THE GLORIOUS SPENCERS

POSSIBLY no other annual flower enjoys greater popularity than does the Sweet Pea, for the improved forms combine fragrance and graceful charm in such a wide range of colors as to make them most desirable as cut-flowers. The Spencers are of unusual size and the waved petals add beauty not found in the old-fashioned Eckford varieties. Sweet Peas are of the easiest culture, but the gardener who wants the very best results will be well repaid for his efforts in the proper preparation of the soil. A copy of leaflet, "How to Grow Sweet Peas" will be sent free upon request.

SULPHATE OF AMMONIA AS A GARDEN FERTILIZER

There is such a growing demand among amateur gardeners for this chemical, that we are prompted to offer a word as to its proper use, as disaster may follow an overdose or foliage may be burnt by wrong method of application.

Sulphate of Ammonia in commercial form has the appearance of a grayish salt, is soluble in water and is very rich in nitrogen. The effect on vegetation is to accelerate new growth, hence valuable on such crops and plants as are valued for their green foliage.

When used for shrubs, a teaspoonful may be spread on the soil around the plant. For the lawn, mix two pounds with a bucket full of loam, this should be spread over an area 20 by 25 feet. For house plants and the garden a solution may be made by adding a heaping teaspoonful to a gallon of water, stirring thoroughly. Sprinkle the solution on the soil around plants. One gallon of solution should be used on at least ten plants. If fertilizer should come in contact with foliage, a spraying of clear water should be given immediately. May be used dry in the preparation of soil at the rate of one ounce to the square yard or 100 pounds to the acre.

HARDY PLANTS SHOULD BE MULCHED IN THE FALL

Much better results will be obtained from perennial flowers if they are properly mulched as winter sets in. The use of some fluffy material like Shredded Cow Manure or Granulated Peat Moss will prevent heaving by frost, and hasten the formation of buds in the spring. When the ground warms up the mulch may be worked into the soil as a fertilizer. Phlox, Hollyhocks, Peonies and Roses respond well to a winter mulch.

PERENNIAL AND BIENNIAL FLOWER SEEDS

The hardy flowers may be grown from seed and most of them will bloom the first season from seed if planted early in the spring. A box in a sunny window will do for many of the seedlings, those who are blessed with hot-beds or cold frames can do work on a larger scale. For fall sowing, August is the best time for planting perennial seed of most varieties. The novice and the old-time gardener will find helpful suggestions in the Burpee leaflet, "Perennials from Seed." Free on request.

HARDY PERENNIAL PLANTS

What is more beautiful than a well-planned border of hardy plants? With colors so varied that any scheme may be worked out, the average gardner may have flowers from early spring until the killing frosts of November. Under this head come plants, which once established, need little or no attention from one year to another. Naturally, they will respond to good treatment and the true flower-lover will study their habits and needs so as to better supply such cultivation, fertilizing, pruning or mulching which they may need.

Most of the perennials may be planted either in spring or fall. When planted early in the spring they will bloom the first year, and will continue to bloom for many seasons with very little care. In arranging borders, it is well to note height, blooming season and color.

PEONIES

Fall is considered the best time for planting Peonies, but if spring-time finds you in the notion to start a bed of Peonies, our advice would be to plant them and let them have the benefit of six more months in which to establish themselves. The ground should be prepared to a depth of 18 to 24 inches. Sheep manure and bone meal are excellent fertilizers. American Peony Society ratings are given below, also the names of originators.

Peonies are seldom at their best until about the second or third year after planting. If plants fail to bloom after good care, the trouble may usually be traced to lack of sun or to improper depth of planting. Transplanting in the garden should be done in early fall before new root-growth begins, placing the crown just two inches below the surface. Remember that Peonies are gross feeders, and you will be amply rewarded for liberal use of fertilizer thoroughly incorporated with the soil.

PEONIES IN THE HARDY BORDER

If you are a novice, we will gladly furnish complete planting directions or aid you in the selection of varieties for cut flowers, exhibition or garden decoration. In most cases we give the name of the originator (in parenthesis) followed by an abbreviation of the type or class; H. C. signifies Hybrid-Cactus, Dec. signifies Decorative.

BETTER SEED GERMINATION.

We should consider ourselves guilty of gross neglect, did we not call the special attention of our gardening friends to a new product which we offer for the control of certain seed-borne diseases. A large percentage of seedlings is lost each season through "damping off" when the young plants are half an inch or more tall. This trouble can now be easily controlled by treating the seed with SEMESAN before planting or by spraying the seed beds with a solution of this material. We will be glad to mail you a booklet telling in detail, how to have more and better flowers and vegetables through the use of SEMESAN. In asking for booklet, please state whether you are interested in flowers, vegetables or both. Either of these valuable booklets free.

A WELL-PLANNED BORDER OF HARDY PLANTS

ONCE planted, the perennials bloom from year to year in one complete cycle from spring till late in the autumn. Can there be a more gorgeous setting for a home than a well-kept lawn surrounded by beautiful hardy flowers? A Hardy Garden is not only a subject for admiration but furnishes a continual supply of cut-flowers for the table. Planting may be done either in

spring or autumn and the novice will find valuable suggestions in our leaflet "Perennials" which may be had upon request. For your convenience we have made a collection of dependable sorts, at least eight varieties of our own selection, ready for delivery about March 15. To avoid delay or disappointment, orders should be sent well in advance of planting time.
