KNULL FLORAL Co.

FLORISTS--NURSERYMEN--LANDSCAPE
DESIGNERS AND CONTRACTORS
TAMPA, FLORIDA

BUSINESS INFORMATION

TERMS—Cash with order. We do not make C. O. D. shipments. If you do not have an established account with us kindly send remittance in full to cover purchase including money to cover Parcel Post if shipment is desired this way, otherwise shipment will be made by Express collect.

We do not guarantee. Most failures of plants to grow are due to causes beyond our control, such as improper planting, care, etc., making it impossible for us to guarantee any plants.

Every care is taken to have plants labeled true to name. We do not, however, accept any liability beyond the purchase price of any stock bought from us.

Our responsibility of plants in transit ends with delivery in good order to transportation company after which they are at purchasers risk.

All prices subject to change without notice.

LAWN—PROPER PLANTING AND CARE

St. Augustine grass, which makes the best lawn, will grow on any kind of soil providing the proper amount of water and commercial fertilizer is applied.

The lawn is the base of all planting and should be treated in this manner.

Grading is one of the most important steps. The grade should always slope away from the building. St. Augustine grass makes a mat three inches thick, in planting the grade should be two inches below sidewalk level, this also retains the moisture and fertilizer which is very important.

If it is desired to add humus a good leaf mould is the best. Never use muck as it will dry and burn the small feeding roots. Dairy manure is not desirable as it contains weeds of every kind. Muck also contains weeds and mosses which it is nearly impossible to remove from your lawn.

Weeding is very slow work and costly so it is advised to keep weed seed from getting into the lawn at all times. A mixed lawn is never attractive, so have St. Augustine or Bermuda grass lawn. Remove all weeds, other grass and roots except the one you wish to grow. All ground should be carefully leveled, graded and rolled before planting.

To make a lawn in a reasonable time the grass should be set in rows eight inches apart and the plants ten inches to the row. A bushel of grass planted in

this manner will plant 25 square yards.

After a lawn has been planted for a few months it should have a top dressing of good rich soil.

For a lawn infested with leaf hopper a treatment of tobacco dust should be applied and continued until the hoppers have been killed. Chinch bugs have been the worst pest of St. Augustine lawns. At the first sign of trouble you should dust with Calcium Cyanide, using dust gun. Care should be taken not to use too much Calcium as it will burn the grass.
