Lilacs,

Our Lilacs are grafted or budded very low on privet; they will quickly get on own roots after transplanting provided the union is placed about four inches below the surface of the ground.

The varieties marked * belong to a new class of Lilacs, the "Early Lilacs," a cross between one of the early flowering Lilacs and *Syringa Giraldi*. This cross originated a new race of tall growing Lilacs, which flower before those now known.

We offer a "lining-out" grade; these are well branched plants 12-18 in. high. The other plants offered are 18-24 in. or larger according to variety.

JAN VAN TOL, fine plants, minimum two branches,

Each \$ 2.00

This variety was universally admired at London and other Flower Shows, it is difficult to describe this Lilac, none is more perfectly white, none has larger trusses, none has larger individual single flowers, none flowers and grows more freely, none is better for forcing.

We have a splendid photograph of this variety and will be glad to send a copy if requested.
