PLANT MAYO FRUITING AGE

No long, needless waiting. No danger of losing weak, young trees through frost, disease or insect pests. Mayo's fruit trees come full fledged and ready to pay their way in the orchard row.

There is a big responsibility and great possibility of loss and disappointment in trying to develop one or two year trees into a profitable orchard.

In the first place, it would be expensive to tie up your land for developing very young trees on the basis of from 40 to 80 trees to the acre when such development can be carried on in the Nursery row with several thousand thriving young trees to the acre.

Mayo's fruit trees are started under the most favorable conditions. Extra rich nursery soil, impractical in the regular orchard, supplies the nourishment for quick growth and rapid development. This gives the young tree a well-balanced vitality that pays big dividends later on in extra quality fruit.

Mayo's young fruit trees are watched and cared for by experienced nurserymen. They are transplanted for stronger root growth, sprayed, cultivated and brought to fruiting age in better condition and at less expense than they could be developed in any grower's orchard.

Planting such trees means rich, juicy fruit without years of waiting, and in a quantity that will give it a place on the family bill of fare. If given ordinary care and attention these trees will produce the finest and best type of Apples for you on your home grounds.

Make sure of profitable results by setting out Mayo's big early-to-bear apple trees that will soon fill your barrels with the kind of fruit that doesn't go to the cider mill.

The Baldwin is king among apples in this part of the country. It is a regular and heavy cropper of excellent flavor, always in big demand for its keeping and shipping qualities.

BALDWIN

TREES FOR QUICK RESULTS

Big, healthy, weather-hardened fruit trees, seven to nine feet tall. Heavily rooted and beautifully branched, with well developed fruit spurs ready to yield full sized, juicy fruit in the quickest possible time.

All our fruit trees are weather-hardened in Monroe County's famous fruit belt. Zero and colder in the winter that builds an immunity against frost. Warm, life giving sunshine in the summertime, drenching dew, just the right amount of rainfall and balmy, humid air from old Ontario. A soil incomparable for giving young trees a strength and hardiness that makes sure of vigorous, rapid growth when transplanted to a less favored soil or location.

You'll find that it will be cheaper in the end to pay a little more for Mayo's big, Early-to-bear trees when setting out an orchard. You save four or five years of needless waiting. You get strong, vitalized trees that will delight you the moment they arrive. Not weazened little whips but well developed trees that will give you, as soon as set out, a fine orchard, the wonder of your neighbors and a source of pride and profit to yourself.

These trees are grown to make sure that they can be transplanted successfully without setback to their growing and bearing power. By our method of transplanting in the Nursery, heavy, fibrous roots are formed, the wood is hardened and fruit spurs started. This means that you get a tree true to name, trained and developed to take hold at once in any location, a tree that is far superior in vigor and fruitfulness than any little one or two year old tree that is set out with high hopes and little else in the average orchard.

A slender branch of a healthy, young apple tree well laden with full size fruit of the highest quality.

DELICIOUS

The Delicious apple is a variety well named. Fine grained, melting, crisp and juicy. In bearing, keeping and shipping qualities it ranks with the best.

APPLE TREES

First-class fruit yield can only result from high-grade trees that have the root vitality to nourish big, specimen fruit and the strength of twig to hang on to it until picking time. This means a big curtailment of loss through windfalls.

SUMMER VARIETIES

Red Astrachan—Tree vigorous, upright, hardy and productive. Fruit medium to large; surface smooth, marbled and striped on greenish-yellow; a pleasant, tangy acid flavor.

Yellow Transparent—Tree is a hardy, upright grower; regular and early bearer, medium size. Color a rich, transparent yellow; flesh melting, juicy, subacid.

FALL VARIETIES

Duchess—A large, beautiful apple, roundish. Streaked red and yellow; tender, juicy and pleasant. Tree a vigorous, fine grower and abundant bearer. Very hardy. September.

Fameuse—Medium size, roundish; crimson. Flesh snowy white; very tender, fine, juicy, mild, subacid; one of the finest dessert fruits. October and December.

Maiden Blush—Large, smooth, regular, evenly shaded red cheek; flesh white, tender, sprightly, with a pleasant subacid flavor; bears large crops. October.

The Grimes Golden is a beautiful yellow apple of alluring flavor. It is a heavy bearer and commands a fancy price in a ready market.

GRIMES GOLDEN

Good bearing stock shows in a fruit tree, even when young. This tree, from the Mayo Nurseries, is shown bearing its second crop of McIntosh Red apples since transplanting.

In these days of high labor costs, there is no economy in planting very young, immature fruit trees because the first cost is low. You'll have to spend several precious years waiting to see what will happen. Make sure of immediate success by planting Mayo's seven to nine foot fruiting age trees.

WINTER VARIETIES

McIntosh—Medium large; smooth; yellow, covered with brilliant crimson; flesh snowy white, very tender, aromatic; subacid; very good quality. Tree vigorous; a good annual bearer. November to February.

Grimes Golden—This is one of the most popular apples in cultivation. Tree strong, thrifty grower; fruit yellow veined, russeted; flesh yellow, firm, quality rich. November and December.

Baldwin—No variety yields larger crops or bears shipment better, or is more attractive in color, size and shape than the Baldwin. It is esteemed as an eating apple, and for cooking. Large, bright red, crisp, juicy, and rich; tree vigorous, upright and productive. Keeps until April.

Delicious—Flourishes well in every state. Bears annually; great yielder. Fruit very large; flesh fine grained, crisp, juicy, melting, delicious.

Rome Beauty—Large, yellow, striped with red, flesh juicy, crisp, subacid, tree moderate grower. October and December.

Winesap—Large, roundish, deep red; medium quality; keeps well; tree is a fair grower; good bearer. December to May.

Specimen Early-to-Bear Apple Trees, 7 to 9 Feet
\$2 Each, \$20 per Dozen, \$150 per Hundred

MAYO'S PEACH TREES

ROCHESTER PEACH

A popular variety of excellent quality. Extremely hardy. Bears very young and ripens early to command top market prices.

Don't wait three or four years to pick your own peaches. Set out Mayo's big six to eight foot Early-to-Bear trees. Each tree is a vigorous specimen, heavily rooted with a well-formed head.

Rochester Peach—The most delicious "Home Table" peach in the world. Large, golden-yellow, with beautiful crimson cheek. Flesh fine grained, juicy and highly flavored. Small free stone. Ripens early in August, fully three weeks before the early Crawford.

The development of the Rochester Peach was brought to a commercial stage in the spring of 1914 when an orchard of 2 year old trees was set out. In August of the following year some of these trees were laden with beautiful, big peaches, some of them measuring 12 inches around and weighing over 12 ounces.

Needless to say, the fame of this excellent peach spread rapidly, until now thousands of successful growers are reaping big profits with the Rochester Peach long before other free stone varieties appear on the market.

Its hardiness amazed experienced growers by withstanding 16 degrees below zero and then producing a full crop

at a time when both Crawford and Elberta failed completely.

By all means plant the Rochester Peach. It bears at a very early age and will give you a "going" orchard right from the start. The demand is big and constantly growing. Plan to cash in on its popularity in a year or two by setting out this big money maker now.

J. H. Hale—Season follows Rochester. Very large, rich golden-yellow with carmine blush. Flesh firm but of delicate texture dripping with rich, sweet juice. Very hardy.

Elberta—Season follows J. H. Hale. The best peach of its season, and one of the greatest commercial peaches on the market today on account of its splendid shipping qualities. The fruit is rich yellow with red cheek, juicy and highly flavored. Very hardy.

Specimen Early-to-Bear Peach Trees, 6 to 8 Feet—\$2 Each, \$20 per Dozen, \$125 per Hundred

CHERRY TREES

LAMBERT CHERRY

An outstanding variety for its enormous crops, firmness of flesh and excellent flavor.

SOUR CHERRIES FOR PIES AND CANNING

Early Richmond—Everywhere the most popular. Tree strong, thrifty grower; fruit medium size, dark red, melting, juicy; sprightly acid flavor; especially valuable for cooking purposes; early and abundant bearer. Season last of May and first of June.

Large Montmorency—An old favorite. Large, bright, clear, shining red; flesh solid, juicy, rich, acid; tree prolific bearer and very hardy.

Specimen Fruiting Age Cherry Trees, 6 to 8 Feet—\$3 Each, \$30 per Dozen

A few short weeks and this cloud of beautiful blossoms will be transformed into ripe, luscious cherries that always find a waiting market for canning or beverage purposes.

Mayo's Big, Healthy Specimen Cherry Trees. Seven to nine feet tall. Heavily rooted and symmetrically branched. Trees that will save you two or three years of needless waiting, trees that will bear fine quality Cherries for you in the next year or two.

ONLY THE CHOICE VARIETIES

We do not believe in confusing our friends by listing a dozen or more varieties of cherries. Success will be yours if you confine your selection of cherry trees to any of the fine varieties listed below. They are preferred by experienced growers as amazing bearers of firm, juicy fruit that commands fancy prices.

The Super-Cherry—LAMBERT

The Tree—In the years following planting the Lambert develops into a very beautiful tree, being a strong, rugged, vigorous grower, with dense, healthy foliage; for this reason it is a valuable acquisition as a shade tree.

Its Yield—No cherry can equal the Lambert with its tremendous crops of delicious fruit.

The Fruit—The Lambert Cherry to eat will give your palate a new sensation. The flesh is firm, crisp and deliciously rich, with juice that has a delightful tang all its own. When fully ripe it is unusually large and of a dark, lustrous purple color.

NAPOLEON

A rich, delicious variety; large red cherry that hangs well on the tree. Very popular. It is tender, and one of those famous varieties that has made cherry growing popular. Clear red in color. June.

YELLOW SPANISH

A magnificent heart-shaped cherry of the largest size, pale yellow, richly dotted and spotted with deep red. Flesh very firm, juicy and sweet; a rapid grower and immense bearer; best for canning, preserving and shipping. July.

PEAR TREES

Mayo's Big, Fruiting Age Pear Trees, well developed in root, stem, branch and Fruit spurs. They're vigorous, weather-hardened growers that are sure to take hold at once in any new location.

Plant Big Trees for Early Profits

Three distinct advantages are yours when you plant Mayo's big Fruiting Age Trees—you get vigorous, hardy trees that we guarantee a whole year after planting—you are relieved of the years of waiting, the training and development necessary to produce a high-grade, heavy bearing fruit tree—you get a high quality yield; not stunted, pithy scrubs, but full bodied, firm, juicy fruit. Those three points mark the outstanding difference between ordinary trees that "just grow" and Mayo's full-fruited-age trees that are developed under ideal conditions of soil, climate and expert care.

SUMMER VARIETIES

Bartlett—No pear of the same season equals the Bartlett in flavor, either for eating or canning. Fruit large and yellow, fine grained, buttery and juicy. Sweet, rich flavor. Tree is hardy, grows very rapidly and bears young and heavily. Carefully cultivated and sprayed trees will produce enormous crops of perfect fruit. Season, September.

Clapp's Favorite—Large, fine; pale, lemon-yellow, with red cheek; fine texture, melting, buttery, juicy, with a rich, sweet vinous flavor. Tree hardy and very productive. Thrives where other varieties fail.

At left is shown a Duchess pear tree two years after planting, with a good crop of full sized pears.

DUCHESS PEAR

A profitable commercial variety. Hardy, productive and an excellent shipper.

FALL VARIETIES

Seckel—A beautiful and delicious little pear that is the standard of excellence. One of the richest and highest flavored pears known, always in demand for desserts and luncheons and better known than any pear of its class. The tree makes a stout and erect growth. September and October.

Duchess D'Angouleme—A most dependable cropper, often fruiting the first season after planting. Fruit large, frequently weighing a pound. A dull greenish yellow, spotted russet; flesh white, rich and good quality. October and November.

**Specimen Early-to-Bear Pear Trees, 6 to 8 Feet—
\$3 Each, \$30 per Dozen**

LE CONTE—Bearing Pear Trees

We have a limited quantity of some big bearing trees of the LeConte variety of pear. This is an exceedingly large pear, smooth, pale yellow; quality good, juicy and pleasant. The pear is remarkably vigorous, healthy and free from blight. It is an extremely prolific bearer. These trees have already borne fruit in the Nursery row and are 8 to 10 feet in height, beautifully branched, and heavily rooted.

Trees, 8 to 10 Feet—\$5 Each, \$50 per Dozen

Do Not Prune Mayo's Fruiting Age Trees

Do not cut back the branches of Mayo's big bearing-age trees as is customary with little weak trees. These large trees have branches and fruiting spurs well developed so that very little trimming to round out the head and a slight pruning of the roots is all that is necessary. They have the strength to take hold at once in any new location.

PLUM TREES

Mayo's seven to nine foot specimen Plum Trees. Strong, fibrous root system, smooth, straight trunks and well-formed fruiting wood tops. Save three or four years of needless waiting to prove up fruit quality and yield. Make sure of a profitable crop of your favorite plums each year by planting these fine, big, healthy, hardy trees that are protected by our guarantee for a whole year after planting.

PREFERRED VARIETIES

EUROPEAN PLUMS

Bradshaw—A very large and fine early plum, dark violet red, juicy and good. Trees erect and vigorous; very productive; the quality is excellent. It ripens ten days to two weeks later than Abundance.

Lombard—Medium to large, roundish, oval, dark red, flesh yellow, juicy and pleasant flavor; hardy, popular, nearly always producing a crop, a valuable commercial sort. August.

Shipper's Pride—Large and handsome, dark purple; quality fine, juicy and sweet; excellent for canning. September.

Shropshire Damson—Large, amber color, juicy and sprightly; most desirable of the Damson class; productive and not liable to rot; good commercial sort. September.

Imperial Gage—Rather large; oval; greenish; flesh juicy, rich and delicious; parts from the stone. Tree a vigorous grower; very productive, and one of the best plums. Middle of August.

JAPANESE PLUMS

Abundance—Fruit large, showy, beautiful. Amber, turning to a rich, bright cherry color, with a decided white bloom. Flesh light yellow, exceedingly juicy and tender, of a delicious sweetness impossible to describe. Its season is very early, ripening in advance of other plums, thus adding to its special value.

Red June—The best Japan plum, ripening before Abundance. Medium to

Photo shows how a high-grade plum tree bears heavily on the main branches. This is in addition to the branch bending yield throughout the top of the tree.

BRADSHAW PLUMS

Firm, juicy, full flavored fruit that well repays the planting of big, healthy, bearing age trees.

large; deep, vermillion-red, with handsome bloom; flesh light lemon-yellow, firm, moderately juicy; fine quality. Tree upright, spreading, vigorous and hardy; productive.

Specimen Fruiting Age Plum Trees, 7 to 9 Feet—\$3 Each, \$30 per Dozen

CRAB APPLE TREES

Mayo's extra fine Five Year Old Crab Apple Trees. Seven to nine feet tall. Vigorous and hardy. Many of these trees are now bearing in the Nursery row. Will thrive and yield heavy annual crops in practically any location.

Transcendent—Early variety; bright red, highly flavored and immensely productive.

Hyslop—Late variety; deep crimson. Large in size; fine flavor and heavy bearer.

Crab Apple—Always in demand for cider and jelly.

Specimen Fruiting Age Crab Apple Trees, 7 to 10 Feet—\$3 Each, \$30 per Dozen

Bearing Quince Trees

A space 10 x 10 is plenty for a quince tree. Absolutely hardy and needs little or no care and attention. There is, therefore, no reason in the world for not growing bushels and bushels of the finest quinces you ever ate. We recom-

mend the Orange variety, which is bright, orange-yellow in color, nearly round in form and of highest quality, and is best for the home garden. We heartily recommend it to our patrons.

Bearing Quince Trees, 3 Years Old—\$2 Each, \$20 per Dozen

It's the Roots that Nourish the Tree

Mayo's big fruiting age trees, developed in the Nursery row for transplanting, have a root system much more compact and fibrous than an ordinary orchard grown tree of the same age. This means quicker, stronger growth and better quality fruit with larger yield.

Showing the big, strong, life-giving root fibers of Mayo's Fruiting Age Apple and Pear Trees.

Specimen Tree Gooseberries

Bearing plants—Only a limited quantity available. Order today

In connection with our sale of tree currants the last three years, we have had a great many requests for tree gooseberries. Three years ago we started a planting and this spring we will have some beautiful, specimen tree gooseberries to offer for the first time. The tree gooseberry is common in English landscapes, but practically unknown in this country, owing to the lack of stock. We believe this is the first time they have ever been offered for sale. Each tree gooseberry bears great clusters of the highest quality fruit, and being off the ground not only makes it easy to pick and handle, but also keeps the fruit clean and fresh. The tree gooseberry also makes a charming appearance in the garden or about your

grounds, being extremely ornamental and will advantageously take the place of a shrub or dwarf tree so that each year you can pick quarts of delicious, juicy fruit for preserves and jelly instead of "just leaves." The gooseberries that we are offering are all of the Poorman variety, which is very productive and not susceptible to mildew. The fruit measures over an inch in length and almost one inch through, oval, pinkish-red when ripe, quality excellent, considered the best of the sixty-two varieties grown at the New York State Experimental Station, which in itself is highest recommendation.

We hope that each of our patrons will try out a few of these charming little trees some place about their grounds. Their beauty, charm and utility will return a great deal of pleasure and satisfaction for the effort expended in planting. If planted this spring, these specimen tree gooseberries, which have already produced fruit in the Nursery row, will produce an abundance of fruit next summer.

Extra Fine Gooseberry Trees, 3 to 4 Ft., Roots Balled in Moss—\$3 Each, \$30 per Dozen

GOOSEBERRY
A well-laden branch showing its immense bearing habit.

BLOWERS BLACKBERRY
Mammoth in size with practically no care.
Enormous bearer and excellent shipper.

BLOWERS BIG BLACKBERRIES

The Biggest and Best of All Blackberries. Large, clean, very sweet and of excellent flavor. The giant among Blackberries. Very hardy and enormously productive.

Mayo's Blowers Variety of Blackberry is a first-class shipper, standing up well for several days. Its marvelous size and splendid flavor have called forth the following comments by those who have observed it: "We are surprised to see the mammoth growth of bush and berry." "Most splendid fruit as to size, color and quantity that ever grew on blackberry bushes." "The berries are large and handsome and the flavor good."

Blowers Blackberries can be planted in any place you would grow Concord grapes. They should be set 3 feet apart, allowing 8 feet between rows. This plan will take care of about 1800 plants to the acre.

Mayo's big two-year-old Blowers Blackberry plants will thrive on any good fruit land and do particularly well on well-drained sandy soil. It will prove a big money maker if you take the simple precaution to keep soil free from weeds and grass.

This berry has a record of 2694 berries from a single plant and 2720 quarts from one-third acre. One seven acre plot yielded 30,206 qts. for a total of \$2,121.75.

The motoring public will come right to your door and pay the top price for crates of fine berries like these fresh from the picking.

Bears from Late July Until Frost

Season of Fruiting—The season of ripening is from July 25th until frost; the bulk of the crop matures in the month of August. The yield in September and October depends upon the season; very few in October. We have had blossoms and ripe fruit in November.

Extra Fine 2 Year Old Transplants—\$3 per Dozen, \$20 per Hundred, \$150 per Thousand

TRY THIS—BERRIES BETWEEN THE TREE ROWS

A young orchard set out to standard trees has plenty of space between rows that can be used to good advantage for several years in growing berries. This intensive cultivation is practiced by many experienced growers who are taking two entirely different crops off the same piece of land every season

without harming its productiveness. If you have a young orchard now that is not yet on a paying basis why not set out Mayo's big two-year-old berry plants between the rows and take a substantial profit the following year? We'll be glad to help you figure your requirements.

Mayo Brothers, 1358 B. St., S. W., Washington, D. C.
Rochester, N. Y.
Gentlemen:

Just a line to let you know that the 12 Rochester peach trees ordered arrived in fine condition and well packed, and I must say that they are the best specimens I have ever seen. Thanking you for your courtesy.

Yours very truly,

EDWIN CROSTHWAIT.

Home address, Hyattsville, Md.

Mayo Nurseries, Inc.,
Rochester, N. Y.
Gentlemen:

This last spring I ordered and received 12 Blueberry plants from you and all lived and are growing fine; thought you would be pleased to know. I am now enclosing order for some more of your stock, as I just received your fall catalogue.

Yours truly,

H. BRABBAN.

Box 105, Pompton Plains, N. J.
September 16, 1926.

GIANT RED RASPBERRIES

LA FRANCE EVERBEARING

An outstanding everbearing variety. Mammoth in size, rich in flavor, sweet and very juicy. July to November. Awarded Certificate of Merit by Horticultural Societies. A big money maker.

At right is shown a fine specimen of Mayo's 2 year old berry plant. As it matures the center cane branches freely, each with its quota of new fruiting spurs.

LaFRANCE GIANT EVERBEARING

A highly developed and profitable variety of red raspberry for the commercial farm or home garden plot.

Bears from Late June Until Frost

LaFrance Red Raspberry fruits early in July the first season planted, continuing throughout the growing season; after being established they will bear as early as June and as late as November last and later, so long as vegetation has not been killed by frost.

La France All Meat—Not All Seeds

In startling contrast with ordinary red raspberries that appear to be all seeds—the LaFrance big, meaty berries are proving a sensation.

LaFrance is free from insects and diseases and multiplies rapidly; while in the East and other parts of this country it reproduced itself tenfold in one season, in the State of Washington it has reproduced itself twentyfold.

LaFrance is perfectly hardy and has been thoroughly and successfully tested in various parts of the country.

In the Northwest, the great berry growing section of America, growers are most enthusiastic over LaFrance and are planting it heavily.

**Vigorous, Well-Rooted Transplants—\$4 per Dozen,
\$30 per Hundred**

GOLDEN QUEEN RASPBERRIES

Most Delicious of All Yellow Raspberries

The Golden Queen is a rapid grower; plants set out now will bear a good sized crop next year.

"Golden Queens are nearly as large as strawberries and the finest I have ever tasted," writes one enthusiastic grower.

A dish of Golden Queens, hulls and all, just to show the large size and transparent golden coloring of these matchless berries.

For those who have never tasted a Yellow Raspberry, the Golden Queen will be a delightful surprise, with its delicious, melting flesh, full of creamy juice. It is an ideal variety for the home garden.

It is a beautiful berry in appearance, being of the largest size, and a beautiful golden orange color. It is a vigorous

growing plant, hardy, and extremely productive. This is not a new variety, but one that has been thoroughly tested out, and we cannot say too much in its favor. For a table berry it has no superior. It is a seedling from the splendid Cuthbert, and is to the Yellow Raspberry what the LaFrance is to the Red.

**Strong, Bearing Age Plants—\$5 per Dozen
\$40 per Hundred**

ASPARAGUS

Pedigreed Mary Washington

There is no variety of asparagus as good as the Washington and no strain of the Washington to be compared with the "Mary." The female "Mary" Washington asparagus, like the original male Washington, is the greatest find in the history of asparagus breeding. It is earlier, produces more asparagus, has larger and more tender stalks, and possesses higher rust resistance than any other variety. Mary Washington asparagus is recognized as the best and we are pleased to announce that we can now offer you selected roots grown from the seed of this asparagus, produced from a field of second generation "Mary" Washington. "Mary" is so much better that it will probably displace most of the other varieties now grown in the garden.

**Extra Fine, Two Year Pedigreed Roots—\$8 per Hundred,
50 Plants at Hundred Rate**

BLUEBERRY PLANTS

Mayo's Hardy, Nursery Grown Fruiting Age Plants, well developed and heavily rooted. Many of these plants have already borne fruit in the Nursery row.

You can't buy blueberries like these—you must grow them yourself. Be sure to set out Mayo's Nursery Grown Plants to save disappointment in transplanting.

Blueberry pie, blueberries and cream, blueberry preserve—all within your reach in an ever increasing quantity. The blueberry flavor almost defies description with its delicious, melting flesh, full creamy juice and delicate tang all its own.

At left is shown how a Mayo Blueberry Plant is burlapped with original earth ball for successful transplanting.

Photo at right shows the surprising root growth that accounts for the vigorous growth and heavy yield of Mayo's Blueberry Plants.

Mayo's Nursery Grown Blueberries do not have any "wild" flavor. Note large clusters of berries at picking time.

HOW TO GROW BLUEBERRIES

Plant blueberries four feet apart in an acid soil. Where soil is not naturally acid use acid fertilizer (Aluminum Sulphate is best) or mix partly rotted leaves into the soil. Blueberries require the sun for greatest yield.

Never use manure or compost near a blueberry plant. No pruning is necessary. Water the plants well the first year and you will be delighted with the results.

Extra Fine Fruiting Age Blueberry Plants, Balled and Burlapped—\$1.50 Each, \$15 per Dozen, \$100 per Hundred

MAYO'S CURRANT TREES

Plant a number of these charming little Currant Trees about the home in place of a merely ornamental shrub or dwarf tree and each year pick beautiful big bunches of currants for jelly and preserves.

USEFUL AND ORNAMENTAL

As can be seen from the accompanying illustration, each tree bears great clusters of the highest quality fruit, and, being off the ground, not only makes it easy to pick and handle, but also keeps the fruit clean and fresh.

These are all of the Perfection variety, which is the best for jelly and preserving. This variety bears enormous crops of the most delicious fruit. We hope that each of our patrons will try out a few of these charming little trees some place about their grounds. Their beauty, charm and utility will return a great deal of pleasure and satisfaction for the effort expended in planting.

The Currant Tree is something new—a combination of ornamental garden tree and fruit tree that bears immense clusters of big, red currants.

FRUITING AGE TREES

These Currant Trees are now of bearing age. If you set them out now, you can gather your own currants next year. No long waiting when you plant Mayo's Fruiting Age Trees. They are so big, strong and well developed that quick success is assured from the start.

Each Bearing Age Currant Tree has its roots balled in moss for safe transportation and to make sure of successful transplanting without setback to growing or bearing power.

**Bearing Currant Trees, 3 to 4 Feet, Roots
Balled and Burlapped—\$3 Each,
\$30 per Dozen**

A fine specimen of Mayo's Bearing Age Currant Tree. Ornamental as any dwarf tree or shrub with the advantage of yielding luscious fruit for jams and jellies.

GRAPE VINES

Mayo's Hardy Four Year Old Fruiting Age Vines for immediate results. Extra heavy root systems, with fruiting canes three to six feet long, that save you at least two years of needless waiting.

Concord—A grape widely grown because of its ready adaptability to various kinds of soil, its popularity as a market variety and its consistently heavy bearing. Has been surpassed, however, in late years in point of size and quality.

Hubbard—A variety similar to the Concord, but surpassing it in many respects. The Hubbard is a large, sweet, blue grape with the delicious flavor of the Vinifera varieties. Pulp tender and juicy; skin thin but very firm. A good shipper. Ripens ten days earlier than Concord. Finest "Home Table" variety of grape grown.

HUBBARD

A fine, hardy American variety with the exquisite flavor so highly prized in European sorts.

EMPIRE STATE

A white grape that surpasses the Niagara in quality and a better keeper.

Lucille (Red)—The Lucille is one of the most beautiful of the red or amber grapes, the bunches being very large and the berries double the size of the Delaware. The pulp is sweet and delicious, with a tangy flavor all its own.

Empire State (White)—Empire State, compared with Niagara, is as vigorous, as free from insects and fungi, as productive. In two characteristics, Empire State surpasses Niagara. Far better in quality and may be kept longer; in quality, Empire State ranks among the best native grapes, approaching in flavor European Muscats rather than the foxiness of native grapes.

Strong, 4 Year Bearing Age Grape Vines, Roots Balled in Moss—\$3 Each, \$30 per Dozen

Mayo Nurseries, Inc., Rochester, N. Y.
Dear Sirs:

Elmeroft, Stamford, Conn.
September 15, 1926.

Out of the 30 grape vines you sent me last season there is only one that died and several of the vines are carrying numerous fine bunches of grapes, so I feel that we have had almost 100% success.

If you should send me one grape vine to take the place of the one which did not live I would not refuse to accept it.

However, I will ask you to send to me the following items at the time you recommend them to be planted: 2 Delaware Grape Vines, 3 Blueberry Bushes, 1 Seckel Pear Tree, 1 Hubbard Grape.

The 9 Blueberry bushes that I now have I believe are three years old, and if you can send me bushes that will be about this same size I would like it.

Yours very truly,
W. D. TRACY.

A picture of rare beauty that owes its charm chiefly to nature's handiwork, guided by the tasteful arrangement of trees, shrubs and vines.

MAYO LANDSCAPE SERVICE

We maintain a professionally trained landscape organization who will gladly assist you with any modest planting scheme, or assume complete responsibility for transforming a raw, ungraded homesite, a barren stump lot, a rocky knoll, or a tract of large acreage, into an estate of interesting landscape pictures and delightful charm.

Every home, whether of simple or elaborate architectural conception, requires a planned landscape setting to complete the picture. Yet how often do we see the beauty of a well designed structure sadly depreciated by lack of adequate shrub-

bery or by a planting attempt that lacks unity and harmony with the style of architecture it is supposed to enhance.

Why not consult our expert landscape service in the handling of your problem?

A corner of our drafting room where the rough sketches made on the property are worked out to scale on paper. The final plan may be a simple design for your own execution or it may be a detailed working guide for a Landscape Engineer and Planting Crew for carrying out your wishes in transforming the surroundings of an Estate or Country Home.

We always welcome your suggestions in the development of your landscape plan. Whether we proceed independently of your suggestions, or incorporate your views into the plan, you will have the assurance of results far above the average.

On all projects we like to have our Landscape Architect go over the ground with the owner. This exchange of ideas at the outset saves much time and expense in getting the actual work under way.

A winding road with evergreen shaded slopes. Trees nearly as large as these can be supplied when necessary and safely transplanted.

An attractive house is shown at the left, yet something is lacking—

The following picture represents plans, plants and planting by Mayo Landscape Service, June, 1926.

Photo of the same house thirty days later. What a big difference a few shrubs or evergreens make in lending the proper setting to a home. Permanence and contentment are reflected here in the employment of evergreen varieties in blending foundation lines with the surroundings.

Begin With a Plan

Have a complete plan prepared for your entire property, even though you intend to develop only a portion of the grounds at a time. In this way you can carry out as much or as little of the planting as you wish each season, secure in the belief that it is properly done as part of an entire scheme.

This is the only way to avoid disappointments in effects and the necessity of needless transplanting of trees and shrubs which is bound to result where no definite plan serves as a guide.

The Broad Scope of Our Complete Service

In creating landscape pictures more or less construction work is necessary. We are equipped to handle this work and can give you an estimate on the cost when tentative plans are submitted.

View toward the house, showing artistic flag-stone walk and sundial. Note the slender Red Cedar placed against the wall panel and the soft-textured Japanese Moss Cypress in the foreground.

Orchard Department

We are prepared to plan your orchard, supply and plant fruiting age trees that will begin to pay dividends in high-grade yield the following year.

Your New Home

Before building, let us work with your architect in securing the best location for your home in relation to the sun and vistas as well as locating drives and walks. No problem is too large nor too small for our painstaking service.

Won't you write us now about your plans? Tell us what you want to know or, if you prefer, suggest a date for our landscape man to call. Our material, workmanship, reputation and responsibility will be your guarantee of lasting satisfaction.

It is our policy to produce none but the best and studied solution of your particular planting problem. To do this, our designers require from ten to thirty days to complete sketches and plans. Neither snow, cold nor rain interfere with the making of surveys, photographs or notes.

To make sure of having your planting done this spring, why not arrange for a member of the firm, or our landscape architect, to call on you now!

A plan like this, in full colors, and as large as the top of a card table, showing the location of every proposed tree, shrub, hedge and path, can be prepared for the home owner's approval before any work is begun. Compare the rear garden detail of this plan with the three photographic views of completed work shown at left.

Our Catalog of Ornamentals

We have discontinued our usual mail order descriptive catalog of ornamental plants, as this material is now required in developing properties through our Landscape Department. Our Evergreens, Rhododendrons, Ornamental Trees, Flowering Shrubs, Roses and Perennials are the finest that can be grown. Every plant is guaranteed for a year after planting when this work is carried out by our landscape department.

It is not necessary to wait several years for results. The effect shown in this photograph was obtained within thirty days from the time when this same view overlooked an ungraded plot devoid of paths or shrubbery.

This is a photographic reproduction of a water color rendering for a combined sunken and rose garden. When desired, we will prepare a colored sketch of this kind. A perspective rendered in colors, visualizes at a glance to a much better extent than a blueprint of a plan does, the artistic results which are intended for the beautifying of your property.

Plans, Surveys and Construction

Our landscape department will prepare grading plans from topographical surveys, in addition to detailed plans and specifications, for concrete and masonry construction, or for the design and construction of any architectural features which may be included in the landscape plan.

We will gladly submit estimates for the preparation of detailed topographical surveys where it is important to preserve existing trees, interesting out-croppings of rock, or locations for artificial ponds or lakes, as a part of the proposed landscape development.

An impressive entrance to a large estate. Our landscape service assumes complete responsibility for handling the concrete or stone work incidental to landscape improvement, such as walls, road-work, drainage, sewers and bridges.

A flower bordered path, an evergreen or two, a pool and fountain—all simple units of landscape design, yet there is a sense of restful charm in their tasteful arrangement.

A delightful sun garden where summertime seems more real among the nodding blossoms. Health, happiness and contentment are often found in the cultivation of a flower garden that takes one out into the fresh air and sunshine.

Certain types of architecture will require the rather severe setting of the formal garden to complete the picture. Send us a photo of your home for an opinion without charge.

[illegible]

Unusual flowering trees and shrubs characterized by a profusion of bloom, for beautifying the surroundings of fine homes and estates.

Flowering Almond

A free-flowering specimen that should be in every shrub collection. Double pink flowers.

4 to 6 Feet, Price \$2 Each

Flowering Cherry

Covered in May with long stemmed, shell-pink double flowers resembling roses.

5 to 6 Feet, Price \$4 Each

Weeping Cherry

Its refined, pendent branches make this an attractive specimen.

5 to 6 Foot Trunk, Price \$7 Each

Flowering Crab

Shrub or small tree, dwarf and branching. Flowers in abundance, large and double shell-pink, resembling roses.

3 to 4 Feet, Price \$2 Each

Dwarf Flowering Plum

An attractive shrub known as the Rose Tree of China. Double pink or rose colored flowers in profusion just before the leaves appear.

4 to 6 Feet, Price \$2 Each

FLOWERING CRAB

FLOWERING ALMOND

EUROPEAN MOUNTAIN ASH

Purple Leaved Plum

A beautiful small tree of garden origin. Foliage is purple, retaining its color throughout the summer. Pink flowers in great profusion in the early spring.

5 to 6 Feet, Price \$2 Each

Paul's Scarlet Thorn

One of the most desirable of the flowering trees. Flowers are large, bright scarlet and double. An excellent specimen tree.

6 to 8 Feet, Price \$5 Each

European Mountain Ash

The bright red berries that remain for months on this tree has much to do with its popularity.

8 to 10 Feet, Price \$4 Each

European White Birch

A very beautiful tree with white bark and pendulous branches.

6 to 8 Feet, Price \$3 Each
