In 90 Days After Planting--- You Get Big Delicious **Mastodon** Berries

Now You Can Grow **EVERBEARERS!**

THE productiveness of the Mastodon—its ability to continuously produce loads of big berries under ordinary care, makes it possible for anyone to grow and have plenty of fresh strawberries all Summer and Fall.

It has been producing its enormous crops of big berries Summers and Falls for the past ten years, proving that its everbearing habits are beyond doubt—as fixed as the breed characteristics of a Jersey cow or a White Leghorn hen. Its productiveness stopped only by freezing Fall weather.

A Commercial Success

STRAWBERRY GROWERS, GARDENERS, in fact everybody has been wishing for an everbearing strawberry which would produce paying crops of berries under just ordinary care—one which would bear large, well-flavored berries which would hold their big size all through the season.

Now comes the Mastodon which fills the bill and places the growing of everbearing strawberries on a successful paying basis.

You don't have to wait a whole year for berries when you set Mastodon. They bear two crops of berries while the common strawberries bear only one, besides they bear a third crop the second Summer and Fall, making three crops of berries within 18 months after you set the plants. Why bother with common strawberries when you can grow MASTODON.

Berries - - Berries FRESH Berries!

**ALL SUMMER LONG—NOT
JUST A WEEK OR SO.**

Picture a row of thrifty 100 MASTODON plants across your garden full of glossy-red, ripe, juicy berries ready for your table three times a day all Summer and Fall; also the following Spring, Summer and Fall. This is what Mastodon can do for you. A delicious treat, easily possible and almost costless.

A Splendid Paying Business

MORE and easier money can be made from one acre of MASTODON plants than 40 acres of corn. For instance—during one day's picking in September, we picked at the rate of 576 quarts of big, nice Mastodon berries per acre from plants set in the Spring. This one day's picking sold at 35c per quart, netting us \$190.80.

From plants set in the Spring, berries begin to ripen in 90 days, and in the next 100 days the plants will have produced an average of one quart each. You don't have to farm acres to make money growing Mastodon,—just a small piece of ground on one side of your corn field or at the one end of the garden will do. Mastodon affords mother and the children a wonderful opportunity to make good money on the side.

Growers Guide Free

TO everyone ordering Mastodon plants, we send FREE a copy of our booklet telling how to grow Mastodon successfully. It will be a wonderful help to you in all lines of strawberry and other small fruit culture.

5 Berries [end to end] measure 8 inches
3 Berries weigh 2 ounces
1 Berry measures 5 inches around!

3 Crops Instead of One! First Crop Berries

Second Crop Berries BIG! Third Crop Berries

Ten Months Out of Eighteen

Never before such a Berry as the *Mastodon*

- 1 The very best for Garden or Field Culture.
- 2 Easily grown. Needs no special care or soil.
- 3 Largest of any known everbearer.
- 4 Bears three crops instead of one from one planting.
- 5 Berries uniform and large from beginning to end of season instead of running small.
- 6 Yields of big berries increase from July until October instead of decreasing.
- 7 Bears profitable crops of berries not only in Summer and Fall but the following Spring also.
- 8 Bears 10 months out of 18. First Summer and Fall, then the following Spring and the second Summer and Fall.
- 9 Berries sweet and remain firmer and stand handling better than other varieties.
- 10 Equally as good for either Hill or Matted-row culture. Makes lots of new plants.
- 11 Production not stopped by adverse weather like other varieties.
- 12 A continuous producer, stopped only by freezing weather.

Why Be Content With Common Varieties When
You Can Grow The Giant *Mastodon*

VARIETIES OF STRAWBERRIES OFFERED.

Below we offer you, besides the Mastodon Everbearer, four worthy varieties of common strawberries, the kind that fruits in June, — just once a year.

These four varieties are adapted to garden or commercial culture, and will produce a fine lot of delicious berries for you in the Spring (June). They, with the Mastodon, will give you a strawberry combination which is hard to beat, and which will produce berries over the longest possible period.

Mastodon will begin to ripen its berries this Summer, within 90 days after you set out the plants, and continue until freezing fall weather. Then, the next Spring they will blossom and produce a crop of berries along with the other varieties listed here.

After this Spring crop of all varieties is harvested, the Mastodon will take about a six-weeks rest and begin to produce their third crop in September and continue until freezing weather the second Fall. This makes three crops of berries from Mastodon within 18 months after you set the plants, and you will be picking berries 10 months out of these eighteen.
