OCT 24 2006

CATALOGING PREP

Abstract

Coulson, Jack R., compiler. 1994. Releases of Beneficial Organisms in the United States and Territories—1983. U.S. Department of Agriculture, Agricultural Research Service, ARS-131, 115 pp.

In 1983, well over 15 million individuals of at least 164 species of insect and mite parasites and predators (almost exclusively of foreign origin) were released against at least 76 insect and mite pests (also predominantly introduced species) in the United States and its territories. Also released that year were over 11 million individuals of 29 species of exotic natural enemies of 21 species of introduced weeds, 3 microbial pathogens, and 7 species of pollinators and other beneficial organisms. These releases (from either field collections or cultures of foreign origin) or recolonizations (from previously established populations in the United States) were made in 51 states, territories, and the District of Columbia. U.S. facilities shipped over 80 biological control agents and pollinators to foreign countries in 1983.

Keywords: Biological control, introductions, natural enemies, parasites (parasitoids), pollinators, predators, weed control agents.

This is the third annual report on the releases of introduced beneficial organisms in the United States and its territories for biological control of pests or for crop pollination. It is produced from the database Releases of Beneficial Organisms (ROBO) of the USDA-ARS Biological Control Documentation Center, BARC-West, Building 004, Beltsville, MD 20702; telephone (301) 504-6350. The report does not contain many details published in the first two reports, but those data and more detailed reports are available from the Center as photocopies or on diskette. The ROBO database can also produce computer reports of shipments sent or received; of releases from a facility, state, or territory; and of individual releases.

This report will probably be the last one published in this form since the information will be available in electronic formats in the future.

This report is reproduced essentially as supplied by the authors. It received minimal publications editing and design. The authors' views are their own and do not necessarily reflect those of the U.S. Department of Agriculture.

Mention of trade names or commercial products in this publication is solely for the purpose of providing specific information and does not imply recommendation or endorsement by the U.S. Department of Agriculture over others not mentioned.

While supplies last, single copies of this publication may be obtained at no cost from the USDA-ARS Biological Control Documentation Center, BARC-West, Building 004, Beltsville, MD 20705.

Copies of this publication may be purchased from the National Technical Information Service, 5285 Port Royal Road, Springfield, VA 22161; telephone (703) 487-4650.

The United States Department of Agriculture (USDA) prohibits discrimination in its programs on the basis of race, color, national origin, sex, religion, age, disability, political beliefs, and marital or familial status. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact the USDA Office of Communications at (202) 720-5881 (voice) or (202) 720-7808 (TDD).

To file a complaint, write the Secretary of Agriculture, U.S. Department of Agriculture, Washington, DC 20250, or call (202) 720-7327 (voice) or (202) 720-1127 (TDD). USDA is an equal employment opportunity employer.

Contents

Introduction	1
Abbreviations Used	4
Section I—Introduced Parasites and Predators Released in the U.S. and Territories	5
Part A—Arranged alphabetically by genus-species of released organism, state, county - complete record with notes	*
Part B—Target host/prey arranged alphabetically by class, order, family, genus, species, with alphabetical list of introduced beneficial species released against it	5
Section II—Introduced Weed Control Agents Released in the U.S. and Territories	19
Part A—Arranged alphabetically by genus-species of released organism, state, county - complete record with notes	*
Part B—Target host/prey arranged alphabetically by class, order, family, genus, species, with alphabetical list of introduced beneficial species released against it	19
Section III—Introduced Microbial Organisms Released in the U.S. and Territories	23
Section IV—Introduced Pollinators and Other Beneficial Species Released in the U.S. and Territories	25
Section V—Species of Introduced Beneficial Organisms (Excluding Plants) Released in the U.S. and Territories	31
Section VI—Releases of Introduced Beneficial Organisms by State/Territory and County	41
Section VII—Shipments of Beneficial Organisms from U.S. and Territorial Facilities to Foreign Countries	86

Section VIII—Participating Research and Action Agency Personnel	111
---	-----

Part A—Quarantine facilities, listed alphabetically by acronym, with addresses and quarantine officers	111

Releases of Beneficial Organisms in the United States and Territories--1983^{1/}

Compiled by Jack R. Coulson

Introduction

Biological control of pests can be improved by good management of data. The search for, collection, and importation of exotic natural enemies for release, establishment, and dispersal as biological control agents of pests in the United States and its Territories represent excellent opportunities, indeed an obligation, to collect and store valuable information of present and future scientific and regulatory interest. The critical need to compile such data for improving biological pest control is well recognized (Bottrell et al. 1976; USDA 1978; Battenfield 1983; Coulson 1992a). This type of information is of current and historical interest not only to biological control and integrated pest management scientists and administrators but also to systematists and ecologists. Unfortunately, detailed records of biological control attempts have often not been published, or even kept in many instances (Greathead 1986). Compilations of the results of these activities (for example, Clausen 1978) are usually based only on generally incomplete published information.

The introduction of living plant germplasm into the United States has long been well documented in a series of annual publications of the U.S. Department of Agriculture, the latest being for 1992 importations (Norris, [1993]), and by the computerized Germplasm Resources Information Network (GRIN) (Perry et al. 1988). This publication is the third of a series designed to similarly document the importation of other beneficial organisms into the United States and its

Territories. Similar reports, for 1981 and 1982, have been published (Coulson et al. 1988; Coulson 1992b; copies of the latter are still available). These present information (mostly otherwise unpublished) on one of the activities involved in importation programs, that is, the field or greenhouse release of introduced biological control agents and pollinators.

As indicated in the Table of Contents, this report does not contain the same details published in Coulson et al. (1988) and Coulson (1992b). Only summary information on releases (as given in Part B of Sections I and II, and Sections V, VI and IX of previous reports) are given here, together with Sections III, IV, and VII, listing releases of introduced microbial organisms, releases of introduced pollinators and other beneficials, and shipments to foreign countries in 1983, respectively. All or portions of the other, more detailed sections can be obtained upon request (as either a single photocopy or data on diskette in WordPerfect® or ASCII format) from the Biological Control Documentation Center. The following specialized Wang-produced reports can also be obtained:

1. annual reports of releases by State or facility,
2. detailed reports of individual releases,
3. annual reports of shipments or consignments from each domestic facility,
4. annual reports of materials received by State or facility,
5. detailed reports of individual shipments (quarantine and nonquarantine),
6. annual reports of shipments from each overseas or foreign facility,
7. annual reports of foreign shipments received by each domestic facility,
8. detailed reports of individual foreign or overseas shipments.

^{1/}Although the data on which this publication is based were collected in 1983, much of the information presented is not published elsewhere. These data are useful as scientific and historical records of the importation and release of exotic organisms in the United States and its Territories. Further details on these records can be obtained from the pertinent organizations listed in the unpublished section VIII of the complete report, a photocopy of which is available, or from the database. This book may be the last in which these data will be published in an annual format since such information for subsequent years will be readily available in electronic form from the ROBO data base.

Coulson is Director of the Biological Control Documentation Center, Insect Biocontrol Laboratory, Beltsville Agricultural Research Center, Beltsville, MD 20705.

Examples of individual release reports (item 2 in the preceding list) have been given in Coulson et al. (1988) and Coulson (1992b).

Brief descriptions of the ROBO data base and its development have been published (Coulson, 1987, 1992a, 1992b). The data base still resides on the Wang computer, but efforts are now underway to reprogram ROBO to run in Oracle on a Solbourne UNIX minicomputer via the Germplasm Resources Information Network (GRIN), which is accessible via the Internet. Publication of a detailed description of the data base is planned after reprogramming has been completed.

In the meantime, entry of 1984 importation and release data is underway on the Wang, which is expected to be the last use of the Wang system. After entry of 1984 records is complete, those data, together with all 1981, 1982 and 1983 data, completely updated as to nomenclatural changes and other new information, will be published on CD-ROM. Future ROBO reports will be available on line, but periodic publication of such comprehensive data on CD-ROM, and of core data such as contained in this book, is planned.

As noted in previous reports, this publication is modeled after the annual bulletin of releases of biological control organisms in Canada published since the 1930s. The most recent issue reports 1991 releases (Sarazin 1992).

Most of the data included in ROBO was provided by many of the research and other scientists and action agency personnel listed in unpublished section VIII, copies of which are available from the Documentation Center. The voluntary cooperation of those many contributors is greatly appreciated.

All scientific names in this publication have been verified by systematists of the Systematic Entomology Laboratory (SEL) and the Systematic Botany and Mycology Laboratory (SBML), ARS, Beltsville, MD. Their efforts are very much appreciated. The most current names for the organisms according to these specialists as of December 1993 have been used in this publication. The name under which the organism was originally imported or released is retained in the ROBO data base, and searches can be made using both original and current names. The higher classification system for arthropods is that used by SEL scientists. The system used for plants in section II is that of Cronquist (1981).

The scientific name in this book for the plant in the United States known as Russian thistle, *Salsola australis* R. Br. (= *S. iberica*, *S. pestifer*, or *S. kali* of authors), is in accordance with the opinion of J.H. Kirkbride, SBML (personal communication), based on Botschantzev (1974). The scientific name of the plant known as Dalmatian toadflax used in this report is *Linaria dalmatica* (L.) Mill. based on treatment by Sutton (1988). In regard to the name for musk or nodding thistle used in this report, we have returned to the use of, as in the 1981 report (Coulson et al., 1988), the subspecific epithet *Carduus nutans* subsp. *leiophyllus* (Petr.) Stoj. & Stef. (= *C. thoermeri* Weinm. *sensu* McCarty), in accordance with the treatment of Desrochers et al., 1988a,b, and rules of botanical nomenclature (J. H. Wiersema, SBML, pers. commun.); some of the insect releases against musk thistle (as *C. nutans* or *C. thoermeri*) in the eastern U.S. may have been made against *C. nutans* subsp. *nutans*, since those authors record that subspecies to be prevalent in eastern Canada. Though the scientific name *Euphorbia esula* L. is used for the weed known as "leafy spurge," it must be pointed out that the taxonomy of North American leafy spurge is still controversial among botanists, some of whom consider North American populations to be a complex of species and hybrids (Radcliffe-Smith 1985; Mahlberg et al. 1987; Crompton et al 1990; Holden and Mahlberg 1992). The scientific and common names of all plants recorded here agree with those used by the ARS Germplasm Resources Information Network (GRIN), as checked by J. H. Wiersema (SBML); author abbreviations are in accordance with Brummitt and Powell (1992), as used in the GRIN system.

Suggestions for citation in publications of release data from the ROBO data base were given in previous published ROBO reports (Coulson et al. 1988, Coulson 1992b), as were explanations of some of the data entries in parts A of sections I and II.

ROBO is a dynamic data base, capable of continual updating with new information. Therefore, readers are encouraged to notify the ARS Biological Control Documentation Center of (1) any errors found in this or previous ROBO reports, (2) additional or currently missing information as indicated by question marks, and (3) any changes to scientific names as a result of the publication of descriptions of species recorded here as "sp.," or otherwise incomplete names, or as a result of new taxonomic studies. Many of these kinds of corrections to earlier ROBO reports are reflected in the present publication. Comments can be addressed to the Biological Control Documentation Center, Bldg. 004, BARC-West, Beltsville, MD 20705.

ANNUAL REPORT OF INTRODUCED BENEFICIAL ORGANISMS RELEASED IN THE UNITED STATES AND TERRITORIES - 1983

SECTION I -INTRODUCED PARASITES AND PREDATORS RELEASED IN U.S. AND TERRITORIES - 1983

PART B - Target Host/Prey Arranged Alphabetically by Class, Order, Family, Genus, Species with Alphabetical List of Introduced Beneficial Species Released Against It; Followed by Summary of Target Host/Prey Arranged Alphabetically by Common Name

PHYLUM: ARTHROPODA

Class: Arachnida (Subclass Acari)

Order of Host/Prey: Acariformes

Family of Host/Prey: Tetranychidae

Host/Prey Genus, species, author: *Oligonychus punicae* (Hirst)

Common name of host/prey: avocado brown mite

Species Released: *Euseius fructicolus*

Euseius scutalis

Euseius sp. nr. *citrifolius*

Euseius vivax

Galendromus occidentalis

Iphiseius degenerans

Phytoseiulus macropilis

Typhlodromips sp. nr. *tunis*

Typhlodromus tiliae

Euseius quetzali

Euseius sp. nr. *concordis*

Euseius stipulatus

Galendromus annectens

Galendromus porresi

Neoseiulus californicus

Phytoseius hawaiiensis

Typhlodromus rickeri

Host/Prey Genus, species, author: *Panonychus citri* McGregor

Common name of host/prey: citrus red mite

Species Released: *Amblyseius limonicus*

Euseius fructicolus

Euseius quetzali

Euseius sp. nr. *concordis*

Euseius stipulatus

Galendromus annectens

Neoseiulus californicus

Typhlodromips sp. nr. *tunis*

Typhlodromus cornus

Typhlodromus tiliae

Euseius concordis

Euseius hibisci

Euseius scutalis

Euseius sp. nr. *citrifolius*

Euseius vivax

Galendromus porresi

Phytoseius hawaiiensis

Typhlodromips swirskii

Typhlodromus rickeri

Host/Prey Genus, species, author: *Tetranychus cinnabarinus* (Boisduval)

Common name of host/prey: carmine spider mite

Species Released: *Amblyseius longispinosus*

Neoseiulus californicus

Galendromus occidentalis

Scolothrips sexmaculatus

Host/Prey Genus, species, author: *Tetranychus urticae* Koch

Common name of host/prey: twospotted spider mite

Species Released: *Amblyseius* sp.

Scymnus sp.

Phytoseiulus persimilis

Order of Host/Prey: Diptera

Family of Host/Prey: Agromyzidae

Host/Prey Genus, species, author: *Liriomyza sativae* Blanchard

Common name of host/prey: vegetable leafminer

Species Released: *Chrysocharis caribea*

Chrysonotomyia punctiventris

Halticoptera circulus

Chrysocharis oscinidis

Ganaspidium utilis

Opius dissitus

Host/Prey Genus, species, author: *Liriomyza trifolii* (Burgess)

Common name of host/prey: leafminer

Species Released: *Chrysocharis caribea*

Chrysonotomyia punctiventris

Ganaspidium utilis

Opius dissitus

Chrysocharis oscinidis

Diglyphus begini

Halticoptera circulus

Family of Host/Prey: Muscidae

Host/Prey Genus, species, author: *Haematobia irritans* (Linnaeus)

Common name of host/prey: horn fly

Species Released: *Atholus maindronii*

[See also Section IV, p. 25, for releases of other beneficials against cattle dung & horn fly]

Host/Prey Genus, species, author: *Musca domestica* Linnaeus

Common name of host/prey: house fly

Species Released: *Atholus maindronii*

Muscidifurax zaraptor

Host/Prey Genus, species, author: *Stomoxys calcitrans* (Linnaeus)

Common name of host/prey: stable fly

Species Released: *Trichopria stomoxydis*

Family of Host/Prey: Tephritidae

Host/Prey Genus, species, author: *Anastrepha suspensa* (Loew)

Common name of host/prey: Caribbean fruit fly

Species Released: *Diachasmimorpha tryoni*

Psytalia incisi

Psytalia concolor

Host/Prey Genus, species, author: *Ceratitis capitata* (Wiedemann)

Common name of host/prey: Mediterranean fruit fly

Species Released: *Diachasmimorpha longicaudatas*

Steinernema carpocapsae

Peristenus stygicus

Host/Prey Genus, species, author: *Lygus hesperus* Knight

Common name of host/prey: western tarnished plant bug

Species Released: *Peristenus stygicus*

Host/Prey Genus, species, author: *Lygus lineolaris* (Palisot)

Common name of host/prey: tarnished plant bug

Species Released: *Peristenus digoneutis*

Peristenus stygicus

Host/Prey Genus, species, author: *Lygus* spp.

Common name of host/prey: plant bugs

Species Released: *Peristenus stygicus*

Family of Host/Prey: Pentatomidae

Host/Prey Genus, species, author: *Nezara viridula* (Linnaeus)

Common name of host/prey: southern green stink bug

Species Released: *Telenomus chloropus*

Trichopoda pilipes

Trissolcus basalis

ANNUAL REPORT OF INTRODUCED BENEFICIAL ORGANISMS RELEASED IN THE UNITED STATES AND TERRITORIES - 1983

SECTION I -INTRODUCED PARASITES AND PREDATORS RELEASED IN U.S. AND TERRITORIES - 1983

PART B - Target Host/Prey Arranged Alphabetically by Class, Order, Family, Genus, Species with Alphabetical List of Introduced Beneficial Species Released Against It; Followed by Summary of Target Host/Prey Arranged Alphabetically by Common Name

Order of Host/Prey: Homoptera

Family of Host/Prey: Aleyrodidae

Host/Prey Genus, species, author: Aleurocanthus spiniferus (Quaintance)

Common name of host/prey: orange spiny whitefly

Species Released: Encarsia smithi

Host/Prey Genus, species, author: Aleurodicus dispersus Russell

Common name of host/prey: spiraling whitefly

Species Released: Delphastus pusillus

Encarsia sp.

Nephaspis oculata

Encarsia ?haitiensis

Nephaspis bicolor

Host/Prey Genus, species, author: Aleurothrixus floccosus (Maskell)

Common name of host/prey: woolly whitefly

Species Released: Eretmocerus sp.

Host/Prey Genus, species, author: Dialeurodes citri (Ashmead)

Common name of host/prey: citrus whitefly

Species Released: Encarsia lahorensis

Host/Prey Genus, species, author: Parabemisia myricae (Kuwana)

Common name of host/prey: Japanese bayberry whitefly

Species Released: Encarsia n. sp. I Förster

Eretmocerus n. sp. Haldeman

Encarsia n. sp.

Host/Prey Genus, species, author: Trialeurodes vaporariorum (Westwood)

Common name of host/prey: greenhouse whitefly

Species Released: Encarsia formosa

Family of Host/Prey: Aphididae

Host/Prey Genus, species, author: Acyrthosiphon kondoi Shinji

Common name of host/prey: blue alfalfa aphid

Species Released: Aphidius eadyi

Aphidius smithi

Aphidius ervi

Host/Prey Genus, species, author: Acyrthosiphon pisum (Harris)

Common name of host/prey: pea aphid

Species Released: Aphidius ervi

Ephedrus plagiator

ANNUAL REPORT OF INTRODUCED BENEFICIAL ORGANISMS RELEASED IN THE UNITED STATES AND TERRITORIES - 1983

SECTION I -INTRODUCED PARASITES AND PREDATORS RELEASED IN U.S. AND TERRITORIES - 1983

PART B - Target Host/Prey Arranged Alphabetically by Class, Order, Family, Genus, Species with Alphabetical List of Introduced Beneficial Species Released Against It; Followed by Summary of Target Host/Prey Arranged Alphabetically by Common Name

Family of Host/Prey: Aphididae (continued)

Host/Prey Genus, species, author: *Callaphis juglandis* (Goeze)

Common name of host/prey: large walnut aphid

Species Released: *Praon callaphis*

Host/Prey Genus, species, author: *Schizaphis graminum* (Rondani)

Common name of host/prey: greenbug

Species Released: *Aphidius colemani*

Hippodamia variegata

Ephedrus plagiator

Lioadalia flavomaculata

Host/Prey Genus, species, author: *Tinocallis platani* (Kaltenbach)

Common name of host/prey:

Species Released: *Trioxys tenuicaudus*

Host/Prey Genus, species, author: aphids

Common name of host/prey: --

Species Released: *Coccinella septempunctata*

Harmonia axyridis

Host/Prey Genus, species, author: aphids, pecan

Common name of host/prey: --

Species Released: *Harmonia axyridis*

Family of Host/Prey: Cicadellidae

Host/Prey Genus, species, author: *Empoasca fabae* (Harris)

Common name of host/prey: potato leafhopper

Species Released: *Anagrus empoascae*

Anagrus giraulti

Stethynium empoascae

Anagrus flaveolus

Arescon enocki

Family of Host/Prey: Coccidae

Host/Prey Genus, species, author: *Pulvinaria delottoi* Gill

Common name of host/prey: --

Species Released: *Exochomus flavipes*

Metaphycus funicularis

Hyperaspis senegalensis hottentota

Metaphycus stramineus

Host/Prey Genus, species, author: *Pulvinaria mesembryanthemi* (Vallot)

Common name of host/prey: ice plant scale

Species Released: *Encyrtus saliens*

Hyperaspis senegalensis hottentota

Metaphycus stramineus

Exochomus flavipes

Metaphycus funicularis

ANNUAL REPORT OF INTRODUCED BENEFICIAL ORGANISMS RELEASED IN THE UNITED STATES AND TERRITORIES - 1983

SECTION I -INTRODUCED PARASITES AND PREDATORS RELEASED IN U.S. AND TERRITORIES - 1983

PART B - Target Host/Prey Arranged Alphabetically by Class, Order, Family, Genus, Species with Alphabetical List of Introduced Beneficial Species Released Against It; Followed by Summary of Target Host/Prey Arranged Alphabetically by Common Name

Family of Host/Prey: Coccidae (continued)

Host/Prey Genus, species, author: Saissetia oleae (Olivier)

Common name of host/prey: black scale

Species Released: Aloencyrtus saissetiae

Coccophagus rusti

Prococcophagus saissetiae

Family of Host/Prey: Delphacidae

Host/Prey Genus, species, author: Perkinsiella saccharicida Kirkaldy

Common name of host/prey: sugarcane delphacid

Species Released: Tytthus mundulus

Family of Host/Prey: Diaspididae

Host/Prey Genus, species, author: Pseudaulacaspis prunicola (Maskell)

Common name of host/prey: --

Species Released: Arrhenophagus albitibiae

Host/Prey Genus, species, author: Unaspis euonymi (Comstock)

Common name of host/prey: euonymus scale

Species Released: Cybocephalus nipponicus

Encarsia citrina

Encarsia fasciata

Pteroptrix n. sp.

Family of Host/Prey: Margarodidae

Host/Prey Genus, species, author: Matsucoccus resinosae Bean & Godwin

Common name of host/prey: red pine scale

Species Released: Harmonia axyridis

Family of Host/Prey: Psyllidae

Host/Prey Genus, species, author: Cacopsylla pyricola (Förster)

Common name of host/prey: pear psylla

Species Released: Anthocoris nemorum

Chrysoperla carnea

Menochilus sexmaculatus

Prionomitus mitratus

Order of Host/Prey: Lepidoptera

Family of Host/Prey:

Host/Prey Genus, species, author: potential alternate lepidopterous hosts

Common name of host/prey:

Species Released: Compsilura concinnata

Meteorus pulchricornis

ANNUAL REPORT OF INTRODUCED BENEFICIAL ORGANISMS RELEASED IN THE UNITED STATES AND TERRITORIES - 1983

SECTION I -INTRODUCED PARASITES AND PREDATORS RELEASED IN U.S. AND TERRITORIES - 1983

PART B - Target Host/Prey Arranged Alphabetically by Class, Order, Family, Genus, Species with Alphabetical List of Introduced Beneficial Species Released Against It; Followed by Summary of Target Host/Prey Arranged Alphabetically by Common Name

Family of Host/Prey: Arctiidae

Host/Prey Genus, species, author: Hyphantria cunea (Drury)

Common name of host/prey: fall webworm

Species Released: Aleiodes lymantriae

Brachymeria lasus

Brachymeria intermedia

Pimpla disparis

Family of Host/Prey: Coleophoridae

Host/Prey Genus, species, author: Coleophora laricella (Hübner)

Common name of host/prey: larch casebearer

Species Released: Diadegma laricinellum

Family of Host/Prey: Crambidae

Host/Prey Genus, species, author: Eoreuma loftini (Dyar)

Common name of host/prey: Mexican rice borer

Species Released: Allorhogas pyralophagus

Rhaconotus roslinensis

Pediobius furvus

Family of Host/Prey: Gelechiidae

Host/Prey Genus, species, author: Keiferia lycopersicella (Walsingham)

Common name of host/prey: tomato pinworm

Species Released: Campoplex n. sp.

Host/Prey Genus, species, author: Pectinophora gossypiella (Saunders)

Common name of host/prey: pink bollworm

Species Released: Goniozus legneri

Habrobracon gelechiae

Family of Host/Prey: Gracillariidae

Host/Prey Genus, species, author: Phyllonorycter blancardella (Fabricius)

Common name of host/prey: spotted tentiform leafminer

Species Released: Pholatesor pedias

Host/Prey Genus, species, author: Phyllonorycter crataegella (Clemens)

Common name of host/prey: apple blotch leafminer

Species Released: Pholatesor pedias

ANNUAL REPORT OF INTRODUCED BENEFICIAL ORGANISMS RELEASED IN THE UNITED STATES AND TERRITORIES - 1983

Family of Host/Prey: Lymantriidae

Host/Prey Genus, species, author: *Lymantria dispar* (Linnaeus)

Common name of host/prey: gypsy moth

Species Released: *Aleiodes lymantriae*

Compsilura concinnata

Glyptapanteles flavicoxis

Hyposoter lymantriae

Steinernema feltiae

Anastatus disparis

Cotesia melanoscelus

Glyptapanteles indiensis

Meteorus pulchricornis

Family of Host/Prey: Noctuidae

Host/Prey Genus, species, author: *Anticarsia gemmatalis* Hübner

Common name of host/prey: velvetbean caterpillar

Species Released: *Microcharops anticarsiae*

Zelomorpha sp.

Host/Prey Genus, species, author: *Helicoverpa zea* (Boddie)

Common name of host/prey: corn earworm, bollworm

Species Released: *Microplitis demolitor*

Trichogramma pretiosum

Host/Prey Genus, species, author: *Heliothis virescens* (Fabricius)

Common name of host/prey: tobacco budworm

Species Released: *Microplitis demolitor*

Trichogramma pretiosum

Palexorista laxa

Host/Prey Genus, species, author: *Pseudoplusia includens* (Walker)

Common name of host/prey: soybean looper

Species Released: *Cotesia ruficrus*

Host/Prey Genus, species, author: *Spodoptera exigua* (Hübner)

Common name of host/prey: beet armyworm

Species Released: *Telenomus solitus*

Host/Prey Genus, species, author: *Spodoptera frugiperda* (J.E.Smith)

Common name of host/prey: fall armyworm

Species Released: *Microplitis rufiventris*

Family of Host/Prey: Pieridae

Host/Prey Genus, species, author: *Pieris rapae* (Linnaeus)

Common name of host/prey: imported cabbageworm

Species Released: *Cotesia rubecula*

Hyposoter ebeninus

Family of Host/Prey: Plutellidae

Host/Prey Genus, species, author: *Plutella xylostella* (Linnaeus)

Common name of host/prey: diamondback moth

Species Released: *Cotesia plutellae*

Diadromus collaris

Family of Host/Prey: Pyralidae

Host/Prey Genus, species, author: *Amyelois transitella* (Walker)

Common name of host/prey: navel orangeworm

Species Released: *Goniozus legneri*

Scambus simulator

Trichogrammatoidea annulata

Host/Prey Genus, species, author: *Ectomyelois ceratoniae* (Zeller)

Common name of host/prey: carob moth

Species Released: *Goniozus legneri*

Family of Host/Prey: Saturniidae

Host/Prey Genus, species, author: *Hemileuca oliviae* Cockerell

Common name of host/prey: range caterpillar

Species Released: *Brachymeria intermedia*

Brachymeria lasus

Pimpla disparis

Family of Host/Prey: Tortricidae

Host/Prey Genus, species, author: *Choristoneura fumiferana* (Clemens)

Common name of host/prey: spruce budworm

Species Released: *Ancistrocerus catskill*

Ancistrocerus tuberculocephalus

Euodynerus hidalgo

Euodynerus leucomelas

Host/Prey Genus, species, author: *Cydia pomonella* (Linnaeus)

Common name of host/prey: codling moth

Species Released: *Trichogrammatoidea annulata*

Host/Prey Genus, species, author: *Rhyacionia frustrana* (Comstock)

Common name of host/prey: Nantucket pine tip moth

Species Released: *Campoplex frustranae*

Family of Host/Prey: Zygaenidae

Host/Prey Genus, species, author: *Harrisina brillians* Barnes & McDunnough

Common name of host/prey: western grapeleaf skeletonizer

Species Released: *Ametadoria misella*

Glyptapanteles harrisinae

PART B - Target Host Arranged Alphabetically by Class, Order, Family, Genus, Species with Alphabetical List of Introduced Beneficial Species Released Against It; Followed by Summary of Target Hosts Arranged Alphabetically by Common Name

Class: Liliopsida

Order of Host: Liliales

Family of Host: Pontederiaceae

Host Genus, species, author: Eichhornia crassipes (Mart.) Solms

Common name of host: waterhyacinth

Species Released: Neochetina bruchi

Neochetina eichhorniae

Sameodes albiguttalis

Class: Magnoliopsida

Order of Host: Asterales

Family of Host: Asteraceae

Host Genus, species, author: Carduus acanthoides L.

Common name of host: plumeless thistle

Species Released: Rhinocyllus conicus

Trichosirocalus horridus

Host Genus, species, author: Carduus nutans leiophyllus (Petr.) Stoj. & Stef.

Common name of host: musk/nodding thistle

Species Released: Rhinocyllus conicus

Trichosirocalus horridus

Host Genus, species, author: Carduus pycnocephalus L.

Common name of host: Italian thistle

Species Released: Rhinocyllus conicus

Host Genus, species, author: Centaurea diffusa Lam.

Common name of host: diffuse knapweed

Species Released: Sphenoptera jugoslavica

Urophora affinis

Urophora quadrifasciata

Host Genus, species, author: Centaurea maculosa Lam.

Common name of host: spotted knapweed

Species Released: Metzneria paucipunctella

Urophora affinis

Urophora quadrifasciata

Host Genus, species, author: Chondrilla juncea L.

Common name of host: rush skeletonweed

Species Released: Aceria chondrillae

[See also Section III, p. 19, for releases of introduced microbial organism against this species]

ANNUAL REPORT OF INTRODUCED BENEFICIAL ORGANISMS RELEASED IN THE UNITED STATES AND TERRITORIES - 1983

PART B - Target Host Arranged Alphabetically by Class, Order, Family, Genus, Species with Alphabetical List of Introduced Beneficial Species Released Against It;
Followed by Summary of Target Hosts Arranged Alphabetically by Common Name

Family of Host: Asteraceae (continued)

Host Genus, species, author: *Cirsium arvense* (L.) Scop.

Common name of host: Canada thistle

Species Released: *Hadroplontus litura*

Urophora cardui

Host Genus, species, author: *Cirsium vulgare* (Savi) Ten.

Common name of host: bull thistle

Species Released: *Urophora stylata*

Host Genus, species, author: *Senecio jacobaea* L.

Common name of host: tansy ragwort

Species Released: *Botanophila seneciella*

Longitarsus jacobaeae

Tyria jacobaeae

Host Genus, species, author: *Silybum marianum* (L.) Gaertn.

Common name of host: milk thistle

Species Released: *Rhinocyllus conicus*

Order of Host: Caryophyllales

Family of Host: Amaranthaceae

Host Genus, species, author: *Alternanthera philoxeroides* (C. Mart.) Griseb.

Common name of host: alligatorweed

Species Released: *Agasicles hygrophila*

Amynothrips andersoni

Host Genus, species, author: *Salsola australis* R. Br.

Common name of host: Russian thistle

Species Released: *Coleophora klimeschiella*

Order of Host: Euphorbiales

Family of Host: Euphorbiaceae

Host Genus, species, author: *Euphorbia cyparissias* L.

Common name of host: cypress spurge

Species Released: *Hyles euphorbiae*

Host Genus, species, author: *Euphorbia esula* L.

Common name of host: leafy spurge

Species Released: *Hyles euphorbiae*

Oberea erythrocephala

ANNUAL REPORT OF INTRODUCED BENEFICIAL ORGANISMS RELEASED IN THE UNITED STATES AND TERRITORIES - 1983
SECTION III - LIST OF INTRODUCED MICROBIAL ORGANISMS RELEASED IN U.S. AND TERRITORIES - 1983
Arranged Alphabetically by Genus-species of Released Organism, State, County

NOTES

078 Inoculum (isolate CIP-1) released on wheat seed, in some plots with the bacterium Pasteuria penetrans (Thorne) Sayre. See Dube, B, and G C Smart, Jour. Nematol. 19: 222-227, 1987.

125 Approximately 8 billion spores were released in the 4 counties (7 billion in Spokane County), teste G L Piper, WASU.

129 Information from I Schreiner, 1989 (Haw. Entomol. Soc. Proc. 29: 57-69), and D M Nafus, GUUG, pers. commun., 1993.

	range caterpillar, Hemileuca oliviae
Family: Diapriidae	
Trichopria stomoxydis Huggert PA	stable fly, Stomoxys calcitrans

ANNUAL REPORT OF INTRODUCED BENEFICIAL ORGANISMS RELEASED IN THE UNITED STATES AND TERRITORIES - 1983

SECTION V - SPECIES OF INTRODUCED BENEFICIAL ORGANISMS (EXCLUDING PLANTS) RELEASED IN U.S. AND TERRITORIES - 1983

Arranged Alphabetically by Class, Order, Family, Genus, Species, with Type of Organism and Target Species

Beneficial Organisms	Targets (Common name, Genus, Species)
Family: Encyrtidae	
Aloencyrtus saissetiae (Compere) PA	black scale, Saissetia oleae
Arrhenophagus albitibiae Girault PA	--, Pseudaulacaspis prunicola
Cerchysiella utilis (Noyes) PA	driedfruit beetle, Carpophilus hemipterus
Comperia merceti (Compere) PA	pineapple souring beetle, Carpophilus humeralis
Encyrtus saliens Prinsloo & Annecke PA	brownbanded cockroach, Supella longipalpa
Metaphycus funicularis Annecke PA	ice plant scale, Pulvinaria mesembryanthemi
	ice plant scale, Pulvinaria mesembryanthemi
	--, Pulvinaria delottoi
Metaphycus stramineus (Compere) PA	ice plant scale, Pulvinaria mesembryanthemi
	--, Pulvinaria delottoi
Prionomitus mitratus (Dalman) PA	pear psylla, Cacopsylla pyricola
Family: Eucoilidae	
Ganaspidium utilis Beardsley PA	leafminer, Liriomyza trifolii
	vegetable leafminer, Liriomyza sativae
Family: Eulophidae	
Chrysocharis caribea Bouček PA	leafminer, Liriomyza trifolii sativae
	vegetable leafminer, Liriomyza
Chrysocharis oscinidis Ashmead PA	leafminer, Liriomyza trifolii
	vegetable leafminer, Liriomyza sativae
Chrysonotomyia punctiventris (Crawford) PA	leafminer, Liriomyza trifolii
	vegetable leafminer, Liriomyza sativae
Diglyphus begini (Ashmead) PA	leafminer, Liriomyza trifolii
Edovum puttleri Grissell PA	Colorado potato beetle, Leptinotarsa decemlineata
Goetheana parvipennis (Gahan) PA	greenhouse thrips, Heliothrips haemorrhoidalis
Oomyzus gallerucae (Fonscolombe) PA	elm leaf beetle, Xanthogaleruca luteola
Oomyzus incertus (Ratzeburg) PA	alfalfa weevil, Hypera postica
Pediobius foveolatus (Crawford) PA	Mexican bean beetle, Epilachna varivestis
Pediobius furvus (Gahan) PA	Mexican riceborer, Eoreuma loftini
Tetrastichus coeruleus (Nees) PA	asparagus beetle, Crioceris asparagi
Tetrastichus crioceridis Graham PA	asparagus beetle, Crioceris asparagi
	spotted asparagus beetle, Crioceris duodecimpunctata
	--, Crioceris spp.
Tetrastichus julis (Walker) PA	cereal leaf beetle, Oulema melanopus
Family: Eupelmidae	
Anastatus disparis Ruschka PA	gypsy moth, Lymantria dispar

ANNUAL REPORT OF INTRODUCED BENEFICIAL ORGANISMS RELEASED IN THE UNITED STATES AND TERRITORIES - 1983
SECTION V - SPECIES OF INTRODUCED BENEFICIAL ORGANISMS (EXCLUDING PLANTS) RELEASED IN U.S. AND TERRITORIES - 1983
Arranged Alphabetically by Class, Order, Family, Genus, Species, with Type of Organism and Target Species

Beneficial Organisms	Targets (Common name, Genus, Species)
Family: Ichneumonidae	
Bathyplectes anurus (Thomson) PA	alfalfa weevil, <i>Hypera postica</i> Egyptian alfalfa weevil, <i>Hypera brunnipennis</i>
Bathyplectes curculionis (Thomson) PA	alfalfa weevil, <i>Hypera postica</i>
Bathyplectes stenostigma (Thomson) PA	alfalfa weevil, <i>Hypera postica</i>
Campoplex frustranae Cushman PA	Nantucket pine tip moth, <i>Rhyacionia frustrana</i>
Campoplex n. sp. PA	tomato pinworm, <i>Keiferia lycopersicella</i>
Diadegma laricinellum (Strobl) PA	larch casebearer, <i>Coleophora laricella</i>
Diadromus collaris (Gravenhorst) PA	diamondback moth, <i>Plutella xylostella</i>
Diaparsis temporalis Horstmann PA	cereal leaf beetle, <i>Oulema melanopus</i>
Hyposoter ebeninus (Gravenhorst) PA	imported cabbageworm, <i>Pieris rapae</i>
Hyposoter lymantriae Cushman PA	gypsy moth, <i>Lymantria dispar</i>
Lemophagus crioceritor Aubert PA	asparagus beetle, <i>Crioceris asparagi</i>
Lemophagus curtus Townes PA	cereal leaf beetle, <i>Oulema melanopus</i>
Microcharops anticarsiae Gupta PA	velvetbean caterpillar, <i>Anticarsia gemmatalis</i>
Pimpla disparis Viereck PA	fall webworm, <i>Hyphantria cunea</i>
Scambus simulator Gupta & Tikar PA	range caterpillar, <i>Hemileuca oliviae</i> navel orangeworm, <i>Amyelois transitella</i>
Family: Megachilidae	
Chalicodoma nigripes (Spinola) PO	see Section IV
Osmia cornifrons (Radoszkowski) PO	see Section IV
Osmia cornuta Latreille PO	see Section IV
Family: Mymaridae	
Anagrus empoascae Dozier PA	potato leafhopper, <i>Empoasca fabae</i>
Anagrus flaveolus Waterhouse PA	potato leafhopper, <i>Empoasca fabae</i>
Anagrus giraulti Crawford PA	potato leafhopper, <i>Empoasca fabae</i>
Arescon enocki (Subba Rao & Kaur) PA	potato leafhopper, <i>Empoasca fabae</i>
Stethynium empoascae Subba Rao PA	alfalfa weevil, <i>Hypera postica</i> potato leafhopper, <i>Empoasca fabae</i>
Family: Pteromalidae	
Catolaccus grandis (Burks) PA	boll weevil, <i>Anthonomus grandis</i>
Dibrachoides dynastes (Förster) PA	alfalfa weevil, <i>Hypera postica</i>
Halticoptera circulus (Walker) PA	leafminer, <i>Liriomyza trifolii</i>
Muscidifurax zaraptor Kogan & Legner PA	vegetable leafminer, <i>Liriomyza sativae</i> house fly, <i>Musca domestica</i>

ANNUAL REPORT OF INTRODUCED BENEFICIAL ORGANISMS RELEASED IN THE UNITED STATES AND TERRITORIES - 1983

SECTION V - SPECIES OF INTRODUCED BENEFICIAL ORGANISMS (EXCLUDING PLANTS) RELEASED IN U.S. AND TERRITORIES - 1983

Arranged Alphabetically by Class, Order, Family, Genus, Species, with Type of Organism and Target Species

Beneficial Organisms	Targets (Common name, Genus, Species)
Family: Scelionidae	
Telenomus chloropus Thomson PA	southern green stinkbug, Nezara viridula
Telenomus solitus Johnson PA	beet armyworm, Spodoptera exigua
Trissolcus basalis (Wollaston) PA	southern green stinkbug, Nezara viridula
Family: Sphecidae	
Larra bicolor Fabricius PA	southern mole cricket, Scapteriscus borellii
	tawny mole cricket, Scapteriscus vicinus
Family: Trichogrammatidae	
Trichogramma pretiosum Riley PA	corn earworm, bollworm, Helicoverpa zea
	tobacco budworm, Heliothis virescens
Trichogrammatoidea annulata DeSantis PA	codling moth, Cydia pomonella
	navel orangeworm, Amyelois transitella
Family: Vespidae	
Ancistrocerus catskill (Saussure) PR	spruce budworm, Choristoneura fumiferana
Ancistrocerus tuberculocephalus (Saussure) PR	spruce budworm, Choristoneura fumiferana
Euodynerus hidalgo (Saussure) PR	spruce budworm, Choristoneura fumiferana
Euodynerus leucomelas (Saussure) PR	spruce budworm, Choristoneura fumiferana
Order: Lepidoptera	
Family: Arctiidae	
Tyria jacobaeae (Linnaeus) WE	tansy ragwort, Senecio jacobaea
Family: Coleophoridae	
Coleophora klimeschiella Toll WE	Russian thistle, Salsola australis
Family: Crambidae	
Sameodes albiguttalis (Warren) WE	waterhyacinth, Eichhornia crassipes
Family: Gelechiidae	
Metzneria paucipunctella Zeller WE	spotted knapweed, Centaurea maculosa
Family: Noctuidae	
Calophasia lunula (Hufnagel) WE	Dalmatian toadflax, Linaria dalmatica
	yellow toadflax, Linaria vulgaris
Family: Sphingidae	
Hyles euphorbiae (Linnaeus) WE	leafy spurge, Euphorbia esula
	cypress spurge, Euphorbia cyparissias

ANNUAL REPORT OF INTRODUCED BENEFICIAL ORGANISMS RELEASED IN THE UNITED STATES AND TERRITORIES - 1983
SECTION V - SPECIES OF INTRODUCED BENEFICIAL ORGANISMS (EXCLUDING PLANTS) RELEASED IN U.S. AND TERRITORIES - 1983
Arranged Alphabetically by Class, Order, Family, Genus, Species, with Type of Organism and Target Species

Beneficial Organisms	Targets (Common name, Genus, Species)
Order: Neuroptera Family: Chrysopidae Chrysoperla carnea (Stephens) PR	pear psylla, Cacopsylla pyricola
Order: Thysanoptera Family: Phlaeothripidae Amynothrips andersoni O'Neill WE	alligatorweed, Alternanthera philoxeroides
Family: Thripidae Scolothrips sexmaculatus (Pergande) PR	carmine spider mite, Tetranychus cinnabarinus
MICROBIAL ORGANISMS	
Insect Viruses Family: Baculoviridae Oryctes rhinoceros NOV	see Section III
Fungi	
Class: Basidiomycetes	
Order: Uredinales Family: Pucciniaceae Puccinia chondrillina Bubak & Sydenham MI	see Section III
Class: Hyphomycetes	
Order: Moniliales Family: Paecilomyces lilacinus (Thom) Samson MI	see Section III

ANNUAL REPORT OF INTRODUCED BENEFICIAL ORGANISMS RELEASED IN THE UNITED STATES AND TERRITORIES - 1983
SECTION VI - RELEASES OF INTRODUCED BENEFICIAL ORGANISMS BY STATE/TERRITORY AND COUNTY - 1983
Each County Followed by List of Released Organisms Alphabetized by Genus-species, with Type of Organism

State: AK

County: South Central

Arranged Alphabetically by Genus-species of Organism Shipped

NOTES

137 Data are not available on actual parasite species shipped by UGA to Australia in 1983. The following were sent from Georgia in 1982-86: Roptrocercus xylophagorum (Ratzeburg), Dendrosoter sulcatus Muesebeck, Spathius pallidus Ashmead, Eurytoma conica Provancher, Coeloides pissodis (Ashmead) & Heterospilus sp. (see Berisford, C L, & D L Dahlsten, 1989; cited in Note 138).

138 Data are not available on actual predator species shipped by UGA to Australia in 1983. The following were sent from Georgia in 1982-86: Thanasimus dubius (Fabricius) (Col.: Cleridae) & Temnochila virescens (Fabricius) (Col.: Trogositidae) (see Berisford & Dahlsten, pp. 81-93 in Kulhavy, D L, & M C Miller, "Potential for Biological Control ... Bark Beetles," 1989.)

139 No species are recorded as sent from California to Australia in 1983. However, with the 2 species recorded as shipped by UCB in the 1982 ROBO Rpt., a third species, Coeloides sympitys Mason, was also sent in 1982 (now recorded as UCB-DLD-83-0013 in the ROBO database), teste D L Dahlsten, UCB, 1992.

157 Original host for ARSEF #326 was originally reported as "rice stem borer," and later assumed to be Chilo plejadellus. A 1979 report from R. S. Soper lists original host of RS 326 as Nilaparvata lugens.

ANNUAL REPORT OF INTRODUCED BENEFICIAL ORGANISMS RELEASED IN THE UNITED STATES AND TERRITORIES - 1983

SECTION VIII - PARTICIPATING RESEARCH AND ACTION AGENCY PERSONNEL - 1983

PART A - Quarantine Facilities, Listed Alphabetically by acronym, with Addresses and Quarantine Officers

1. BBSL	Bee Biology and Systematics Lab ARS, USDA Utah State University Logan UT 84322 USA	D F Viers, Quarantine Officer
2. BCIRL	Biological Control of Insects Res Lab ARS, USDA Research Park, P.O. Box A Columbia MO 65205 USA	B Puttler, Quarantine Officer
3. BCWRL	Biological Control of Weeds Research Lab ARS, USDA 1050 San Pablo Ave Albany CA 94706 USA	A H Krueger, Quarantine Officer
4. BIIL-PPQ	Plant Germplasm Quarantine Center APHIS-PPQ, USDA (c/o BIIL) Bldg. 320, BARC-East Beltsville MD 20705 USA	c/o S W T Batra, BIIL
5. BIRL	Beneficial Insects Research Laboratory ARS, USDA 501 South Chapel Street Newark DE 19713 USA	L R Ertle, Quarantine Officer
6. FBCL	Florida Biological Control Laboratory Division of Plant Industry, FDACS P.O. Box 1269 Gainesville FL 32602 USA	C A Bennett, Quarantine Officer
7. GSWRL	Grassland, Soil and Water Research Lab ARS, USDA P.O. Box 748 Temple TX 76501 USA	P E Boldt, Quarantine Officer
8. HDA	Hawaii Department of Agriculture 1428 South King Street Honolulu, Oahu HI 96814 USA	G Y Funasaki, Quarantine Officer
9. IPRU	Insect Pathology Research Unit (& ARSEF) ARS, USDA c/o Boyce Thompson Inst. Cornell Univ Ithaca NY 14853 USA	R A Humber, Quarantine Officer
10. PDRL	Plant Disease Research Laboratory ARS, USDA P.O. Box 1209 Frederick MD 21701 USA	W L Bruckart, Quarantine Officer
11. SRQF	Stoneville Research Quarantine Facility ARS, USDA P.O. Box 225 Stoneville MS 38776 USA	W W Harrison, Quarantine Officer
12. TAMU	Texas A&M University Department of Entomology College Station TX 77843 USA	J P Cuda/M J Rose, Quarantine Officers
13. UCB	University of California, Berkeley Division of Biological Control Department of Entomology Albany CA 94706 USA	J Hamai, Quarantine Officer

ANNUAL REPORT OF INTRODUCED BENEFICIAL ORGANISMS RELEASED IN THE UNITED STATES AND TERRITORIES - 1983
SECTION IX - SUMMARY INFORMATION - 1983

	<u>Total Number of Species Released</u>	<u>Total Number of Specimens Released</u>	<u>Total Number of Hosts/Prey Released Against</u>	<u>Total Number States/Terr. Releases Made</u>	<u>Total Number of Counties Releases Made</u>
Parasites	117	14,672,691e+	70	45	809
Predators	47	571,934e+	16	14	34
Weed Control Agents	29	11,896,081e+	21	22	149
Microbial Agents	3	N/A	3	3	6
Pollinators	3	13,749e	N/A	19	32
Other Beneficial Species	4	2,708	N/A	1	3
Grand Totals	203	27,157,163e+	99	51	924

+ = Some records with unknown release amounts

NOTE: Some parasites and predators were released against the same hosts/prey and therefore the grand total is not a sum of the figures in that column. Similarly, several kinds of beneficial organisms were released in the same States/Territories and counties, and the grand totals are not the sums of the figures in those columns.
