Early Spring

STYRAX. (*S. platanifolia*.) \$1.00. Another of our favorite natives. Shrub or small tree. Both twigs and leaves somewhat resemble a Redbud, but are light in color. Loaded with sprays or panicles of dainty white flowers. The buds remain half open for several weeks. The daintiness of the tree, buds, and flowers makes it truly a Fairy's Bower. It prefers a shady location. Very rare.

BABY SUMACH. 75 cents. A miniature gem. Will grow three to five feet tall, but may be kept one or two feet, by pruning.

Sumach, Staghorn. 75 cents. Large leaf, Exquisite autumn foliage in red, green, and yellow.

SUMACH. Evergreen. 75 cents. Hardy native, growing 4 to 6 feet. Foliage shows beautiful shades all winter, with red limbs and twigs. A grand and valuable addition. Perfect evergreen.

SUMACH, Native. (*Rhus copallina*). 50 cents. While it is worth growing for its beautiful leaves all the summer, it is a charming sight all fall with its dress of scarlet, orange, and yellow. It is so hardy and easy to transplant, one rarely dies. The clusters of red seed are greatly admired. Should be cut back to one foot above ground in February or March.

Tamarix. (Improved Salt Cedar). 2-3 feet, 50 cents; 3-4 feet, 75 cents. Hardy, graceful, grows anywhere. Following are three best kinds of some fifteen in our nursery:

Tamarix estivalis. Beautiful plume like foliage, with profuse pink flowers.

Tamarix Japonica plumosa. Becomes medium size shade tree. Each limb a mammoth plume of feathery-like green. Every landscape needs them. Pink flowers.

Evergreen Tamarix. Athol Tree. \$1.00 Holds beautiful gray-blue foliage through ordinary winter in Central Texas, and always until after Christmas. This is a valuable addition to our list of ornamentals. Makes striking contrast in front of darker green foliage. It will remain green all winter in South Texas, and we recommend it as far north as Oklahoma, New Mexico, and Arizona.

Vitex. Blue. 75 cents. Very hardy, growing 6 to 10 feet. Large spikes of blue flowers. Commonly called Sweet Lavender.

WILLOW, Flowering. 75 cents. (*Chilopsis linearis*). Native of Western Texas and New Mexico. Constant bloomer, May till fall. Lace-like flowers in clusters. Colors, lilac and white. Tree reaches 20 feet.

YAUPON, EVERGREEN, \$1.00. Holly. (*Ilex cassine*). Native of the waters of the Colorado from Austin down. Its masses of bright red berries set in the evergreen leaves are exquisitely beautiful from October to April every year. Grows 6 to 10 feet.

YAUPON, DECIDUOUS. Holly (*Ilex decidua*). 75 cents. Blazing red berries set thick on every twig all winter. This is the only Holly that extends into West Texas.

3 inches diameter.	4.00	44.00	325.00

EXTRA HEAVY TREES.—In nearly all kinds of shades, we have extra heavy trees which we can supply. Prices furnished upon inquiry.

TOPS CUT BACK. Shade trees should have the tops severely cut back. If the top is left on, the extra express charges amount to a considerable sum. Unless expressly requested to do otherwise, we shall cut tops off the larger shade trees before they are shipped. This is better for the trees, the customers and nurseryman.

ASH. Beautiful, clean, adapted to nearly all soils.

BOX ELDER. Handsome, quick-growing tree.

CATALPA, JAPAN. A healthy, rank growing long-lived shade tree. Beautiful clusters of white, fragrant flowers in spring.

CHINA, UMBRELLA. Quick growing. Dense round top.

3 to 4 feet, 50 cents; \$5.00 per dozen.

5 to 6 feet, \$1.00; \$10.00 per dozen.

6 to 8 feet, \$1.75; \$18.00 per dozen.

Texas Umbrella China

CYPRESS, NATIVE (*Taxodium distichum*). 1 foot, 50 cents; 2 feet, \$1.00; 3 to 4 feet, \$2.00. A grand, stately tree. On the mountain streams west of Austin it reaches a diameter of eight feet. Needs plenty of moisture.

COTTONWOOD. A rapid grower on rich land.

A Noble Elm Tree. We Think We Have All the Different Shades That are Successful in Our Territory

ELM. The long limbed, fast-growing American Elm grows well on any ordinary soil.

HACKBERRY. One of the hardiest trees in existence. On poor land or very dry locations it is to be recommended.

JAPAN VARNISH. 3 to 4 feet, 75 cents; 4 to 5 feet, \$1.25; 6 to 8 feet; \$2.00. A stately, tulip-leaved tree from Japan, smooth, green bark.

LIGUSTRUM, JAPAN. See Evergreens.

LOCUST, BLACK. Especially in the Panhandle and on the plains, this is one of the most satisfactory shades.

PECAN. See under PECANS.

OAK, LIVE. 2 to 10 feet, 40 cents a foot. The native evergreen oak. A beautiful tree. Well rooted, nursery grown. If all liveoaks 5 feet and under are cut off near the ground when planted and soil mounded over the stump, they never or rarely die. If larger trees are cut back to 6 feet and wrapped with burlap (old sacks), they rarely die.

POPLAR BOLLEANA. A most upright growing tree, very hardy and desirable.

POPLAR, CAROLINA. Resembles cottonwood; branches more slender and leaves slightly smaller. Should be largely planted.

POPLAR, LOMBARDY. Graceful, tall, slender; gives fine effect.

POPLAR, SILVER LEAFED. Leaves white on underside and, when stirred by the breeze, the tree seems laden with white flowers.

SYCAMORE, AMERICAN. One of our most reliable and satisfactory shades for all kinds of soils and locations.

WALNUT, BLACK. Should be planted for shade and timber.

WEeping WILLOW. 75 cents; large, \$1.25. At the back of most lawns or landscapes a willow generally gives a pleasing, quiet tone. Support the body for the first year or two with a stick or post to the height desired, until trunk is strong.

Massing of Arbor Vitae, Estate of Mr. McIlhenny, Avery Island, La. In Front, Rosedale Arbor Vitae; Next, Compact Arbor Vitae; Tall Specimen, Pyramidal Arbor Vitae.

EVERGREENS

If one asked us how to spend a few dollars to bring the most good, we would say, besides planting some Haupt Berries, to plant some evergreens, for windbreaks or screens. Every home on the prairies should have a grove of Chinese Arbor Vitae or other evergreens on the north side of residence and barn lot. Plant some where the chickens run. They protect from the sun in summer, the cold and wind in winter.

Many calls are received for fir, spruce, and other evergreens hardy in the North. These, however, are not satisfactory for planting in the Southwest.

HARDY CONIFEROUS EVERGREENS

Special Notice.—Most of the evergreens below can be transplanted with reasonable safety when bare-rooted, but we would urge our customers to buy them taken up with ball of earth on roots, securely burlapped. This entails an extra expense in packing and a big increase in express or freight charges. We have to charge fifty per cent extra for the balling, but it is the next thing to insurance that trees will live. It is almost necessary to have the largest trees balled. Do not remove sack when planting B. and B. trees.

"B & B" indicates balled and burlapped—that is, taken up with earth. Varieties so marked are not sold bare-rooted.

CHINESE ARBOR VITAE (*Biota orientalis*).

Fast grower, always green. Good for specimens, screens or windbreaks. Selected specimens, 1 foot, 50 cents; 2 feet, \$1.00; 3 feet, \$1.50; 4 feet, \$2.50; 6 to 7 feet, \$3.50. This variety by proper pruning may be kept any size and shape desired. In fact annual pruning is necessary for best results.

BONITO ARBOR VITAE. Originated in Comal Springs Nursery. A perfect globe, easy to transplant. Rich, dark green.

12 to 15 inch, B. and B. . . . \$3.00
18 to 24 inch, B. and B. . . . 4.50

COMPACT ARBOR VITAE. Compact, even outline, pure green.

18 inch, \$1.50 B. and B., \$2.50
2 feet, 2.25 B. and B., 3.50
3 feet, 3.25 B. and B., 4.50

DWARF GOLDEN ARBOR VITAE. A dwarf compact form, with green foliage, tinged with gold.

1 foot, \$1.50. B. and B., \$2.50
18 inch, 2.25. B. and B., 3.50
2 feet, 3.00. B. and B., 4.50

A mass of evergreens to "kill" the ground line, harsh corner, and glaring walls at our State University. Photo taken one year after planting. Everything furnished by our Nursery. Planting consists of Japan Ligustrum, Chinese, Golden and Rosedale Arbor Vitae, Euonymus Japonicus, and few shrubs.

18 inch, 1.50	B. and B., 2.25
2 feet, 2.00	B. and B., 3.00
30 inch, 2.50	B. and B., 3.75
3 feet, 3.00	B. and B., 4.50

Windbreak of Chinese Arbor Vitae for Barn

CEDAR, RED. (*Juniperus Virginiana*).

1 foot, B. and B.....	\$1.75
2 feet, B. and B.....	3.50

JUNIPERUS Sabina (Trailing or Prostrate Juniper). A fine, slow growing evergreen, almost trailing on the ground, spreading three feet wide. Good for massing against low foundation.

8 to 12 inches, B. and B....	\$2.75
18 inches, B. and B....	3.75

PYRAMIDAL CYPRESS. The well-known Italian Cypress. Slender, tapering form. Will grow 30 feet tall.

1 foot, B. and B.	\$1.50
2 feet, B. and B.	3.00
3 feet, B. and B.	4.00
4 feet, B. and B.	5.00

HORIZONTAL CYPRESS. Branches grow horizontally, parallel with the ground.

Price, same as PYRAMIDAL CYPRESS.

ARIZONA CYPRESS. Branches growing almost horizontally or parallel with ground. Foliage gray, with tinge of blue in winter. Grows to be eight to twelve feet tall.

2 feet, B. and B.	\$3.00
3 feet, B. and B.	4.00
4 feet, B. and B.	5.00

Sold by Austin Nursery. A Pyramidal Cypress 30 Feet High; a Texas Mountain Laurel 10 Feet High; a Pink Crepe Myrtle 25 Feet High.

Broad-Leaved Evergreens

These are among the most valuable plants for landscape work. As a class, they are easily transplanted, and with their many shades of green foliage produce splendid effects even when planted alone, without the aid of flowering shrubs. They give background against which to plant the flowering shrubs, which combine harmoniously with them to give the best results.

See under Coniferous Evergreens for information in regard to Balling and Burlapping, (B. and B.), which indicates taken from ground with ball of earth.

ABELIA. See under Flowering Shrubs.

AGARITA. See under Flowering Shrubs.

BOX, BOXWOOD, or BOXTREE. The old favorite, glossy leaved, compact, slow growing, almost dwarf.

8 to 12 inch,	\$1.00.	B. and B.,	\$1.75
18 inch,	2.00.	B. and B.,	3.00
2 feet,	3.00.	B. and B.,	4.50

Larger, choicest specimens, prices on application.

EUONYMOUS Japonicus. Very hardy, easy to transplant. Round, dark green glossy leaves. Can be sheared into any shape.

	Each	Dozen	100
One year plants, 4 to			
7 inches.....	\$.25	\$2.50	\$18.00

18 to 20 inches, B. and B.....	3.50

Very fine evergreen shrub, growing to be six feet high and thick, and larger. Suitable for trimming, to be kept any size. White flowers.

SALVIA Greggii. See under Flowering Shrubs.

SUMACH, Evergreen. See under Flowering Shrubs.

Japan Ligustrums in Front of Our State Capitol. Grown and Sold by Us.

When pruned into tree form they are about to win the title of "best shade." Always rich glossy green. No litter from leaves. They live four hundred years. A dense cool shade. When unpruned they protect from disagreeable winds and disagreeable views.

LIGUSTRUM JAPONICUM (JAPAN PRIVET.)

The smooth-leaved evergreen, shown so beautifully on plazas in San Antonio and along the drive in front of the State Capitol. Grows to be fine shade tree, or may be kept as shrub, if desired. It is very desirable for a medium or tall hedge. Bright green, winter and summer, with black berries at Christmas. We have largest stock in the world. No other tree ever came so into popular favor as the Ligustrum in the last ten years. Should be planted only in bush form in North Texas.

IMPORTANT NOTE: This Ligustrum will be greatly improved and give better satisfaction if it is regularly pruned. The more pruning, the more foliage and better shape. The lower branches should not be cut off near the body of the tree, but should be cut back somewhat the same as other branches. Any shape desired may be obtained by pruning, which can be done any month in the year.

This is also true for Amoor Privet. See next page.

PRICES for Japan Ligustrum. Hedge size.

HEDGES

The planting of hedges, screens and wind-breaks is becoming more popular every year, and justly so. They add beauty by making backgrounds against which to plant smaller shrubs and plants, or by hiding undesirable views. They give comfort by breaking the cold winds from house or barns.

ALTHEA. 3.00 a dozen, \$20.00 a 100. Mixed colors. The most hardy of all flowering shrubs. For hedge plant 18 to 24 inches apart.

CHINESE ARBOR VITAE. Every prairie farm should plant a row or double row on north side of barn lots; and a grove for chickens. See under Evergreens for prices. Plant 3 to 5 feet apart.

EUONYMOUS. See under Evergreens. For hedge, plant 15 to 20 inches apart. \$2.50 per dozen, \$18.00 per 100. From two-inch pots.

ROSEDALE ARBOR VITAE. Small one year plants, \$3.50 a dozen; \$25.00 a 100. For description, see Evergreens.

POMEGRANATE. \$3.50 a dozen, \$25.00 a 100. Very attractive; nearly evergreen. 3-4 feet, double Flowering. Plant 18 to 24 inches apart.

CALIFORNIA PRIVET. For quick uniform hedge. These and most hedge plants should be cut within three inches of the ground when planted, for best results. Plant 9 inches apart.

Hedge of Euonymous. Observe It Is Not Hurt by Hackberries Growing in the Hedge

ORNAMENTAL GRASSES

BAMBOO. 50 cents. Grows ten to twenty feet high, even on uplands.

GEORGIA CANE. 25 cents. Grows 12 feet. Attractive in landscape planting.

STRIPED GEORGIA CANE. 50 cents. Grows 6 to 12 feet.

LEMON GRASS. 50 cents each; \$4.00 a dozen. Three blades make a pleasant cup of tea. Said to cure tuberculosis. Very fragrant.

MOCK PAMPAS (*Erianthus Ravennia*). 40 cents. Plumes two feet long, resembling genuine Pampas. Height 7 to 10 feet.

Pampas Grass

PAMPAS GRASS. Clumps, \$1.00 each. Grows five to six feet. Its fluffy white plumes, two feet in length, make it the most striking of all grasses.

UMBRELLA GRASS. Very beautiful, growing about three feet high, many stalks from each root with umbrella-like tufts of leaves at top. 25 cents.

ZEBRA GRASS. 35 cents. Same growth and plume as Ribbon Grass but the blades are barred crosswise with white stripes.

Pennisetum Grass

PENNISETUM. 25 cents; \$2.50 a dozen.
Dwarf grass, growing eighteen inches tall, with beautiful white plumes. Fine for bedding.

Yuccas and Similar Plants

Natives of the Southwest, especially the arid regions, they are adapted to this section. Valuable in ornamental plantings.

Prices, except where noted, smaller size, \$1.00; larger size, \$1.50.

Extra choice specimens, \$2.50.

YUCCAS WITH A CAUDEX (Stem or Trunk)

YUCCA radiosa. Stem attaining several feet, surrounded by a large head of narrow, divergent leaves, that are somewhat filamentose. Large inflorescence. Blooms in spring and fall.

SPANISH BAYONET. (*Yucca treculeana*) The trunk reaches 10 feet in height with head of dark green leaves topped in spring with a great truss of cream white flowers. Prices: Plants with stem 1 foot, \$2.00; 2 feet, \$3.00; 3 to 4 feet, \$5.00; 7 to 10 feet, \$10.00 to \$15.00.

YUCCAS WITHOUT A CAUDEX

YUCCA filamentosa. Leaves not rigid or stiff, reaching 2 feet long, 1 to 1½ inches wide, curved. Flower stem 4 to 8 feet.

YUCCA constricta. (*Y. elata*). Very narrow green leaves with white filaments along edges. Graceful, showy. Flower stem 3 feet.

YUCCA nobilis. Very graceful. Wide leaves curving to ground. Suitable for urns and pots.

RED YUCCA. (*Hesperaloe parviflora*). Blooming size \$2.00 each. One of the rarest plants in existence. Native of a limited area in West Texas and Mexico. Dark green pliant leaves. Flower stalks 5 to 6 feet. Covered with scapes of brilliant coral red flowers from April till late summer. For beauty and hardiness we can hardly name an equal.

DASYLIRION. Plants with leaves 1 foot, \$1.00; 18 inches, \$1.50; 2 to 3 feet, \$2.00 to \$3.00. Older plants have one hundred to two hundred symmetrically arranged leaves of a

Dasyilirion Is a Good All-the-Year Plant for Urns.

brilliant intense green every day in the year. Fine for large urns, rockeries and lawns.

CENTURY PLANT (*Agave Americana*). The Maguey or pulque plant of Mexico. Plants with leaves 6 inches long, 50 cents; 12 inches, \$1.00; 2 feet, \$1.50; large specimens, \$2.00 to \$5.00. The flower stalks reach 18 feet, the flower spike resembling a chandelier. Will not stand the winters north of Dallas.

LECHUGIA. Similar to Century Plant, but smaller, not over two feet tall. One of most attractive of this group. Plants with leaves 8 to 10 inches long, \$1.00; 12 to 15 inches, \$1.50.

PALMS

All hardy for outdoor planting.

Cut off the leaves or most of them, as soon as planted.

SABAL TEXANUM. Native in Southwestern Texas. Stands more cold than Washingtonia. Leaves fan-shaped, tree reaches over 20 feet. Does not freeze back at Austin. Smooth stem. Pure green leaves.

	Each	Dozen
2 years, four or more narrow leaves	\$.25	\$ 2.50
3 to 5 years, 3 to 4 character leaves	1.50	15.00
2 to 3 feet, several character leaves	2.00	20.00
3 to 4 feet	3.50	36.00

5 to 6 feet	7.00	75.00
Trunk 6 to 8 inches diameter.		
7 to 8 feet, trunk 8 inches diameter	10.00	100.00

WASHINGTONIA FILIFERA. Fan-leaved, hardy. Grows 20 feet. We have this variety only 3 to 4 feet, and smaller.

	Each	Dozen
2 year in pots	\$1.00	\$10.50
2 to 3 feet	2.00	20.00
3 to 4 feet	3.50	36.00

We recommend that all Palms larger than the \$2.00 grade be taken up with ball of earth, making the price fifty per cent additional. Remember we pay express on orders of five dollars in Texas.

SABAL TEXANUM PALM

The native Texas Palm, with no thorns. Foliage, finest shade of green. Makes largest tree with trunk twenty to thirty feet high. Zero temperature has never killed one. This palm should have the lower leaves cut off every year in February, if a tall trunk is desired.

SPINELESS CACTUS

THE THORNTLESS PRICKLY PEAR

(*Opuntia Ellisiana*)

Price: Slabs, 10 cents each, \$1.00 a dozen, \$8.00 a 100.

The only kind yet known that will stand freezes at Austin. Will grow in North Texas. We have tested all kinds introduced, including Mr. Burbank's. This is the only one we consider worth while, except where there is no frost. A very valuable plant for forage.

This spineless Cactus grows on any soil. A sudden drop to zero did not freeze a single slab. Our little Jersey, Mary Pickford (see photo below), is crazy for it. A bucket nearly full of pieces small enough for a cow to get in her mouth and fed every day will increase the flow of milk twenty per cent, increase the butter fat, and fatten the cow.

Every ranch and farm should have large fields of the Cactus, planted about three by five feet, and every city home should have a few plants for cow or chickens. Yield per acre has been as much as forty tons.

The Government says a ton of this cactus has a feeding value equal to a ton of green cane hay. As a milk producer it rates much higher.

The Cactus must be protected from rabbits, especially the first year or two after planting.

HOW TO PLANT CACTUS

Have soil in good condition and bedded up in rows six feet wide. Set plants about four feet apart in rows. The slabs or leaves should be laid flat on top of ground and pressed down firmly. Do not stick slabs in the ground. It

is not necessary to water at time of planting, but in extreme drouth water is always beneficial. The Spineless Cactus can be planted any month in the year, but preferably in the fall and again in March and April.

Spineless Cactus. Money Invested in This Plant Will be Better Invested Than in Silos

TEXAS BLUEBONNET SEED. 50 cents an ounce. Plant September to December.

TEXAS BLUEBONNET PLANTS. 10 cents each, \$1.00 per dozen, \$6.00 per 100. Plants ready in January, February and March.

DISTANCES FOR PLANTING

Depending on character of soil, etc.
 Peach, Plum, Apple, Apricot, 20 to 25 feet
 apart each way.
 Pear, 20 to 30 feet apart each way.
 Pecans, 40 to 60 feet each way.
 Figs, 12 to 18 feet apart each way.
 Haupt, McDonald and Dallas Berries, 3 ½ by
 5 feet. In rich land 4 by 6 feet.
 Other Blackberry and Dewberry, 3 by 4 feet.
 Strawberry, 1 by 2 ½ feet.
 Grapes 12 by 18 feet.

NUMBER OF TREES OR PLANTS TO THE
ACRE

1 x 1 foot, 43,560	16 x16 feet, 170
1 x 2½ feet, 17,424	18 x18 feet, 130
2 x 2 feet, 10,890	20 x20 feet, 108
1½ x 3 feet, 9,680	20 x25 feet, 87
3 x 4 feet, 3,630	25 x25 feet, 69
3½ x 5 feet, 2,430	30 x30 feet, 48
4 x 4 feet, 2,722	30 x60 feet, 24
4 x 6 feet, 1,815	25 x30 feet, 53
10 x10 feet, 435	40 x40 feet, 27
12 x12 feet, 302	40 x50 feet, 22
12 x18 feet, 201	50 x50 feet, 17
14 x14 feet, 223	60 x60 feet, 13

To determine number of trees to an acre for
 and given distance apart, multiply distance
 apart, and divide 43,560 by this product.
 For example:

18 by 20 feet=360. $43,560 \div 360 = 121$.

There are 121 trees per acre, planted 18 by
 20 feet.

A one year old six foot Peach tree planted in
 February and cut back to 18 inches. Photo-
 graphed in October. Six feet of new growth.
 The sun will never burn its body. The two or
 three lower branches should now be cut off.

One summer's growth on a Plum tree, prop-
 erly cut back when planted.

PLANTING AND PRUNING

Directions for planting and Pruning Fruit Trees

When trees are received, if they can not be
 planted immediately, they should be unpacked,
 set in a trench, mellow earth thrown around
 them and thoroughly wet.

If trees are frozen when received, the whole
 bunch should be laid in a trench and entirely
 covered with earth until the weather mod-
 erates.

It is best for the ground to be thoroughly
 plowed before the trees are received. When it
 can not be plowed, dig holes one to two feet
 deep, and two feet across. When a plow can
 be used the holes are easily dug by throwing
 out two or three furrows and shoveling out
 the dirt where the trees are to stand. Check
 with plow.

To plant fruit trees, throw in or take out soil until the tree stands the same depth as it did at the nursery; then throw in soil until the roots are covered, and pour in a bucket or more of water, shaking the tree; then fill in the balance of soil mounding it up slightly, but do not pack. Then cut the top off from 12 to 24 inches from the ground. Some two-year-old trees should be cut above three or four of the branches and the branches cut three or four inches from the body.

By cutting all trees severely one almost insures the life of the tree, and it makes a low, robust, round-headed tree that shades its own body. It is better to buy a tree and cut the top than to have it given to you and leave the top on.

If any limbs or roots of trees or plants are bruised or injured in any way, cut off all such injured parts.

Keep all sprouts or suckers cut off from 12 to 15 inches from the ground. At the end of the first year cut out the drooping and weaker branches of all trees. Pear and plums need the long branches cut back half the length or more, and this treatment may be given each year in January and February. In taking off a branch, cut or saw close to the body of the tree.

Frequent and thorough cultivation with plow and hoe, especially for the first few years, is absolutely necessary.

To prevent rabbits from injuring young trees, we would suggest that either straw or corn stalks be tied around each tree. Old newspapers will answer the purpose, and either may be left on during the summer to partially shade the trunks of the trees. This is the only absolutely safe way to protect trees from these pests.

Do not make a horse lot or calf pasture of your orchard.

PLANT TREES PROMPTLY

While trees may be kept in bundles, by being watered regularly, or in the ground, for a long time and then planted safely, we always suggest that they be planted where they are to stand as soon as possible.

Customers should follow carefully all directions for planting and pruning, and if they do not understand any detail, or desire further information, we are very glad to supply all we can upon inquiry.

HOW TO WATER TREES AND SHRUBS

In planting fill the hole nearly full of soil and then pour in water until it stands for a moment. While the water is standing shake the tree or shrub to settle the mud around the root; then mound up the soil, either dry or naturally moist, a few inches above the level covering all wet soil. Do not pack this mound.

All pecans, large evergreens, and trees of any kind that are dry, are benefited by having the soil mounded up around them a foot or more.

We should earnestly request all our customers, in watering anything at any time after it is planted, not to pour water on top of the ground and leave it exposed to the wind and

sun. The practice is sure to be the death of roses. Dig a shallow hole by the side of the tree or shrub, and after the water has soaked in, cover up the hole and all wet soil with dry, loose soil, unpacked.

Trees and plants, as a rule, should not be watered more than once a week in dry weather.

FIGS

See especially under description of these for further instructions.

GRAPE

Set a post 6½ feet long, two feet in the ground, placing a crossarm two feet long at top. Place these posts every 20 feet along the rows, putting two strings of wire upon the ends of the crossarm. Tie the single stem of vine up between these wires, the branches of the vine then forming on these two wires an arbor, shading the fruit and vine, and being easily sprayed. Prune heavily in February, before the sap starts. A straight stake by each vine is sufficient for the first year.

The American varieties of grapes after the first to second year, should be pruned back severely every year, in December or January, leaving two or three eyes or buds of the last season's growth on each new shoot.

The Vinifera varieties of grapes should be pruned back so as to form thick bodies or trunks three to four feet high with short heavy branches, and not allowed to form vine on trellis or other support.

PECANS

Pecans are commonly considered hard to transplant. We find the difficulty is slight, if the tops are cut back, leaving only three or four eyes or buds above the point of the bud or graft, which can be told by a slight off-set on the body of the tree. Plant trees two to four inches deeper than they stood in nursery, according to size of trees, which are usually one to six feet tall. Dig holes at least two feet square and deep, and then put down a post hole in center of large hole one to two feet deeper, or as deep as may be necessary to hold the long root.

After trees are set and well watered, mound dry soil up on stem of tree a foot or more above level of ground, or even to top of the stem or trunk, after it has been cut back, as directed above. Leave a ditch around this mound to hold sufficient water to soak down to end of root. New growth will come through the mound of soil in the spring or summer, and the soil will work down gradually to a level.

PERSIMMONS

These should be cut back as directed for pecans, leaving about three good eyes or buds above the graft. Plant trees slightly deeper than they stood in nursery, and mound soil up on stem, the same as for pecans.

HOW TO PLANT BLACKBERRIES AND DEWBERRIES

The ground should be plowed and harrowed frequently for some weeks before plants are received. It must be in finest condition for good results.

Plant in ordinary furrows. The plants should be leaned down the furrow until the top is level with the ground. Press moist soil on roots and mound loosely, slightly over top. If soil is dry, use water in planting.

In planting large lots, we lay plants flat in bottom of furrow, tramp on them and then wrap up with cultivator or turning plow. When the shoots begin to start, we run a heavy drag over the rows, killing the first crop of young weeds.

STRAWBERRIES

Set the plants as you would tomatoes or potato plants, one foot by two or two and a half feet apart. Give each plant a pint or quart of water. Straw (free of seed) or leaves should be spread as a mulch over the ground to cover partially or entirely the plants through the winter. During warm spells, rake the mulch of straw or leaves away from the plants. This can easily be done with a small home patch, and the mulch raked back to the plants during freezing weather.

HOW TO PLANT AND PRUNE SHADES

The planting is the same as for fruit trees. Most planters demand long-bodied shades. This is not natural in this climate. Instead of leaving or cutting the tops 8 to 12 feet from the ground, cut them 6 or 8 feet. A tree cut 7 feet or less will in any number of years make about twice as much shade as if it had been cut 12 feet. The branches can be pruned up as the years go by and then the lower foliage will be as far from the ground as on the long-bodied trees.

The more any tree is cut back when planted, the more likely it is to live.

SHRUBS

Follow directions in general for planting and pruning Fruit Trees.

VINES

Follow directions in general for planting and pruning Fruit Trees. We emphasize especially cutting off tops right to the ground.

BULBS

Do not leave any part above ground. Plant from two to six inches deep, according to size of bulb.

ROSES

Follow general instructions. Many roses are lost by not being cut back sufficiently. Cut tops back to stems from 2 to 4 inches long, according to size of plants, and mound soil up to the top of these stems.

EVERGREENS

In a general way, evergreens should not be cut off as other trees or shrubs. If any parts are dead or injured, cut off such parts. In planting, mound up soil several inches on body. In watering, do not let water touch the foliage. It is often necessary to use a stake by which to support the trees till roots take hold.

FROST PROTECTION

In the Southwest the time has come when it is almost necessary to spray orchards to control insects and fungi. This has been necessary for many years in other fruit sections of the United States.

Perhaps the most serious handicap to fruit growing is our late frosts or freezes, and this trouble can be overcome to a large extent. In any year it will hardly ever be necessary to give frost protection for more than one to three nights, and then only sufficiently to raise the temperature 2 to 5 degrees.

There are smudge pots burning crude oil that will handle the situation in large orchards.

In smaller orchards a smoke through the night can be maintained by burning brush, logs, straw or cobs on the windward side. This is generally sufficient, and staying up with your trees one or two nights will certainly pay.

In towns, spraying the trees thoroughly with water about dark, when frost threatens in March or April, after buds have swollen or opened, is practicable and almost certain protection. If one had a sprayer sufficiently large, this is perhaps the best method to protect fifty trees, or even more. Spray with water again before midnight if possible.

EXCESS OF LIME IN SOIL

The effects of Root Rot and of Lime on the tops of trees are at first very much the same. The leaves turn yellow, but in the case of Root Rot the trees die quickly, whereas, in the case of excessive lime in the soil, the trees do not die quickly. The effect on the roots is different. In the case of Root Rot, the bark of the roots peels off easily, whereas, in the case of lime, the root is hard. To overcome the condition of excessive lime, use one to one and one-half pounds of Iron Sulphate around an orchard tree worked into the soil so as to reach the ends of the roots. This will be made available for the roots by rain or irrigation.

USE OF COPPERAS (Iron sulphate)

Copperas can be bought at any drug store.

For convenience of customers, we are keeping a supply of copperas on hand for prompt shipment.

	Per pound
2 to 5 pounds	\$.16
6 to 9 pounds	.14
10 to 25 pounds	.13
26 to 50 pounds	.12
75 to 100 pounds	.10

Larger quantity, price on application.

Delivered by prepaid express or parcel post.

We recommend the use of copperas for all kinds of trees and plants, especially in limey soils or wherever leaves turn yellow. It will cause foliage to turn green and healthy in about three weeks time, and it is possible that it will help destroy root rot in the soil.

Two to four tablespoonfuls should be applied to roses, grapes, and plants of similar size; a pound and a half to bearing fruit trees,

and corresponding quantities to other trees and plants according to size.

The copperas may be worked into the soil and then be dissolved by rain or irrigation, as well as by dissolving it in water first and pouring the water around the roots. Afterward more water should be given to carry it to the roots.

Apply around trees so as to reach the young roots. This means a radius of about two feet around small plants, and ten feet around large fruit trees.

Copperas should be applied in the spring and during the growing season, but may be given in the winter time, especially for evergreens and any fresh planted stock. Generally, one application per year is sufficient.

TO CONTROL ALKALI AND ROOT ROT

There is no absolute and practical remedy, but we have found that in spots of soil, where cotton as well as trees and plants will die, we can grow a heavy crop of castor beans one year, and then follow successfully with trees or other crops for several years. Try it.

Root Rot is caused by a fungus which can not live through the winter where there are no live roots of trees or plants which are susceptible to it. Pear and Apple are the most susceptible fruit trees, while Peach and Plum are hardly affected.

Morning Glory or Tie Vines and certain weeds that have live roots in the ground through the winter will carry the fungus through and cause it to multiply. Cotton is very susceptible, while the grains and sorghums are not. The best remedy, therefore, is to grow crops on such land that are not susceptible to the root rot fungus and to give late summer and fall cultivation so that no live roots are left in the soil through the winter. In one or two years it is possible to reduce the extent of this trouble very considerably.

STIM-U-PLANT

The Magic Fertilizer in Tablet Form

STIM-U-PLANT is the only complete plant food in tablet form. Guaranteed analysis 11 per cent Nitrogen, 12 per cent Phosphoric Acid, 15 per cent Potash—all of which elements are water-soluble and immediately available to the feeding root-hairs of the plant.

TABLET FORM OF GREAT VALUE

They give an EXACT FEEDING UNIT.

MAXIMUM EFFICIENCY because no food-value lost in scattering, leaching, or run-off of soil surface water.

EASY TO USE

Simply insert tablets in soil about 3 inches from stem of plant, or dissolve in water at the rate of four tablets to the gallon and apply as liquid manure. Complete directions with every package.

One, two or three tablets placed two inches under watermelon seed when planted produce wonders; or if you have to water seed, dissolve tablets in the water. They are good for everything.

Price: 30 tablets, 30c; 100 tablets, 75c; 1,000 tablets, \$3.50.

Use of Fertilizer

Many soils require fertilizer, and almost all soils will be benefited by its application. There is none better than old barnyard manure, which is available in small quantities nearly everywhere. When trees are being planted, the fertilizer should be mixed thoroughly with the soil that goes in the hole, in the proportion of one part fertilizer to four parts soil.

Thereafter, every year or two an application should be made on top of the ground, working it into the soil. As trees grow larger, the fertilizer should be applied farther from the body of the tree so as to reach the small feeding roots, which in the case of fruit and shade trees several years old may be out eight to fifteen feet from the trunk.

Application of commercial fertilizers will depend on nature of soil. Information as to these can be obtained from the manufacturers of such products, from the local county farm demonstration agents, or we shall be glad to give any information we can.

Best Spray for Insects and Diseases

All-in-One Spray, one pound can.....\$1.00
Small Hand Dust Gun..... 1.50

Delivered by prepaid express or parcel post.

We have found the All-in-One Spray the best we have ever tried for all kinds of plant troubles, including insects, mildew, fungi, and diseases, either outdoors or indoors. Use spray whenever needed, especially in the spring time.

For convenience of customers we are prepared to supply this material, together with a gun to apply it. Either may be ordered separately.

Control of Insects and Fungus Diseases of Plants

By Courtesy of Mr. G. J. Scholl, Chief Inspector of Orchards and Nurseries, State Department of Agriculture.

(For more detailed information, write A. & M. College, College Station, Texas, or State Department of Agriculture, Austin, Texas.)

Materials for sprays can be obtained from most drug stores.

SCALE INSECTS.

(San Jose, Oyster Shell, Scurfy Scale and others.)

To be used as a dormant spray during winter only.

No. 1—Lime-Sulphur Wash.

Stone Lime20 pounds
Sulphur15 pounds
Water50 gallons

Preparation: Use two iron kettles each holding 20 to 25 gallons of water. Make sulphur into a paste by stirring in a small quantity of water, and add to about 15 gallons of water in kettle No. 1, which has been brought to boiling. When the sulphur solution is boiling, the stone lime is gradually added.

Kettle No. 2 is filled with water which is also brought to boiling. To prevent mixture from boiling over, pour small quantity of water from kettle

No. 2 into it. Boil about one hour or until the yellow color of the sulphur has disappeared, then strain the mixture into spray tank and add enough hot water to make 50 gallons. Spray onto trees while still hot through a coarse nozzle.

After day's work, thoroughly cleanse spray machine with hot water.

Ordinarily two thorough applications, one in late fall and another in early spring before trees bud out, will control a very severe infestation of scale insects.

Summer Spray.

Sometimes a supplementary spray is necessary. Such spray should be applied during the growing season when the young or "crawlers" are most abundant in May or June. For such spraying, we recommend formula No. 2.

No. 2—Kerosene Emulsion.

Kerosene	2 gallons
Soap	$\frac{1}{2}$ pound
Water (soft)	1 gallon

Preparation: Dissolve soap in water by boiling, remove from fire, add kerosene and stir vigorously until it forms a creamy mass and emulsion. Dilute in from 10 to 35 gallons of soft water according to tenderness of growth.

Spray thoroughly, as it is a lack of painstaking effort that explains many failures in scale control.

SUCKING INSECTS.

(Plant Lice, Thrips, Squash Bugs, Melon Aphis, Grape Leaf Hopper, Midge, and Mealy Bugs—use sprays Nos. 2 or 3.)

No. 3—Nicotine Solution.

"Black Leaf 40"	$1\frac{1}{2}$ teaspoonsful
Soap	1 ounce
Water	1 gallon

Preparation: Dissolve soap in water by boiling, let cool, and add "Black Leaf 40." Spray must come in contact with insects.

No. 4—Sulphur.

(For controlling Plant Mites and Red Spider.)

Sprinkle plants with water, or when dew is still on plants; dust with sulphur through duster or bellows on a clear sunny day. This same treatment will also control mildew affecting roses.

LEAF-CHEWING INSECTS.

No. 5—Arsenate of Lead.

(For all leaf-chewing insects.)

Arsenate of Lead (dry)	2 pounds
Rock Lime	$2\frac{1}{2}$ pounds
Water	50 gallons

Slake lime in water and add it with arsenate of lead to 50 gallons of water. Spray onto plants so that all portions are covered with the poison.

No. 6—Calcium Arsenate.

(For Eight Spotted Forester Caterpillar on Grape Vines.)

Dust vines with calcium arsenate when dew is still on, or first sprinkle vines with water.

No. 7.

Arsenate of Lead	2 pounds
"Black Leaf 40"	$\frac{1}{2}$ pint
Bordeaux Mixture	50 gallons

Sometimes a combination spray is desired for controlling chewing and sucking insects as well as fungus diseases. No. 7 is a good combination spray.

BORERS.

Borers are small white worms that work under the bark of trees.

To prevent Borers, rake away earth from around base of tree and apply compound made of the following:

No. 8—Tree Wash.

Strong Soap	2 quarts
Crude Carbolic Acid	$\frac{1}{2}$ pint
Paris Green	2 ounces
Water	2 gallons
Clay or Lime enough to make thin paste.	

Apply to trunk of tree with a stiff paint brush.

To Destroy Borers:

1. The surface of the earth is lightly broken and leveled about to the foot of the tree. One ounce of paradichlorobenzene is distributed evenly in a band of 2 inches wide around base of tree about 2 inches from tree and is covered with a mound of dirt about two or three inches deep. The mound is packed evenly with a shovel, and left sloping from the tree to facilitate drainage. This material should be applied about October 10th, and after 5 or 6 weeks the mound should be removed with a hoe.

The dosage should be reduced for trees less than five years old to prevent injury.

2. A very effective method generally used by orchardists is the worming method, i. e., dig the borers out with a sharp knife or by the use of a flexible wire. They can easily be detected by swollen bark or oozing out of gum, and are usually only under the bark of the tree.

3. Inject small amount of high life (bisulphide of carbon) into holes or tunnels of borers, and stop up holes with clay, putty or wax.

CUTTING ANTS.

(a) **Calcium cyanide.** Use dust gun and blow sufficient amount of calcium cyanide into entrance holes which will penetrate to all tunnels and nests of the ants. Also place small quantity of the material in each hole after treatment.

(b) **Cyanide of Potassium.** One ounce diluted in one gallon of water poured into holes made with sharp stick or bar around entrance of ant bed, then pack the dirt tightly, is a method that has been very effective.

(c) **Carbon Bisulphide.** A quantity of high life (Carbon Bisulphide) poured into each entrance hole and covered with loose dirt is also good on a small scale. Care must be exercised not to use chemical around fire as it is highly combustible.

FUNGUS PLANT DISEASES.

No. 9—Bordeaux Mixture.

(For Stone Friuts.)

Copper Sulphate	3 pounds
Stone Lime	6 pounds
Water	50 gallons

No. 10—Bordeaux Mixture.

(For Hardy Trees and Plants, Apples, Potatoes, Grapes, etc.)

Copper Sulphate	4 pounds
Stone Lime	4 pounds
Water	50 gallons

Preparation: Have three 50-gallon barrels. Crush copper sulphate, place in sack and suspend overnight in barrel containing 25 gallons of water. Slack lime in second barrel and add enough water to make 25 gallons.

The next day copper sulphate and lime solution are poured bucket by bucket of each into the third barrel. Stir thoroughly and use. Test to see if amount of lime is right, i. e., drop a quantity of yellow prussiate of potash into mixture. If this material turns brown, add more lime. Spray through fine nozzle onto all portions of plant. Best applied in spring after considerable amount of foliage is on plant. Applications must be repeated every 14 days until 3 applications are made.

MILDEW.

- Use spray No. 9 or 11.
 - Potassium Sulphide
Water	1 gallon
- Mix and spray onto plants immediately.

(c) Fine powdered sulphur dusted on plants while dew is on, of a clear sunshiny day, or sprinkle plants with water before dusting. This treatment also applies to the control of mites and red spiders.

BROWN ROT (PEACH MOULD).

Scab and Curculio.

Brown Rot is the worst fungus disease, and the Curculio is the worst insect pest affecting the fruit of the peach and plum.

Brown Rot starts as a small circular brown spot which enlarges rapidly under moist conditions, and soon causes decay of the entire fruit. Scab causes the drying up of the skin and subsequent cracking.

Curculio is an insect which often destroys a plum crop, and frequently attacks the peach. It is best known in its larva or grub stage as a small whitish worm.

How to Control Brown Rot, Scab and Curculio.

(a) Spray trees in winter about middle of February with Lime-Sulphur wash. (See formula No. 1 above.) This formula is helpful as a fungicide and an insecticide against any possible scale insects.

(b) Spray trees with arsenate of lead alone (See formula No. 5) about 7 to 10 days after petals fall, when fruit is barely forming.

(c) Spray trees with self-boiled lime-sulphur and arsenate of lead (Formula No. 11) two weeks later or about four weeks after petals have dropped.

(d) Spray trees with self-boiled lime-sulphur alone (See formula No. 11, omitting arsenate of lead) four or five weeks before fruit ripens. Use very fine nozzle so as to apply thinnest spray possible.

No. 11—Self-Boiled Lime-Sulphur and Arsenate of Lead Spray.

Fresh Stone Lime.....	8 pounds
Sulphur	8 pounds
Water	50 gallons

Preparation: Place stone lime in barrel and pour on about 6 gallons of water to cover it. See that sulphur is sifted fine with no lumps. As soon as lime begins to slake add the sulphur. Stir constantly and add more water (3 or 5 gallons) to form a thick paste and then gradually a thin paste. The lime will supply enough heat to boil the mixture several minutes. As soon as it is well slaked, in 4 or 5 minutes, water should be added to cool the mixture and prevent further cooking. Strain into the spray tank, dilute with enough water to make 50 gallons. Make paste of 2 pounds of arsenate of lead in little water and add to the mixture of lime and sulphur. Apply to trees.

While spraying, see that the mixture is constantly stirred.

For a few trees, use same proportions to make less amount. About one gallon of mixture per tree is required for an ordinary orchard. Apply thoroughly to limbs, foliage and fruit.

Considering the benefit from using these sprays, the cost is hardly worth considering. It will pay to spray one tree or a thousand trees. There are all kinds of spray pumps available from a small hand machine to the largest power machine.

In spraying plum trees for curculio alone, it is necessary to use only (b) and (c) above.

Commercial Spraying Preparations.

There are now several good commercial preparations of lime-sulphur and Bordeaux mixture on the market which may be substituted for the home-made preparations.

GRASSHOPPERS, ETC.

No. 12—Poison Bran Mash.

(For Controlling Grasshoppers, Cutworms, and Sowbugs or Pill Bugs.)

Bran	6 pounds
Paris Green or White Arsenic.....	4 ounces
Cheap Cane Molasses (Not Corn syrup)	$\frac{1}{2}$ pint
Juice of 1 lemon.	
Water to make a wet mash.	

Mix, dry and thoroughly, the bran and Paris Green; stir into this the molasses and lemon juice, then add just enough water to make a wet mash, but not dripping wet. Sow small pellets of the mash broadcast on infested ground preferably in evening, about 1 pound to each 100 square feet of plant beds.

This material will kill chickens or other animals if they are allowed to eat much of it.

WHAT IS A MONEY CROP?

The October 2, 1926 issue of Texas Farm & Ranch contains an excellent article with the heading FARMS ARE PLACES TO MAKE A LIVING. The substance of it is that more effort should be given to the making of a living on the farm primarily, rather than making money.

Every farm must have some kind of money crop, which in the South is largely cotton, but when the money from cotton has to be used to buy canned fruits, vegetables, meats and other products that are grown on somebody else's farm, the cotton is really not a money crop.

The proceeds from a so-called money crop should be available for the purchase of clothes and goods that cannot be produced at home, for the making of improvements and for investment.

The money spent for canned and dried fruits in any state of the South in one year would buy enough trees and vines to produce a larger amount of home grown fruit than would be needed for home consumption in ten years.

When more attention is given to making a living at home, then the money crop, whether cotton, live stock or something else, will really be a money crop, and the country will be prosperous.

Besides providing living at home, fruit is in itself a good money crop.

At Right—Box and vine of Haupt Blackberry,
the same every year. Grows on any soil.

A GARDEN.

A Garden is a lovesome thing, God wot;
 Rose plot,
 Fringed pool,
 Ferned Grot—
 The veriest school
 Of Peace; and yet the fool
 Contends that God is not.
 Not God, in Gardens when the eve is
 cool?

Nay, but I have a sign;
 'Tis very sure God walks in mine.
 —Thomas Edward Brown.

*It's sweet to walk out when the sun's brightly shining,
And sweet to sit down with my friends in the shade.
My homeyard abloom with vines that are twining
Is the best place, I know, that God ever made.*

—F. T. Ramsey

CARPENTER PEACH—One of our surest bearing varieties.

We pay express on \$5.00 orders in Texas and \$10.00 in the United States, guarantee arrival of trees in good condition, and replace at half of catalog price any trees that die the first year, if reasonably good care has been taken of them.
